WARRANT OF APPOINTMENT.

I hereby nominate and appoint—

GEORGE WILLIAM ERSKINE RUSSELL, Esquire, M.P., Under Secretary of State for the Home Department;

HENRY HARDINGE SAMUEL CUNYNGHAME, Esquire, Assistant Under Secretary of State for the Home Department;

FRANCIS JOHN STEPHENS HOPWOOD, Esquire, C.M.G., Assistant Secretary (Railway Department) to the Board of Trade;

EDWARD HODSON BAYLEY, Esquire, M.P.;

JOHN BURNS, Esquire, M.P.;

THOMAS LOUGH, Esquire, M.P.; and

CHARLES ALGERNON WHITMORE, Esquire, M.P.;

to be a Committee to consider, with regard to the Metropolitan Cab Service and the Acts relating thereto, whether any changes are expedient as to the grant of drivers' licences; the amount and disposal of the cab plate revenue; the jurisdiction of the police courts in complaints by and against cab-drivers; the relations of cab-owners and drivers with the railway companies; the tariff of prices charged to the public for the hire of cabs; cab stands and shelters in the streets; and, generally, the conduct of the said service.

I further appoint the said George William Erskine Russell, Esquire, to be Chairman; and Malcolm Delevingne, Esquire, of the Home Office, to be Secretary of the said Committee.

Given at Whitehall, this 9th day of June 1894.

(Signed) H. H. ASQUITH.

Warrant appointing a Committee to consider certain matters in connexion with the Metropolitan Cab Service.

a 85819. Wt. 5562.

REPORT.

TO THE RIGHT HONOURABLE H. H. ASQUITH, Q.C., M.P., SECRETARY OF STATE.

We have the honour to report that we have carefully considered the various questions connected with the Metropolitan cab service referred to us in your Warrant of the 9th of June last, and to lay before you the conclusions at which we have arrived.

We have met 23 times. We have examined witnesses representing the bodies concerned in, and interests affected by, the conduct of the cab service in the Metropolis; officials from the Home Office, New Scotland Yard and the Police Courts; proprietors and drivers of cabs; managers of great railway companies; and others. We have compared the system at present prevailing in London with the systems existing in other large English cities and (by the help of the valuable reports obtained from Her Majesty's Representatives abroad) with those of the most important cities of foreign countries.

The majority of the suggestions that have been made to the Committee have been in the direction of increasing the strictness of the regulations for the cab service and the closeness of the supervision over it.

It will be convenient to state in the first place the results of our enquiry into each of the questions referred to us, in the order and terms in which they appear in your Warrant; and afterwards the recommendations which we have agreed to make.

I.—The Grant of Drivers' Licences.

In this connexion we have considered (*a*) the inspection of cabs for licence; (*b*) the general supervision of cabs on the streets and in the yards; (*c*) the examination of drivers; (*d*) the question of age; (*e*) questions of renewal; (*f*) the question of limiting the number of either cab licences or drivers' licences.

(*a.*) For the preliminary work of inspecting cabs for licence the staff at the disposal of the licensing authority consists of six inspectors and six constables assisting the inspectors.

The staff of inspectors and their assistants was fixed at its present strength in 1870 when the number of cabs was 7,000, as compared with 11,000 licensed during 1893. The duties of these inspectors include not only the inspection of cabs for licence, but also the subsequent supervision of cabs and horses on the streets.

The general concurrence of testimony as to the appearance of "bad cabs" in the streets, the returns furnished by the Commissioner of the number of cabs reported yearly as unfit by the general body of constables and by the public, and the information obtained from New Scotland Yard as to the qualifications required in an inspector, have led us, after every allowance has been made for the wear and tear to which a cab is subjected in the course of twelve months, to conclude that the present staff is insufficient in numbers for the work; that there is no sufficient guarantee in the present method of selecting or training the inspectors that they shall possess the technical qualifications which are necessary in the inspection of vehicles or horses; and that there is not sufficient unity of action or co-operation among the inspectors themselves. 2621, 2629, 2906–7, 4981–93, 5224–8, 5433–46, 5586, 5604, 6864–7, 6984–7, 7017–20, contra 998–9, 5160, 6259–63. App. I., E, F.

We think it right to state here that charges of bribery have been freely made against the inspectors. In all such cases we have endeavoured to obtain such particulars as might have formed the basis of an enquiry by the proper authority, but invariably the allegation has broken down or remained unsubstantiated.

(*b.*) For the work of general supervision there are (excluding the staff in the Public Carriage Branch at New Scotland Yard, who are chiefly occupied with the examination of drivers, the issue of licences and the investigation of complaints, and in addition to the six inspectors and six constables mentioned above) 378 constables wholly or partially employed on standings; and the general body of constables on street duty are instructed to watch cabs and report those they see to be unfit. 8056–7. 8019.

We find that the present inspection of horses, which is confined to the animals when bringing up the cabs for licence or as they are seen at work on the streets, is inadequate, and that satisfactory results can only be looked for from a periodical inspection of the stables of the cab proprietors.

Our attention has been called to the insanitary condition of many cab yards. It appears to us that the Chief Commissioner of Police, on receiving from an inspector a report that a cab yard is in an insanitary condition, should direct the attention of the local authorities to the matter, and that the power of these authorities to deal with it should, if necessary, be increased by legislation.

2651–8, 3239–44. We further find that a practice which exists in the cab trade—to what extent we have been unable to ascertain—known as sub-letting, and described in the evidence of Mr. Scott, is a hindrance to the proper supervision of the service and is detrimental to the interests of all classes concerned in the trade.

(*c.*) We think that more strictness in the granting of licences to drivers is shown to be desirable, and that careful enquiry should be made into the character and qualifications of applicants.

We are informed that the standard of examination as to an applicant's knowledge of London is sufficiently high. In knowledge, however, of driving—the other chief qualification which is nominally required—it appears that applicants are not practically examined as in Liverpool, Berlin, and other cities. At present an applicant must produce a certificate from two persons to the effect that they believe him to be a skilful driver, and three sergeants of police are required to report as to the value of this certificate, and must be able to say that the persons certifying *state* that they have had frequent opportunities of observing the applicant's capabilities as a driver. It is obvious that under this system it is easy for a man with little or no knowledge of driving to obtain a licence to act as driver. Many drivers who gave evidence before the Committee put the proportion of drivers who had no previous experience of horses, harness, or driving as high as 50 per cent. of the whole number. It is fair to state, on the other hand, that, on an average, about one complaint only in the course of a year is received by the licensing authority from the public of a driver's unfitness to drive, and that the return of accidents prepared after the late strike in the cab trade proves, so far as it proves anything, that cabs are not responsible for the majority of street accidents.

The results that, in our opinion, might be expected from the imposition of a driving test would be, as regards the public, to increase the safety and efficiency of the service, and, as regards the driver, to give his trade more of the character of a skilled profession than it possesses at present. The question also is one that has an important bearing on the question of limitation. Such a test would be required only in the issue of *fresh* licences which at present average 700 a year, or 14 a week among all the divisions of the police district.

(*d.*) The limit of age for drivers is fixed by Statute at 16, but we find that in practice licences are never granted to persons under the age of 17, and to persons under 21 only when the applicant has been guaranteed employment by some proprietor. The drivers themselves appear to be generally desirous that the limit should be raised to 21.

The evil, if it exists, must of necessity be small. The juvenile drivers licensed in 1893 numbered 131 only, and of these 60, it is supposed, drive only in the suburbs.

It will be seen that in the opinion of the Assistant Commissioner of Police the limit should be fixed at 18, the minimum adopted in most of the provincial and foreign cities of which we have information, and that Sir E. Bradford sees no objection to its being fixed at 21. In any case a saving should be made for the present holders of juvenile licences.

(*e.*) The question of the renewal of licences to men who have been convicted of offences, and to men who have failed to use their licences, was repeatedly brought before the Committee.

We think that this is a matter which should receive the earnest consideration of the licensing authority. To license men who have proved themselves, by conviction of the more serious offences, to be unfit for the work, is to discredit the whole class. At the same time we feel that much must be left to the discretion of the Commissioner, and that it is impossible to fix either a minimum number of offences, or the degree of seriousness of offence, which should disqualify for a renewal.

The increased stringency in this respect which we consider desirable will doubtless tend to improve the conditions of the trade, by reducing the number of drivers and raising the standard of character, and we think this end might be further secured by the elimination of those whom the drivers call "Loafers" or "Butterfly-loafers"—

i.e., men who have no desire to work regularly, and have not the same incentives to good conduct as the regular drivers. We are not, however, prepared to say that the man who drives for some private employer in London or elsewhere, or works partly at another trade, and, during a period of slackness in that trade or in the busy season when the demand for drivers is greater, drives a cab, should necessarily be refused a licence. 4663-9.

We are further of opinion that the licensing authority should discourage the holding of two licences by the same man for different purposes.

(*f.*) The question of the limitation of the number of cabs or drivers or both, derives importance from the prominence given to it by the drivers among the measures which they urge for the improvement of the trade.

Cabs.—We find that the principle of limitation is adopted in several English cities and boroughs, and we have had evidence as to Leeds from the Chief Constable. The difference of circumstances, however, is so great that the results of the trial there can be in no measure a guide to the probable results of adopting it in London.

Limitation of the number of cabs is recommended on two distinct grounds, viz., the safety of the public, who it is alleged are endangered by the great number of cabs passing in the streets; and the unfairness of admitting applicants without restriction of number into a trade in which the selling-price to the public is fixed by law.

As regards the danger to the public, we find that the general opinion, so far as we have been able to ascertain it, is that in many districts at certain times of the day more cabs than are actually required are to be found on the streets, those districts being the places, such as the City and Strand, where, and those times the hours when, fares are most numerous. It is also the case that while the number of cabs has increased in the last 20 years, the "business radius" as it is termed by the cabmen, has shrunk through the competition of railways and omnibuses to one, roughly speaking, of $2\frac{1}{2}$ miles measured from Charing Cross.

Without entering into the economic reasons put forward as justifying in this special case the creation of a monopoly (for an arbitrary limitation of cabs by numbers means the creation of a cab proprietors' monopoly, the good will of which could be sold), we apprehend that the evils which limitation by number would introduce would more than balance the good which it might do. Among other results that may be expected, would be a decline in the quality of the cab consequent on the absence of the present keen competition among proprietors, and, with the decline, a falling off in the receipts of the trade. Nor is it to be expected that the cabs which at present chiefly ply in the outer districts would refrain from seeking a share of the increased earnings in the central district, which it is supposed that a system of limitation would ensure.

Drivers.—The limitation of the number of drivers is a question which is independent of the limitation of the number of cabs, and the propriety of fixing a proportion between the number of cabs and the number of drivers is urged by the drivers, whether a limitation of cabs is adopted or not.

It has been urged by those who are in favour of a limitation of the number of drivers that the conditions of employment of cabmen are strictly regulated by law and differ in very many important respects from those existing in trades where contract as well as competition is free, and that where the law limits and regulates contract it is fair also somewhat to limit and regulate competition.

We are prepared to admit that there is weight in this contention, and think it would be desirable that, so far as practicable, the drivers' reasonable prospects of regular employment should not be interfered with by a sudden influx of new-comers. On this point we would refer to our recommendations under (*e.*).

It is allowed that a certain excess of the number of drivers over that of cabs is required both by the habits of the London driver and by the contingencies of accident or sickness.. With the Improved Cab Company, the proportion is 23 drivers to every 19 cabs, that is a ratio of 12·2 to 10, while the proportion existing between the whole number of drivers and the whole number of cabs licensed is 13·6 to 10.

We think it probable, though only exact knowledge of the necessities of the trade could enable us to state it with certainty, that more drivers are licensed every year than are actually required, and that the proportion found necessary by the Improved Cab Company would be sufficient.

While agreeing, however, that a reduction in the number of cabs and drivers is desirable, we are unable to recommend any such arbitrary limitation as is urged by the drivers. We confidently expect that the recommendations which we make under

other heads, principally the increase of stringency in the licensing of cabs and drivers, will remove the chief evils of which the drivers reasonably complain, and tend to increase business.

II.—The Amount and Disposal of the Cab Plate Revenue.

It was the intention of Parliament, and it appears to us to be right in principle, that the expenses of administering the Cab Acts should fall upon the cabs, and not on the community in general. The question therefore of the amount of the licensing fees can only be properly considered in connexion with that of their disposal.

We may here state however that complaint has been made of the wheel tax of 15*s.* which proprietors are required to pay to the Inland Revenue for each vehicle, in addition to the licensing fee paid to the police. We believe that it was not the intention of the Government that hackney carriages should be subject to this tax, and it will be seen that we recommend its abolition so far as they are concerned.

The question of the disposal of the revenue involves several difficulties; one of these arises from the fact that we are not in a position fully to estimate the additional cost which will follow from the increase in the number of inspectors and other improvements that we recommend.

We are of opinion, that in future the accounts of the Cab Fund should be kept distinct from those of the Metropolitan Police Fund, and that the revenue collected and carried to the accounts of the Cab Fund should be no more than sufficient to cover the cost of the service.

A statement was prepared for us by the Receiver for the Metropolitan Police, App. II. showing the approximate amount received and expended by the Public Carriage Department at Scotland Yard on account of cabs during the five years ended the 31st March 1894. It appears to us that the 26,670*l.* charged in this statement for the year 1893–4, and estimated as the cost of the police employed on standings, is a 8015–55. sum so large that it requires careful consideration. We entertain some doubts whether in principle any part of this sum is properly chargeable to the cab revenue; if any sum at all is charged it should, in our opinion, certainly not exceed the extra expense, which can fairly be deemed to have fallen on the police force by reason of any duties in the streets specially relating to cabs and not forming a part of the ordinary duties of a constable which they have been called on to perform.

With regard to the other items appearing in the Receiver's statement, it appears to 8076–8. us that no part of the cost of the Lost Property Branch should be set against the cab revenue; the branch is entirely maintained for the convenience of the owners of lost articles, on whom therefore it appears right that the charge should fall.

It may be found in future that the cab-plate fee helps to yield a revenue in excess of expenditure, and if that should be the case we are of opinion that it should be reduced. In any case the driver's fee, which is admittedly small, seems to us to require no alteration.

It is not, of course, to be expected that the cab-plate fee can be so fixed as to ensure that the revenue arising from it shall exactly balance the expenditure incurred, and, if even after an alteration in its amount the cab revenue should be found at any time to show a surplus, the surplus should be applied to the improvement of the conditions of the trade. It could, we think, be used with most profit to both driver and proprietor in the provision of shelters and covered standings which will afford protection alike to driver, cab, and horse.

III.—Jurisdiction of the Police Courts in Complaints (*a*) against Cab Drivers (*b*) by Cab Drivers.

(*a.*) Apart from the complaints of unfair treatment and false evidence by the police, which the majority of the complainants admit to be decreasing evils, the chief objections which the drivers have urged against the present system are that, for offences which are at the most breaches of regulations, they are taken to a criminal court and compelled there to associate with criminals; and that the work of the police courts is at present so great that drivers have frequently to wait for several hours before their cases are taken, and that when they are taken it is safer to plead guilty than defend their case and perhaps incur a heavier fine for wasting the time of the court.

An impression that cab cases do not receive fair and patient treatment in the courts is undoubtedly general among drivers, and is shared by some of the proprietors who

gave evidence before us. That it is well founded we are not prepared to say, but we are in favour of any reasonable measure short of the provision of a special court that would tend to remove it. A special court we are not prepared to recommend, nor are we convinced that the work of the existing courts is so great as to require the transference of these cases elsewhere. We understand indeed that a committee which enquired last year into the courts of the Metropolis advised you that the Marlborough Street Court, at which nearly one half of the cab cases are taken, was not overworked, and that its district should be enlarged—an enlargement that, so far as we are aware, has not been carried out.

We have received little evidence to show that the alleged association with criminals forms any considerable grievance. The police court now is largely a court of civil jurisdiction, and it is the rule, we understand, that the more serious cases are usually disposed of in the morning, and the less serious cases, such as school board cases, cab cases, and private party summonses are taken in the afternoon. We think, however, that the distinction thus made might be still further emphasized. All cases which are not criminal in nature should as far as practicable be treated on separate days or at separate times, and, if it were found convenient, we do not see why all cab cases should not be taken at two or three courts only and on special days, thus following, in some degree, the practice of the city of London. This is a matter which can only, we conceive, be satisfactorily settled by arrangement between the Secretary of State and the Chief Magistrate.

We also hope that a more rigorous examination and the removal of the temptation to crawl and ply for hire in the streets by the re-arrangement of standings and the abolition of the privilege system, will largely diminish the number of cab cases coming before the courts. There is no desire on the part of the drivers themselves that the more serious offences, such as drunkenness, abusive and obscene language, assault and cruelty to horses, should be tried elsewhere than at the ordinary courts or under the ordinary conditions.

It must be remembered in this connexion that in many English boroughs and foreign cities the police or licensing authority have powers of punishment for breaches of regulations, by revocation or suspension of licence, which the Commissioner of Metropolitan Police does not possess.

It will be seen that we recommend that all first offences which are not of a serious character should be dealt with by a cautionary notice and not by summons; and that no summons should be granted unless a deposition or statement of facts, to be incorporated in or annexed to the summons, is put in by the inspector applying. It often happens that a driver is not aware of the particulars of the offence for which he is summoned until he hears the constable's statement in court several days after the occurrence, and so is seriously hampered in his attempt to defend himself.

(*b.*) In this connexion we have given careful consideration to the subject of "bilking."

In the course of our enquiry we found it necessary, when dealing with this question and hearing evidence upon it, to distinguish between the cases of (1) the man who, by disappearing, altogether evades payment of his fare, and to whom the term bilker is usually confined; (2) the man who, without attempting to escape, refuses to pay the fare or knowingly offers an insufficient amount; (3) the man who in all honesty disputes the amount of the fare, under the belief that the cabman has made a mistake or is wilfully overcharging.

Cases under (3) are naturally the most numerous and are easily disposed of by reference to a policeman. They need not further be considered by us.

Several instances of cases under (1) and (2) appear in the evidence given by the drivers before the Committee, and, though perhaps the loss *on the average* to the whole body of drivers is small, it is evident that in individual cases great hardship is occasionally caused, and we think that the drivers are right in demanding that the special circumstances under which they are compelled to conduct their trade should be met by special provisions.

In considering, however, the question of the proper remedy for this evil, it must be borne in mind that it is possible for cases to occur under both (1) and (2) in which no fraudulent intent is present.

For this reason and for the reason that such a power would become a weapon of extortion in the hands of unscrupulous drivers, we are opposed to the claim of the drivers that they should be given in these cases the power of summarily arresting the hirer, or at least of compelling him to accompany his driver to the nearest police station for the purpose of ascertaining his correct name and address. We would refer on this

point to a memorandum which has been prepared and handed in by Mr. Cunynghame and which is printed as an appendix to the report.

The other remedies that have been proposed, are as follows :—

It has been suggested that as a cabman is compelled by law to carry any hirer, he should have power to require the hirer to show that he has sufficient money to pay for the journey for which he has engaged the cab. This power would, of course, be rarely used by a driver, as its exercise would prejudice his chance of obtaining a gratuity over and above the amount of his fare at the end of the journey, but it might be found useful in cases where the driver suspects an intention on the part of the hirer to defraud.

Sir John Bridge and many witnesses have suggested that, in case of refusal to pay the fare or the full fare, the driver should have power to demand the name and address of the hirer, who, if he shall refuse to give his name and address or shall give a wrong name and address, shall be guilty of an offence punishable with a fine of 40*s.* recoverable summarily.

For the more effectual punishment of the detected "bilker" than is possible by a mere order of the court for the payment of the fare, compensation and costs as at present, it has been further suggested that it should be made an offence punishable by fine or imprisonment without option of a fine, in addition to payment of the fare, costs, and compensation, for a man either to engage a cab knowing that he had no means of paying the legal fare, or, having hired a cab, to attempt to defraud the cabman.

1768-9, 2039. Our attention was also called to the mode of recovery of fares. By the provisions of the Summary Jurisdiction Act 1879, a cab fare was made recoverable only as a civil debt, and the drivers complain—in our opinion justly—that the method of procedure for the recovery of civil debt, entailing, it may be, his attendance at the police court on four or five separate occasions, is too long and cumbrous to make it worth his while to institute proceedings for the recovery of his fare.

Reg. *v.* Kerswell (*Times Law Reports*, 31 Oct. 1894, p. 8). Sir J. Bridge has recommended as a remedy the re-enactment of the provisions of 1 & 2 Will. IV., cap. 22, section 41, which were repealed by the Summary Jurisdiction Act and which run as follows :—

"And it be enacted, that if any person shall refuse or omit to pay the driver of any hackney carriage the sum justly due to him for the hire of such hackney carriage, it shall be lawful for any Justice of the Peace upon complaint thereof made to him, to grant a summons, *or, if it shall appear necessary to him, a warrant*, for bringing before him or any other justice such defaulter and defender and, upon proof of the facts made upon oath before any such justice, to award reasonable satisfaction, ... and upon the refusal of any such defaulter or offender to pay or make such satisfaction it shall be lawful for such justice *to commit him to prison*, there to remain for any time not exceeding one calendar month unless the amount of such satisfaction shall be sooner paid ; and it shall also be lawful for such justice if he shall think fit to order such defaulter or offender to be kept to hard labour during such imprisonment."

The objections to the re-enactment will be found at the end of Mr. Cunynghame's memorandum. While we believe that in administering its provisions the magistrates would exercise their discretion in declining to commit to prison those whose inability to pay was not fraudulent, we conceive that the innovation—even in appearance—of making an exception to the process for recovery of debt is undesirable, and in all cases of fraud on the part of the hirer the driver will be able to institute proceedings under the provision suggested above by which the magistrate will have power to order payment of fare, costs, and compensation, as well as to punish the fraudulent hirer by fine or imprisonment for his fraud.

IV.—The Relations of Cab Owners and Drivers with the Railway Companies.

The question of the abolition of the "Privilege system" at railway stations, was one of the most important of those referred to us, and the evidence which we obtained in regard to it both from the opponents and from the advocates of the system is exceptionally full.

It is to be borne in mind that the existing system of "privilege" is an arrangement between the railway companies and cab proprietors, in which the driver has no voice.

The chief arguments urged against the system by the drivers are that—

(*a.*) An undue preference is given to "privileged" drivers, and friction between them and the "outside" drivers is the result.

(*b.*) The system does not secure for the stations the best horse, cab, or driver.

(*c.*) Congestion is caused in the central districts by privileged cabs which are hurrying back empty, after depositing a fare, to the station to which they are attached.

(*d.*) This immediate return of the driver, which is a necessary part of the system, causes a great waste of power.

(*e.*) The supply of privileged cabs not infrequently fails, and congestion is caused by street cabs waiting outside the stations where the system prevails in the hope of being called in or obtaining a fare from the station.

Doubts also have been thrown on the legality of the system, but they are such as can be settled only by the decision of a court of law. For the statutes and cases bearing on the question we may refer to the statement which we had the advantage of receiving from Sir Godfrey Lushington.

The system generally recommended by the drivers is something similar to that now in force at the Waterloo station of the London and South-Western Railway Company, where all cabs, provided they satisfy the company's inspectors as to quality and otherwise conform to the Rules laid down by the Company, are admitted on payment of one penny.

It will be useful to note a few of the conditions which the convenience of the public requires should be fulfilled at railway stations. In the first place, as the standing room for cabs at arrival platforms is necessarily small, and as passengers arriving with luggage are prevented from exercising much choice in the selection of a cab, it is essential that the cabs admitted to the station should be good in quality, and their drivers respectable and of good behaviour. Secondly, it is essential that a sufficient number should be forthcoming. Thirdly, it is desirable that, since mistakes as to luggage are frequently made on the arrival of trains, special facilities should be provided for their rectification.

We believe that the present privilege system does to a certain extent fulfil these conditions, and that under the open system, as it is exemplified at Waterloo, though a sufficient supply of cabs is provided, the quality of the cabs and the facilities for tracing lost luggage are not on the whole such as are provided by the privilege system. These indeed are admitted defects, but it has been argued that they are due not to anything inherent in the open system itself, but to the fact that at the present time it is in operation at a single station only.

We further find that in the cab trade generally the privilege system produces a feeling of irritation which it would be most desirable to remove; the general body of drivers complaining that, while they bring up the majority of the railway passengers to the station, they are not permitted to take passengers away. We believe that, in the increased strictness of inspection of cabs and of examination of drivers which we recommend, the railway companies will find sufficient guarantees in regard to the two points which we admit are not at present sufficiently ensured by the Waterloo system.

It must be remembered that evidence was given on behalf of some of the railway companies which showed that in their judgment the structural conditions of certain London station yards make the adoption of an open system physically difficult.

We do not recommend, however, that for the purpose of introducing an open system the railway stations should, as some desire, be declared to be public places. If ultimately legislation should be found necessary for the purpose, we advise that it should take the form of requiring the railway companies to demand no qualification in cabs or drivers other than that of their fitness and respectability, and of obliging them to make regulations, subject to approval, for the rejection of cabs and drivers unfit for admission; for the preservation of order on the railway premises; and for the exclusion, subject to appeal to the Commissioner or to a magistrate, of any cabman who has misconducted himself on a previous occasion. The expenses of carrying out such regulations would justly be met by the imposition of an entrance toll; the amount of that toll we recommend should be 1*d.* as at present at Waterloo, a sum which we believe the drivers are content to pay. Any surplus remaining after such expenses have been met should be thrown into a fund for the benefit of the general body of cabmen, which would supplement any sums that might be devoted from the cab revenue to the erection of covered standings and shelters. We feel, however, that, though it has been shown that at Waterloo the open system provides a sufficient supply of cabs, at stations less advantageously situated it may produce a different result; and we would recommend that power should be reserved to the Secretary of State, on proof that the supply at any station is so frequently inadequate as to be the cause of serious inconvenience to passengers, to permit exceptional arrangements for a regular supply of cabs being made with *drivers*, as is now done by the London and South-Western Railway Company in their south station at Waterloo. It is conceivable that such arrangements might be found necessary at some of the suburban stations.

A general demand has been made by the drivers that the private railway omnibus should be licensed. We do not find, however, that there are sufficient grounds why a private omnibus should not be hired like a fly or other private carriage to take passengers to and from stations, provided it does not ply for hire. If, as the drivers complain, it does ply for hire, the existing law, which makes such plying by an unlicensed vehicle illegal, is sufficient. The real remedy therefore is strictness on the part of the railway companies in seeing that no omnibus is allowed to stand at the platform, which has not been ordered beforehand by a passenger.

V.—The Tariff of Prices charged to the Public for the Hire of Cabs.

We do not find that there is any general desire for an alteration of the present tariff.

The sixpenny fare for a distance of a mile or under is not forbidden by the existing law, and we understand that it is taken by a certain number of drivers. The following suggestions have been made in regard to it:—

(*a.*) That there should be some method by which a driver should be able to advertise his readiness to take a sixpenny fare. It should be optional with the driver to display such advertisement. and he should be able to withdraw it when he chooses.

3325, 4452–5. (*b.*) That sixpence a mile should be made a compulsory fare during the business hours of the day, say from 10 a.m. to 6 p.m. or from 8 a.m. to 10 p.m.

(*c.*) That sixpenny fares should be introduced in the congested districts within different radii, *e.g.*, a mile of Ludgate Circus, a mile of Charing Cross, &c.

(*d.*) That the law as it existed before the Act of 1869 should be restored; that is that the minimum fare for a cab taken off a stand should be 1*s.*, for a cab taken from the street, "crawling," 6*d.*

The opinions of the drivers as to the advantage to them of a sixpenny fare are very much divided, and in face of this division we do not recommend that it should be made compulsory. Evidence moreover has been given before us that, in the city, where most short fares were once obtained, communication by the telephone has largely taken the place of the personal interview.

We think, however, that the first suggestion is one which is well worthy of the consideration of drivers and proprietors, to whom it must be left. Any symbol adopted should be one authorised by the Commissioner of Police. The fourth suggestion, which on first sight might appear to be a means of checking the practice of "crawling," would we believe in the end encourage it.

Connected closely with questions affecting the tariff is that of the adoption of a taxameter. In its simplest form, a taxameter is a distance-registering machine; such a machine would assist the passenger in the calculation of his fare, but should not be accepted as conclusive evidence of the amount to be paid. As it is the simplest, so it appears to be the least liable to be thrown out of order, and therefore on the whole the most workable.

Other machines have been produced before us, which aim, not only at securing the passenger from overcharge by indicating the exact amount to be paid, but also, by enabling the owner to keep a check on the earnings of the driver, at permitting him to pay the driver a weekly wage. We have had evidence that one such machine is at work and with satisfactory results in several continental cities.

We are not prepared, however, to recommend any particular machine, but the advantages that would be attained by an instrument on which reliance could be placed appear so undeniable that we think the Commissioner might well invite the submission of machines for consideration by a practical Committee including among others representatives both of proprietors and drivers.

Suggestions have been made for the division of cabs into two classes with different tariffs, as in some of the continental systems of which we have had reports. The evidence before us points to the existence already of a practical division which is clearly marked as between proprietor and driver, and which generally receives recognition from the hirer. We are of opinion that no more formal classification is practicable.

1801–3, 1839–40. Sir John Bridge has recommended the repeal of 1 & 2 Will. IV. cap. 22, sec. 43, which makes any agreement between driver and hirer for more than the legal fare not binding on the hirer. In this recommendation we concur.

The question of the extension of the present four mile radius is one of the most difficult that has engaged the attention of the Committee. On no subject has more conflicting evidence been given than on this. One reason of this conflict of evidence has been that three separate interests have been represented before the Committee; the

drivers who work in the central districts; the drivers who work in the suburbs just outside the present radius; and the public. To the last, an extension of the radius would be an advantage, not only because passengers would be able to travel the additional distance at the "inside" rate of 6*d.* a mile, but, also, because the present anomaly which requires persons entering the radius from outside to pay at the rate of 1*s.* a mile throughout the journey, would cease to effect the large number of persons who are at present outside the radius but would be included in any extension.

The drivers in the central districts may be said to be generally indifferent on the question, but not on the whole ill-disposed towards extension. It appears from their evidence that they are seldom taken beyond the four mile radius—"not once in three months" said one of the witnesses—and that they would have no objection to the extension of the radius to places, such as Hammersmith, where on depositing a fare they would have a fair chance of obtaining another.

The suburban drivers are opposed to any extension; but we believe that it will do no serious injury to their interests. It is reasonable, in the first place, to suppose that a great number of persons who are now outside the radius, but will be included by the extension, will use cabs for journeys into London when they can hire them at one half the present rate. Secondly, for the short fares in their immediate neighbourhood the minimum fare will still be 1*s.* Thirdly, for the journeys beyond the radius they will still receive 1*s.* per mile as soon as they pass the boundary.

Assuming, then, that an extension is desirable, the question remains as to its nature and limit. On the whole, we concur with the London County Council that the radius should be that of the Administrative County of London, but minus the Plumstead district.

VI.—Cab Stands and Shelters in the Streets.

We find that the present disposition of the standings is unsatisfactory and a strong incentive to the breach of the regulations as to plying.

We think that it is desirable that more shelters should be provided. While gratefully acknowledging the services rendered to the cab-trade generally by the Cabmen's Shelter Fund, we also think that, in view of our recommendation as to the increase in number and of the desirability that the accommodation at present provided should be improved, the time has now arrived when the shelters can with advantage be taken over by some public authority. Our opinion as to the desirability of defraying out of the cab revenue a portion at least of the cost of their erection and maintenance has been already expressed.

VII.—The General Conduct of the Service.

(*a.*) *Liability of Cab Proprietors.*

Two provisions of the present law press heavily on cab proprietors. These are the obligation to produce before a magistrate a driver who has been guilty of an offence, and the liability to pay any fine that may be imposed; and the unlimited liability for luggage that may be lost from a cab.

Both proprietors and drivers are agreed in wishing the abolition of the power to summon the proprietor. The proprietors wish it because they have to appear in person or send a representative; the drivers, because some proprietors are in the habit of not giving the driver the summons until the morning on which he has to appear. The enactment is doubtless an anomalous one; the reasons that may be urged for its continuance are set out in a note from Sir J. Bridge, which is printed on page 262 of the evidence. The liability of the proprietor to pay the fine appears to us to be less defensible, and we are informed that in fact the fine is never levied on the proprietor.

The claim of the proprietors that a limit should be placed on their liability for lost luggage—as is the case with carriers, inn-keepers, and railway companies—when no previous declaration of the value of the luggage has been made by the owner, is in our opinion one which cannot be refused.

(b.) Consolidation of Hackney Carriage Acts.

9210-21. On the question of the consolidation of the existing statutes we desire to refer to the evidence given before us by Sir Godfrey Lushington. Many sections are now admittedly obsolete, and some of the offences punishable under the Acts are declared by Sir John Bridge to be unknown in practice. One useful result of consolidation would be the simplification of the hand-book which is issued to the drivers.

(c.) Transfer of Control.

Two of our members, Mr. Burns and Mr. Lough, have urged throughout the proceedings that, having regard to the history of the cab service during the past 25 years and the relations to it of the Home Office and Scotland Yard, the administration of that service should be transferred to the London County Council, and, although concurring in the recommendations of the report so far as they go, they are still of that opinion. The other members of the committee desire to reserve their judgment upon this point, which was not included by you in the terms of our reference and on which we took no evidence.

RECOMMENDATIONS.

1. The staff of inspectors and assisting constables should be increased. There should be at least one to each police division, and one of the inspectors should act as a chief inspector controlling and supervising the others.

2. Inspectors should be chosen from among men having technical knowledge of the construction of vehicles or of veterinary matters.

3. A register of the cab-yards in each district should be kept by the inspector of the district, who should inspect from time to time the horses stabled there. It is desirable that some safer plan of watering horses than the present system of street troughs should be introduced. We recommend that powers should be obtained for erecting a stand pipe at every cabstand.

4. Sub-letting should be forbidden.

5. The limit of age for drivers should be raised from 16 to 21.

6. Applicants for drivers' licences should be practically examined in their knowledge of driving.

7. The licence issued to a driver should contain spaces in which the proprietor should be required to insert (1) the periods of more than a week during which the holder has not been at work (2) the cause of leaving. In renewing licences, the licensing authority should insert in the licence form the graver endorsements of the two previous years.

8. Failure to use a licence for any considerable part of the year, and conviction of a serious offence should, except in special circumstances or unless the magistrate otherwise directs, debar the holder from obtaining a renewal. In all such cases there should be an appeal to the Commissioner of Police. The practice called "chairmarking" should be discontinued.

3162-85. 9. The carriage tax of 15*s.*, should be abolished.

10. First offences, not of a serious character, should be dealt with by cautionary notices and not by summonses. No summons should be granted unless a deposition of facts, to be incorporated in or annexed to it, is handed in by the inspector making the application. So far as practicable the cases should be heard at an hour and place convenient to the men.

11. An Act should be passed embodying the principal proposals made in Mr. Cunynghame's memorandum on "bilking."

12. The "privilege" system should be abolished at all railway stations where it is in force, but the railway companies should be required to make regulations, subject to approval, for the admission and supervision of cabs. Power should be reserved to the Secretary of State to permit exceptional arrangements in the interest of the travelling public.

13. The radius should be that of the Administrative County of London, minus Plumstead. Drivers should not be compellable after a certain hour in the evening to go any considerable distance except in the direction of their own homes. For this purpose the metropolitan area should be divided into districts, and the cabs of each district distinguished by a lamp of a particular colour.

14. A number of small standings, for two or three cabs only, should be placed at various points in crowded districts and thoroughfares; such small standings should be supplied from the larger standings in the neighbourhood. It is advisable that the larger standings should be covered, and be provided with a shelter.

15. Proprietors should be relieved of their liability to pay the fines of their drivers, or to produce drivers in court, except for offences wholly or partially attributable to the proprietors.

16. The proprietors' liability for lost luggage should be limited to 10*l*., except where a declaration has been made by the owner.

17. As legislation will be necessary for carrying into effect some, at least, of our recommendations, should they be adopted, we consider it most desirable that the opportunity should be taken of consolidating the statutes and carrying out the changes recommended by Sir John Bridge as regards the wearing of the badge, &c. The consolidating Act should empower the Secretary of State to decide from time to time by regulations under his hand both what shall be deemed to be offences and what shall be the penalties for the offences. Many of our recommendations, however, can be carried into effect immediately under the powers conferred on the Secretary of State by the present law. It is desirable that this, whenever practicable, should be done, not only in order that the improvements which we anticipate may be produced without delay, but also because the experience of the modifications thus introduced will be valuable when the provisions of the consolidating Act are framed.

In conclusion we desire to call your attention to the valuable services rendered by our secretary, Mr. Delevingne, whose ability, assiduity and obliging conduct deserve our warmest acknowledgment.

We have the honour to be,
Sir,
Your obedient servants,

GEORGE W. E. RUSSELL.
HENRY CUNYNGHAME.
FRANCIS J. S. HOPWOOD.
E. H. BAYLEY.
JOHN BURNS.
THOS. LOUGH.
C. A. WHITMORE (subject to my dissent from recommendation No. 12).

MALCOLM DELEVINGNE (Secretary),
Whitehall, 2nd January 1895.

I cannot concur in recommendation No. 12 that "the privilege system should be abolished at all railway stations where it is in force." We have ourselves, on page 7 of our report, stated several of the reasons which render the adoption of the "open" system at all railway stations inadvisable, and, in many cases, impossible. And the very words which follow upon this recommendation, "but the railway companies should be required to make regulations, subject to approval, for the admission and supervision of cabs," show that in fact my colleagues are convinced that a purely "open" system is impracticable, and that in some form the Companies must be enabled to retain the power of restricting the free admission of cabs into their stations. In my judgment it is to some extent the use of the word "privilege" which just after the cab strike, when we took the evidence of cab-drivers, accounted for their feeling against the system so named. As against their view and wishes must be set the strong opinions of all the railway managers, except Mr. Scotter, who gave evidence in favour of a system of "privilege." The general manager of the London, Brighton, and South Coast Railway stated that, if this system were abolished, his Company would be forced to keep their own cabs. And it is noteworthy that while Mr. Scotter thought that the "open" system worked well at Waterloo, his Company has since 1891 adopted a "privilege system" at the South Station. It had been found that the structural position of this station and its yard, and the general conditions of the traffic to and from it, made the "open" system work badly. I think it is clear that similar causes would produce the same inconvenient consequences from an adoption of the "open" system at certain other railway stations in London. It should also be remembered that we

have heard no evidence at all from the travelling public on the relative merits of a "privilege" and an "open" system. The railway managers assert that they have adopted, and desire to retain, the "privilege" system in the interests and for the protection of the travelling public. No evidence has been given on behalf of the drivers to show that it does not work well for the public. I do not, therefore, think that this recommendation is justified by the evidence; and while I doubt whether the sweeping change proposed would benefit the cab-drivers as a whole, I cannot help feeling that it might be injurious to the public.

C. A. WHITMORE.

I concur in the views of Mr. Whitmore. I am further of opinion that, if the present system be abolished, the existing "privileged" drivers who are a large, steady and respectable class of men, will be thrown out of employment as the railway companies (as stated in evidence) will employ their own vehicles driven by their own servants.

E. H. BAYLEY.

APPENDIX I.

Historical Sketch of the Cab Service.

(Reprinted from the Evidence of Sir G. Lushington.)

The history of the cab trade furnishes a few items which, though of no practical importance, yet perhaps may be not without interest to the Committee.

Authority. First of all, as to the development or evolution of the authority administering the Acts, there have been a series of changes. The first authority was a Board of Special Commissioners, who combined in themselves a multiplicity of functions. They issued licences and collected revenue; they made byelaws with the consent of the Lord Chancellor and the Lord Chief Justice to regulate the conduct of the proprietors and the trade generally, and also they were a court which adjudicated on all complaints and offences against cab law (9 Anne, chapter 23, sections 12, 13, 16.) The next step which was taken was in 1831, a long time afterwards, by which the licensing duties were transferred to the Commissioners of Stamps (1 and 2 William IV., chapter 22, section 62.) That in itself, I suppose, was a mere formal matter, but an important change was that the adjudication of complaints and offences was now transferred to a metropolitan police magistrate. Then a few years afterwards, in 1838, the licensing work was transferred to a Registrar of public carriages to be appointed by the Secretary of State. (1 and 2 Victoria, chapter 79, section 4.) In 1843 we have the first mention of the Metropolitan Police; the Commissioner is brought in, but only to appoint the standings. In 1847 the duties were transferred from the Commissioners of Stamps to the Commissioners of Excise. (10 and 11 Victoria, chapter 42.) That I presume was formal only. In 1850 all the Registrar's powers were transferred to the Commissioner of Metropolitan Police, acting under the authority of the Secretary of State. (13 Victoria, chapter 7.) In 1867 was passed the Metropolitan Streets Act, which assigned certain functions to the Secretary of State (30 and 31 Victoria, chapter 134), and then in 1869, by the Metropolitan Public Carriage Act (32 and 33 Victoria, chapter 115), the tax—I do not say, was removed—but was very greatly diminished, and the system of issuing licences for fees was introduced. At the same time the whole trade was placed under the Secretary of State, and the Commissioner of Police acting in accordance with his authority.

Area. To pass to the area which was the subject of legislation. This originally was the area covered by the cities of London and Westminster, and their suburbs and parishes within the weekly bills of mortality. (9 Anne, chapter 23, section 2.) The next change was in 1831 (1 and 2 William IV., chapter 22, section 4), when the area was made five miles from the General Post Office; in 1838 (1 and 2 Victoria, chapter 79, section 1) it was enlarged to 10 miles, and in 1843 to the present area consisting of the City and Metropolitan Police District, which, as you are aware, is larger than the county of London.

Duties. Then, in respect of duties. Originally these duties were made entirely for the purposes of revenue. The first Act, which was passed in 1710, was a Ways and Means Act, "May it please your most Excellent Majesty we, your Majestie's (most dutiful "and loyal) subjects the Commons of Great Britain in Parliament assembled, being "desirous of raising the necessary supplies for enabling your Majesty to carry on the "present war and for other your Majestie's (frequent) occasions have therefore given and granted, &c." But in 1869 this system was altered, and though there still is a small tax of 15*s*., the rest of the duties have disappeared, and instead licence fees have been introduced.

Limitation. Lastly on the subject of limitation. Originally the number of hackney carriages was strictly limited, and it so continued from 1710 to 1833, when all limitation was removed, and the trade thrown entirely open. (1 and 2 William IV., chapter 22, section 8.) The number of drivers never has been limited; the drivers were not licensed until 1838. (1 and 2 Victoria, chapter 79, section 4.)

APPENDIX II.

Memorandum on the Prevention of Bilking.

(By H. Cunynghame, Esq.)

The chief cases in which a person can be arrested in the Metropolis without a warrant are :—

1. Where the person arrested has committed treason or felony, (a mere reasonable ground of suspicion is sufficient for a constable, but not for a private person).
2. To prevent the commission *by night* of any indictable offence whether treason or felony or a misdemeanour.
3. To prevent a riot or violent breach of the peace.
4. Where a man *in view of a constable* obstructs the public highways in the cases mentioned in 14 and 15 Vic. c. 19, sec. 11.
5. For obstructing or assaulting a constable.
6. Under the Intoxicating Liquors Acts ; for being drunk and disorderly.

It will be noticed here that powers of arrest for wrongfully depriving another of property are only given where such deprivations amount to felony.

Hence it would be very illogical to enable a cabman to arrest a man even for the worst case of bilking, without a warrant, unless such bilking were made a felony.

But to make bilking a felony would be a grave innovation.

Felonies connected with the deprivation of property are larceny, bankrupt absconding with property of his creditors, forgery, embezzlement, and burglary. But obtaining goods under false pretences, uttering false coin, cheating, fraud by trustees, perjury falsely marking merchandise, &c., are only misdemeanours, and for such no one can be arrested without warrant. It may be argued that it is worse for a man to bilk a cabman of his fare than it is for a starving man to steal a loaf, and this is true ; but that is an argument rather for making petty thefts mere misdemeanours than for making everything which morally is as bad as a theft a felony. The policy of our law has for nearly half a century been to discourage the creation of new felonies.

It might be urged that it would be wise to give a power of arrest without warrant in all cases of misdemeanour as well as of felony. The answer to this is, that a wholesale grant of the power of arrest without warrant places a dangerous power in the hands of the police and of private citizens and is not desirable.

From this it must be concluded that, if bilking can be reasonably checked by the use of less stringent powers, it would not be desirable to depart so widely from the general principles of our law as to permit cabmen to arrest without warrant those who cheat them.

Before making any suggestions, however, I would call attention to the powers of railway, omnibus, and tramway companies in like circumstances.

The servant of a railway company has power to arrest any one who refuses to pay his fare and to give his name and address. The old power of arrest whether he gave his name and address or no has been abolished. 8 & 9 Vict. c. 20, s. 103, and 52 & 53 Vict. c. 57.

Omnibus officials have no power of arresting passengers who bilk them.

Tramway company officials have power to arrest any one who attempts to avoid payments of his fare, 33 & 34 Vict. c. 70, s. 52. This is a power which never ought to have been given to them. It is liable to the grossest abuse by blackmailing (*see e.g.* the case of Rayner *v.* South London Tramways Company reported in the "Times" of June 13th, 1893).

Here, however, since the Companies are liable for the acts of their servants within the scope of their employment, a person who is improperly arrested or dragged through the streets by the servant of a rail or tram company has his remedy against the company, and in the case just mentioned the prosecutrix recovered 150*l*. A cabman, on the other hand, is not the servant of the cab-owner, for the purpose of arresting persons who do not pay their fare, nor, even if he had the power of arrest, would the cab-owner be liable for an abuse of it, and it is not to be expected that, as a general rule, cabdrivers would be found to be in possession of means sufficient to meet substantial claims for damages. A person, therefore, who brought an action against the cabman for illegal arrest and won it might not only fail to obtain compensation but would very possibly also have to pay his own costs. To attempt to remedy this by making it

a penal offence for a cabman wrongfully to arrest a person would be altogether foreign to the whole spirit of our law, which never makes it an *offence* for an individual mistakenly or maliciously to put the criminal law in force.

The following acts of cheating are punishable on summary conviction, but no power of arrest without warrant exists with regard to them :—Adulteration of food, fraudulent imitations of copyright, cheating friendly societies, frauds on gas and water companies, selling margarine as butter, &c. &c. If power of arrest were given whenever a person had obtained something knowing he could not pay for it, a tremendous engine of oppression would be brought into existence. Landlords would arrest tenants who did not pay the rent, shopkeepers customers who did not pay for goods, and so on. It is not a complete answer to say that the cabman is bound to drive the passenger. A public-house keeper is bound by law to supply all who ask with refreshment provided they are orderly and sober, but is a publican to be allowed to arrest a man without warrant for not paying for a pot of beer ?

Ample protection will, in my opinion, be given to the cabman if it be provided :—

1. That any one who having hired or used a cab does not pay to the driver the fare legally payable, and who either refuses to give to the driver on demand an address where he may be found, or gives a false address with an intent to deceive, shall be guilty of an offence for which he may on information be summarily punished by fine or imprisonment.

2. That cabmen may require a hirer to produce and show him sufficient money to pay for the journey he is directed to go, and in default may refuse to take the hirer. If required to wait he may demand a reasonable sum to be paid him, sufficient to cover the fare already earned and the sum due for the period he is required to wait; and he should not be legally compellable to wait longer than that period,

3. That in case the hirer neglects or refuses to pay the legal fare, the fare, together with costs and compensation for loss of time, may be recovered by the cabman as a civil debt summarily.

4. That any person who (a) hires, or having hired uses, a cab knowing or having reason to believe that he cannot pay the fare, or (b) hires, or having hired uses, a cab with intent fraudulently to evade payment of the fare or any part thereof, or (c) having hired or used a cab fraudulently endeavours to evade payment of the fare or any part thereof, may be sentenced to pay, in addition to the fare, costs, and compensation, a fine of 5*l*., or to imprisonment with or without the option of a fine.

The special power of a hirer to require a cabman to drive him to a police station should I think be abolished. He can direct him to drive there under the other provisions provided he has sufficient money to produce to the cabman.

It is believed that all the protection possible would be given to a cabman by these proposals. It is to be noted that the non-payment without fraud of a legal fare subjects the hirer to have the fare, costs, and expenses recovered summarily as a civil debt, that is by distress, and then, if he has means and refuses to pay, to imprisonment. But if the hirer has no means and knew that he had not when he took the cab, he may then be imprisoned and fined under 4. It would be objectionable to punish a person who cannot pay without any fraud. For in this case the fare is only a civil debt and to make non-payment of a legal debt without fraud a crime would be unique in English law. To give power of arrest without warrant for mere non-payment of a civil debt would also give rise to a demand by the employers for power to arrest and imprison cabmen who had the money to pay but did not pay the cab proprietor, and would be introducing a dangerous principle into the law and one likely to be abused to the injury of the cab trade in general.

MINUTES OF EVIDENCE

TAKEN BEFORE THE

COMMITTEE OF INQUIRY

APPOINTED BY

THE HOME SECRETARY,

WITH

APPENDICES.

At the Home Office, Whitehall.

FIRST DAY.

Friday, 15th June 1894.

PRESENT:

MR. GEORGE RUSSELL, M.P. (CHAIRMAN, PRESIDING).

Mr. HENRY CUNYNGHAME.
Mr. F. J. S. HOPWOOD, C.M.G.
Mr. E. H. BAYLEY, M.P.
Mr. JOHN BURNS, M.P.
Mr. T. LOUGH, M.P.
Mr. C. A. WHITMORE, M.P.

Mr. MALCOLM DELEVINGNE, *Secretary.*

Mr. ALEXANDER CARMICHAEL BRUCE, Assistant-Commissioner of the Metropolitan Police, called in and examined.

Mr. A. C. Bruce.

15 June 1894.

1. (*Chairman.*) You are Assistant-Commissioner of Police?—I am.

2. And the public carriage branch is under your immediate control?—Yes.

3. I understand that you propose to leave to some of your subordinates the questions of detail, and rather to give us your general views in relation to the industry?—If you please.

4. Will you tell us, in the first place, what are the general rules or laws under which you conduct your operations?—I conduct them under the provisions of various Acts of Parliament, the Secretary of State's Order of 1871, and regulations of the Commissioner of Police.

5. Do you say several Acts of Parliament? I mean, have you a series going back a long time?—Oh, yes; there are about thirty Acts of Parliament altogether bearing upon the licensing.

6 And the former ones were not repealed by the Act of 1869?—No, except in so far as they were contrary to it.

7. I mean the Act of 1869 is not a complete code in itself?—Oh, no, it did not expressly repeal them.

8. It is not a complete code? I mean it would not cover the whole ground as it stood alone?—No, it does not cover the whole ground.

9. And under the powers of that Act there is an Order of the Secretary of State?—There is.

10. That, I suppose, is what guides you in your administration?—Yes.

11. Do these Acts and these regulations, as they stand at present, inflict any hardship on cab drivers as far as you know? It is a very general question. I mean, do you think they are in any sense or in any degree hostile to the interests and rights of the drivers?—No; I should say not.

12. Then, in addition to the powers conferred by that Act, and the powers conferred by the Secretary of State's Order, you have some regulations of your own Department, have you not?—Yes.

13. Issued, I suppose, from time to time, by the Commissioner?—By the Commissioner.

14. And, of course, so arranged as not to clash with the Orders of the Secretary of State?—Clearly.

15. Carrying the regulations, I suppose, more minutely into detail?—Yes.

Mr. A. C. Bruce.

15 June 1894.

16. All these regulations are varied and revoked from time to time?—From time to time, as occasion may require.

17–20. Has a copy of the regulations been handed in?—I can hand in copies, sir, of these regulations. They are contained in the general orders.

21. We come to the practical application of these rules; and the first point is, as to how licences are granted in the first instance; what is the inspection that is practised before a licence is given?—The proprietor takes his cab to the inspector of public carriages at a convenient station which is set down, of which he has notice. The inspector examines that carriage according to the regulation of the Commissioner, and it is either fit or unfit. If it is fit, he sends a certificate to that effect to Scotland Yard, and the licence is then sent to the proprietor.

22. (*Mr. Whitmore.*) Are there any defined descriptions of what constitutes fitness?—Oh, yes; there are regulations made by the Commissioner for the guidance of the hackney carriage inspector.

23. (*Chairman.*) Then a fee is charged for the licence?—2*l.*

24. And what becomes of that?—That goes to the Receiver.

25. And that is set forth, I believe, in the table of charges which you will either hand in or have handed in. I mean you have some table of charges made in connexion with cabs, or you can supply such at any rate?—Oh, yes; that is according to the Secretary of State's Order.

26. That is part of the Order?—That is part of the Order.

27. Then can you give either now, or on paper, a return of the number of licences granted, showing the rise from 1884 to 1888?—Yes, I have a return here.

28. These things which you have in black and white, on paper, it is not necessary to trouble you to go through, but I only want to get them handed in?—Yes, they have been handed in.

29. I am told that there was a rise from 1884 to 1888, and a decline from 1888 to 1893?—That is so.

30. And now, once the licence is given, is there any subsequent supervision or inspection of the cabs?—There is a general inspection and supervision by the hackney carriage inspectors themselves in their patrolling, when they are serving notices in yards, and so on. There is a supervision and inspection by police constables at the hackney carriage standings, and by the police in general, who are instructed to notice cabs and report if they see any unfit. And, in addition to that, I ought to say that there are night inspections every month.

31. (*Mr. Whitmore.*) What inspections?—The night inspections. Inspections by night, from nine o'clock to one, and occasional inspections beyond that even, surprise inspections.

32. (*Chairman.*) Then the result of these inspections is, I suppose, that a certain number of them are struck out of use as not being fit. They are reported?—Yes, they are reported; and they are then inspected by the hackney carriage inspector, and if found unfit a notice is served not to use till they are fit.

33. And as the result of that there must be a considerable number of licensed cabs not in use?—Yes.

34. Cabs for which a licence was obtained, but which as a matter of fact are not allowed to ply?—Yes.

35. Have you any views about the desirability of dividing cabs into classes corresponding to their merits?—Well, I do not think it would be advisable. You would have to have a lower fare for the second class cabs.

36. Lower than for the first class do you mean, or lower than the existing fare?—Lower than the existing fare.

37. It would not do to keep the existing fare for the worse cab, and put on a higher fare for the better cab?—I do not think so.

38. (*Mr. Whitmore*). That is a possible alternative, of course?—Oh, yes, of course that is a possible alternative.

39. (*Chairman*). But as far as you have considered the question, we may take you as opposed to any idea of differentiating the cabs into two classes?—Not exactly as opposed, but I think it would probably lead to disputes, and you would have to have a distinguishing mark in the first and second class.

40. Oh, you would, no doubt?—And the first class cab would deteriorate, perhaps, into what we call a second class cab.

41. Yes; but then it seems to me that this system of constant inspection that you speak of would enable the decay or depreciation of a cab to be noted, and the alteration made. It might be degraded from first class to second class, and indicated as a second class cab when it got to a certain pitch of miserableness?—Yes.

42. You may have information which has not been presented to me, but at the first blush of it it does not sound an impossible or an impracticable scheme—I mean the difficulties do not sound insuperable?—I do not know that they are. I am only trying to give, as far as I can, any objections.

43. (*Mr. Whitmore.*) If these objections could be surmounted you would not be unfavourable to the idea?—Yes; I think if it could be done I do not see any radical objection to it.

44. (*Chairman.*) Exactly?—There is no opposition that we can offer to it.

45. Well, now, I come to the question of limiting the number of cabs. Do you think that the State ought to interfere in that? Of course, as the thing stands at present, the system is not one of absolute free trade in the matter. I mean, where the State regulates the charge the ordinary conditions of the market are interfered with, and do you see any objection to the State going a step further, adding a little to its control, and limiting the number of cabs as well as the amounts charged?—You mean if it would work?

46. Well, yes. I mean do you see any objection in principle, if I may use that word of such a thing, or on practical grounds, to limiting the number?—Well, of course, it would only be a matter of opinion. From a police point of view, of course, there would be no objection; if the numbers were limited we would just go on as we were doing, and we offer no objection as police.

47. I thought possibly, from a police point of view, you would answer it would be an advantage, because you would know exactly what number you had to deal with instead of having to adapt your arrangements to a possible growth?—Well, there might be difficulties in this way, that if you limited the number you would probably have to have a list of applicants who wanted to have cabs when vacant numbers fell in. Then you would have to write to all these people. Supposing 20 cabs fell in you would have to write and ask each one whether he intended to take it up.

48. That could be done by public notice, I suppose, as vacancies in an office are notified for competition. Thus, "on such and such a date the Commissioner "will issue 20 fresh cab licences, applications to be "made beforehand"?—That would cause a little delay, perhaps. I do not know that it is insuperable. Then there is the point, if I may be allowed to put it in the form of a question, How are you going to fix the number?

49. That is a question I was going to ask you. Supposing the thing was not undesirable in itself, what means would you suggest?—Well, suppose that you said that Richmond wanted so many and so on; you would say that the needs of the Metropolitan Police district on the whole required, we will say 10,000 cabs, you could not ensure that these cabs—we will say Richmond would want a dozen, you could not be sure that six of those would not come into the Strand or Piccadilly to ply for hire.

50. (*Mr. Whitmore.*) Would you not apportion the number roughly to the population of London as a whole. I mean is not that possible?—Then you could not be certain that certain outlying places would get cabs at all.

51. You cannot now, I suppose, can you?—No; but then I suppose they find that they are unlimited, and it pays them better perhaps to settle out there. But if they knew the numbers were limited they would perhaps take the risk of so many cabs not plying, and say, "We will go into the busy parts, into Piccadilly and the Strand, and might get better fares." It might have that effect.

52. (*Chairman.*) Of course, in the question I asked you about the policy of limiting the number I was

thinking of a permanent limitation—the setting up, in act, of a new system. But how do you regard the proposal to try that as an experiment, a temporary device, simply to stop the issue of licences for a time with a view to bringing down the number, or not allowing the number to increase, at any rate? Do you think that that is an expedient worth trying, in the interests of the men or of the public?—I do not think so.

53. (*Mr. Whitmore.*) Do you not think the present number is excessive?—Well, I suppose it is in some parts of London. But I suppose, from one point of view, it is for the public convenience that there should be always enough cabs.

54. But from another point of view, according to information laid before me, there has been a great increase in the safety of the pedestrian public since the cab strike; I mean that there have been fewer accidents from cabs.

55. (*Mr. John Burns.*) Not so many, sir?—I do not think the difference was very great—587 against 615—that is all.

56. (*Chairman.*) That is all.

57. (*Mr. John Burns.*) In fact it goes to prove that the cabby is not the prolific source of accidents that he was supposed to be?—No.

58. (*Mr. Bayley.*) Still it is an advantage that the streets should be clearer of traffic, apart from accidents?—I do not know that that would actually entail the streets being clear of traffic, if you limited the number, because you could not ensure that an equal number of the limited number would not come into the congested parts of London; and if it is found that the Strand and Piccadilly and Regent Street are the places where fares can be picked up, although the numbers are limited they would all go in there.

59. (*Mr. John Burns.*) But that is a matter for police regulation, independent of the question whether there are too many or insufficient cabs. The police have the power to prevent the Strand being made a sort of Roman Corso down which hansom cabs are to ply up and down in procession. They have the right to prevent?—To prevent persons driving, you mean?

60. I mean mere loitering. Supposing there was a procession of sixty empty cabs on the one side from Trafalgar Square to the Gaiety Theatre, will the police have the power to divert?—If they cause an obstruction.

61. (*Mr. Bayley.*) Is it at all likely that a cabman having his stabling at Richmond would ply for hire in Piccadilly or the Strand?—I am only making that suggestion as possible; and if the drivers knew the numbers were limited they would think probably that there may be room for them in the Strand when there was not before because the number was unlimited; and therefore you could not ensure their not going there, and the other parts might be depleted and this congested part might have the same number of cabs.

62. But if the number were limited, would you not have a better chance of picking and choosing, and in that way perhaps getting a better type of driver and cab than you have at present?—A better type of driver?

63. You are talking now about the drivers, are you not?—No, the cabs.

64. Which is just the same—a better type of cab, then, because naturally you would refuse a licence to the worse type?—I do not know. I think, probably, if you were unlimited you would get a better type of cab, because there is more competition among the cabs if it is true that a better cab gets a better fare; there would be constant competition to get the best cabs.

65. (*Mr. Whitmore.*) Is there any sort of competition at the present moment in the selection of cabs?—Do you mean are the better cabs selected?

66. I mean, does the present system tend to anything like a survival or selection of the fittest; practically if any cab which applies for a licence is up to the standard it would be passed?—Yes.

67. I do not know under the present system whether there is anything like competition in which only the superior kind can be licensed?—Competition in this way. There is a great rush to fares, and it is found that the better cabs have a better chance.

68. But not, I mean, in the granting of licences?—Oh, no; not in the granting of licences. That is a matter entirely for themselves. If a man chooses to have a better cab than is required, that is entirely a matter for himself.

69. (*Mr. John Burns.*) Between him and the master. But has not unrestricted licensing rather tended to drive out of the cab trade the better type of cabman, who has taken to bus driving and then to tram driving rather than put up with the bad conditions that unrestricted licensing has brought about? Is not that your experience?—Unrestricted licensing of cabs?

70. Yes. Has not the unrestricted issuing of licences brought into the cab driving trade the wastrels of other trades, while the better type of drivers have become bus drivers at a weekly wage?—Are you talking of drivers now, or cabs?

71. I am talking of drivers?—I do not know that I should say that.

72. But would not that be the natural tendency?—An unlimited competition in cabs and an unrestricted issue of licences would bring into the trade generally a worse type of man than prevailed when there was not that proportion of cabs on the street to potential passengers?—It might be so, I cannot say exactly.

73. (*Chairman.*) I would only put it in this way. Suppose you maintain your present system of disallowing the cabs which get out of repair, and at the same time refuse to issue any licences, say for a year or so, can you give me any idea what reduction in the number of workable cabs would take place in the twelvemonth? Supposing you were not to issue any new ones, simply taking the cabs licensed to-day, and continuing the present system with the same amount of rigour which you now practise in knocking-off the decayed ones, what sort of reduction, even approximately, in the number, would take place in the twelvemonth?—I do not know that I am prepared to say that.

74. (*Mr. Whitmore.*) Have you not got some statistics upon that point?

75. (*Chairman.*) Only tell us about how many are disallowed every year for being out of repair?—During the year the vehicles rejected by the inspector of public carriages unfit for public use and presented for licensing were, 139 two-wheeled.

76. But are those carriages which have once been licensed, or which apply to get their license in the first instance?—This does not show—there is nothing to show that, sir. It is only "officially brought up for inspection, and were rejected."

77. You have not got at hand any record of the number which, having been on the streets, have been disallowed—turned off—for having got out of repair?—No; we have no report of that.

78. (*Mr. John Burns.*) 139 rejected—when, in 1893?—Yes, in 1893.

79. (*Chairman.*) But does that mean rejected in the sense of not having been licensed in the first instance, or taken off after they had been once licensed?—I do not think there is anything can show that.

80. Have you not the means of finding out how many you take off the streets for having got out of repair?—Oh, yes; we can tell that. But then we cannot tell whether the ones that were rejected were original ones or ones that had been plying.

81. That is what I am saying all the time. Have you any means of finding out the number of those which, having been upon the streets, having been in use, having been licensed, have been rejected afterwards?—I beg your pardon, sir; but do you mean rejected or returned as unfit?

82. I did not know there was any difference. I understood you to say that by your system of inspection you were constantly striking out of use cabs which have been in use, but which have got into a state of decay?—Yes.

83. Well, have you any means of finding out how many cabs are taken off in that way?—Oh, yes; certainly.

84. That is the question I have been asking you.—I thought you meant when they came round the year after they are licensed.

Mr. A. C. Bruce.
15 June 1894.

85. No; I mean those which do not stand the test of the constant inspection that you told us you had.—Oh, I beg your pardon. We can. In 1893, in consequence of night inspection by public carriage inspectors there were 316 returned unfit.

86. That means cabs which had been plying and were not allowed to ply any more?—Quite so.

87. (*Mr. Lough.*) What were they, were they four-wheelers or two-wheelers, do you know?—That is not distinguished.

88. You were giving us a figure some time ago, you said 139 two-wheeled; how many four-wheeled, would you furnish that if you might?—139 two-wheeled, and 106 four-wheeled.

89. What year was that?—That was 1893. By night inspection, in consequence of night inspection 316 were found unfit. Then by police on ordinary duty, 400.

90. (*Chairman.*) As well?—Yes.

91. Then you get at once to 700?—Yes; and by complaints from the public 14.

92. (*Mr. Lough.*) What is night inspections?—Once a month there is a special inspection by the hackney carriage inspectors, a general inspection.

93. (*Chairman.*) What I am trying to get at is this, the total number of cabs licensed and running? I mean of both sorts, altogether. I am not distinguishing between the two. I mean, quite roughly, in round numbers, what is the number now licensed and plying for hire?—About 11,000.

94. And in one year you knocked off by this process of inspection and complaints by the public, do you say 700, 800, or 1,000? What does it amount to altogether? 730 really.

95. What I was trying to get at roughly was this: Supposing you kept up your present system of inspection and knocking of the decayed cabs with the same rigour that is practised now, neither more nor less, and also refuse to issue any more licenses for a year, I want to see how much the number of cabs plying would be reduced?—It would only go down by less than a thousand a year.

96. (*Mr. Whitmore.*) Probably it would not be so many the second year?—There would not be the same number, there might be the same proportion.

97. (*Chairman.*) It would take two or three years before what we may call an appreciable reduction was made in the number of cabs?—I think so.

98. I mean appreciable over the whole area of London?—Yes.

99. (*Mr. Cunynghame.*) I want to know whether in considering say the fitness of a cab you consider at all the fitness of the horse of the cab, the horses which are owned by the proprietor or gererally the horses in the yard?—Not in connexion with that particular cab.

100. There are in the stables, roughly, I suppose, about two-and-a-half horses to each cab, are there not?—Yes.

101. But a horse, after all, is part, in a sense, of a cab, and an important part?—Yes. There is power to inspect the horses afterwards, but not at the time the carriage is inspected.

102. There is none?—No. It may be brought by a horse that is not going to use it.

103. A man might get a licence for a cab, he might get his cab passed although the horses that were going te be used for that cab were quite disgraceful or unfit?—Yes.

104. (*Mr. Whitmore.*) Although conceivably there might be no horse at all?—Yes.

105. (*Mr. Cunynghame.*) Do you examine the harness at the time you do the cab?—Yes.

106. That goes with the cab?—That goes with the cab.

107. The horses do not?—No.

108. I need hardly ask you this, but I suppose the principle of limitation is not altogether unknown to English law, such as railways and so on?—No; but perhaps the Committee would like to know, sir, that we have got a return from most of the towns in England in regard to the limiting of cabs.

109. (*Chairman.*) Yes, I should?—Ten boroughs limit the number of licenses to be issued,

110. (*Mr. Lough.*) One moment. What ten, may we ask?—I have marked some of them.

111. Give us a few.

112. (*Mr. Whitmore.*) Are they the larger boroughs?—Oh, smaller boroughs. The largest, I think, is Scarborough. Then Truro, Southampton, Blackpool, Preston, Hereford, Wolverhampton, Guildford, Hove, Scarborough, and Leeds.

113. (*Mr. Cunynghame.*) I want to know this question. It has been said that the cabs have a licence fee of 2*l.*, and in addition to that would they not pay the ordinary wheel tax of 15*s.*? I understand that is so?—Yes.

114. (*Mr. John Burns.*) How many inspectors are there for the whole of London?—Six hackney carriage inspectors.

115. Are they night and day and surprise inspectors, too? Are they the only inspectors you have, six for the whole of London?—Yes, for the purpose of passing officially.

116. Night, day, and surprise inspectors?—Yes.

117. What are these inspectors?—Do you mean what ranks?

118. Are they ordinary constables?—They are ordinary police inspectors.

119. What are their trades before joining the police?—I do not know, but they may be any trade. They are not selected for their trade.

120. But what practical knowledge have they other than that of a policeman of the construction of the cab, and what knowledge have they of harness? What practical knowledge have they of cab construction and harness?—I do not know that they have any knowledge before they come into the police.

121. Do you know whether any of them have been coachmakers or wheelwrights?—I do not know. I cannot say.

122. Well, what knowledge have they of horses?—I do not think they have any special knowledge.

123. But what is the examination to which they are subjected before they are made inspectors of cabs? Is not a knowledge of horses and harness and vehicles, particularly the construction of vehicles and the upholstering of vehicles—is not that one of the qualifications?—They have regulations by which they must go, as I said before, when they are inspecting and passing a carriage.

124. But a nominal supervision by a non-practical man would enable a cab to pass where a practical workman would see through what the cabmen call the treacling up or the varnishing of a cab that was structurally unsound, that an ordinary policeman would pass because he would not be up to the tricks of the trade; a coachmaker would not pass such a cab?—Yes; but I think I may say that the inspectors are up to that treacling.

125. But what I want to know—in what sense are they up to it? What has been their trade and calling before?—I do not know that they had any practical experience, as I say, before they were police, but practice puts them up to these dodges.

126. (*Chairman.*) What I take to be the case is this: the inspectors have no more and no less technical knowledge than any of the ordinary men in the force. I mean they have the average knowledge, but they have no special or technical knowledge?—No; they have no special or technical knowledge.

127. (*Mr. Whitmore.*) Who actually selects the inspectors of the traffic?—The Commissioner.

128. You, yourself?—Yes.

129. Then, if I may ask, in your selection, do you not consider whether a policeman has some special aptitude or knowledge upon that subject?—It is so much in his favour if he has.

130. (*Mr. John Burns.*) Now, with regard to horses, what are they? Have they had knowledge of horses, either as soldiers in cavalry regiments, or what attempt has there been made to adapt to the examination of horses any professional experience that you might have incidentally amongst the policemen through their contact with horses either as patrols or as soldiers in a cavalry regiment?—With regard to the inspection of horses?

131. Yes?—I do not know.

132. What veterinary knowledge do they possess? Could they tell whether a horse was suffering from farcy or glanders or any other disease?—Well, the police orders enumerate the symptoms of farcy and glanders. I do not know that they have any special knowledge.

133. (*Mr. Bayley.*) They could not tell whether a horse was sound or not?—Oh, they could see whether it was lame or that sort of thing.

134. (*Mr. John Burns.*) With regard to night inspections, you say night inspections are taken every month. Under what conditions are these night inspections made? Do the men go to the cab rank?—They visit the cab rank and walk about the streets and——

135. Under what conditions are the night inspections made by the night inspectors who operate once a month?—They walk about and inspect the different cabs.

136. Is much attention paid by these inspectors to the East End and the North-east of London, do you know?—I think so, equally with the others. The inspector for that district has that district to inspect; he has to give a report of the numbers of the cabs he has inspected.

137. Does he ever go to the East where notoriously night cabs are put up, and inspect those night cabs in the day, which seems to me a much more satisfactory method of inspection?—He is supposed to give attention to the cab yards.

138. How is it there are so many bad cabs in the East End of London in the small hours of the morning—there I have special knowledge, between two and six in the morning—how is it that in the East End of London, particularly in the neighbourhood of the docks and the London Hospital, and round Aldgate way and Petticoat Lane, and round Liverpool Street between two and six in the morning one sees such awful vehicles as one frequently does?—Well, I cannot answer that question, I am afraid.

139. (*Mr. Whitmore.*) Perhaps we ought to ask whether it is the fact that it is so?

140. (*Mr. John Burns.*) Is it the fact that in the East End of London, and in the neighbourhood of Aldgate and round the docks, between two and six in the morning, there is a number of ramshackle vehicles?—I cannot say it is a fact.

141. (*Mr. Whitmore.*) You do not know it?—I do not know it.

142. (*Mr. John Burns.*) What steps are taken to see that condemned cabs are put into a proper state of repair or broken up?—That they are not fit?

143. Yes?—Not to use till they are fit and seen again by the inspector that they are fit.

144. But what steps are taken to condemn, and to cause to be broken up, those which are gone by the repairing stage?—I do not know that any steps are taken until notice is served not to use. There is no power to cause it to be broken up. A cab may remain in that state as long as it is not used on the streets.

145. But do you regard that as a satisfactory condition of things? Ought you not to have the power to cause to be either completely dismantled or broken up a cab that, in the opinon of a competent inspector, is utterly unfit for public use?—But a cab may be put in a state fit for public use. A cab is very bad indeed that cannot be repaired, I should think.

146. I myself, since I have been a member of the House of Commons, have seen the rear wheels of three four-wheelers leave the fore part of the carriage. That does not indicate a complete or satisfactory state of inspection?—I think the present system is satisfactory. The plates are taken off, and the cab cannot be used again without plate.

147. But what steps are taken to prevent this condition of things happening; suppose a man has six cabs, four first class cabs, and two of them very bad ones; what steps are taken to prevent him from, after he has had his four good cabs passed, transferring the plates from two good cabs, which may be let to doctors, and consequently do not want the plates on, and putting two good plates on two bad cabs that have not been up for inspection at all?—He is liable to have his licence revoked if he does that, if he is found out.*

* *See* question 336.

148. Have your inspectors ever heard of such things being done? Have they ever reported on such cases?—Oh, yes.

149. Could you hand in to the Committee, at your leisure, cases where good plates taken out of good cabs have been put upon cabs that not only would have been condemned, but which have not come up for inspection at all?—We can say the number of revocations for that having been done.

150. Well, I should like you to put that in. Now, with regard to the disinfection of cabs, what practical steps are taken by the inspectors of cabs to see that the section relating to this disinfection of cabs after people who have been ill have been carried in them is rigorously enforced?—If we know that a cab has carried an infectious person a notice is served not to use until it has been disinfected, and if a cab has taken an infected person to a hospital we have arranged with the hospital to send us word, to send us the number of the cab, and we immediately telegraph to the inspector who goes and sees that the cab is disinfected or that it is not used until it is disinfected.

151. But that is an optional and a voluntary notification; have you not an automatic and a compulsory system of registering cabs that have carried people to and from asylums and hospitals?—No.

152. Do you not think it advisable to secure such power?—If we know that a cab has carried an infected person we see that it is disinfected, or rather that it is not used until it has been disinfected.

153. Yes, but a cabman is not going to voluntarily sacrifice half-a-day's pay to drive up to Scotland Yard and tell you, or drive up to the inspector's residence and say that his cab drove a diphtheria case or a small pox case to a particular hospital?—The hospital reports to us.

154. All hospital porters do not take the trouble?—Well, we do what we can. The hospitals send us word of every case of that sort, and we take immediate action.

155. Do you not think it would be better to prevent cab proprietors carrying infectious patients at all? Would it not be better that the local authorities should provide special vehicles, not used for public purposes, for all infectious patients?—Anything that tends, I suppose, to prevent infection is good, but there is a penalty attached to anyone knowingly doing it.

156. Yes, but the detection of this offence rests entirely upon either the hospital porter, the cabman himself, or a friend of the patient, if he were public-spirited enough to take the trouble.

157. (*Chairman.*) Arising out of that point, do you as a matter of fact receive many communications from the hospital porters to say that such and such a cab brought an infectious patient to the hospital?—It generally comes from the secretary.

158. The hospital authority then; it is a matter of frequent occurrence, is it?—I am informed there are about a dozen in the last three months.

159. We can hardly think that represents the number of infectious people carried about London in cabs in three months.

160. (*Mr. Cunynghame.*) There is a provision in the Public Health Act, 1875, that the owner is bound to do something.

161. (*Mr. John Burns.*) Well, the owner will not trouble to inform, and the cabman does not tell, because it involves a loss of money to him. How often does the Commissioner under the Act appoint persons to visit the premises of cab proprietors and inspect the premises, the horses, harness, and general condition, as the section of the 1871 Order says; how often is that exercised?—I cannot say how often this is done, but it is done when occasion requires.

162. Will you put in a list of the visits made by the inspectors under this power that the Commissioner has to appoint persons to visit yards?—The inspectors in the ordinary course of their duty in serving notices do visit yards frequently.

163. Do you think that six inspectors for the whole of London are sufficient for daily, nightly, and surprise visits to over 3,000 cab yards in London?—That is the number we have.

164. But with that limited number, do you think it possible for six men to give adequate inspection and

Mr. A. C. Bruce.

15 June 1894.

supervision, both to horses and cabs in the street at night time, and to the premises, plant, harness, and general condition of the cab yard in the day?—They are not alone in that; as I said before, they have the whole of the police force, who are instructed to supervise the cabs, so to speak, in the streets

165. Yes, but the average policeman on duty at the end of a mews simply walks up and down, thinking that the inspector of cabs would go into the stables, and generally knows about it. With regard to the horses and cabs, he does not do it, except in the most perfunctory way; as a matter of fact, it is not his direct business?—You mean to visit these stables?

166. Yes?—No, I do not suppose he would do that.

167. (*Mr. Whitmore.*) Have these inspectors any other duties to perform beyond that of this particular duty?—No.

168–70. (*Mr. Lough.*) What is their salary?—It is the usual salary of an inspector, plus a shilling a day.

171. (*Mr. Bayley.*) How much per week is the usual salary?—It depends upon his rank.

172. Well, these six inspectors, how much do they get per week?

173. (*Mr. John Burns.*) About 3*l.*?—Yes; I cannot say quite off hand; it depends on his class.

174. (*Mr. Lough.*) Then there is 3*l.*, and then there is 6*s.* added, that comes to 3*l.* 6*s.* a week for inspecting carriages?—Yes.

175. The inspection, we see, according to the book, takes place at certain stations?—Yes.

176. Well, how long notice do these inspectors give of their intention to visit a station?—They go at stated times.

177. Then it is well known?—Oh, yes, it is known, and it is on the back of the licence; the proprietor can see that.

178. And the proprietor brings the carriage there to get the license?—Yes.

179. Well, you told us that 730 were rejected in a year of all sorts?—Yes; not rejected exactly.

180. Were declared unfit?—Yes, were reported unfit.

181. In pursuance of a question Mr. Burns put, I want to ask this simple question, do you mean that these 730 were absolutely disposed of and pushed off the street, or do you mean that they were only rejected at the moment, and that they might have come up at the next time?—They were returned unfit.

182. Then?—They may have come on the streets again when they were fit.

183. I see; so that practically you can hardly get a cab off the street if it is faked up a bit and brought up again?—Well, if it is passed by the inspector. We hope that the inspectors would not pass a faked-up cab.

184. Do you ever hear any suggestion of unfair influence being used by proprietors to get a cab passed?—No, we have heard none.

185. You never heard of any suggestion of anything of the sort?—The only one that I can remember was an anonymous letter, and that we went into as well as we could. It was not at all proved against the inspector; in fact the conclusion come to was that it was written in consequence of the inspector having been too rigid in his examination, and so aroused an animus against him; that is the only one that I can remember. We have had nothing at all.

186–7. (*Mr. John Burns.*) At this point may I interpolate this, because—I say it with all seriousness—if the allegation that is made both by masters and men is true, it is a great reflection upon the inspector. Has it ever reached your ear that when a cab is inspected something under the cushion is very frequently put?—No.

188. Except that one anonymous letter?—Except that one anonymous letter.

189. It has never reached your ears?—No. I can assure the Committee that (if people will come forward and give any evidence upon which we can go) there will be at once a full and impartial inquiry, and if it is proved against the inspector very serious consequences would result to him.

190. Are you aware that that belief is generally very very prevalent amongst not only masters generally, but the best of masters and the best of men?—No, I am not aware of it.

191. (*Mr. Lough.*) You never heard it before, except the one case you gave?—That is the only one I ever came across.

192. You could not conceive the police inspector who found anything under the cushion, or the proprietor who put it there, would come and state it to you?—No; but if it is so very common I suppose there would be some case where there would be tangible evidence, and if that evidence were brought before us I say immediate inquiry would be made, and we can do nothing more.

193. Do you put a mark upon the wooden part of the cab when you have inspected it, any mark besides the plate?—Yes, an approval mark.

194. Where is that put?—It is put on a hansom just alongside the driver's seat.

195. How is it put on; is it impressed, or what?—It is by a stencil plate; the man puts a stencil plate on the cab, and comes with a brush like that (*illustrating*), and there is the approval mark.

196. It is a thing that could not easily be removed?—No, it would have to be painted out.

197. Have you ever found an attempt to have a forged mark like that?—No.

198. There is no record of such an attempt?—No.

199. (*Mr. Whitmore.*) How long does the original licence last for?—A year.

200. And at the end of that term every cab has to be re-inspected, has to be brought for re-inspection?—Yes.

201. Independently of any other inspection by the method you have described?—Yes.

202. So it is certain that every cab is inspected at least once every year.

203. (*Mr. Bayley.*) There are in the police service surveyors who have practical and technical knowledge of carriage building, I believe?—You mean as policemen?

204. No, in the police service, employed under the Receiver?—As practical carriage builders?

205. They are employed in making designs for the prison vans, and in inspecting the prison vans during construction and passing them when they are finished?—I do not know of it.

206. (*Mr. John Burns.*) May I ask one other question, sir, what attempts are made by the inspector to enforce the regulation No. 5 in the Hackney Carriage law, section 14, that proper check strings and other means of signalling shall be furnished to each cab; one sees it in the Hackney Carriage Act, but it never pans out in practice in the street?—I assume that if there were not a check string they would not pass the cab.

207. Well, but is ever a cab stopped in the street to see that the cab has the check string? I am speaking now of four-wheelers, a very difficult vehicle to stop with the driver's back towards you.—I cannot say, but it is part of their duty if there is no check string to report it.

208. (*Mr. Hopwood.*) I want to ask you one or two questions about the administration in Scotland Yard, who issues the licences, are they issued by you?—By us, yes.

209. By the Commissioner?—Yes.

210. Does the Commissioner issue a licence upon some written material?—Yes, on certificates.

211. Would you mind putting in the forms which are filled up by the inspectors and handed to the Commissioner previous to his issuing a licence?—You are speaking of cab licences now, are you not?

212. Of cab licences?—I will put in the forms.

213–4. I see by the forms that these various requirements as regards fitness are not specifically set out upon the form which is submitted to you? The point I want to make is this, does the inspector when he submits the form to you upon which the licence is issued make a specific report upon the condition of the cab or simply a general report?—A general report that the cab is fit for public use.

215. But does not say specifically that he has found that the various requirements of the general order have

been complied with?—No, he forwards the certificate that he has examined the carriage submitted and found the same fit.

216. It is merely in general terms?—Yes, and this is the form prescribed by the Secretary of State, the certificates.

217. Yes, it is for information, not for criticism?—Yes.

218. Then with regard to the inspectors, are they all of the same rank?—They are all inspectors.

219. And they each have equal access to you as Commissioner?—Oh, clearly.

220. There is no intermediate officer?—Well, yes, they are under the supervision of the superintendent of the division and also the superintendent of the department.

221. That is what I wanted to get at. Then, as I understand it, the inspectors are told off to deal with different districts within the police area?—Yes.

222. They have special districts assigned to them and they have not a roving commission over the whole of the area?—No, they have special districts assigned to them.

223. Then when a cab is submitted to an inspector for a licence he first of all has to report to the district superintendent of police?—No, no; after he has examined the cab and found it fit or unfit, as the case may be, he signs the certificate and sends it to Scotland Yard.

224. It comes direct to you?—It comes direct to Scotland Yard.

225. It does not come through the local police inspector?—No.

226. Have you given any consideration to this point as to whether the number of licences can be reduced without legislation?—Of cab licences?

227. Yes?—They cannot be reduced without fresh legislation.

228. Because if a cab is found by one of your inspectors to be fit within the meaning of the regulations made under the Secretary of State's Order the cab is entitled to be licensed?—That is so; the Commissioner must issue a licence.

229. So that legislation is necessary in your view if it should be decided that a general reduction of licences should be made?—Yes, that is so.

230. (*Mr. Lough.*) Have you had a legal opinion upon that point at Scotland Yard?—Oh, yes, the Act of Parliament says ——

231. I am not asking that; has there ever been a case stated?—I cannot say whether we have had any direct legal opinion.

232. (*Chairman.*) I understand your question to mean this: Has the question ever been legally decided whether Scotland Yard has a right to refuse a licence to a proper cab.

233. (*Mr. Lough.*) That is my question.

234. (*Chairman.*) Mr. Bruce, that has never been decided so far as you know?—No, not so far as I know.

235. In the law courts?—No.

236. (*Mr. Hopwood.*) In answer to a question put by the Chairman you made some reference yourself to classes of cabs; I understood you to say that a particular form of cab which was referred to would be a second-class cab?—Yes.

237. Have you already in your system of administra- got classes of cabs?—No, so long as they come up to a certain standard they are all passed.

238. They are all passed as fit for licence?—As fit for licence.

239. And of course the same observation applies to the horses?—Yes.

240. The inspection with regard to horses?—Yes.

241. Have you anything to say as to whether the same number of cabs go out at night as in the daytime?—We have nothing to show but observation.

242. Would your inspectors be able to give us an opinion upon that?—As to whether there are more cabs in the street at night?

243. In the daytime than at night?—I do not know; they could only say there were more within a certain area, the area of theatres and that sort of thing.

244. There is no distinction for licensing purposes, as I understand it, between what is commonly known as day cabs and night cabs?—Oh, none at all.

245. They are supposed to be equally good?—Equally good.

246. (*Mr. John Burns.*) Have your inspectors reported to you that there are beyond night and day cabs cabs that are known in the trade as short riders, particularly plying on the Embankment for hire after ten o'clock at night?—No.

247. Then you are not aware that there are amongst four wheelers peripatetic brothels known as "short-riders"?—No.

248. Are the licences granted to carriages on an equal average during all the weeks of the year; it is constantly going on?—It is constantly going on.

249. There is no particular season, say at the beginning of the year or at the end of the year, when cabs are inspected, but it is constantly going on?—It is constantly going on.

250. Every day, and the average is about the same all through the year?—Yes.

251. (*Mr. Cunynghame.*) You have given us, I think, Mr. Bruce, the number of cabs that are at present licensed; have you made any estimate of how many of these cabs—what percentage—are in practical use on the average through the year and what may be estimated as laid up for repairs or disused?—About 20 per cent. roughly, as far as we can make out.

252. I suppose it would be difficult to give us any reasons, would it, for your 20 per cent.; your superintendent could give us the detail perhaps?—Yes, I think so.

253. (*Chairman.*) Now I come to the question of drivers, even without much expert knowledge, I think everybody who has ever travelled by cabs in London must have a very definite opinion of his own, and that is that a great number of drivers come to their business knowing extremely little about it antecedently. Do you find that men come perfectly unversed both in driving and even in such a simple thing as harnessing a horse?—No, because we require a certificate that they can drive.

254. You require a certificate that they can drive, from whom?—(*The form with regard to the issuing of licences put in.*) From someone that can certify that he can drive, and when that certificate has been received the police make inquiry as to the value of the certificate.

255. I was going to say that; what test is there that the person who gives the certificate himself knows what he is talking about; may it not be the case that he is actuated by a friendly wish to put the man on a job?—Well, we make every effort to find out that he is a responsible and respectable person.

256. And is there anything like a standard or definition of what being able to drive means? Surely under some wide construction of the words anybody who had even one hand can be said to be able to drive although he had never driven before; like the man who did not know whether he could play the flute as he had never tried. Might not people be able to say that they would be able to drive simply because they could sit upright on a box and hold the reins in their hand; is not that latitude of construction possible?—It is possible, but I think in a very great majority of instances the words mean that the man has driven before.

257. You think it goes to mean as much as that?—Yes.

258. That he has been in the habit of driving?—That he has been in the habit of driving; he has been a carman, perhaps, or a stableman, or a horse keeper.

259. Of course a good many men do drive carts, but some men go from indoor service, footmen, for instance, who have never been accustomed to drive anything but a tea tray, and they have been put on the box.

260. (*Mr. Whitmore.*) I do not see where it is in these regulations. "We, the undersigned, hereby certify that "the bearer has been known to us personally; we have

Mr. A. C. Bruce.

15 June 1894.

"observed his conduct during the periods stated opposite "our respective names. He is sober, honest, and of good "character, cleanly in his person, and civil in manner "and behaviour. We believe him to be a skilful "driver and careful and humane in the management "and treatment of horses, and we recommend him to "the Commissioner of Police as a fit person to hold a "license as driver of hackney carriages."

261. (*Chairman*) On these words "we believe him to "be a skilful driver," now do you think as a matter of experience that these words are construed by the people who use them with any kind of regard to what would be called ordinary skill in driving. Is it anything more than a dead letter or common form?—We have no reason to believe it is; we have no reason to believe otherwise than that they do believe what they certify.

262. That they believe it, yes, but do they mean—of course you will say these are almost impossible questions to answer—but is the impression on your mind that these people who testify that a man is a skilful driver mean anything like what you and I should mean if we were engaging a private coachman?—I think it means that he has sufficient skill to drive a cab through the streets of London.

263. Do you not think that almost anybody would be said to be able to do that?—I cannot say; I cannot answer that.

264. I know it is impossible to answer, and that is what I think is the unsatisfactoriness of the condition: everyone must speak according to his own opinions of what driving in London means, as to whether a man is fit to do it or not, and in the minds of those testifying people there may be widely different views as to what is necessary, yet their testimony is equally valuable and equally accepted by your office?—We make every inquiry as to whether the certifiers are responsible people.

264*a*. But supposing you found that people certified a footman as being able to drive a four-wheeled cab; supposing he afterwards had an accident, and complaint was made and it was represented to you that he had never driven at all in his life till he got upon a cab; would you then inquire of the people who recommended him to you what they meant by saying that he was a skilful driver?—We should make all inquiry.

265. Of the persons who recommended him to you?—Yes.

266. Yes, but supposing that they openly avowed that they had done it to oblige him without any serious regard to the words involved; there is no kind of penalty attaching to them?—"Any person making a "misrepresentation with regard to the application for "this license is liable to a penalty of five pounds."

267. You take him to the police court; a man who testifies wrongly that a man could drive?—Yes, if the case warranted it.

268. Then you have to prove in the police court to the satisfaction of the magistrate that the testifying person——?—Had misrepresented.

269. Well, at any rate his definition of safe driving, skilful driving, was not an adequate one?—I suppose, probably, the case would be that you could prove that this footman had never driven at all, and then you would prove that this representation that he was a skilful driver must be false.

270. (*Mr. Whitmore.*) The words are simply we "believe him to be a skilful driver."

271. (*Chairman.*) They are vague words; I daresay in this case this young man had been born and bred in the country and used to drive a cart in the village and had represented to the people who testified to him, "I used to drive my father's cart in the village when a boy," and they had taken him at his own valuation. That makes an extremely sandy foundation to build upon. I mean this, these two people's belief may be founded upon what a man may have said about his own previous experience; they have no means of testing his fitness, and as far as that goes they only say they believe it to be such and such; they escape from penalty if they honestly believe it to be so?—Then there is the certificate, "I certify that the applicant is qualified to "act as a driver of a hackney carriage"; the man certifies; if he misrepresents by that certificate he is liable.

272. That certificate would be held legally to mean that they had some positive knowledge by their own sense of observation that he was fit?—I think so.

273. (*Mr. Hopwood.*) I suppose they are personal friends, are they not?—Yes, that they had seen him drive; practically that would be it.

275. (*Mr. John Burns.*) Could you get out for us from the return of persons who recommend men for licenses, the occupations. I am afraid we should find that sympathetic clergyman with a perfectly good object would vouch for men. It would be interesting to know the number that the Charity Organisation Society had signed too?—It could be done, of course.

276. (*Chairman.*) My attention has been called to one of these forms here, P.C. O. 29: "We, the un-"dersigned Police Sergeants hereby certify that the "signatures of the persons residing in the respec-"tive divisions to which we are attached are "genuine, and that the recommendation appears "deserving of confidence. They state that they "have had frequent opportunities of observing ap-"plicant's conduct and his capabilities as driver." Then these police sergeants are responsible to you for stating that the witnesses declare that they have had opportunities of observing his capabilities?—Yes, that was the inquiry that I referred to just now.

277. I mean, all that the police sergeants are responsible to you for is proving that these men say that?—Yes.

278. The sergeants are not bound to prove that the men have had an opportunity?—No.

279. Only that they have said that they have had an opportunity?—Yes.

280–1. (*Mr. Whitmore.*) This goes rather further than "the belief" in the other form.

282. (*Chairman.*) Yes, it does, but it takes the onus off the police. All that they are bound to do is to testify that these other men have certified their own belief?—Quite so; they do not go so far as to say they saw the man drive in the presence of these other men.

283. I mean, you are driven in your ultimate resort to the credibility of those testifying witnesses, and to their notion of what constitutes a competent driver?—Yes.

284. And do you think that that is an adequate test for the safety of the public?—I think it is on the whole.

285. Then when you have got these people recommended by their two testifying friends, and corroborated to this extent by the sergeants, do you practically examine them?—Oh, yes, they are examined before they get this certificate. They are examined as to their knowledge of London.

286. I mean, do you examine into their capacity for driving?—No.

287. I mean that they are not trained in any sense as a cavalry soldier is trained in a riding school; they are not put on the box to see how they can drive?—No.

288. Their driving capacity is testified to by these friends?—Yes, and the certificate.

289. You do not make any fuller examination into it?—No.

290. You do not put yourselves in their cab and let yourselves be driven up and down the Strand?—No.

291. (*Mr. Whitmore.*) Do you think that would be possible, to have an actual practical examination?—No.

292. (*Mr. Bayley.*) Is it not done in Paris?—I do not know, I cannot say.

293. (*Chairman.*) Then the only examination to which they are subjected is an examination as to their knowledge of London?—That is all.

294. Do you examine them as to their knowledge of the situation of railway stations, hospitals, and clubs?—They are asked how they would drive, for example, from Scotland Yard to Paddington, from Paddington to the Bank, or from the Bank to Chelsea.

295. And suppose they suggest a devious course in their answers, do you ever reject them?—Well, if all their answers were unsatisfactory probably they would be rejected.

296. As matter of fact are they ever rejected for insufficient knowledge of London?—Oh yes, often; I have a return——

297. Without going into the number of cases, you do not think of taking their knowledge of London on the mere statement of two friends; you would not be satisfied with two respectable inhabitants saying, "We "believe this man to know London very well," you subject him to a test?—Yes.

298. But in the power of driving, which means the safety of our lives and limbs, you are satisfied with the testimony of his friends?—That is our test.

299. But you think that this system of testimony as to his power of driving and examination as to his knowledge of London is satisfactory, and that the men are safe men?—I think it has worked satisfactorily on the whole. It is a matter of comment, but, of course, only a matter of comment that probably a man who cannot drive very well will take more care than a man who can.

300. Do you not think it would be more satisfactory, that it would give the travelling public a greater sense of security, if you examined them both as to their knowledge of driving and also as to their knowledge of harnessing and unharnessing a horse with a view to accidents?—We only judge to a certain extent by complaints. We have very few complaints about it, I am told not more than one a year.

301. As to their unfitness for driving?—Yes.

302. (*Mr. Lough.*) Did a case that I put in the House to the Home Secretary a few days ago, about a proprietor in Westminster, come before your notice; about which I got a letter from the Home Office?—What was that?

303. Well, it was a proprietor in Westminster who had brought down two horse keepers and was using his own influence at Scotland Yard; and it was stated in the letter that he actually did try to get these people licensed; do you remember the case?—I remember that, yes.

304. Does that sort of incident occur often?—No, I should think not.

305. And as a matter of fact, would the authorities be prejudiced or influenced favourably by, say a cab proprietor or anybody who is interested?—Not at all, they are absolutely impartial.

306. They would be quite impartial?—Absolutely.

307. You have got horses at Scotland Yard, have you not, for some purposes; you have got a stable of your own?—Not at Scotland Yard, at King Street.

308. How many horses are there?—I cannot remember at this moment.

309. But there are some?—Yes.

310. Practically there would not be much difficulty supposing you had a man told off for the purpose, or enough men, in making an applicant go and harness a horse in the gig and give the inspector a drive along the embankment?—It would take a long time if there were 20 or 30 applicants.

311. But still there might be such an organisation; it would not be an impracticability, would it?—I do not know; I am not prepared to say at this moment.

312. (*Mr. John Burns.*) The tests you mentioned may not be generally indicative of other tests that are put to them, but it is a very simple test to ask a man to drive us from the Bank to Chelsea; that is straight down the river, do you give them rather complex cross roads?—Oh, yes, I only took those as the first that occurred to my mind. I may put in this return showing the number of applications from the 1st January 1894, to the 31st May inclusive, showing the number of applicants for hackney drivers' licenses examined once and passed, 333, twice, that is rejected once, 76.

313. (*Mr. Lough.*) What is the meaning of the difference?—They did not pass the first time, knowledge not sufficient; three times 17, four times, that is put back three times until they had passed, 9; five times, 1; and six times, 2. Then 130 were examined once and not passed, 29 were examined twice and not passed, 8 examined three times and not passed, 2 examined four times and not passed, 1 examined five times and not passed, 1 examined six times and not passed.

314. (*Mr. John Burns.*) What steps have been taken by you to ascertain the antecedent occupation of men who apply and are submitted to the tests?—We have the occupation.

315. Is it registered?—Yes.

316. (*Mr. Lough.*) From what occupation do the bulk of the applications for licences come?—From horse keepers and carmen and people who have had to do with horses.

317–8. The figures you have just given us principally represent the new men, the new licences; for you do not examine an old man whom you have passed?—We do not examine him in that.

319. And it is about 420 or 430 during the five months that have been examined altogether?—It is not added up here.

320. It is evidently about 450 that you examine, and if they pass you will grant the licence to any number regardless as to whether they may be required or not?—Yes.

321–2. There is no relation between the requirements of the service and your examination?—No.

323. There is nothing in this notice about knowledge of driving. Number one is the notice you give the applicant; is it the first form?—Yes.

324. In that notice is there anything said about capacity to drive?—That is the first thing he is examined for when he says he wants to be a driver.

325. I am leaving that point out of view; that is the paper he gets; is there anything in that paper as to capacity to drive—in that notice? These are the official regulations, as to the granting of licences are they not?—Yes.

326–7. Can you point me to anything in them about capacity to drive?—There is nothing about driving.

328. (*Chairman.*) Does it not strike you as rather a curious omission?—Certainly it is an omission.

329. (*Mr. Lough.*) Is there any test as to the age? I see here the second rule is, "A licence will not be "granted if he be less than 21 years of age." Is there any test; has he to bring his birth certificate?—In doubtful cases.

330. What do you mean by a doubtful case?—If a man looked 15, and said he was 23, or something of that sort.

331. In doubtful cases you ask for the certificate?—Yes.

332. Are you aware that there are numerous complaints about boys getting licenses?—I am not aware of it.

333–5. Have you never heard that?—I have heard it mentioned to-day.

336. (*Chairman.*) There is one question about examination that I have not asked. Do you have any examination in reading and writing?—No; when the applicant fills up the form he has to read the questions aloud, which is partly to show that he can read, and partly that he understands them.

337. Supposing he could not read the names of the streets, would he be rejected on that account?—Oh, yes.

338. Do you have any examination as to health?—If he were not satisfactory in that respect he certainly would be rejected.

339. It is not as matter of course that he is subjected to an examination by the stethoscope, or anything of that sort?—No.

340. (*Mr. Hopwood.*) Would you license a man with a wooden leg?—Yes.

341. (*Chairman.*) I believe you put in a return showing a rise in the number of drivers' licences corresponding with the rise we saw in the number of cabs; there is also a rise in the number of cab drivers, from 1884 to 1888, and a fall from 1888 to 1893?—That is in, sir.

342. Also you have put in a return of the per-centage of licenses not used?—Yes.

343. Which I understand to be 20 per cent.?—That is only an approximation; that is only a sort of surmise, we have no definite knowledge of that.

344. (*Mr. John Burns.*) What steps do you take to revoke or cancel licences that are periodically applied for, and are not always in use?—Do you mean drivers?

345. Yes?—We cannot revoke a driver's licence.

346. But supposing, for instance, this case happens: supposing an engineer or a carpenter is able to get someone to certify as to his fitness to take out a licence, and he passes your examination, not with the intention

Mr. A. C. Bruce.

15 June 1894.

of using the licence for the year that he applies for it, but on the off-chance that should trade be bad in 1895, he would fall back upon cab-driving. Do you allow that man to renew the license in 1895 although he has not used it in 1894?—Yes, we should not reject him.

347. (*Chairman.*) I want to ask you this question about the age of the young drivers. Is it, to your knowledge, a ground of common complaint that the market was overstocked with boys and youths—juvenile drivers?—No.

348. Well, what is the age fixed by law—the minimum age?—16.

349. And you say if a boy, or an applicant, is so juvenile in appearance as to suggest that he does not come up to that age, you apply for his certificate of birth?—Yes.

350. And do you, as a matter of fact, reject any considerable number on the ground that they are apparently applying when they are too young?—No, I do not know that there is any large number rejected for that reason.

351–2. But does it occur sometimes that you find that boys come forward and you send them back because they are not old enough?—Yes.

353. But within the legal age, are they, as matter of fact that is, licensed at the legal minimum age?—No, never at 16, we do not go below 17 as matter of fact.

354. (*Mr. Hopwood.*) And even then only on the special recommendation of the proprietors?—Oh, yes, in the regulations for grant of licenses to drivers and conductors it states that a license will not be granted to any applicant if he be less than 21 years of age, except upon the special application of proprietors.

355. (*Mr. John Burns.*) What steps do you take, Mr. Bruce, to prevent the abuse of that by proprietors; what steps do you take to prevent the abuse of the juvenile cab-driver provision?—Not any other than the special recommendation of the person who has promised to give him employment.

356–7. Let me put it in this way: is it not possible for a cab proprietor with young sons to get an exceptional licence for three or four individuals who may be under 17 years of age? What steps do you take to prevent that abuse?—You cannot get it under 17, you mean under 21?

358. Yes. Is not that practice resorted to by proprietors to work in their juvenile relatives?—We only licensed 131 juveniles last year.

359. (*Mr. Whitmore.*) Under 21 do you mean by that?—Under 21.

360. (*Mr. John Burns.*) Is it not a common saying among cab drivers that cab masters have very large families of sons, but very few daughters?—I do not know.

361. (*Chairman.*) Have you any reason to think that the grasping sort of masters or proprietors use a great number of these very young drivers on the ground that being unmarried and having no children to provide for they are more easily sweated, if I may say so?—We have no reason to think that.

362. (*Mr. John Burns.*) Have you seen the evidence of the cab drivers before the Labour Commission, complaining of the extent to which juvenile cab drivers are allowed to drive about the streets?—I may have seen it; I do not remember it.

363. (*Mr. Cunynghame.*) That of Mr. Dyke, Mr. Beasley, and others, but I understand there are only 131 as a fact, out of 15,000?—Yes.

364. (*Chairman.*) Have you considered the propriety of raising the minimum age?—The legal minimum is 16, we do not license under 17, and then we should suggest if we were asked for that suggestion that possibly the minimum age might be raised to 18.

365. Eighteen; you would not put it higher?—No, I think the Legislature having put it at 16, we might safely license at 18; there are plenty of lads, I think, at 18 who are well grown and quite capable of driving.

366. (*Mr. John Burns.*) Yes, but that type of lad as a rule does not go for a cab driver, the very big lad who is 18 and looks 24, generally goes to increase the army, or some other occupation. If you put a lad that would go for a cab driver at 18 alongside a recruit for the A. Division of Police, he would look only 16 or 14; age is no test of physical fitness for certain work?—I should suggest that if there were an alteration that 18 should be the minimum.

367–8. Have you any evidence of the transfer by proprietors who themselves have taken up cab drivers' licenses to their sons, who are considerably below the age?—No.

369. Do you know as to the belief that it is generally done?—No.

370. (*Mr. Cunynghame.*) In view of the very small number that you grant at present, namely, 60, and provided that those who now have it were to continue out their licenses, does it strike you that it would be no great hardship if no more were granted under 21?—No I do not know that it would be a hardship.

371–3. (*Mr. Lough.*) Would it not be a hardship in some suburban cases, where the father may own a cab or two, and where he may have a son of 18 or 19 growing up. Do you not think it would be a hardship to refuse the son a licence?—It might in certain cases.

374. (*Mr. John Burns.*) They are dealt with under the exceptional licenses given on the application of the proprietor; I do not object to that at all, but ought we not to be safeguarded, Mr. Bruce, so as to prevent proprietors passing as sons people who are really not their sons; that is what the cabmen complain of?

374*a*. (*Chairman.*) That is a new point to you, Mr. Bruce, it has not been brought under your notice?—No.

375. I come now to the question of renewal of licenses on which questions were addressed to you just now; I believe you put in a return† showing the number of cases of the renewals refused?—Yes.

376–7. What is the number of drivers' licenses now current?—The total number current in 1893 is 14,985.

378. (*Mr. John Burns.*) That is a decrease from the previous year?—The previous year there were 15,311, and the year before that, 15,219.

379. (*Chairman.*) You put in a return showing the number of cases of renewals refused. Now will you tell us what are the considerations which weigh with the Commissioner in refusing a renewal?—The Commissioner would refuse a renewal if in his opinion a man proved himself entirely unworthy of being trusted with a driver's licence.

380. (*Mr. John Burns.*) Would that refusal be based upon criminal convictions?—It would be based upon the nature of the case, *e.g.*, if he had been drunk several times.

381. (*Mr. Whitmore.*) Several times?—Several times, and if the inquiry had not been satisfactory.

382. You do not think one or two cases of drunkenness would justify a refusal?—Well, it depends; each case is taken on its merits. A driver might be drunk once and he probably would be cautioned; if he were drunk again, the next time next year, possibly the licence might be refused at the end of that year. If he went two or three years free of any report, and then got drunk again, that might be matter for consideration.

383–4. (*Mr. John Burns.*) But drunkenness is a diminishing cause for the refusal of licences. Is it not diminishing rapidly? Would you kindly hand in, Mr. Bruce, a list† of the causes of the refusals to renew?—Well, we have that here.

385. But it is a fact that refusals for drunkenness convictions are diminishing?—In 1891 there were 120, in 1892 59, and in 1893 they were 100, so you cannot say they are diminishing.

386. (*Chairman.*) Have you considered whether it would be desirable to grant provisional licences instead of absolutely refusing renewals?—I think possibly that might be a good thing.

387. (*Mr. Cunynghame.*) What I want to know is this. When a renewal of a license takes place I suppose you have before you the old sheet, the old licence with any convictions or other things marked upon the back?—Yes.

388. Is it not customary, I want to know whether it is or not, to issue the new licence for the next year without any of those convictions or any marks upon it, so that it is blank?—Oh, yes, entirely.

† Appendix I., II., D.

389. If that is so, does not that rather put a driver who has got a very bad character, say, has conducted himself very badly indeed, upon a level, perhaps, with a man who has had 20 years of very good conduct, so that when he shows his licence, say to an employer, nobody is able to tell the difference between a man who has been long in the trade, and been very respectable and done well, and has a very good character, and a man who has not?—For that year he is on a par.

390. (*Mr. John Burns.*) But equally it would perhaps operate harshly against a cab driver, Mr. Bruce, would it not, supposing he had had four convictions for drunkenness in the preceding 10 years, and then had suddenly become a teetotaller and changed his whole mode of life, if his four previous convictions were to be held up in evidence *in terrorem* against him. They have to consider that. Does not the Commissioner think that placing on a man's licence his previous convictions for drunkenness would operate harshly against a man who had changed his old conduct and method of doing his work and his life?—I think it might.

391. (*Mr. Lough.*) You have told us there were 11,000 cabs licensed, and 20 per cent. lie up every day, which leaves 9,000 in work any day. You have now told us that you issued 15,000 drivers' licences. Does it occur to you that that is an extreme proceeding to licence 6,000 people more for this industry than there are cabs employed any day?—But then the same remark applies to these drivers, that these 15,000 are not all working.

392. I will come to that next. Have you anything to say about that disproportion, which leaves 6,000 men idle every day?—It does not mean 6,000 idle every day from one point of view.

393. Well, why not?—It means that some are sick, some are dead, some do not intend to drive perhaps more than a month or two, some are doubles.

394. I will come to that next. You have told us that 20 per cent. of the cabs lie up each day?—Yes, roughly.

395. Now I ask you do you not think that as 20 per cent. of the cabs lie up each day it would be quite sufficient to license the same number of drivers as of cabs, because you would have that 20 per cent. margin to provide for these other things? Do I make myself clear?—I see what you mean.

396. If you have 11,000 cab plates out, would not 11,000 drivers be sufficient, the 20 per cent. of the cabs lying up each day corresponding with the drivers who would not be out each day?—You mean would not the margin of drivers lying idle be equal to the margin of cabs lying idle, and that if there were 11,000 cabs there need only be 11,000 drivers, for while there are 20 per cent. of the cabs lying idle there would probably be 20 per cent. or more of the drivers not out.

397. That is my question; why do you wish—I will ask you now, consequent on your answer—why do you wish to have more than 9,000 drivers available any day for 9,000 cabs?—I think a proprietor must have a selection.

398. Why do you say a proprietor should have a selection, do you not select?—The cab would lie idle.*

399. (*Chairman.*) May I ask you this question that I intended to ask, what proportion exists between the daily average of cabs in use and the daily average of drivers using their licence?—It is about 13·88 drivers to 10 cabs.

400. (*Mr. Lough.*) How do you find that figure?—That is the number licensed.

401. The number licensed, that is another thing; but I want to get at the point of all these men idle every day, sir, and why they are licensed.

402. (*Mr. Whitmore.*) Is it the case that the drivers as a rule do not work for more than five days per week?—I do not know as a fact, I do not know it officially.

403. (*Mr. Bayley.*) I can give it you as a fact that they work five and five and a half days.

404. (*Mr. John Burns.*) Five and a half days.

405. (*Mr. Lough.*) This proportion that you have just given means 40 per cent. more drivers than cabs licensed; do you think that 40 per cent. is necessary, adding to it the proportion of cabs that are idle?—I think it is desirable.

406. You think that full margin is desirable?—Yes.

407. (*Mr. Hopwood.*) Is it not a fact that you may have two drivers of one cab in 24 hours?—Yes, sometimes a cab is worked, I understand, day and night.

408. (*Mr. John Burns.*) Then this 13·88 applies to two drivers to one cab, and two odd men to relieve the others?—Yes.

409. And do you think that the difference between 13·88 and 10 is too great a margin for the interests of the trade?—As far as I am able to judge I do not think it is.

410–1. (*Chairman.*) I think you are not an advocate of limiting the number of either cabs or men?—No, personally, I am not.

412. (*Mr. John Burns.*) But independently of the cab masters and cab drivers, are you not generally in favour of some limitation from the point of view of convenience of the public in the streets, and the prevention of accidents due to an excessive number—disproportionately excessive number—of cabs?—Well, as I said, I do not know that the accidents are due to an excessive number of cabs, and I think there is nothing to show that even if you limit the cabs the congested area would not contain the same number as it does now.

413. (*Chairman.*) I understood from your previous answer, and from Mr. Burns' comment on it, earlier in the morning, that you read the figures which have been produced since the cab strike as rather tending to show that the number of cabs has not much to do with the number of accidents?—That is what I intended to convey.

414. Is it not for the public convenience, as this strike has proved, that the supply of cabs should be proportionate to the demand, when it has been demonstrated beyond the shadow of a doubt that 15,000 drivers' licences and 12,000 cabs are more than sufficient to supply the wants of London?—If you could ensure by limiting the licences that the wants would be supplied, but I do not think you could ensure that effect in that way.

415. (*Mr. Cunynghame.*) Would you let me ask a question about your answer with regard to the congested area. It was submitted by you that if the number of cabs were limited the congested area would contain the same number as it does now, because they would all rush into the most profitable areas and there would be the same congestion in some parts that there is now. If it were resolved to limit the number of cabs, could we not possibly defeat that by noticing the addresses of the proprietors who take out licenses for cabs, so as to take care that a sufficient proportion of them should keep their cabs in the suburbs; do you think that would meet it in any way? I do not know if I have made my point clear. By taking care that if there was a limitation the limitation should be so arranged that a good many of the applicants who were living in the suburbs might be preferred to others, we might minimise the danger?—That might minimise the danger.

416. But it would not of course entirely remove it?—No.

417. It is a fact, I think, is it not, that if a cab proprietor does not use his licence for a certain time the law entitles you to revoke that licence?—It does.

418. Well, but take a driver, if he does not use his licence there is no corresponding power of revoking it, is there?—None.

419. If that is the case, would there not be a danger if you limited the number of cabs and a number of men took out licences who intended to use them only just during the Epsom week?—Yes, certainly.

420. Can you suggest any safeguard against that system; could you, for instance, bring in a rule that a driver who did not use his licence should be liable to have it forfeited in the same way as a cab has?—I do not see, first of all, how you are to prove that the driver is not using his licence.

421. (*Mr. Burns.*) But, is it not easy for the cab-master to certify the use of the licence on the licence?—Yes, that is so.

422. (*Mr. Cunynghame.*) Even if that were done there is one other difficulty I would like to put before you, and ask if you can suggest any way of getting over it. Supposing it were a rule that a man who did not use his licence for a week or a fortnight should

* *See* question 537.

Mr. A. C. Bruce.
15 June 1894.

forfeit it, might we not in the case of a strike have the fact of the whole of the men forfeiting their licences?—Certainly.

423. (*Mr. Burns.*) Do you not consider that the excess of licensed cab drivers on the streets of London, and an excess of licensed cabs is an incentive to three or four drivers to rush to one fare leading, as a consequence, to disorderly scenes in the streets and bad language and the ultimate detention of some of them in Marlborough Street?—I have no doubt that does occur.

424. Have you not observed it in the streets yourself?—Yes.

425.—Five or six cabs rushing for one passenger?—I have observed two or three cabs rushing for one passenger on a whistle, certainly.

426. As apart from the interest of the cab-master and the cab-driver, does not the general convenience of the public demand a diminution of that evil?—If you can effect it, I think it does.

427. Well, but would not the tendency of reasonable restriction, that is, the regulation of supply of cabs to demand, tend to diminish that?—I say, qualified by my former remark, that if you could ensure that, I think it would—if you could ensure that.

428. That is a matter of regulation rather?—Yes.

429. (*Mr. Lough.*) Can you give us any definite reason for your objection to limiting the number of licences? You have stated now that you have 15,000 licences out for a daily work of 9,000 cabs, and yet you object to diminution?—When I say I object to any diminution I say it is not advisable.

430. You object to restrictions, I think?—I think it is inadvisable.

431. You object to any reduction; are you speaking of drivers now?—Cabs would stand idle, they would not be used because there would not be drivers for them. You cannot compel the drivers who have taken out licences to work. I think the possibility is that if you limit the drivers many cabs would have to stand idle, and the public would be worse off than they are now.

432. Will you agree that if the driver will work regularly then the number might be restricted?—Yes if you can ensure that.

433. If you could ensure that the drivers would work regularly?—As far as the public are concerned.

434. That would do away with your objection against restriction?—As far as that is concerned.

435. Well, have you any other objection?—I think it would be rather difficult to work, I do not say it is insuperable, but I think there would be difficulties in the working of it.

436. Then your evidence amounts to this, that because there are butterfly drivers, or men who choose to work a few days in the trade, you think it necessary to have such a great number in excess of the requirements in order to facilitate the man who wants to get a licence for amusement a few days in the year?—No, I do not say that.

437. That is the effect of it?—Well, it is not in order to do that; we license men of good character and that sort of thing without any relation to butterflies in any way.

438. I am not speaking of that; you say you are the officer over it, and you object to the restriction?—I object to it only in so far as I see objections to it.

439. (*Mr. John Burns.*) You have a theoretical objection to the restriction of cabs?—Yes.

440. (*Mr. Lough.*) Can you state the objection beyond what you have said, that cabs might stand idle?—Well, I think that perhaps is the chief one.

441. The chief one—the only one?—The chief one.

442–3. You said a moment ago that there were cabs running constantly, so constantly that they require two men a day to drive them; do you stick to that? Do you mean that they run the same cab night and day?—So I understand.

444. And there are just as many out at three o'clock in the morning as at three o'clock in the afternoon?—I do not say that is universal, I only say that there are some cabs run night and day.

445. The whole 24 hours?—Well, practically the whole 24 hours.

446. How many would you think?—Oh, well, I am afraid I cannot give any estimate.

447. Yes, but it is important, because you are basing the double number of men really on the idea that the cabs must be running constantly, and I do not think that is accurate, at least, I doubt if it is accurate.

448. (*Chairman.*) Mr. Bruce is not able to state that definitely. It is only an impression?—It is only an impression; merely a matter of opinion.

449. (*Mr. Lough.*) Do you know any one case yourself of any cab kept running with two men for the 24 hours?—I cannot cite one off hand; there are plenty of cases.

450. You do not know any case yourself?—No, I cannot give a case.

451. (*Mr. Whitmore.*) Not within your official knowledge?—No.

452. You have no means of knowing?—I have no means of knowing; no reason to know.

453. In giving us this view you have based your opinion upon what you have heard?—Yes.

454. (*Mr. Lough.*) Your evidence about the cabs running day and night with two men is only hearsay; you do not know it officially?—I do not know it officially.

455. Do you see any objection to the cab proprietor for official reasons marking on the driver's licence the number of days the man works in the year?—He does that.

456. He does that now?—He is bound to do it.

457. Do you pay any regard to the number of days he has worked, in the renewing of the licence?—If the man has worked all the year we assume that there have been no convictions, and if there are no complaints we assume that he has been of good character. If there is a hiatus; if a man has worked from January to October, and then has not worked till December, we make further inquiry as to what he has been doing during that period.

458. Supposing you find he has been gardening, does that prevent you issuing the licence?—Not if his character has been good.

459. You pay no attention to the hiatus?—Not if his character has been good.

460. (*Chairman.*) You only inquire into the hiatus to see whether he has been in prison or not?—Certainly.

461. (*Mr. Lough.*) You take no notice, for the purposes of renewal, of how many days he has driven?—No.

462. (*Mr. Whitmore.*) There may have been a short summer that year?—Yes.

463. (*Mr. Lough.*) If you did notice that, and insist, say on a minimum of 200 or 250 days driving, then the number of licences to drivers might be reduced?—Probably it would reduce them, but I do not quite see how it would work.

464. (*Chairman.*) That would require legislation, would it not?—Yes.

465. I mean you cannot take away, refuse the renewal of a licence on the ground of a hiatus in the present year?—No.

466. (*Mr. Lough.*) Have you ever had a legal opinion at Scotland Yard that you must issue drivers' licences to anybody who applies, and who is suitable? No; not that I am aware of.

467–8. (*Mr. John Burns.*) So that every application, other things being equal, has to be met with a granting of the licence; every applicant, subject to his being qualified by the regulations, must have a licence given to him?—Strictly speaking, I do not think the Commissioner is absolutely bound,* in the case of drivers, to issue a licence.

469–70. (*Mr. Lough.*) He could limit the number?—I think he could.

471. You think there is a difference between the cab licences and the drivers' licences?—I think there is a difference.

472. (*Mr. Whitmore.*) Legally?—Legally.

* R. v. Comm. of Pol. 28 J.P. 438.

473. (*Chairman.*) That difference may be very important. We would not press the Commissioner for a professional opinion offhand, but as far as the subject presents itself to your mind now there is a difference with regard to the licensing of cabs and drivers?—In the one case it says on the intending proprietor filling up certain forms and doing certain things thereupon the Commissioner shall issue a licence; in the case of the drivers it says the Commissioner may.

474. There is that difference in the wording?—Yes; that is what I go upon.

475. Has not the "may," the permissive form, been interpreted to be obligatory?—In some cases it has, but there is such a marked difference in the wording; "the Commissioner shall" and "the Commissioner may"; the two things are different. But we have no settled opinion about it. I do not know that the point has ever been actually decided judicially.

476. But it suggests to your mind that there was an intention to give the Commissioner a latitude in the one case which he does not possess in the other?—Well, I am not prepared to say whether it was intended or not.

477. I will illustrate my question in this way: according to the wording of it there is a latitude permitted legally to the Commissioner in the one case but not in the other?—I will not say that.

478. (*Mr. Whitmore.*) But it is a latitude which has never been exercised?—Which has never been exercised.

479. (*Mr. John Burns.*) Except in the case of persons convicted of a misdemeanour?—That is the cabs, the proprietors.

480–1. (*Chairman.*) I understood Mr. Bruce to say there was a difference in the wording of the Act?—I think the words "the Commissioner may" are in the Act of Parliament. I think the word "shall" is in the Secretary of State's Order.

482. Mr. Bruce, this is fundamental; it seems to vitiate almost everything that has been said during the last few minutes. The wording in the Act is the same in both cases.

483. (*Mr. Cunynghame.*) If you look at 32 & 33 Victoria, chapter 115, section 6 in the one case, and 8 in the other, I think the words are "may" in both cases. One deals with cab licences, the other deals with drivers' licences. In the order, however, there is a difference?—The Secretary of State's Order says "shall."

484. I am speaking of the Act?—I beg your pardon, the cabs are licensed only under the Act of 1869 and drivers under 6 & 7 Victoria as well.

485. (*Chairman.*) Well, let us compare the terms of the two Acts.

486. (*Mr. Lough.*) May I ask whether in the ideas which the Commissioner has formed he is guided by the Act of 1869 or by the Order of 1871?—The cabs are licensed under the Secretary of State's Order of 1871, which was made in pursuance of the Act of 1869, and drivers under the Acts of 6 & 7 and 32 & 33 Victoria.

487. (*Chairman.*) That reference I have got. Let us by way of saving time read that 6 & 7 Victoria, Chapter 86, section 8, "And be it enacted that it shall "be lawful for the registrar to grant a licence to act "as driver of hackney carriages, or as driver or conductor of metropolitan stage carriages, or as waterman (as the case may be) to any person who shall "produce such a certificate as shall satisfy the said "registrar of his good behaviour and fitness for such "situation respectively: Provided always that no "person shall be licensed as such driver as aforesaid "who is under sixteen years of age, and in every such "license shall be specified the number of such licence, "and the proper name and surname, and place of "abode, and age, and a description of the person to "whom such licence shall be granted, and in the case "of a waterman, of the standing or place at which he "shall be thereby authorized to act as a waterman, "and the nature of his duties; and every such licence "shall bear date on the day on which the same shall "be granted, and shall continue in force until and "upon the first day of June next after the date thereof, "or if granted in the month of May in any year, then "to continue in force until and upon the first day of "June in the year next following that in which the "same shall be granted, except in either case the same "shall be sooner revoked, and except the time (if any) "during which any such license shall be suspended, "and on every licence of a driver or conductor the "registrar shall cause proper columns to be prepared, "in which every proprietor employing the driver or "conductor named in such licence shall enter his own "name and address, and the days on which such "driver or conductor shall enter and shall quit his "service respectively, and in case any of the particulars entered or endorsed upon any licence in pursuance of this Act shall be erased or defaced every "such licence shall be wholly void and of none effect, "and the said registrar shall, at the time of granting any "licence, deliver to the driver, conductor, or waterman "to whom the same shall be granted, an abstract of "the laws in force relating to such driver, conductor, "or waterman, and of the penalties to which he is "liable for any misconduct, and also a metal ticket, "upon which there shall be marked or engraved his "office or employment, and a number corresponding "with the number which shall be inserted in such "licence." There it is that it is lawfully permissive apparently. Let us see the Act of 1869.

488. (*Mr Lough.*) Would you mind looking at the *Blue Book, page 6, sir. At the top of the page you will see that the clause begins: "One of Her Majesty's "Secretaries of State may license," and it goes on: "Any licence may be granted on such conditions as the "said Secretary of State may by Order prescribe"?—Yes.

489. I imagine, then, that the law is actually fixed by the Order of 1871?—That is for licensing cabs.

490. But do you not think that another Order might be issued under that clause which would permit new restrictions to be put on the issue of licences?—Oh, I daresay that might be.

491. Then you think the Home Secretary might issue an Order in substitution of the Order of 1871 that would alter the present practice?—That would alter our powers.

492–3. Then new legislation would not be required from the Secretary of State?—As far as the licensing is concerned.

494. As far as the licensing of a certain number is concerned?—As far as having power to limit.

495–6. He might introduce a new condition; he might say if he likes, subject to not more than 12,000, the present number being licensed?—He might.

497. (*Chairman.*) Here we come to 32 & 33 Victoria, Chapter 115, section 6: "One of Her Majesty's Prin"cipal Secretaries of State may from time to time "license to ply for hire within the limits of this Act "hackney and stage carriages, to be distinguished in "such manner as he may by Order prescribe.

"Any licence in respect of a hackney or stage carriage "under this section may be granted at such price, on "such conditions, be in such form, be subject to revi"sion or suspension in such events, and generally be "dealt with in such manner as the said Secretary of "State may by Order prescribe, subject as follows:—

(1.) "That a hackney or stage carriage licence "shall, if not not revoked or suspended, be in "force for one year, and there shall be paid in "respect thereof to the Receiver of the Metro"politan Police, to be carried to the account of "the Metropolitan Police Fund, such uniform "money not exceeding 2*l.* 2*s.*, as the said "Secretary of State may prescribe."

(2.) "That in any such Order provision shall be "made for the transfer of a hackney or a stage "carriage licence to the widow or to any child "of full age of any person to whom a hackney "or stage carriage licence has been granted who "may die during the continuance of such licence, "leaving a widow or child of full age, and also "for the transfer of a hackney or stage carriage "licence to the husband of any woman to whom "such licence has been granted, and who marries "during the continuance thereof."

Well, then, it appears that the law is the same in both cases, that it is only permissive in both cases?—Except that the Secretary of State's Order says that he shall.

498. But the Secretary of States Order has only the force of law until it is revoked; it is an executive administrative Order?—But the Commissioner is bound

* The Abstract of the Hackney Carriage Regulations.

Mr. A. C. Bruce.

15 June 1894.

by that Secretary of State's Order as long as it remains in force.

499. I am putting aside the question of construction, but as to the actual terms of the two Acts, the law seems to be the same, merely permissive in both cases?—Yes.

500–1. There is no compulsion in either case apparently?—Not so far as the Acts are concerned.

502. The Acts, of course, are everything?—Yes.

503. The further procedure taken by order of the Secretary of State is of course a matter that can be altered, modified, or revoked in a moment I presume?—Yes.

504. As far as the Acts are concerned, and as far as we, being laymen, are able to construe them, there is a latitude in both cases?—Yes.

505. (*Mr. John Burns.*) May I ask Mr. Bruce this question, whether considering that the hackney carriages of London are worked under 24 distinct Acts of Parliament and regulations, some of which are optional, some of which are obligatory, would it not be an advantage to the cab driver, the cab-master, the public and the officers if the whole of the hackney carriage laws were simplified and codified into one Act complete in itself, that every cab driver would be able to have in his possession?—Certainly.

506. (*Mr. Lough.*) Do you think that much practical hardship would arise if you ceased to grant the licences to new men?—That is limit the number.

507. To new men. It would be a hardship to refuse to grant the licences to old men?—Well, I do not know whether I am prepared to say, purely from the point of hardship.

508. Well, from any other point?—I mean it would be limiting the number, of course, at once.

509. That would limit it very rapidly would it not?—Yes.

510. How many would you strike off a year by refusing—a thousand?—I cannot say.

511. (*Mr. Cunynghame.*) May we take it from you that a great many of these enactments, sections in the different Acts, are very confusing because they are cumulative, that is to say, you find in more than one place a penalty for obstructing the roadway and for furious driving expressed in different words?—Yes.

512. So that that would perhaps be an additional reason for codifying?—Yes.

513. One other point, if you please. You have handed in a return, I think, showing the number of convictions for crime of different sorts among cabmen during the past three years; that you were requested to prepare?—Yes.

514. I observe here in 1893 there were 1,458 convictions for drunkenness?—Yes.

515–6. That would be 10 per cent. Now, I am going to ask you this question: have you formed any opinion, perhaps you have not had the subject before you, but have you formed any opinion of what proportion the number of convictions in the metropolis for drunkenness bears to the adult male population over 21 and, we will say, under 60?—No, I have not.

517. If I gave you the figure at one in about 45 would that surprise you; I suppose you have formed no opinion?—I have formed no opinion.

518. In that case, if one in 10 is the proportion in cabmen and one in something like 40 is the average in the rest of the population, does that not point to the face that there may be amongst the ranks of the cabmen, not that they are distributed through them, but certainly amongst the ranks of the cabmen, a very considerably larger proportion of drunken men than among the rest of the population?—I would say that would seem to show that.

519. (*Mr. John Burns.*) Do you know, Mr. Bruce, as a fact, that it is alleged by many drivers, and by some of the temperance societies, that one man out of every three who drives a cab in London is a teetotaller?—No, that has not been brought to my knowledge.

520. Has it been brought to your knowledge that amongst the 12,000 cabdrivers plying for hire in London there are 4,000, over 4,000, of them signed teetotallers?—No, that has not been brought to my knowledge.

521. But is it a fair test, may I put it this way, of the sobriety of the cabmen in comparison with the sobriety or drunkenness of people who are not cabmen, that the charges of drunkenness against cabmen should be taken as a general indication of his drunkenness or his sobriety. For instance, when a cabman is drunk on the box he cannot avoid the policeman, but when a bricklayers' labourer is drunk on the pavement his friends can take him home. Is that a fair test?

522. (*Mr. Cunynghame.*) Certainly a reduction ought to be made. It is perfectly fair to put it that the cabmen lead a public life, while the bricklayer's labourers' life is not so public; it is quite fair; a reduction ought to be made.

523. (*Mr. Hopwood.*) I have one question on licensing to sum up your evidence, given in answer to Mr. Lough. Assuming that it is proved to us that too many licences are issued, I take it that you would prefer to meet the difficulty by a more rigorous examination of the drivers and by a practical examination of the cabs rather than by cutting down the licences, by restricting their issue?—I think, perhaps, that would be the best way.

524. (*Mr. John Burns.*) But, then, does not that throw the responsibility of rejecting both cabs and the application for the licences upon the individual who is the inspector of both cabs and cabmen. We have no right to throw upon one inspector the responsibility of refusing either licences or cabs, but if we are to limit them we should take it out of the power of a police officer or any one individual to say for a certain number of years only a certain number of licenses will be issued.

525. (*Mr. Hopwood.*) I intimated a more rigorous examination. That, I take it, would be within the purview of your administration?—Yes.

526. You could have a more rigorous examination of the cabmen?—Yes.

527. A practical examination of the cabs you could also make if you had the material placed at your disposal?—Yes. I do not know that it follows that that would actually limit the number; it might have the effect of diminishing the number of drivers for a certain number of years, but unless you had a fixed limit—suppose you said that every cabman who got drunk was not to have another licence, probably it would reduce the number of licences for a number of years, but it would not follow that the number would not creep up again, of men who never get drunk, so that you would have to have a proper limit assigned.

528. True, but I take it it would eliminate the bad drivers and the bad cabs?—Yes, certainly.

529. You would get rid at once of a large number of bad cabs and incompetent drivers?—Well, I do not know that I would admit that we would get rid of a large number of bad cabs; I do not admit that there are a number of bad cabs passed.

530. (*Mr. Whitmore.*) Or incompetent drivers?—Or incompetent drivers.

531. (*Mr. Hopwood.*) So that really you do not think that Mr. Lough's suggestion would lead to any material reduction in the number of cabs or drivers?—I do not think it would, and if it did it would not, I believe, have the effect desired.

532. (*Mr. Whitmore.*) You admit it would improve the service if it could be proved that there are bad cabs and incompetent drivers?—They would be weeded out.

533. (*Mr. Hopwood.*) You put it as high as this: you think the present examination of the drivers would be sufficient and the present examination of the cabs is adequate?—Yes.

534. (*Mr. Whitmore.*) All is really for the best in the best possible of cab systems?—I think with the materials at our disposal it is probably as good as we can do, certainly.

The witness withdrew.

Adjourned till Friday next at 11 a.m.

SECOND DAY.

Friday, 22nd June 1894.

PRESENT:

MR. GEORGE RUSSELL, M.P. (CHAIRMAN, PRESIDING).

Mr. HENRY CUNYNGHAME.
Mr. F. J. S. HOPWOOD, C.M.G.
Mr. E. H. BAYLEY, M.P.
Mr. JOHN BURNS, M.P.
Mr. T. LOUGH, M.P.
Mr. C. A. WHITMORE, M.P.

Mr. MALCOLM DELEVINGNE, *Secretary.*

Mr. ALEXANDER CARMICHAEL BRUCE, Assistant Commissioner of the Metropolitan Police, recalled and further examined.

Mr. A. C. Bruce. 22 June 1894.

535. (*Chairman.*) First of all I believe you want to correct one or two points in your evidence of the other day?—If you please, sir.

536. On Question number 147, I have a note?—The question was: "But what steps are taken to prevent "this condition of things happening; suppose a man "has six cabs, four first-class cabs, and two of them "very bad ones; what steps are taken to prevent him "from, after he has had his four good cabs passed, "transferring the plates from two good cabs, which "may be let to doctors, and consequently do not want "the plates on, and putting two good plates on two "bad cabs that have not been up for inspection at "all." I ought to have added that there would be no approval mark on those cabs that had not been up for inspection at all, and therefore they would be discovered.

537. Have you anything further to say arising out of your evidence of the other day, as you have had the opportunity of reading it since?—Question 398, Mr. Lough asked, "Why do you say a proprietor should "have a selection, do you not select?" I appear to have said the cab would lie idle; I would like to amplify that by an illustration of what I mean by selection: if the cab drivers are limited in number, and a driver who is driving for a certain proprietor uses a horse badly, or drives it too much, or does anything which entitles a proprietor to be dissatisfied with him, the proprietor would wish to say, probably, "You do "not drive for me again, and I will take some one "else." If the numbers are limited, probably he would be unable to do that, and he might let the cab lie idle or sell it.

538. Is there anything more that occurs to you to suggest?—I think not, sir.

539. Well, then, we will resume the examination here, if you please, Mr. Bruce. Have you ever considered the advisability of adopting the Paris system of apprenticing drivers to drivers, in order to ensure their competence?—No, I have never considered that.

540. It has never been under consideration?—It has never been under consideration as far as I know.

541. Now we come to the sub-head of the duties of the police with regard to the cabs; I understand that the police orders have been handed in?—Yes.

542. What are the duties of the police with regard to crawlers?—The duties of the police with regard to crawlers are to see that they do not cause obstruction principally. It is no actual offence to crawl, so long as obstruction is not caused thereby.

543. (*Mr. John Burns.*) But is that so, Mr. Bruce; did not some of the cab drivers, in giving evidence before the Labour Commission, state in the most positive manner, that the fact of interrogating potential customers on the side-walk was in itself an offence against the hackney carriage law?—Plying for hire you mean.

544. Yes?—That would be a question of plying for hire.

545. But do you differentiate between crawling and plying for hire?—Well, in the fact of crawling, unless he plies for hire, he commits no offence.

546. (*Mr. Whitmore.*) He must make a solicitation?—Yes, the crawling through the streets, and nothing else, is no offence; he may be going home, or he may be going to the nearest stand. The mere walking his cab, or trotting his cab empty through the street, is no offence.

547. (*Mr. John Burns.*) No. but is not the difference between crawling slowly along the near side and solicitation after all a difference only of a very slight degree? For instance, supposing you and I were to go out of the Home Office towards Trafalgar Square, and a cabman recognised us as possible passengers, he would walk his cab right alongside until we reached Trafalgar Square, and when we went into some building he would at once leave us and take on with someone else. Now, if he were to say "Cab, sir," the fact that he did it would bring him within the hackney carriage law?—Would constitute plying for hire.

548. You recognise the difference between crawling alongside a possible passenger and actual solicitation?—Yes.

549. And is not the difference between one and the other from the point of view of public convenience, rather in favour of solicitation; if a man said "Cab, sir," and you said "No," he would cut away at once, while if you did not say "No," he would follow you right down to Pall Mall, to the inconvenience of other vehicles.

550. (*Mr. Whitmore.*) I want to know whether the distinction which you state is one which has been sanctioned by legal decisions; the distinction between mere crawling and crawling plus solicitation?—I think it is, yes.

551. (*Mr. John Burns.*) Have you considered what remedy would be possible and practicable for the prevention both of crawling and undue solicitation?—I think it is very difficult to suggest a satisfactory remedy.

552. (*Mr. Whitmore.*) But do you consider that crawling is a nuisance, and a thing which ought to be stopped?—Well, I am looking at it from two points of view; from the point of view of the public it probably is the case that it is an advantage to the public as it enables them to get a cab quickly, but from the point of view of the regulation of traffic I think it may be said to be a nuisance.

553. (*Mr. John Burns.*) Do you consider that the only satisfactory remedy for crawling is a sufficiency of ranks?—I do not think that is a remedy.

554. Is it a partial remedy?—Well, I think there is a difficulty in deciding what is a sufficiency of ranks.

555. Well, that having been decided subsequently, do you consider that a better and more equitable distribution of ranks would, to a great extent, mitigate crawling?—I think it is very difficult to say, because you cannot compel them to go upon stands, and you cannot put in the neighbourhood where cabs most do congregate a sufficiency of stands.

556. No; but have you ever considered any alternative scheme of ranking cabs, or any other ways of fixing

Mr. A. C. Bruce.

22 June 1894.

them for hire by would-be passengers, as against the bad system of crawling that now prevails?—I think we have done all we reasonably can in the way of appointing standings.

557. Do you find generally that the local authorities are opposed to ranks being placed in their district; have you had any experience?—I do not think as a rule they are opposed to it; we always ask them.

558. (*Chairman.*) Have the police any means of checking unlicensed drivers?—I beg your pardon, do you mean by checking, stopping them, or detecting them.

559. Detecting and stopping them; are there any means by which the police, supposing they meet a man who is really an unlicensed man driving, can take him and prevent him continuing to drive?—He would show he was unlicensed by not having his badge; they have then the power of apprehending him.

560. And the driver is bound to show his badge, is he?—He is bound to show his badge.

561. Does a policeman meeting a driver without a badge at once pounce upon him and ask him to show his badge?—It would be his duty to see that his badge was worn conspicuously.

562. And as matter of fact, do they pull up men for driving about without badges or invisible badges?—Yes.

563. And have you considered whether keeping photographs of the drivers and the men having licences would be a useful device?—That has not been considered.

564–5. Is there any objection, with a view of preventing the transfer of a licence from one man to another, to the adoption of the Paris system of having a photograph of the driver on his licence; have you ever considered that?—I have never considered that.

566. Is there anything which in your view should be added to the police orders; have you any suggestions to make for addition or extension?—On this particular point?

567. Yes?—No, I think not, sir.

568. Now we come to the head of police courts; on this we shall not have to ask you much, because the great bulk of this evidence will be given by a magistrate and by a clerk, and I believe you have already handed in returns of suspensions, revocations, charges, and convictions?—Yes.

569. I have no questions to ask you on this branch of the subject; is there anything that you wish to say, arising out of your official experience in the police courts?—If it is in order at this moment I should suggest that a driver's licence should become void if he were convicted of felony. At present that is not so; I think in that case the licence might at once become void.

570. Would that need legislation, or could that be done by the Secretary of State's Order in virtue of the powers conferred by the Acts?—I think the Secretary of State could do that.

571. (*Mr. Cunynghame.*) The law at present is, I think, that all men are not only obliged to wear their badges when upon the rank, and when plying for hire, and conducting passengers, but also when they appear at all before a police magistrate, even upon a case unconnected with cabs. Whenever they go into a magistrate's court they are—I believe the law is—they are obliged to wear their badge; is there any reason for that rule? Some of the men I have noticed object to it very much, but I do not know why?—I do not know that there is any special reason for it.

572. There is no corresponding provision, for instance, that a soldier shall appear in uniform before a magistrate instead of in plain clothes if he were not breaking a military regulation?—I cannot give any special reason.

573. (*Mr. John Burns.*) In your opinion, Mr. Bruce, does the possession of a badge necessarily give proof of licence?—No.

574. Well, what steps, in your opinion, should be taken to verify the driver's *bona fides*, and his right to have a badge?—You mean in the case of a man driving along the street with a badge?

575. Yes?—I cannot suggest any.

576. Well, put it this way: supposing you were to go outside, and you were to authorise a policeman to stop a cab, and say to the driver, "What is your badge?" "Let me have a look at your badge"; he would produce a badge. What guarantee would the policeman have on the production of that badge that the man had a right to it, and that it corresponded with the licence that he either got out himself, or which perhaps someone else got out and transferred to him?—I do not think he would have any guarantee; the presence of the badge would be *primâ facie* evidence that the man was licensed and licensed duly.

577. (*Mr. Whitmore.*) I should just like to ask whether you would restrict the forfeiture of licence which you propose to cases where a man had been convicted of felony, and whether you would not increase it to cases of misdemeanors of a serious kind?—The magistrate has certain powers of revoking or suspending drivers' licences. But I think in cases which the magistrate does not deal with, it would be well that the licences should become void on conviction, because probably the judge before whom the man came would not have that power of revocation.

578. You see what I mean, the distinction between felony and misdemeanor is rather an artificial one sometimes?—Yes.

579. (*Mr. Hopwood.*) Have you any written instructions to the police with regard to their attitude towards cabmen?—There is this.

580. Are they written instructions which could be put in for the information of the committee?—No written instructions, I think. What I am about to read is printed in the police orders.

581. I beg your pardon, would you let us have it?—"The Commissioner desires to impress on the Superintendents the necessity of careful inquiries being made into the circumstances of all cases reported by the Police for proceedings to be taken by summons previous to applications being forwarded to the executive branch. In many cases the offence charged to have been committed may not have been wilful, and a caution in the first instance would be expedient.' I think that is about all.

582. A caution by the police constable?—A caution by the police constable.

583. That is as regards cabmen. Now as between your inspectors and cab proprietors, have you any instructions to your inspectors?—As to their conduct towards them?

584. Yes?—I do not think any special instructions.

585. Merely general instructions?—Merely general in regard to their general conduct as inspectors.

586. Then upon the point of procedure; when a police constable observes in the conduct of a cabman anything which he feels it his duty to complain about, does he draw up a written report?—If he thinks the case is one that ought to be decided by summons he makes a note, he reports the circumstance at the police station, his report is entered in the occurrence book. That occurrence book goes before the superintendent, and the superintendent, if he thinks it is a case for summons, recommends accordingly.

587. Then the summons is not taken out against the cabman at the instance of the constable alone?—No.

588. His action is first endorsed or condemned by a superintendent?—Yes.

589. (*Mr. Lough.*) Pursuing that subject for one moment, I wanted to ask this: are you aware of a practice adopted in the police courts of recommending the cabmen to plead guilty by the police; do you know that there is such a practice?—I do not.

590. You never heard that the police generally advise the cabmen that if they plead guilty the cases will be disposed of quickly and they will get off easily?—No.

591. Is it not true that there are two days specially devoted at Marlborough Street to these cases, and the police generally bring up their prosecutions?—I cannot say off hand.

592. Fridays and Tuesdays?—It may be so; I am not prepared to say at this moment.

593. Well when they are brought up there is always a special hour for the cab cases, is there not, at the end

of the court?—I am not prepared to say whether that is so or not; it may be changed from time to time.

594. And do you know how many cases of prosecutions the police will sometimes have at Marlborough Street on Friday or Tuesday?—No, I cannot say that.

595. Do you know that as many as a hundred will sometimes be disposed of in about an hour or two; did you ever hear that?—I cannot say.

596. (*Mr. Hopwood.*) The police charges are taken alike, at all Metropolitan courts, I suppose?—Oh, yes.

597. (*Mr. Lough.*) That is my one question; you do not know that there are any general instructions to the police to advise the cabmen to plead guilty and they will get off easy?—No.

598. There are two courts at which the cases generally come up, are there not, Mr. Bruce?—Come up specially, do you mean.

599. Yes. Marlborough Street?—Probably there are more cases at Marlborough Street; that is all I can say.

600. And what is the other one?—Bow Street.

601. Is there no rule that the cab cases shall be brought there if possible?—No, not that I know of.

602. (*Mr. John Burns.*) Have you ever been to Marlborough Street, Mr. Bruce, on a cab day?—No, I do not know that I have.

603. (*Mr. Cunynghame.*) Do you happen to be aware, Mr. Bruce, that once there was said to have been a court which used to sit in Essex Street to try cab cases; it is many, many years ago, more than 40 years ago?—I believe there was.

604–5. (*Chairman.*) Now, I am to ask you two rather large questions, Mr. Bruce. Have you any additions to suggest to the existing Acts of Parliament and the police orders with regard to, in the first place, the duties of proprietors, and in the second place, the duties of drivers; or do you think that the duties of those two classes of men, so far as they can be regulated by any public authority, are sufficiently defined and regulated by the Acts of Parliament and the police orders?—With regard to proprietors, I think it would be a good thing if they were prohibited from sub-letting their cabs.

606. Is that your only suggestion with regard to the proprietors?—I think that is the only one.

607. And with regard to the drivers, do you think they are sufficiently dealt with under the existing authorities, or would you like to have some further regulations for them?—With regard to drivers, I think it would be a good thing if we were empowered to grant a three months' licence, and perhaps in addition a six months' licence, instead of as now a 12 months' licence.

608. (*Mr. Lough.*) What do you mean by sub-letting, Mr. Bruce, in reference to the Chairman's question?—A proprietor will have a cab licence and then sub-let it to someone else.

609. Is not that what the London Improved Cab Company does; it has got the licences, and it lets out its cabs; do you object to that?—I think it would be better if they were not allowed to sub-let them, but only let out the cabs to the drivers; I do not think they should be allowed to let out their cabs to other people for the purpose of hiring them out.

610. You have no objection to a proprietor having a large number of cabs?—Oh, no, that is not what I mean.

611. (*Mr. John Burns.*) What proof have you of sub-letting, Mr. Bruce, other than, of course, the drivers?—I have reason to believe that it is done; I think it can be proved.

612. What do you consider are the public and passenger disadvantages of sub-letting; does it result in a dirtier cab; does it tend to the evasion of police supervision and of the hackney carriage regulations?—Yes, I think it does.

613. In what way, Mr. Bruce, please?—If a man lets out a cab at Paddington who lives, we will say at Islington.

614. There is an absence of local knowledge on the part of the police?—Yes, the police have to run after him.

615. How does that operate towards the driver—disadvantageously: does it mean two profits?—I am not prepared to answer that exactly.

616. (*Mr. Lough.*) Do the proprietors give the Scotland Yard authorities any return as to the number of days that the drivers work with them?—They are bound to mark on the driver's licence the time the driver has worked for them.

617–8. When he entered the service?—When he entered the service and when he leaves it.

619. But they do not mark the number of days that he works between those two dates?—No.

620. Do you not think it would be an improvement if the proprietor was bound not only to say, "The licence "has been deposited with me so long, but the man has "actually worked so many days during that interval;" do you not think that would be an improvement?—I do not see from a police point of view that it would be of any moment.

621. Well, would it not enable you to test whether the man was an industrious man and regular in his work?—We could not go into the causes of his non-driving.

622. You do not see any advantage?—I do not see any advantage.

623. Talking of drivers, you said a moment ago that you would be glad to be able to grant licences for three months and six months?—Yes.

624. Why did you say so; what advantage do you think would arise from it?—Because I think that there are sometimes cases—doubtful cases—where the Commissioner would like to test the man's protestations of reform for instance, and be able to say to him, "I give you a three months' licence as a last "chance; if you misconduct yourself during that "three months you will not get another licence." But now he has either to refuse that man altogether or grant him another licence which lasts for 12 months.

625. Just so; well, would it not help you to know whether the man worked during that interval or whether he did not work?—I do not think we should take that into consideration as a rule.

626. Then you would just as soon give a licence to a man who went and deposited it with a proprietor, we will say, and did not work at all, as to one who worked regularly every day from a police point of view?—From a police point of view and as things are now, I do not think we have any cause for taking note of that.

627. (*Mr. Cunynghame.*) I understand you, Mr. Bruce, that the three months' licence you would propose should be granted only where there had been a licence existing before, not to an entirely new man coming in? You see my point. The evil that you are suggesting perhaps might be met by the power to give a three months' licence to a man who had one before, but giving licences for three months to new men might produce, if done on an extensive scale, a somewhat changed condition of the cab trade?—I do not suggest these three months' licences for that purpose or for any other purpose than the one I have suggested, therefore it would practically be what is called a renewal licence.

628. (*Mr. John Burns.*) But in your opinion, would not fairly continuous service be a good qualification to a cabman having a licence?—We do not take any note of that. Naturally it is in a man's favour if he works all the year without complaint, and without conviction.

629. But could you not devise some scheme by which fairly continuous service would produce a better driver, a more civil driver, and one with greater knowledge of London than the type which now prevails with discontinuous service?—I am not prepared to answer that.

630. (*Mr. Hopwood.*) Do you see any objection, Mr. Bruce, to inserting in the proprietor's licence a proviso which would prevent his letting his cab for a definite or indefinite time to a railway company?—I do not think I should be inclined to put that proviso in.

631. You know that railway companies do enter into agreements with proprietors for supply of cabs?—Yes, I believe so.

632. You would not be disposed to advise the insertion of such a proviso as I suggest in a proprietor's licence?—No.

Mr. A. C. Bruce.
22 June 1894.

633. (*Chairman.*) Now, Mr. Bruce, we come to the very important question of the tariff, and I believe you put in a table showing the present scale of charges?—Yes.

634. On this point I wrote to Lord Aberdare, who was a former Secretary of State for the Home Department, and very conversant on the subject of cabs, and I thought he would be able to give us very useful information, and I asked him whether he would come here to be examined, or whether he would be prepared to write his views. I think, with the permission of the Committee, I will read his letter. "June 14, 1894.—"My dear Russell. I have really only one suggestion "to make, which I may as well send you by letter. It "is that, having regard to the great changes affecting "the use of cabs—and especially hansoms—since 1870, "was it?, when the rules now in force were pro-"mulgated—viz., the underground railways, and the "almost universal use of omnibuses by whole classes "who, twenty years since, were rarely seen in or on "that now popular vehicle, some improvement in their "scale of payment might fairly be adopted. The most "simple and intelligible would seem to be to give 1*s.* for "the first mile, and 6*d.* a mile afterwards. If that could "be done so that the advantage could be secured by the "driver, not by the owner (in addition to the rates "adopted on Mr. Asquith's award), the position of the "drivers would be materially improved. But can it? "And would not the increased profits sooner or later "be absorbed by the owner? There's the rub.

"There is another danger; any material improve-"ment in the drivers' position would inevitably lead to "the increase of their numbers, and I do not see how "the number of licences could be fixed from time to "time so as to prevent the evils of that competition "which has been the chief cause of the recent strikes "among cabmen and colliers.

"This is all I have to say, and it comes to very "little.

"Believe me,
"Very truly yours,
"ABERDARE."

Mr. Bruce, do your opinions on this subject at all tally with those of Lord Aberdare? In other words, do you think that the time has come when an increase should be made in the charges for cabs?—No; I think that if the charges were increased it would prevent people taking cabs.

635. You distinctly entertain that opinion; you do not recommend an increase in charges?—No, I do not.

636. Well, then, on the other hand, what do you think of sixpenny fares?—I think it would be an advantage to the cab trade to have sixpenny fares.

637. Sixpence for what?—Sixpence a mile.

638. Then, if you were reforming the fares what would be your reform; I mean, what would be the charge you would make?—I think sixpence a mile all through.

639. You mean sixpence a mile all through, without reference to first mile and subsequent miles?—No.

640. (*Mr. Lough.*) That is the present?—At present it is 1*s.* for two miles.

641. That is sixpence a mile?—It is a shilling for two miles.

642. (*Chairman.*) And for anything less?—Yes, and for anything less.

643. (*Mr. Lough.*) Do you mean that we could take a cab for one mile for sixpence?—Quite so.

644. (*Chairman.*) That is what I understood Mr. Bruce to mean?—That is quite so—that is what I suggest. At present you cannot; you must pay 1*s.*

645. And this really relates to an answer that you made, I think, in the earlier part of your examination. I asked you then whether you approved of dividing cabs into two classes—better cabs for higher charge, and poorer cabs for lower charge, and you said that you did not?—I do not.

646. And you do not now? I mean, you do not think that in connexion with this subject it would be advantageous to have shilling fares for one sort of cab and sixpenny for another, or higher than a shilling fare for one?—I do not think so.

647. Have you any views about the cab radius; do you think that it is satisfactory as it is, or that it should be expanded?—I think it is satisfactory as it is.

648. You would not increase it, having regard to the increase of London?—I would not.

649. (*Mr. Whitmore.*) May I ask when was that fixed—the present radius?—It was fixed by 16 & 17 Victoria, chapter 127.

650. (*Mr. Lough.*) What date?—I am just trying to find out—1853.

651. (*Mr. John Burns.*) Would you have a map prepared for us, with a circle?—I have one here.

652. Have you a map, Mr. Bruce?—Yes. This map shows the four mile circle and the five mile circle—not all the six mile.

653. (*Mr. Whitmore.*) Can you say what was the radius before this was fixed?—I believe, three miles from the General Post Office.

654. So that as the population increased the area of the cab radius was enlarged; as London grew outwards the cab radius also followed the growth of London? You do not think that the subsequent growth of London justifies a fresh enlargement of the cab radius?—I do not think so; but, as to the history of the cab radius, I might suggest Mr. Ware being examined on that—his knowledge is quite extensive.

655. (*Chairman.*) Mr. Bruce, you see this implement, the taxameter [*a taxameter, fare-indicator, and receipt-contoller was exhibited*], have you had your attention called to this particular one or to any contrivance of the same sort?—I have had my attention called to that particular one.

656. Would you give us your views about it, or would you like to have the gentlemen in who have brought it over?—I think I understand it.

657–8. You have had it explained to you by them; have they not interviewed you?—I could not quite understand all they said, but I think I understand generally. I think, sir, perhaps with the view of saving time, we may assume for the purpose of my remarks, that it does what it professes to do. I think I may assume that both from what I have seen of it and also from the fact that it is in use in Berlin, I believe, and Hamburg and Dresden and so on; but I am not prepared to say how it would take in England.

659. (*Chairman.*) I suppose you have considered the question, without reference to this particular implement, have you not?—Yes.

660. You have considered it before you came here?—Yes.

661. (*Mr. Whitmore.*) From the police point of view you would have no objection to its adoption?—No; but I should like to make this remark with regard to this particular machine, that I understand abroad where it is in use it is made an offence for a man to carry a fare while that arm—that signalling arm as they call it—is horizontal.

662. (*Mr. Lough.*) Which is the signalling arm?—That one. It is made an offence for a man to have a fare inside his carriage when that is in that position. That is the check the proprietor has upon the driver, and the only way of enforcing it is by the police or others reporting the cab.

663. (*Mr. Cunynghame.*) Not where the men were taking the whole of their earnings and paying so much to the proprietors; that precaution would rather be, would it not, where the men were paid a weekly salary to drive, and were supposed to give the whole of their earnings?—That is what I am supposing would be the case.

664. That would make a difference; in that case some such precaution, no doubt, would be necessary as in the omnibus system?—Yes, and that has probably been the weak point in most of the other inventions.

665. (*Mr. John Burns.*) But beyond that you see no other objection to it from a police point of view?—Well, I was going to say that my objection from a police point of view is that the police probably would be supposed to report any case of this sort, and it would really be an offence, not against good order or against obstruction or anything of that sort, but a——

666. (*Chairman.*) May I interpose at this point. You will recollect I had come to this stage in your

examination in chief: Had you considered the question of the use of taxameters altogether, and of this instrument in particular. We have had your answer to these questions, and now we have had the advantage of the presence of these gentlemen from Germany, the inventors and proprietors of the machine, and we may interrupt your evidence or suspend it; I mean this is an interlude in your examination. If any members of the Committee have any questions with regard to the mechanical properties of this implement which they will put to these gentlemen from Germany we will receive their evidence, and then we shall not have to trouble them to remain. When we have heard their evidence we will resume with you, Mr. Bruce, when I will ask for any points that occur to you arising out of the account given by these gentlemen of their own instrument?—If you please, sir.

Mr. A. C. Bruce.

22 June 1894

Mr. W. Bruhn, director; Mr. George Westendorp, engineer; Mr. William Junge, engineer; Mr. Max, mechanique (of the Taxameter Manufactory, Hamburg, Berlin), called in and examined.

667. (*Chairman.*) We shall be glad to have your explanation of this instrument?—(*Mr. Bruhn*). If you would allow, this is very exact, and if I would read it, you would see the apparatus meanwhile. I think all questions are answered already, if you allow that I read it without interruption, and afterwards the questions.

668. If you please?—"The motion of every apparatus "may easily be changed to suit variations in the rate of "fares. If, for instance, the standard fare is charged "for conveying one or two passengers at day time, the "driver is enabled by the action of a lever to raise the "fare 33 or 50 per cent. in case three or four passengers "are conveyed, or if some heavy trunks are carried, and "to raise it 100 per cent. for a ride at night time or to "places beyond the city limits. These variations in the "schedule of fares may be fixed according to any other "figure, and the mechanism set accordingly. The rate "of fare at the time governing the motion of the appa-"ratus is marked by the appearance of a correspond-"ing figure visible to the passenger. No matter how "often, or in what succession the various rates are "thrown in, both the total amount to be paid by the "passenger for a single ride, and that received by the "driver during a whole day or any period, will each "be indicated in one figure." Here for the public and here for the owner of the cab.

669. (*Mr. Lough*). I do not see that?—The small numbers are only neccessary for the owner of the cab, who only wants to look at them once every day. It is unnecessary to make them greater because the public has no interest in these numbers.

670. But if some one is in this cab for two hours and has to pay six francs, show me where this is shown?—The hand stands to the red six shillings when six shillings are to be paid—six shillings. "When looked "at from the seat of the carriage, the apparatus ex-"hibits a large dial, on which, instead of hours and "minutes, the fare to be paid by the passenger is indi-"cated by the pointers," or by the hand, we call it in England. "The figures for the larger coins, like marks, "florins, shillings, dollars, francs, lires, crowns, rubles, "&c., are printed in red." These are the 10*s.*, 20*s.*, 30*s.*, 1*s.*, 2*s.*, while those for the smaller coins like pence, pfennigs kreutzers, cents, centimes, oeres, kopeks, &c., are in black. The large dial is arranged to indicate the fare for a single ride up to 10*s*, while the golden hand advancing on the small dial shows the additional amounts from 10*s.* to 10*s.*

671. (*Mr. Whitmore.*) Which?—That small one. Thus, if the large hand stops at 1*s.* 6*d.* and the golden one at 10*s.*, the total fare to be paid is 11*s.* 6*d.* A figure which appears in an aperture at the lower right-hand corner indicates the rate of fare for the time governing the apparatus through the action of the driver. For instance, No. 1 may be meant for one or two persons by day time, No. 3 for night fares between specified hours, &c. A printed tariff suspended from the apparatus explains these variations of rates, and the figure indicating the rate is shown in a bright, distinct colour, and visible to the passenger in the carriage, whether open or closed. The leverage by which this change of rates is effected influences the hand of the dial in such manner that with a higher rate of fares the hand is made to travel faster. The apparatus not only indicates the charges to the passenger according to the tariff, but shows also, on a special "receipt-controller" the total of the amounts received by the driver in the course of a day or so; and a second dial registers the number of trips made in the same period. Thus the owner of the carriage is enabled to read off at a glance how much the driver has earned during the day, and by how many single rides he has earned it. The apparatus is of the size of an ordinary cigar box, and is enclosed in a metal box measuring about 9 in. by 7 in. by 3 in., which closes perfectly tight, so that neither moisture nor dust can enter, and is absolutely inaccessible to the driver, the passenger, and even the owner of the carriage, a seal and stamp insuring sole access for the manufacturer or his representatives. The apparatus, which is mounted on a simple guide bar, may be fixed to any sort of open or closed carriage, without any alteration, ready for use within an hour or so, and can be replaced by another one in a few minutes. They are only the screws which are lifted, and then it is taken out and another apparatus put in. During the use of the carriage the apparatus is always before the eyes of the passenger on four-wheeled carriages on the driver's box, while on a two-wheeled carriage (a so-called hansom) the apparatus is on the right-hand side of the driver's box. When the ride has been finished, and the driver has received the fare, he will hasten to stop the mechanism, in order to prevent the hand from advancing farther, and thereby registering on the "receipt-controller" a larger amount than the driver actually collected. To put the fare-indicator out of action, the signalling arm has to be raised. This signalling arm is provided with a little metal plate in shape of a flag, painted red and white, and bearing the inscription: "Free" (disengaged). It is only after this operation that the driver is enabled to put the mechanism out of action by the use of a simple and convenient lever, while the pointer on the dial, though stopped in its movement, remains in its position, in order to allow the passenger to read off at his ease how much he has to pay. By a plate visible through the aperture, close to the dial, and bearing the inscription "Cassa," or "Cash," the passenger is invited to pay his due fare. After the fare has been paid and the carriage disengaged, the driver, by means of another lever, causes the dial to be partly covered by a red disc bearing an inscription to indicate that the apparatus is out of action. The raised position of the signalling arm makes it practically impossible for the coachman to drive with passengers without previously putting the indicator into action. For both the public and the police agents would see at a glance that the carriage was being put to an unlawful use. At night a lantern with coloured glass is used for the same purpose. As long as the "out of action" or "not engaged" disc is visible, the driver is not allowed to refuse a desired ride, except when he is on his way to a place of appointment by previous engagement, or going home to the stable in case the horse is in want of rest. In these cases he covers the plate of the signalling arm, while on his way, by a blue disc bearing the inscription: "Ordered"; when stopping at the carriage stand, however, he is not allowed to use this cover. When a carriage is engaged by a passenger, the driver has to lower the signalling arm. This operation is impossible, however, before the arm, which is firmly locked by a catch, has been disengaged by means of a special device, the operation of which causes the fare-indicator to enter into action immediately. The hand on the dial then points directly to the initial fare, the "out of action" disc disappears, and a new trip is registered on the counter. Below the hind axle there is a small air-pump suspended, the piston of which is pressed against the hub of the wheel by means of a spring. The hub being provided with an eccentric, or cam, acts against said piston at every rotation of the wheel, and produces a compression in the air pump. This impulse is transmitted through a strong and well protected hose, leading along the vehicle up to the indicator, and capable of following the motion of the carriage springs. By this means every rotation of the hind wheel is made to move a bar provided with a pawl-lever, which acts on the cogs of a ratched wheel, moving it on, and thus, by the agency of intermediate gearing and levers, actuates the hand of the indicator dial. In the manner thus described in outline, the

Mr. W. Bruhn.

Mr. W. Bruhn.
22 June 1894

distance travelled by the carriage while in motion is measured; but as soon as the vehicle stops, the time-work mentioned above immediately begins to actuate the pointer, the details being so arranged, that, while both agents act on the same gearing, that only which travels fastest takes effect in moving the pointer. In this way the taxameter is made to charge both prices—for the actual ride according to the distance passed over and for the stops according to the time, adding automatically these various charges, and showing directly in one figure on the dial the amount to be paid. The rate-regulating device is so arranged as to increase the speed of the pointer, recording higher charges the higher the rate of fare that is made to govern the apparatus. But it is only while the carriage is actually moving, and not during stoppages, that this increase in the rate of charges is effected, the intention being to raise the charges only for an increase in the work done by the horse while driving, such as the transportation of more than two persons or some heavy baggage, but not while the carriage stops and the horse is at rest. Below the dial there is a special distance indicator showing the number of kilometers or miles passed over by the carriage with and without passengers, from the time of leaving the stable to its return, thus enabling the owner to regulate the amount of food and time of service according to the work done by his horse. The exact record given of the whole day's work gives him the best means of judging of the work done by driver and horse. If, by order of the passenger, the carriage moves on rather slowly, as is frequently the case with strangers making a round trip through a foreign place, the fare charged by distance would be unreasonably low, owing to the very slow rotation of the wheels. But in this case the action of the time-piece exceeds that produced by the carriage wheel, and thus keeps the fare at a proper level during such slow rides. The taxameter used at first to be placed inside the driver's box, and put to action by means of a special key, differing for every single apparatus. The improved style, however, is mounted on a guide bar at the back of the driver's box. The handling of it is done by means of a lever, in a manner very simple and convenient to the coachman, yet so that he cannot operate the indicator, throwing it into or out of action, or changing the rates in the way he might wish to do, but only in the prescribed manner. Wherever these fare-indicators have been introduced they have had the effect of materially increasing the tendency of the public to use hackney carriages, and resulting in a great improvement in the system for the public conveyance of passengers. The objects of this apparatus are twofold: 1. It indicates to the passenger, in one figure, the fare he has to pay for the use of the carriage. 2. It shows to the owner, in one figure at the end of a day's work, the whole amount of the daily earnings made by the driver. The attainment of these objects is of equal advantage to the public, the authorities, and the owners of livery carriages. The public avoids thereby the difficulty of interpreting unknown and complicated tariffs, as well as disputes with the coachman, especially the ladies, which in all large cities are felt as a nuisance, especially by strangers, but often enough by the inhabitants as well, and even detain them from hiring a cab, if they are not obliged to. As the passenger can read from the apparatus exactly what he has to pay, the frequent overcharges by the drivers are completely avoided. For the authorities the introduction of the apparatus is desirable, because they will be no longer called on to decide in cases of differences between the public and the hackmen, and a great number of complaints will cease to be brought before them. Finally, the owner of the carriage obtains an apparatus which has been long called for, by which the owner is able to control the receipts of the drivers. He can read them off from the apparatus in one figure, at any time and for any period, and is thus protected from being defrauded by the drivers.

672. (*Mr. Cunynghame.*) Would you tell us the cost, the first price, of this apparatus?—We do not sell them, gentlemen. The apparatus is only to be hired. Formerly there was an apparatus that was sold. But we have seen the apparatus is sold and the coachman who is proprietor can do with the apparatus what he likes, and in the case of reparation the one proprietor sends it to a mechanic, the other to a clock maker, a third to a forge, a fourth to——

673. I see that; but how much does it cost to hire, a year?—I think 12*l.*; 8*d.* and 9*d.* a day. But in this price is not included the first arrangement on the cab, but including all the cost for cleaning every year, for reparation, for reserve.

674. (*Mr. Bayley.*) What is the weight?—The weight is 25 lbs. to 26 lbs. 12 kilo. (*Mr. Bruhn.*) It is not possible to sell them. It is necessary——

675. (*Mr. John Burns.*) That we understand. In what cities are these taxameters in operation?—We have introduced them at first in Hamburg.

676. How many are in operation at Hamburg?—Hamburg, nearly 400; 300 to 400.

677. At Hamburg 400?—Three to four hundred, that changes always.

678. But what number of cabs are there in Hamburg without them?—Only the second class, the old ones, the first class and elegant coupés must have apparatus; they are compulsory.

679. By the local authority?—By the local authority, by the police. No cabs of first-class are allowed without taxameter now.

680. (*Mr. Whitmore.*) How long has that been the case?—Three years, nearly, sir. But the second-class, old ones, do not need the apparatus. But six of them have it already also.

681. (*Mr. John Burns.*) What other towns besides Hamburg?—The other town is Bremen; there is a small society of cabs.

682. In any other town?—At Berlin.

683. How many cabs at Berlin?—At Berlin we had in the beginning of this year 200 to 300 hundred cabs; and there was a great strike of the coachmen. The police had ordered that all the coachmen who had the taxameter should wear a white hat, and the coachmen could no more make extra fees, and therefore at first they did not like the apparatus, and therefore they struck. But the public went past the other cabs, and took the taxameters, and now we have at Berlin nearly 900.

684. Out of how many?—If the apparatus was ready

685. How many cabs?—2,500. But we had no more apparatus. We have not one apparatus in the ateliers. The apparatus were already gone to the coachmen from the ateliers.

686. (*Mr. Whitmore.*) There is no order of the municipal authority there?—No, no order; it is facultative; but the public, especially the ladies altogether, they take only coaches with the apparatus; they have no differences.

687. (*Mr. John Burns.*) In your pamphlet description?—The first town is Dresden.

688. What other towns?—Dresden, and Bremen, and Frankfort, Bâle in Switzerland, and different other towns in Germany, and also of other countries where we are asked for the apparatus.

689. (*Mr. Hopwood.*) Is it by order of the local authority at Dresden?—At Dresden by order of the local authority. The director of the police orders that no cab of first-class can drive without taxameter.

690. (*Mr. Lough*). How many?—The first-class is a new institution. 60 to 70.—(*Mr. Junge.*) 75 to-day. (*Mr. Bruhn.*) 75 at present.—(*Mr. Junge.*) Since two months. But we have not had first-class. The first-class was introduced in April of this year—a new institution.

691. (*Mr. John Burns.*) What diminution in disputes have taken place in the various towns where the taxameter has been adopted, and what proof can you give us that the authorities have been less troubled since it was introduced than before?—(*Mr. Bruhn.*) The director of the police of Hamburg, a special friend of mine, told me that formerly they had 30 to 40 differences a day, and when we were in the course of our way, after one and a-half to two years, he told me that there had been three differences, but these three differences he has proved very exactly, and it was found it was not the fault of the apparatus, but it was the impression of the public. The public had ordered the cab, but had not got in directly, but the coachman had also put it in activity, and then they had waited a quarter of an hour, and, therefore, it showed more than the gentleman thought; and then there were differences. There were only differences of not sufficient knowledge of the apparatus,

but no fault. Every apparatus which is in course of way in Hamburg, Berlin, Paris, it is first approved by the agents of the police.

692. What is the reason for the high charge of from 8*d.* to 9*d.* a day?—Apparatus are high in price because there are seven different apparatus inside. And we have great patentee's fees, we paid also for my English patents, and we must have great places, great ateliers here, because different workmen are in the place at day and night time.

693. That is sufficient. How often are they repaired on an average in the year?—It is different. At first the coachmen have——

694. The last year?—That is different, according to the coachman. We have an apparatus that has not had one——

695. No. What is the proportion of instruments out of 900 in Berlin that are taken to the workshops to repair in the course of the year?—We must clean them every year from dust, such things that are necessary, and look for the oil, &c.; and the reparations are very few. It is different; but I think it is not more than one or two times a year that there is anything, and then it is that the lever is crushed, or that the pump—a simple thing; the repairs are very seldom.

696. You have told us that the authorities and that the public, particularly the ladies, are very favourable to the taxameter; what do the men have to say about the taxameter—the drivers; what do the drivers and the coachmen say about the taxameter?—They are satisfied; they get more tips.

697. You say they get more tips?—Yes.

698. Do they receive now a weekly wage from the masters with the taxameter?—No, gentlemen, they receive a small weekly wage.

699. *Plus* a commission on the takings?—Also to the proprietor there is fixed a price which is the cost of the cab and two horses a day altogether, and what *plus* they get, the greater money they take, is divided between the owner and the coachman—the coachman gets different percentages, and therefore the coachman is as much interested as the owner of the cab. Outside he gets many tips because there are no differences.

700. Then the coachman receives a small weekly wage *plus* a division of the profits above a certain standard of receipts?—Yes, that is just right.

701. Since the introduction of the taxameter have the profits of the cab masters been greater than before, and have the weekly wages of the cabmen been more?—Yes; I have established a society at Hamburg. At this society we can get all the coachmen of private houses that take carriages—they gain more than formerly; and we have good men—we have not the old bad men; we have good—quite another sort of cabmen we have got.

702. Just one moment. Then I gather from you that the introduction of the taxameter, beyond pleasing the public, the authorities, has paid to the masters and to the men, and secured a better type of cab driver?—Yes, a better type. Many of the public drive now who formerly never went in a cab.

703. Before the introduction of the taxameter did the cab masters have much difficulty in getting their money in?—Oh, always, gentlemen; they have had many difficulties.

704. Have those difficulties disappeared?—Oh, they have all disappeared. You do not ask any more the coachman how much he has got; you tell him, "You "have to pay that and that"; and I will tell you what I heard at Berlin. The director of the police told me, "To-day were two widows, their husbands have "died and they have lived very well, but since the "death of the husbands they cannot get more than "three or four shillings per day; they have got and "they are sure they get 10*s.*, 12*s.*, 15*s.* a day, but they "cannot prove it to the coachmen, and the widows "were in a very bad position." From the moment they have got this apparatus the widow knows what the coachman has taken in a day.

705. (*Mr. Lough.*) I want to ask you one or two more questions about the prices. I suppose you have calculated the price on Hamburg?—No; we have calculated the price for here.

706. For London?—For London.

707. What number did you think might be in use?—Eightpence or ninepence a day.

708. In your calculation how many apparatuses?—Oh, we think that we must introduce here 3,000 apparatus.

709. That would come to 36,000*l.* a year?—Yes.

710. Well, you have got no other city with anything like that consumption at present?—No, not yet; no, no. But Paris, Berlin, will also come.

711. How long do you think will a machine last if it is fairly treated?—They are renewed every year by us; when the apparatus is opened by us everything which is bad is renewed. But it is impossible to tell you how long the apparatus will last at the same time, like a watch.

712. Will it last as long as a good watch?—I think, I suppose so; but I am not able to tell you.

713. Paris—are there any in Paris?—In Paris we have not yet introduced them. Paris had written out a concurrency in the year 1889, when there was a great exhibition there, and they were given in 128 models and constructions, but not one is good for use till now.

714. What is the reason they have not taken them in Paris?—We have not yet produced them in Paris. We wished to have at first other places, because, you see, we Germans are not friends of the Frenchmen.

715. Did you show them in the Paris Exhibition?—No, we have never shown it in Paris—in France—till now.

716. Is not there another machine in use in Paris?—No, there is not another machine there. They have made trials with another machine, but in February of this year there were 25 of these machines and they are taken off the cabs as being insufficient.

717. (*Mr. Bayley.*) Touching the case of the two widows, that you spoke about. What is to prevent the cabman cheating the proprietor by running the cab with a passenger with the machine not in action?—He cannot. He cannot drive without this high red disc before them. Every one likes it.

718. Yes, I understand. But every passenger is not wide awake enough to understand this instrument, and if he were to drive without pulling that lever up he would be cheating the widows, would he not?—He has no interest. He has interest that this number shows as much as possible, because he gains by it. He has interest that the number for that day shall be as much as possible, because he has a proportion of it.

719. He has the pay if he drives a passenger without the machine in motion? He puts the money in his own pocket?—He has no interest in doing so.

720. Is it never done?—No; it is never done.

721. A dishonest cabman could cheat in that way, by driving his cab with the machine not in motion? But his expectation is that the passenger would be sharp enough to see that the lever was up. Still, an old lady might not.

722. (*Mr. John Burns.*) Is there any possibility of collusion on the part of a sympathetic passenger, to conspire with the cab driver to cheat the owner?—No, gentlemen.

723. (*Mr. Whitmore.*) Then you would say probably the police would see it?—Every one would see it.

724. (*Mr. John Burns.*) What check is there against that state of things?—Every one would see it. We have given great premiums to our workmen, to our engineers, to deceive us, and always we found points till we have got this construction, and now it is impossible when this flag is low and the disc is gone up.

725. Do you contend that in the construction of your taxameter you have so arranged it as to weld or to unite the interest of the cab driver as well as the master?—Yes, yes; that is the highest aim. (*Mr. Westendorp.*) This point has been gained. Here the cabman quite as well benefits by it as the cabowner.

726. As the master?—As the master.

727. And the public cannot be cheated?—The public cannot be cheated. It is impossible; here this dial is all that is necessary, he cannot put it back.

728. As all roads lead to Rome, the taxameter leads to the convenience of the public, the profit of the master?—The profit of the master.

Mr. W. Bruhn.

22 June 1894.

729. And the higher daily earnings of the cab driver?—And the more daily earnings of the men. (*Mr. Bruhn.*) You asked me formerly for the tests of police government. I will send you the test* of the Hamburg and also the test* of the Berlin police if you wish. We have despatched for already last night.

730. (*Mr. Lough.*) Is this price that you state here the actual price charged in Hamburg?—No; the actual price in Hamburg is lower.

731. What is the price in Hamburg?—The Hamburg price is 50 and 60 pfennig, but you have lower prices for workmanship there, and lower prices for hiring places, buildings.

732. I do not want the reasons. What is the price in Hamburg?—At Hamburg the price is 50 pfennigs, 6*d.*

733. Sixpence per day?—6*d.* per day; between 50 and 60 pfennig.

734. What is the price at Berlin?—Berlin we have different prices; we have arranged with the different coachmen. At Dresden we have 60 German pennies, and also 72 marks at first for the arrangement on the cab.

735. (*Mr. Whitmore.*) Do you know who pays for it, in Berlin, for instance; is it the owner of the cab or the drivers?—The payment to us is done only by the masters of the cab—by the proprietors.

736. (*Mr. Hopwood.*) Have you considered whether it is possible to put the apparatus on view in some place in London?—Not yet; but if you would desire we could arrange it.

737. The Industrial Exhibition at Earl's Court?—Yes; if you would wish it, we would do it willingly,

738. It is for you.—Quite so.

739. (*Mr. Bayley.*) There are two scales, are there not, or three, of charges?—Yes, that is so.

740. Yes, or in case luggage is carried, or at night, you charge a higher price at night?—Yes, at night time. (*Mr. Junge.*) (*Showing*) Day—night.

741. What is to prevent the cabmen being paid at the high price and recording here the low rate?—(*Mr. Westendorp.*) He cannot do it.

742. Yes, he can by moving this lever?—He can get only forward; he cannot put it backward. He cannot put it back—he can only put it forward.

743. Suppose he is carrying one passenger, the rate is the standard fare?—Yes.

744. Suppose he is carrying three passengers, then the rate is the higher fare?—Quite so.

745. He moves this lever, and then it records the higher fare?—(*Mr. Westendorp.*) Quite so.

746. Who is to prevent him carrying three passengers, and only recording at the low scale?—(*Mr. Bruhn.*) He cannot come to the low scale; he must pass the cash.—(*Mr. Westendorp.*) Here the passenger would not pay for three in case they would only say one.

747. But suppose there is collusion between the passenger and the driver the passenger paying on the higher scale, the taxameter recording the lower, and the driver putting the difference into his pocket?—The passenger will only pay this.—(*Mr. Junge.*) The driver had no interest. (*Mr. Bruhn.*) The passenger would naturally look for the fare.

748. (*Mr. John Burns.*) If three passengers get in, and the cabman indicates on the dial that one has got in, he does not gain so much by that as if he were to register that three got in, because there would be an increased price?—It is his own interest to do it, because he has a commission upon it.

749. It is the other way round, Mr. Bayley.

750. (*Mr. Bayley.*) In one way it is; according to the division of profit between himself and his employer, his interest is to record as much as possible, but the other way his interest is to record as little as possible. Suppose he wants to cheat, he would record here the low scale, and the three passengers would pay him on the high scale. He assumes that people would know about the working of this machine, but old ladies and people travelling at night the drivers would be able to cheat; there might be collusion?—(*Mr. Bruhn.*) The public has to look for two things, for this that is put down, and for the scale that he has the right fare; that is necessary. (*Mr. Westendorp.*) Pay for tax one, two, or three only at this, and if the apparatus is put right from the very start.

751. (*Mr. John Burns.*) This only does for a cab what the halfpenny automatic receiver does for the halfpenny omnibus at Vauxhall Bridge without indicating it on the dial.

752. (*Mr. Bayley.*) Yes, but constant cheating of the omnibus companies goes on through collusion between the driver and the passenger.

753. (*Chairman.*) We are very much interested in what you have told us and shown us, and the whole of your evidence shall have our careful consideration. We wish you good morning.

* *See* Appendix VIII.

The witnesses withdrew.

Mr. Alexander Carmichael Bruce recalled and further examined.

Mr A. C. Bruce.

754. (*Chairman.*) You have seen the machine, and heard the explanation of the gentleman in charge of it. May we ask, as far as the opportunity has been afforded you of forming an opinion, whether this is a system which can be introduced into the London cab service; whether in any reasonable time you could get the cabmen to understand it or the public to understand it?—I do not think that it is one that could be adopted in London.

755. Do you think that the cabmen would like it?—I do not think they would.

756. Should you like to be responsible for teaching the cabman the use of it?—Certainly not.

757. The whole of this sub-division of our evidence has been concerned with charges, and the introduction of this machine may be pertinent here because it affected the question of charge, one of the reasons, as we understand, why it is necessary. We understand the claim of cabmen for increased remuneration is partly based upon this, that at present they suffer great loss by what is commonly called bilking. Now, I want to ask you what your experience of that matter is. Have you official knowledge of the practice obtaining to any great extent and inflicting loss upon cabmen?—No, not officially.

758. I suppose you are aware of the fact that it is alleged that it is?—Certainly.

759. But you personally have no official knowledge of it?—No.

760. You have not, in your official dealings, had to do with numbers of cabmen complaining of that particular form of hardship?—No.

761. (*Mr. Cunynghame.*) I should like to ask you, first, with regard to this table which you have put in; it is a table of cab fares that we all know. I notice here that if a cab is hired without the four-mile circle—suppose it was hired just without the four-mile circle—the fare to Charing Cross would be 5*s.*, would it not?—A shilling a mile; yes.

762. Suppose, before he got in, the passenger said, "I will have you go to Charing Cross, and drive by time"—what would be the fare then—the same journey, at four miles an hour, the statutory pace, I make it 3*s.* 2*d.*—2*s.* 6*d.* for one hour, four miles, and then give him for the short bit extra 8*d.* more—that would be 3*s.* 2*d.*; that would be the most he could charge?—Yes, I think that is so.

763. He would be bound to drive by time to Charing Cross, and he might drive as fast or as slow as he liked, but he would be bound to drive to Charing Cross for 3*s.* 2*d.* if the customer told him to drive by time?—He can only be compelled to drive four miles an hour, and no more than this.

764. But it would take him by time an hour and ten minutes to reach Charing Cross, and for this he would be paid 3*s.* 2*d.*?—3*s.* 2*d.*

765. Instead of 5*s.*?—Yes.

766. Well, now, does it not seem to you that whatever alterations are made, if any, in the table of fares, that an anomaly of that sort ought to disappear, because you see he is paid differently as to whether a person pronounces a formula or not before he gets into that cab. You see my point?—Quite.

767. (*Mr. Whitmore.*) Have you had any complaints on that score from cab drivers?—No.

768. (*Mr. John Burns.*) Or from the public?—No, we have not had any.

769. (*Mr. Cunynghame.*) It never suggested itself to anybody in that peculiar way to hire a cab. Have you considered the question of two classes of cabs—what might be called a better class cab and a luggage cab, if I might call it so, with different fares, one rather cheaper than the other—painted, perhaps, a distinctive colour, so that the public could see the difference between them—have you any opinion as to whether that would work well or not?—I cannot say.

770. That would be, perhaps, rather a question for the proprietors and the cabmen to answer?—I think so.

771. At all events there would be no difficulty in working that from a police point of view?—I do not think it would work.

772. I notice here is a provision that a customer may compel a driver to drive him to a police station at once?—Yes.

773. In the first place, is that often resorted to, so far as you are aware?—Not very often, I should think.

774. Do you think that provision would be necessary to be retained? I will explain why I suggest to you that it might not. Because in case, for instance, a man was bilking a driver, and he had no money, he would only make the driver expend more money still with a very fair chance of having him in for bad language in addition?—Yes.

775. Do you think, having regard to the whole thing, that that is a very useful provision? Is it not enough that he should be able to summon him?—I should have thought myself, yes.

776. That it would be enough?—That it would be enough.

777. To be able to summon him?—Yes.

778. (*Mr. John Burns*). Have you any evidence, Mr. Bruce, of the extent to which, in the experience of the cabmen, bilking is supposed to prevail? Have you any evidence of the practice of bilking?—No.

779. Have you seen reports frequently in the newspapers of cabmen appealing to magistrates in consequence of it?—I should not say very frequently.

780. You know of its existence in a few cases?—Yes.

781. What remedy, police or magisterial, would you suggest for stopping it, even in the limited cases that have come within your knowledge?—May I ask you exactly what you mean by bilking.

782. This is how I would describe bilking. Bilking is an attempt on the part of a man who takes a cab, after it has reached not its final destination, to get into, say, one end of the Burlington Arcade, and say to the cabman, "I will be back in five minutes," after the cabman has driven him about two or three hours; the cabman waits over half-an-hour, and the man does not return. That is bilking?—I can suggest no remedy, except the cabman taking the money before he starts on his journey.

783. Well, but in the event of the cabman the same day, or subsequently, meeting the bilker, what objection have you to the cabman appealing to the nearest policeman, and the policeman exercising, as he would in every other case but that of a cabman being cheated, the power of summary arrest that the policemen now exercise in the case of all persons accused of felony in the streets?—I would rather prefer that the cabman should be entitled to apply for a warrant.

784. But that necessitates, on the part of the cabman, first, half-a-day for application for the warrant, as against the man, and necessarily at least half-a-day for the case being tried, and the result is that that remedy to the cabman is financially more disadvantageous than letting the bilker alone, and the bilker escapes. Is that a system of things that the police look upon with equanimity?—He might be mistaken in the identity of the person.

785. Oh, then he would have to stand the racket of false accusation. But do you think it a fair thing that am an who steals an apple off a stall should be locked up, and that a man who deprives a cabman of half-a-sovereign or a sovereign should be allowed to escape?—I think it is a great pity, if I may say so, that a cabman cannot avoid this bilking. I think it would be a good thing if some remedy were found for it. But I cannot suggest any.

Mr. A. C. Bruce.
22 June 1894.

786. In the event of a remedy being found, either by the cabman asking his fare beforehand, or the adoption of some method of payment similar to the taxameter, would you not give the cabman the same power over a cab thief that a shopkeeper has over a man who steals a loaf?

787. (*Chairman.*) Do you answer that question?—If I might add, I think perhaps it would be good if the police had power to detain a man under those circumstances—a supposed bilker—until his name and address had been verified.

788. (*Mr. John Burns.*) That is practically the power of summary arrest. If he could not satisfy the police as to his *bona fides*, as to his name and address, the police would detain him in custody naturally. Would you suggest that?—They would detain him until the name and address he had given were inquired into and verified.

789. Were proved? And failing that? Failing the name and address being satisfactory, are the police to let him go or detain him?—I think detain him.

790. (*Mr. Cunynghame.*) By the present law a man cannot be imprisoned even when he bilks a cabman, I understand?—No.

791. You have noticed in the old Acts he could, but that that was altered by the Summary Jurisdiction Act?—Yes.

792. By an accident as it were? The Summary Jurisdiction Act only entitled the cabman to recover a fare as a civil debt. He can only recover it as a civil debt?—Yes.

793. Might it not be expedient to give some power of imprisonment to a magistrate, where a man took a cab knowing that he could not pay, and intending to cheat, the same as on railways?—Yes, I think so; I see no objection to that.

794. And, further, supposing that when a man was asked for his name and address by the cabman, or an address where he could be found, he either refused to give it or gave a false one, in order to cheat the cabman, might that not reasonably be considered an offence?—I think so.

795. Very much as in the case of a railway company?—Yes.

796. And, moreover, might you not go a little further, and say that in case of downright cheating, where it appeared clear that a man had either hired a cab with intent to cheat, or, having got into it, gone on with it with the intent to cheat, that there power might be given to imprison without the option of a fine where the fraudulent intention was proved?—Yes, I see no objection to that.

797. Only one question more. Might it not give to a cabman somewhat of the power of terrorising if he could threaten an old lady that refused to pay the fare that he demanded to have her arrested and taken to the police station at once? What is your opinion upon that? "You have not paid my fare that I have "demanded, and I will give you into the custody of a "policeman." Do you think she would pay any sum of money rather than submit to that? I am speaking of a power of arrest for not paying the fare?—I beg your pardon. What I assume you mean is this, that we will assume the old lady is willing to pay her fare, and has paid it.

798. The legal fare?—But the cabman ——

799. Demands more?—Demands more, and says she is bilking him.

800. Exactly, and he will have her arrested and taken up. Would not that be giving a power to a cabman which would be liable to abuse?—I do not think that would come under the head of bilking; it would be a dispute about a fare.

801. I am not caring what head it comes under. Would not that add to the present dangers if such a power were entrusted to a cabman?—It might possibly be open to abuse.

802. (*Mr. Whitmore.*) Might not that danger be obviated if power of arrest were limited to a case where

Mr. A. C. Bruce.

22 June 1894

no money at all was tendered?—That was rather my suggestion when I said it came under the head of a dispute about a fare.

803. (*Mr. Lough.*) On that point of bilking, I want to put this clearly: you are not in favour of what Mr. Cunynghame suggests, namely, allowing the cabman to take the lady or the fare who pays short to the police station, are you?—No.

804. It is only in the case of a bilker, that is, a person who refuses to pay anything?—That is so.

805. You do not wish to mix the two up?—No.

806. (*Mr. John Burns.*) The cabman would have his remedy?—If it is a dispute about a fare.

807. (*Mr. Lough.*) I want to leave bilking; I think it is exhausted. But, if you will allow me, I want to go back to the tariff, which you began about. You said that you were against two classes of cabs?—Yes.

808. But do you not know that there are two classes now? There is the first-class hansom, as it is called, with India-rubber tyres?—There are not two classes, so far as we are concerned. We pass a cab that is fit; and to us it is neither a first nor a second-class cab. It is a fit cab.

809. But, as a matter of fact, you know that there are two classes, do you not?—I know that there are some hansoms with india-rubber tyres, and some without.

810. Some hansoms much better than others?—Some look smarter, certainly.

811. And you still object to the idea of there being two scales of fares, do you, for these two classes?—I do not think it is advisable.

812. Can you give any reason?—One reason is, I do not think it would succeed.

813. Now you have told us you have exhibited the table of fares, that is, what the drivers can charge the public; do you know anything about what the driver has to pay the proprietor?—Nothing.

814. You do not interest yourself in that?—We have nothing to do with that.

815. Would you approve of having a scale between the driver and the proprietor as well as between the driver and the public?—I am not prepared to answer that question at present.

816. You know that the Home Secretary has fixed some prices lately?—Yes.

817. Do you think it would help in the organisation of the service if the scale that the proprietor could charge the driver was well known, so that the police could see that the charge was observed?—I am not prepared to say what the effect would be.

818. Take the radius. You have exhibited a map showing the circles which are now the radius. Do you believe that a circle is the best limit that can be drawn?—I think it is satisfactory.

819. Do you think London always expands in a regular circle? To put it another way, do you not think that towards the west it might be well to elongate the radius, and not towards the north or the south?—I can only say that I think the system works well as it is, and I cannot suggest any alteration.

820. Well, is London as wide as it is long?—I am not prepared to say that it is.

821. You do not know?—No.

822. I think, as a matter of fact, it is not. But you do not think it might be well to include some districts such as the west, and perhaps the east, without bringing in the same length of country over Highgate Hill on the north, or over Wandsworth Common on the south? Do you think that would be wise?—I cannot say. I think the present system is satisfactory.

823. (*Mr. Hopwood.*) One question on bilking to clear up the answers to the questions of Mr. Cunynghame and Mr. Burns. Are you or are you not in favour of conferring on a cabman the power of giving his fare into custody for any matter arising directly or indirectly in regard to his fare?—I think only in an undisputed case of bilking, if I may so express it.

824. Which is an impossible case?—Well in the case that was suggested of a man going into Marshall and Snellgrove's, leaving a cab there, and going out of another door, and leaving the cabman to wait, perhaps, the rest of the day, and then appearing in another part of London and being identified by the cabman.

825. Is that an instance which you would give of an undisputed case of bilking?—So far as the cabman knew of course; setting aside any chance of the cabman fixing on the wrong person.

826. It would be an undisputed case of bilking so far as the cabman was concerned no doubt, but does it not occur to you that the fare would say at once: "Oh yes, "I am very sorry I went into a shop and forgot that "you were waiting for me." Would you give the cabman the power of saying: "I dare say you did, and "I dare say you did not, but I will give you into "custody"?—I think my first suggestion was the best, of the cabman applying for a warrant.

827. Then you are disposed to answer my question in the negative?—I think so.

828. You would not advise this Committee to recommend that a power should be given to a cabman to give his fare into custody in regard to any matter arising in connexion with a fare?—I think there would be danger in it.

829. (*Mr. Burns.*) But under the circumstances, Mr. Hopwood, where it was a clear case of forgetfulness, the fare and the cabman would no doubt mutually arrange terms. The cabman would be induced to do that because of his anxiety not to appear?—No doubt.

830. Do you consider that an optional bargain below the shilling fare for short distances should be allowed and encouraged between drivers and fares. I will tell you what I mean by this. Supposing I come out of the House of Commons, and I want to drive to Spring Gardens, supposing I were to say to the cabby, "Drive "me for 6*d.*, will you?" "Yes, with pleasure," because it is only four or five hundred yards. Do you think that could be arranged under the legal fare rate to the convenience of the public and incidentally to the advantage of the driver?—It is in his power, of course, to do that now.

831. Can he do it now?—He can.

832. (*Mr. Whitmore.*) Is it done?—I cannot say.

833. (*Mr. John Burns.*) Do you remember the time when a 6*d.* fare was prevalent in London?—No, I am afraid I do not remember that.

834. On the radius; do you consider that the present radius, which has not been altered for many years, tends to the congestion and concentration of cabs in the inner London ring?—No, not necessarily. I think the making the radius five miles instead of four would have the effect of still more congesting the streets round here—the Strand, Piccadilly, and so on.

835. Would you suggest the creation outside the four mile radius of suburban radii in themselves, to be decided by the Police Commissioners, or some other authority—concentric radii?—No, I should leave matters as they are.

836. (*Mr. Hopwood.*) One question on fares. Have we power, Mr. Bruce, to reimpose the obligation to carry at the 6*d.* rate without legislation?—No.

837. (*Chairman.*) With regard to the treatment of the horses and the state of the troughs and other matters connected with the health of the animals, would you be disposed to let the questions on these subjects be answered by one of your subordinates?—I think so.

838. Now, with regard to cab stands, I understand you put in a return as to the number and place of them?—Yes.

839. Is the more congested area of London supplied with stands proportionate to its greater number of cabs; is the number of cab stands proportionate to the number of cabs in the more congested parts?—As far as practicable.

840. What considerations does the Commissioner take into account in setting up a cab stand?—He consults the local authority, the vestry, and he consults the convenience of the surrounding people; in fact, so far as he can he consults all interests.

841. And do you think there is a sufficient number, or are more required?—I think, strictly speaking, there is sufficient accommodation for cabs.

842. With regard to shelters, do you think that the voluntary system is best, or would you have the shelters handed over to the control of the police?—I think the voluntary system is the best.

843. And do they require any supervision, or can they be left quite well to take care of themselves?—I think not; I think they can be left.

844. (*Mr. John Burns.*) Have there been any complaints, Mr. Bruce, as to the abuse of shelters in any way?—No.

845. And generally speaking you think they have operated advantageously to the cab driver?—I think so.

846. Have you a list of complaints, if any, against shelter keepers, on the ground of the shelters being either a nuisance or insanitary?—No; we have no complaints.

847. Do the local authorities complain of them ever having been put to uses other than that for which they were started?—No, not that I am aware of.

848. Are they restricted generally to cab drivers?—So far as I am aware, certainly.

849. And you have no complaint from the police as to their being used as a rendezvous for people day or night?—No.

850. And do you think that the shelters have carried out completely the objects of the promoters, and have weaned, so to speak, the cabmen from the public-house, and contributed to give him a shelter for himself and his meals under better conditions than prevailed before the shelters were started?—Quite so.

851. And you regard them generally as a healthy institution for London cab life?—Certainly.

852. (*Mr. Lough.*) As a matter of fact, except in the very centre of London, are your cab stands near public-houses?—I cannot say off-hand, but not necessarily; we do not fix upon a public-house as a place to put a cab stand near.

853. If the publican gets up a little of what he calls public opinion in favour of getting a cab stand there do you ask the question before you fix it; do you try to find out whether it is public-house influence that is leading it to be located in a certain spot or not?—If we had any reason to suspect that there was any public-house or undue influence we should, of course, inquire into it and consider it among the other things.

854. Yes; well, when you inquired, would you decide not to do it because a public-house was there?—Not if it were for the convenience of the public and the cab drivers. Other things being equal, we should not refuse to make a stand there because there was a public-house.

855. In short, you have no prejudice against putting a cab stand near or opposite a public-house?—No.

856. Do you remember a case in Cromwell Road, where there were 200*l.* subscribed to put a cab shelter there and a cab stand, and where it was not done; it could not be arranged because it would take the cabs away from some public-houses in the locality. You do not remember that case?—No.

857. Do you find that there are complaints of want of accommodation on the stands in the crowded parts of London?—From the cabmen themselves?

858. Yes.—No.

859. Where do most of your charges for loafing come from, the centre or the outskirts?—The centre.

860. Why do the charges for loafing arise in the centre?—By loafing you mean ——?

861. Crawling?—Crawling with obstruction?

862. Yes?—Why are they in the centre? Because that is where the cabs, as I say, mostly congregate, and where the money is to be earned.

863. But does it not arise from the fact that in these parts there are not sufficient cab stands?—I do not think so; we have put as many cab stands as we possibly can.

864. (*Mr. Whitmore.*) As to consultation with the vestry as to the position of cab stands, I should like to ask what does that really come to; supposing a vestry makes a recommendation that a cab stand should be put in a particular locality, would you consider that recommendation as conclusive, or would you exercise your own judgment?—Oh, exercise our own judgment.

865. Supposing, again, you communicated to the vestry your intention to put a cab stand in a particular place, and the vestry asked you not to, would that be deterrent or not?—It would be a very strong case indeed. I am not prepared to say that we have never done that; but it would require a very strong case for the Commissioner to go directly against the wishes of the vestry. Moreover, we have instructions that when there is that conflict of opinion, the matter is to be referred to the Secretary of State.

866. (*Mr. John Burns.*) Wherever practicable, Mr. Bruce, you insist, do you not, upon lavatory accommodation being as near to the cabstand as practicable?—I do not know that that is a condition.

867. Do you make that one of the conditions?—No.

868. (*Mr. Lough.*) Railway cab stands. Do the police exercise any supervision over cab stands in railway companies' property?—No.

869. (*Mr. Hopwood.*) Have the police any opportunity of making arrangements for watering horses on cab stands?—Yes.

870. How is that done?—From the water posts.

871. How is that done?—That is a matter of detail, on which a subordinate will give information.

872. As to the shelters, the return of shelters put in does not include the shelters provided at railway stations, I think?—No.

873. Can you supplement the return by giving them?—We can ask for it, and probably we shall be able to get it.

874. (*Chairman.*) Now, Mr. Bruce, I want to ask you about the railway companies and the privileged cabs. I suppose you can put in the number of privileged cabs?—Yes.

875. Which, in your opinion, are the better as to condition, the privileged or the non-privileged cabs?—I should say the privileged cabs on the whole.

876. I should like to know your views generally on the subject of privileged cabs, the institution of privileged cabs; do you think it serves public convenience, and is a good thing?—I think so.

877. (*Mr. Cunynghame.*) Just one question. You have told us that you have nothing to do with the cab stands in railway stations?—No.

878. They are not, I mean, cab stands selected by you, or licensed by you?—No.

879. Now I want to know, is it legal for a licensed hackney carriage to ply for hire except on a cab stand that has been selected by you?—Yes, it is.

880. What cab stands other than those licensed by you is it lawful for a hackney carriage to stand for hire?—On private ground.

881. That is the question; does not the law say that it is unlawful for a cabman for a licensed carriage to ply for hire in any place, public or private; that is what I should like your opinion upon?—It has been decided, by the case of *Skinner* v. *Usher*: if I may I will read the head-note?

882. Certainly.—"The 6 & 7 Vict. c. 86. s. 33, "imposes a penalty on any driver of a hackney carriage "plying for hire at other than a standing or place "appointed for the purpose. The 32 & 33 Vict. c. 115. "s. 9, gives power to the Home Secretary to appoint, "within the Metropolitan Police District, certain "standings or places for cabs and hackney carriages: "—The Home Secretary having exercised that power "by Order number 29, S, driving a hackney cab, the "property of C, was convicted of plying for hire at a "place within the Metropolitan Police District other "than a place indicated and appointed by and in the "said Order No. 29. The place where S so plied for "hire was private property in the occupation of C, but "to which the public had access, although they pos-"sessed no right of passing there. Held, that the con-"viction was wrong, and that plying for hire in a "private yard or place was not an offence within either "of the statutes."

883. (*Mr. John Burns.*) Do you not consider, Mr. Bruce, that it would be advisable to have police powers for police-licensed vehicles on semi-public property, such as railway stations?—I do not think there is the necessity.

884. Do you not consider it advisable for the police to have the same right of access to semi-public property, both for inspection and for criminal purposes, inside Victoria Station as they exercise on the cab stand outside, and if not, why not?—I do not think it is necessary in the case of railway stations.

Mr. A. C. Bruce.

22 June 1894.

885. Why not, a cabman is not an angel inside Victoria Station and a devil out?—I am speaking of the cabs rather now.

886. Well, but I will take both?—I believe it is a fact that the railway stations do exercise strict supervision over their cabs.

887. Yes, but they have not that police power which you exercise; a railway constable has no power at all; the railway companies assume it for their purposes, but a railway constable is not recognised by the police in law; he has not the power to arrest a man?—I am rather speaking of the condition of cabs now.

888. I will take both cabs and men. A railway policeman has no more power than a porter or a civilian?—No, but the railway company have a power, if the cab is not in condition or is otherwise unpresentable, of saying, "You shall not come here again."

889. Assuming they did not do it, why should not the police exercise that power inside Victoria Station as much as they do it inside an unprivileged cab yard?—I do not know that there is any real objection, but I do not think it is necessary.

890–1. Another point; does not the privileged cab system at railway stations inconvenience railway passengers, when the passengers arriving by a train are in excess of the number of privileged cabs at their disposal?—That I do not know; I cannot say.

892. But you have seen a train come in at Victoria Station from Brighton?—I have seen that, and, as a rule, I think there are plenty of cabs for the passengers.

893. When the privileged cabs are exhausted, what do the public have to do, take their luggage outside on the pavement, and, in so doing, obstruct the foot passengers, and cause non-privileged cabs to congregate outside the railway station; have you ever seen that?—I cannot say that I have.

894. You can see it nearly every fine day at Victoria Station. Have you considered how giving a privilege to a limited number of cabs causes non-privileged cab drivers to congregate in the roads outside the station? Have you ever noticed that?—No.

895. But in the event of such being proved, what would you suggest to remove that difficulty, if it could be proved to result entirely from a limited number of cabs having the privilege?—Possibly put a cabstand, if it could be done.

896. But supposing the only available cab rank in that district was inside the railway station, and that was large enough to receive three times the number of privileged cabs who use it, what would you suggest in that case—not from the railway point of view, but from the general public point of view?—I do not know what I should suggest, but I do not think I would suggest the abolition of the present system.

897. But in the event of it being proved to you that the privilege system necessitated public inconvenience on the footway and the road outside through the congregation of non-privileged cabs, what would you suggest to meet that difficulty?—I am not prepared to say.

898. But surely you have some remedy to suggest for the discontinuance of a public nuisance like that?—Well, one remedy would be to summon the cabs causing the obstruction.

899. (*Mr. Whitmore.*) And if they are not soliciting?—Oh, causing obstruction.

900. (*Mr. John Burns.*) If they are not soliciting they could not be punished?—Yes, for causing obstruction.

901. And would it not be the best way out of the difficulty to remove the incentive for the men to congregate outside the privileged cab yard by insisting that as the railway station was, generally speaking, a public place, it should be free to all cabs, as it in many cases is to omnibuses?—I am not prepared at all to say that that would be the best plan.

902. Do you not consider that it would diminish crawling, and provide cabmen generally with rank accommodation, if privilege railway stations were all served, say, as Waterloo is now served, where everyone has a right of entering on the payment of one penny?—I am not prepared to say. Waterloo has a larger field. There might be great congestion of cabs and great confusion and obstruction and disputes if a small railway station were thrown open to cabs. There would have to be a limit.

903. But upon it being proved that privileged cabs at railway stations were a public nuisance, and if it could be demonstrated that the abolition of that privilege would diminish the nuisance, would you be in favour of its abolition?—I should first of all consider whether there were not some alternative plan.

904. Have you ever received reports from police constables at Victoria, at Charing Cross, and elsewhere about the nuisance to the public of the congregation of non-privileged cabs outside?—I cannot say; there may have been reports; I do not know of them.

905–6. (*Mr. Whitmore.*) I should like to know quite distinctly from you, as matter of fact, have you received no reports yourself in connexion with this matter?—None personally.

907. What is the procedure at the office, supposing a report reached Scotland Yard complaining of obstruction outside Victoria Station; would it not reach you as a matter of course?—I do not know that it would reach me particularly.

908. (*Mr. Lough.*) You have said that you approved generally of the railway system as worked in London with cabs?—Yes; I see no objection to it.

909. Except in the railways, is there any other instance in London of cab stands on private property? I am unable to say.

910. You do not know of any?—I am unable to say.

911. In the return that you have handed in we see that there are 1,452 privileged cabs at the various stations. In effect, then, all these cabs stand on private stands outside your cognizance?—Yes.

912. Do you think it is satisfactory that such a large number should in this way be absolved from your control—from the police control of the metropolis?—I do not see any objection to it.

913. Do these privileged cabs in some instances practically make stands outside the railways, in the streets, for instance, at Victoria, where there is not room in the station? Is there practically a privileged stand outside of which the police have no cognizance?—That I am unable to say.

914. And you do not know anything about Charing Cross where I see there are 153 cabs licensed? Is there room for that number in the station—I mean privileged cabs?—There is not room for 153 cabs in the station alongside the platform, but they go in in Villiers Street, they go in underneath, and come up the platform, so there may be room for 153 actually within the station precincts. There is not room for 153 alongside the platform.

915. But do you know there is room for 153 on the station precincts?—I do not know.

916. Do you know of any other city, have you any experience of any other city—either on the Continent or in England—where such a system as this of London prevails?—No, I do not know of any; I mean I cannot say.

917. (*Mr. Bayley.*) Does it not prevail in Glasgow, do you know?—I could not say, sir.

918–9. (*Mr. Lough.*) Do you know that these railway companies, in addition to having their own privileged cabs, run a 'bus with passengers from their platforms?—Yes.

920. Has that 'bus a plate?—Some have; some have not.

921. Do you know how many have plates and how many have not?—I could not say.

922. Are the drivers of those 'buses licensed?—The drivers of the licensed 'buses are; the drivers of unlicensed 'buses are not.

923. Can you tell how many there are of each?—I cannot.

924. Do you approve of those unlicensed 'buses competing with your licensed cabs in the Metropolis?—I do not know that I can give an opinion upon it.

925. I suppose you would not approve of any ordinary private proprietor, if he did not happen to be a railway company, if I may use these words, running a lot of cabs without plate or licence?—You mean as to whether it is right that the railway companies should compete with the cab trade in carrying passengers from their trains?

926. Yes, without a plate, and without a driver's licence, perhaps, in some cases?—They do not ply for hire, those: they are ordered beforehand. They come under the head of "job carriages."

927. But is it not in effect plying for hire?—No.

928. Well, I will ask you this: If a railway passenger comes in, and there is a 'bus there, cannot he take it?—If it is licensed.

929. (*Chairman.*) These are not questions, are they, which fall within your official cognizance?—I hardly think they are.

930. (*Mr. Lough.*) I would like to put this one. You, of course, have observed that railway 'bus system?—Yes.

931. And you do not approve of it at all?—I do not think it is a question for the police to consider whether it is right or not that railways should compete with the cab trade.

932. (*Mr. Whitmore.*) In whose interests do you conceive that the system of privileged railway cabs exists? Is it in the interests of the railway company or of the public?—I think it is in the interests of the public.

933. And it is on that ground that you defend the system?—Yes.

934. (*Mr. Hopwood.*) As a matter of fact, Mr. Bruce, the police know nothing about the arrangement between the railway companies and the cab proprietors?—Not officially.

935. It has nothing to do with them?—No.

936. You cannot express an opinion upon it either one way or the other?—Not strictly.

937. (*Mr. John Burns.*) I want to ask a question on a matter of policy that I think Mr. Bruce ought to answer. Have you ever received complaints from police constables as to unlicensed private omnibuses from railway station to railway station picking up passengers between the two points?—Unlicensed?

Mr. A. C. Bruce.
22 June 1894.

938. Yes. Have you ever received complaints from constables as to unlicensed, unplated private omnibuses with unlicensed drivers, picking up passengers between Waterloo Station, say, and Euston?—No; I do not remember any.

939. In the event of that having been reported what would you have done as Commissioner?—Made inquiries into the case.

940. And would it surprise you to hear that that is frequently done? Would you post a man on Waterloo Bridge, say, to-morrow morning, to see a private omnibus unplated, unlicensed, picking up fares between Waterloo Station and Euston and St. Pancras?—In other words, plying for hire?

941. Yes, plying for hire; taking people that, if there were not a private omnibus, would take a cab?—I do not know that that has occurred.

942. (*Chairman.*) We are all very much obliged to you for the evidence you have given, and you will remember, no doubt, that there are certain points of detail on which I thought it my duty to check honourable members, and those you will have the goodness to instruct your subordinate official to come fully prepared to deal with?—Certainly.

943. We have received from you the general views of the policy and the conduct of the business from Scotland Yard; we shall receive from somebody under you detailed information about the work on several minute points which were not within your immediate knowledge?—Yes.

The witness withdrew.

Mr. James Scott called in and examined.

944. (*Chairman.*) Mr. Scott, you are, I think, manager of the London Improved Cab Company?—I am, sir.

Mr. J. Scott.

945. How long have you been such?—Since 1887.

946. You will understand at page 11, question 186, we were examining the witness before us on the question whether any undue influence was brought to bear upon the officials at Scotland Yard to secure the licensing of cabs which were not fit to be licensed, and Mr. Bruce told us that he was not aware that anything of the kind was done, and then at that point an honourable member interrupted and said: "At this "point may I interpolate this, because—I say it with "all seriousness—if the allegation that is made both "by masters and men is true, it is a great reflection "upon the inspector. Has it ever reached your ear "that when a cab is inspected, something under the "cushion is very frequently put?—No." "188. Ex-"cept that one anonymous letter?—Except that one "anonymous letter." Now what I have to ask you is whether in your experience anything of the kind is done; do you know or have you any reason to believe that when a man comes to Scotland Yard and wants to get his cab licensed, he puts a sovereign under the cushion in order to propitiate the inspector?—I have no personal knowledge of anything of the kind, sir.

947. (*Mr. John Burns.*) You have heard of it, sir?—Well, I have heard a lot that I cannot assert; but of my own personal knowledge I know nothing of it.

948. You have heard both masters and men make that allegation?—No, I have not.

949. Have you heard masters make it?—I may have, but it is one thing to suggest a thing and another thing to be able to prove it.

950. (*Mr. Whitmore.*) Have you any reason for thinking that the allegation is true?—No, I have not.

951. Do you believe it yourself?—I do not.

992. (*Chairman.*) Well, Mr. Scott, I am bound to say the reason I asked this particular question was that I understood you were in a position to give evidence, not of having seen the thing with your own eyes, but evidence to the effect that you had reason to believe it was true. It appears I am misinformed?—I can only speak so far as our own company is concerned; we have close upon 300 cabs, and I am perfectly certain of this, that there is no undue influence brought to bear on any inspector by any official in our company.

953. (*Mr. Lough.*) Do you know of any means by which an improper cab, a cab that you, as a judge we will say, would not pass, any unfair means by which it may get passed?—The only remedy that I know for detecting a cab of that sort is to appoint a practical man as an inspector.

954. That is a different point; I am speaking of getting them through now, the experience of the past year or two. For instance, do you know of any shuffling, or have heard of any shuffling, I do not say on the part of a large company like yours, by which an improper cab may be passed; do you know of any such thing?—I know of nothing; if the inspector was not a practical man, of course, he might pass a cab that is insufficient for the purpose.

955. Well, you cannot give an instance of that?—I cannot.

956. (*Mr. John Burns.*) Do you consider the conditions of inspection satisfactory?—I do not.

957. Have you any remedial suggestions to offer to the Committee as to the improvement of the conditions of inspection?—Well, I consider that the one thing needed there is that a thoroughly practical coach-builder be the inspector of hackney carriages licensed to ply for hire in the streets, and if he is not a practical man there is always a danger of a cab being passed that should not be passed.

958. (*Mr. Lough.*) Let me put a case to you; did you ever hear this, that a man brings a cab to one station to get it passed and it is refused; he then gives another address and sends it to another station, and the same cab that was refused at one station is passed at the other?—I never heard of such a thing.

959. (*Mr. John Burns.*) Would you suggest that instead of an annual there should be a biennial inspection of cabs?—I do not think there is any necessity for a biennial inspection. A cab should be in a thoroughly efficient state when it is passed for the 12 months, and should last through the 12 months, barring accidents.

960. Then you consider a proper annual inspection by a competent and technically qualified man would serve the purpose?—I do, with this added, that in Edinburgh, where I think they have a very perfect

Mr. J. Scott.
22 June 1894.

system, the inspector is a practical coachmaker, and he goes down into your workshop and sees the work going on when you are repairing a cab or when you are constructing a cab, and it has to be to his satisfaction then, if it is going to be used as a public vehicle; and I think if the powers that they have in Edinburgh were extended to the police inspectors here so that they could go in and out and that sort of thing, it would very materially help them, because it is sometimes almost impossible for a man to see through paint and putty and varnish, and it would be better if he saw the repairs while they were going on and the vehicle in course of construction.

961. What do you think of the surprise visits of inspection on the part of the police?—I would be pleased to have them.

962. Have they ever been to your place?—We have had them this week, not as to carriages, but as to another matter.

963. But have you ever had them before?—No.

964. How long have you been without the pleasure of a visit?—Seven years now, I think.

965. Have you ever been subjected to night inspection by the police?—For what, sir.

966. Either of your cabs on the ranks or of the cabs and horses in the yard?—Not that I am aware of.

967. And so far as you know the night inspection by surprise visits of the cab inspector is of a most perfunctory, not to say nominal, character, so far as you know?—So far as I am aware; of course, I am not there night and day.

968. Would you be prepared to give the Committee in memorandum form your opinions and views as to a complete inspection of cabs, not only when first licensed, but a periodical inspection by a visit to stables and a night visit to ranks or shelters; you would have no objection to oblige the Committee?—No, if I were asked I would, but, as I have said, I consider that one thorough inspection of a cab once a year is quite sufficient for that cab.

The witness withdrew.

Adjourned till Monday next at 11 a.m.

THIRD DAY.

Monday, 25th June 1894.

PRESENT:

MR. GEORGE RUSSELL, M.P. (CHAIRMAN, PRESIDING).

MR. HENRY CUNYNGHAME.
MR. F. J. S. HOPWOOD, C.M.G.
MR. E. H. BAYLEY, M.P.
MR. JOHN BURNS, M.P.
MR. T. LOUGH, M.P.
MR. C. A. WHITMORE, M.P.

MR. MALCOLM DELEVINGNE, *Secretary.*

MR. EDWARD WARE, ex-Superintendent P.C. Office, called and examined.

Mr. E. Ware.
25 June 1892.

969. (*Chairman.*) I believe you are ex-superintendent, Mr. Ware?—I am, sir.

970. How long were you in charge of the Carriage Department?—Partially from 1864, sir; wholly for the past 12 years.

971. And you have only lately retired?—Just retired, sir; in February last.

972. So that you have had some 30 years' experience off and on?—About that, sir.

973. You have been present at our previous meetings?—I have, sir.

974. And you have heard what Mr. Bruce said, and you will remember that on many questions of detail Mr. Bruce said that he would prefer to leave the answering of them to you, where you had practical knowledge, and he only had knowledge of the general principles?—Yes, sir.

975. Is there anything that you would like to add on your own account now, before I begin questioning you on what Mr. Bruce said?—I do not remember anything; I generally concur in what was said by Mr. Bruce.

976. Perhaps you heard Mr. Scott from the Improved Cab Company say the last time we met that his yard had only once been visited in several years. What have you got to say about that?—The visitation of proprietors' yards, sir, is made as a rule upon the reports that are made against the several proprietors' horses or carriages, and the yards are visited on those occasions, but not otherwise, unless it were for the sanitary purposes of the premises or something in that way, or unless a night inspection were directed.

977. I see; well, supposing the yard was in a satisfactory state, and there was no ground for any one to make a complaint about it, you would not visit it?—It would not be visited, sir.

978. Then you think it is quite likely that what Mr. Scott said was the fact, and that the yard had not been visited?—Quite so, sir; if the proprietor's yard is in good condition and the horses and carriages are satisfactory.

979. (*Mr. John Burns.*) Then I understand you lock the stable door when the horse has been stolen?—No, we do not allow the horses to be stolen, sir. I can only speak from my own thought.

980. (*Chairman.*) How many cab yards are there in London?—I am unable to say, sir; some proprietors have several yards, some have only one.

981. Do the inspectors visit according to localities; I mean, does one inspector inspect the yards in a certain area?—They are limited to districts, sir, except on night visitations, when they might receive instructions to visit other places, other districts.

982. When you were in the service you mean you had only one district?—I had no district; I was at Scotland Yard receiving the reports and acting under the Commissioner's instructions.

983. You supervised the inspection by the other people?—Yes, sir.

984. So your knowledge extends all over London?—As a rule, sir.

985. Not being confined to one particular district?—As a rule, sir. There might have been instructions and regulations in existence since I left on the 1st of February last with which I am not acquainted.

986. We can only expect you to speak of your own experience up to the 1st of February. It might have occurred—I judge from what you have told us already—that some yards might never have been visited at all?—Yes, such a thing might happen.

987. When the yards are inspected, are the visits surprise visits, or are they arranged beforehand?—Never arranged beforehand, sir.

988. It has been suggested, you will remember, that the existing inspectors are not properly qualified for

their work; they have not the technical knowledge required for satisfactory inspection; do you think that, or do you think they are well up to it?—I do not think they are selected on that account wholly. There are cases where inspectors have been wheelwrights and persons having knowledge of horses, but those matters are taken into consideration with their experience in the police and various other matters, temporary duty when other inspectors have been absent, and other matters which may show them to be desirable.

989. I suppose the cases where they have technical knowledge are the minority?—I have no means of saying that; I do not remember.

990. Well, then, I will put it this way, in the cases where the men have no technical knowledge do you think that the system is a satisfactory one?—I do not see the objection to it that an outside person might. Shall I give you an instance, sir?

991. Yes, please.—Some years ago there was a veterinary surgeon appointed to the Metropolitan Police, and his duty was, amongst other things, to inspect cab horses that were reported as being unfit for public use. He was a qualified man, and the Commissioner of Police was also beset with the opinion of other qualified men, the proprietor's veterinary surgeon, or other of the district who might be brought into requisition, and there was a conflict of authority between the two veterinary surgeons. I may state now that proprietors tell me that the public carriage inspector was about the best man to visit upon complaint of horses and carriages, particularly horses, for if a police inspector with his general knowledge of the world could see there was anything the matter with the horse there was no gainsaying it, there was something the matter with the horse; whereas if a veterinary surgeon went to see the horse he got inside and said there was incipient disease and so-and-so. The safest plan, I think, is to fall in with the view of the proprietor who said that when a police inspector could see there was something the matter with the horse there was no gainsaying it, there was something the matter with the horse.

992. You mean the horse must be dead lame, or the inspector would not find it out?—They trot them about theyard, and make them trot and run, if a horse is reported as being lame, and if the horse shows no sign of lameness, why it does not take a qualified man to give an opinion on that subject.

993. Granted that the present inspectors are properly qualified, do you think there are enough of them?—No, sir.

994. How many do you think would be required to do the work?—Half more sir, nine men; I consider that would be the minimum. May I say further, sir. In 1870 the public carriages were under 7,000, in this past year I do not know what it may be, but when I left the cabs alone numbered somewhere about 10,500.

995. You are giving the figures offhand?—Offhand, sir.

996. Subject to correction by the report?—Subject to correction.

997. (*Mr. Hopwood.*) Your point is that the public carriages have doubled, but your staff has not increased?—That is my point, sir.

998. (*Chairman.*) But as matter of fact, do you think that bad cabs do get on the street?—Occasionally, sir.

999. And how do you account for that?—The desire of the proprietor to earn as much money as he can, sir; but I think they are discovered. I think the inspection by the police generally, and the arrangements made, are sufficient to detect it; they may run about for a quarter of an hour, an hour, or two or three hours, they may escape even altogether for the day, but they will not do so long, sir.

1000. Do you think that the present system of having no restriction on the number of licences is a good plan or a bad one?—The proposal to limit them would be a bad one, sir.

1001. Would be bad?—Yes, sir.

1002. You think the present system is the best one?—I do, sir.

1003. The unlimited licences?—I do sir. As for the limitation of cabs, sir, may I read a report made by me on the subject in 1890?

1004. Yes, certainly?—"Cab licences, like everything "else, are governed by the law of supply and demand; "cabs would not be in the streets if the earnings were "not remunerative, and with such a wide area as the "Metropolitan Police District limitation would not be "practicable. For the increase of the cab riding "population, say at Chislehurst, might demand an "additional supply of cabs there that could not be "licensed, because perhaps applications for additional "licences were already existing at Hendon, Staines, "Croydon, Loughton, Barnet, &c., and so proprietors, "drivers, and the public would suffer, besides which a "proprietor leaving Chislehurst for Greenwich might "overburden Greenwich and leave Chislehurst with "none at all, but whatever might be done in the matter "of licences, it would not relieve congested streets, "for drivers would be sure to flock to where money "was to be earned. Making drivers' licences depend "upon the number of cabs licensed, and so allowing "drivers to make their own terms and control "the trade, is not wise nor desirable. A proprietor "could not go from Greenwich to Barnet to live, or "from Staines to Stratford, unless he took his drivers "with him, then he could not compel them to stop "there, and men becoming drivers and discontinuing "the use of their licences might cripple the trade, "for others could not be licensed in their place. There "ought at all times and in all places drivers to be "found for proprietors to select from, and not to be "under compulsion either to employ a man he has "no regard for, or keep his horse and cab at home. "If the proportion of 12 men to 10 cabs were acted "upon, temporary drivers known as butterflies might "reduce the proportion and reverse the numbers to "10 drivers to 12 cabs. Every driving licence bears "date of issue and is in force for 12 months from "that date, 32 & 33 Vict., c. 115. s. 6, and Secretary "of State's Order 37, there is no provision in law "to compel a man to use his licence, and it is difficult "to see how it could be enforced. A man may be "ill or die or he may obtain, temporarily, more "profitable employment, or he may not be able to find "an employer who would employ him, or it may be "that holding a licence as cab driver, omnibus driver, "and conductor, he may not require to use either more "than four months each, and there are many pro-"prietors who hold a licence for use only in case of "emergency, and perhaps may not want to use it at "all, and it would be very hard to refuse to renew "licences in such cases. A driver's licence is 5s., and "if a higher charge were imposed for a 'summer "'month licence' every man would pay the less sum for "a licence to be in force for 12 months."

1005. I have your opinion, then, very clearly, that you are not in favour of restricting licences?—I am not in favour, sir.

1006. Well now, some people think that the unrestricted issue of licences tends to bring down the class both of drivers and cabs; I mean, tends to put a lot of inferiors in the streets, and to drive out the better sort of men and cabs. Does your experience confirm that view, or otherwise?—I think otherwise, sir.

1007. During the last 30 years you have had to do with this business. I suppose you must have seen a great deal of drivers, as well as of cabs?—Yes.

1008. Should you say that the class which drive now, taking them as a lot, are better, or worse, or the same?—Much better, sir; far in advance.

1009. Far in advance?—Very far in advance.

1010. You mean in respect to ability and intelligence?—Just so, sir.

1011. As to their aptitude for their work, knowledge of driving, do you think they are also improved?—They are superior, sir.

1012. They come from every possible and imaginable class of men, do they not?—Doubtless, sir.

1013. A considerable number, I believe, come from driving trade carts and vans, butchers' carts, and so on?—Yes, but I think the sympathy with the occupation would limit the applicants; that is, if a man has no taste for horses or carriages he will not apply for a licence in that direction.

1014. Do you really think that?—I do, sir.

1015. Do you not, in your own experience, see a great many men applying for a licence and practising as drivers with, at any rate, no knowledge of it?—They are very soon out of work.

Mr. E. Ware.
25 June 1894.

1016. They are very soon out of work?—Yes, sir, they do not follow it up. I should say, giving an estimate, sir, 12 out of every 18, or more, are men who are skilled with horses and have an acquaintance with driving.

1017. Before they come?—Before they come.

1018. They do not learn it all on the cab?—No, they do not, sir.

1019. I quite understand what you have just now said, that you are not in favour of limiting, but supposing, on the other hand, it were decided to limit the number, do you think that cabs could be licensed to ply in a certain district, and restricted to that district; would that be practicable, do you think?—I do not.

1020. You think that could not be managed?—It could not be done, sir—if you gave permission, say, to a man to take out a licence to ply in a particular district and restricted him to that district, and he did not take out a licence for other districts, and if a person wanted to drive, say from Epsom to Islington, the effect would be that he might have to take half-a-dozen different cabs. A person might be going to a ball or might be dressed for the theatre, and if he got into a cab holding some peculiar licence he would not be able to occupy that cab while being driven from one suburb to another, or towards London, because of the prohibition of the law, unless the driver of it had provided himself with three or four or more badges.

1021. The fare would have to change and get out and get another cab?—Yes, sir.

1022. Does your recollection go back to the time when we had sixpenny fares?—It does, sir.

1023. I mean your official experience?—It does, sir.

1024. Sixpenny fares were still going when you took on this work?—Yes.

1025–30. In what year were they abolished?—In 1870; they were partially abolished before that in the Metropolitan Streets Act, 1867, in this way: section 26 of the Act put the driver in the position of being able to claim a shilling for a cab taken off a standing; where a hirer engaged a cab from a stand the cabman was entitled to charge a shilling.

1031. (*Mr. Hopwood.*) If he hired a cab elsewhere than from a stand he would pay sixpence?—The driver could not enforce the shilling. So far as I understand I do not know of my own knowledge, because I have never been consulted on Acts of Parliament in these matters, but I have heard it was done with the view to prevent crawling in the streets.

1032. (*Mr. Whitmore.*) That was between 1867 and 1870, that state of things?—Between 1867 and 1870.

1033. (*Chairman.*) Then in 1870 the sixpenny fares were abolished altogether?—Yes, sir.

1034. You do not know why?—I have no knowledge.

1035. You only know the fact that they were done away with?—Yes.

1036. Did the sixpenny fares, as far as your experience went, work well?—As far as my experience goes they worked well, but there was discontent with the sixpence.

1038. You do not think it would be policy to go back to them?—I do, sir; I think proprietors would wish it as well.

1039. It was suggested the other day that they would be very popular in the City, in a limited area like the City. Where people are constantly going very short journeys from one place to another as in the City sixpenny fares would tempt them to travel much more by cab?—Yes, and benefit the trade, sir.

1040. (*Mr. Whitmore.*) You think they might be popular in the City?—I do, sir.

1041. Do you agree generally with the cab drivers' view that the sixpenny fare would not be beneficial to them?—I only speak of my own view, sir.

1042. I know; what is your view?—That the sixpenny fare would benefit the trade.

1043. Not merely in the City, but everywhere?—Everywhere in the district.

1044. (*Mr. John Burns.*) You are in favour of the sixpenny fares?—I am; in fact in my experience I have only come across a very limited number who think otherwise, only there is a disinclination to start the sixpence.

1045. (*Chairman.*) Have you any other views about the present tariff, the scale of charges; would you like to alter it if you could alter it with your own power; would you make any change in it?—Yes, sir; on the refusal to pay I should like to——

1046. That is another thing. On the question of charges, as I understand, you are in favour of introducing the sixpenny fare?—I am, sir.

1047. What do you mean by the sixpenny fare; do you mean sixpence for every mile, sixpence for the first mile, or what?—Sixpence per mile, sir; preserving the radius; I am in favour of retaining the radius.

1048. No difference between the first mile and the second mile?—None whatever, sir.

1049. You were here when that machine was put on the table?—I saw it, sir.

1050. Without asking what you thought of that particular machine at present, do you think that any machine of that kind, some sort of mechanical device of that sort for that purpose, would be an advantage?—I do not, sir; not for London, sir.

1051–2. Do you hold that opinion only because you think it would be too complicated and difficult? Is that what makes you object to it?—No, sir, I think of its inapplicability.

1053. I mean, that it is not only that the thing looks complicated and difficult?—Not at all, sir. This machine, like all other machines, works on the hub of the wheel. There is no law saying that the wheel of a cab shall be of a particular diameter, that the wheel of a cab shall be exactly such and such a diameter; and there is no law at present which says that the evidence of a machine shall be accepted, and as evidence before a magistrate. Even if that were so, there is nothing about the machine, in case of summons, being taken before the magistrate. There would be nothing to show that the machine might not have been tampered with, or to show that that was the identical machine in use at the time. Putting that aside, it works on the hub of the wheel. A wheel three feet in diameter would cover nine or ten feet in circumference at one revolution. If the wheel were five feet in diameter it would cover 16 feet or close on 16 feet in circumference, so that the one revolution in the one case would show 16 feet, and in the other case between nine and ten. Any variation in wet weather might even make a difference in a machine of that kind, because the circumference being rather more than three times the diameter—perhaps I am saying too much, sir?

1054. No; finish what you have to say, please?—I was going to say if the diameter of a wheel were increased $\frac{1}{16}$th of an inch it would be $\frac{3}{16}$ths in every revolution, and in the course of a long journey might make an additional sixpence, as the case might be.

1055. And you do not approve of the taxameter at all; you have no particular remarks to make on that one that was shown here?—Nothing further than that.

1056. (*Mr. Whitmore.*) What you are saying would apply to any mechanical contrivance of that kind?—I have seen a dozen of them; I think man's intelligence is superior to the construction of a machine, sir, and they all depend upon the driver being honest in working the lever. If the driver is honest he is honest, if he is not honest he would not turn the lever to set the thing in motion more than he could help.

1057. (*Chairman.*) Now, on the question of bilking that you intended to speak of just now, would you like to see an alteration of the existing law about that?—So far as I am myself concerned, sir—I am only speaking for myself, sir; shall I read——

1058. I understand all this evidence is only your own; you do not any longer speak for Scotland Yard, because you have retired?—Only my own, sir.

1059. You do not commit anyone but yourself; those are your individual opinions founded on 30 years' experience?—Yes, sir.

1060. And what are your views about the law of bilking?—First of all I think the limitation of seven days within which a driver can claim his fare should be abolished. 6 and 7 Vict. c. 86. s. 38, says, "And "be it enacted that all complaints under the pro- "visions of the said recited Act of the reign of His "late Majesty or of this Act or of the orders and regu- "lations made in pursuance of either of them, except "such as shall be made by the direction of the Com-

" missioners of Stamps and Taxes, and except in cases " where some other term of limitation is specially " provided by this Act, shall be made within seven " days next after the day on which the cause of " complaint shall have arisen," and I think seven days is much too short for a driver with a hirer he has never seen before.

1061. Have you any other views about the alteration of the law?—I think the driver should be able to claim in advance, and not be obliged to drive anybody; he is obliged to drive; he is not like an ordinary shopkeeper who can please himself whether he serves me with an article that I go to buy or not. A driver is bound to take a man, and it seems to me that when he is bound to take a man, he should have some opportunity of being paid, or some approximate idea of receiving his money.

1062. You think he ought to be empowered by law to demand his fare in advance if he likes?—Yes, the law gives him power of claiming a deposit upon waiting now. Then I think the driver should be able to give a person into custody like a tramcar or railway official or like eating-house keepers. Many of those things show themselves to be frauds, and where the fraud is apparent I do not think there would be any objection at all to empowering the drivers to give the man into custody. But, at the same time, I think that a police inspector, when the man is brought in, should have the power of detaining the person and satisfying himself of his *bona fides*, detaining him until his address were confirmed or his position were confirmed.

1063. (*Mr. Cunynghame.*) On the subject of taxameters, I think the present fares are counted as the crow flies, are they not?—No, sir, along the road.

1064. Has that been tested? I mean, if I drive a mile, and I were disputing before the magistrate, would the magistrate decide according as the crow flies or from point to point according to the nearest road?—According to the roadway.

1065. I think the point you mentioned about the size of wheel could be got over by an adjusting apparatus on the taxameter as in bicycles; they have machines in the shops by which they can measure?—I see difficulties here unless you have the owner of each machine to do it. I would not allow anyone to do it but the proprietor of the machine; then he would have to give evidence before the magistrate on the subject, sir.

1066. I want to ask you about railway stands; as I understand it, it is against the law for a cab to ply for hire in a railway station without being licensed?—That is so, sir.

1067. And that has become law, I think, by 32 & 33 Vict., c. 115?—That is so, sir.

1068. And not till then?—That is so, sir.

1069. Well, now, I think there is also a law which says this:—6 & 7 Vict., c. 86, s. 33, " that a cab may not ply " for hire except on a cab stand appointed for that " purpose "?—That is so, sir.

1070. Does it not seem to you to follow from those two propositions that if a cab stands in railway stands which have not been appointed by the Commissioner, it is breaking the law?—The judges have decided otherwise.

1071. In what case?—In the case of Case *v.* Storey and Skinner *v.* Usher.

1072. What is the date of those cases; give us the reference to them?—Skinner *v.* Usher is reported in *Weekly Reporter*, 25th May 1872, sir. Case *v.* Storey, I think, was before the other.

1073. The case that was cited the other day does not apply to what we are dealing with now, because it was before the Act of 32 & 33 Vict.?—I think it was held to be good, so far that the driver could refuse to carry while he was on the premises of the railway station.

1074. What was held was that before the Act of 32 & 33 Vict. it was no offence to ply in a private place?—No offence.

1075. But in 32 & 33 Vict. the words " public place " were left out, and it was made an offence to ply anywhere?—That is right, sir, anywhere within the limits of the Act.

1076–7. Anywhere within the limits of the metropolis?—Within the limits of the Act.

1078. And a railway station would be within the limits of the Act?—I am not able to decide that.

1079. That is the second case which apparently you have cited which I have not yet seen?—Yes, sir.

1080. Now I should like to ask you a question about lost luggage; is it within your knowledge whether a certain amount of luggage that is lost in cabs in London is never recovered?—I think you had better ask the inspector; I had nothing to do with the lost property office at the time.

1081. Certainly. Although in your experience the men are improving very much, there are a good many men in the cab-driving profession who are still guilty of a good deal of rudeness?—I have heard so, sir.

1082. What was your experience, so far as you know, when you were inspector?—It is very much individualised, sir; it is not a general thing.

1083. Now of course it would be very much to the benefit, I suppose you would say, of the whole cab trade if some stringent rules about politeness could be brought in. I mean it would improve the whole hiring of cabs?—Possibly so.

1084. Are you not of opinion that many people, particularly ladies, hesitate to hire cabs at present on account of the anticipated rudeness of the drivers?—I have had no personal knowledge of that, sir. I had a lady call on me one day in very great haste and say: " Oh, Mr. Inspector, I just called to tell you that I had " a cabman who was very polite to me; I paid him his " regular fare and he said 'Thank you.' "

1085. (*Mr. John Burns.*) That was not Mrs. Giacommetti Prodgers?—That was not, sir.

1086. (*Mr. Cunynghame.*) Do you not think that the power of arrest without warrant in the case of a disputed fare might give rise to terrorism by the cabmen over ladies and persons of weak mind?—It might or it might not, sir.

1087. According to the weakness of their mind?—It would be unwise to give the power absolutely, but when it is backed by the power which I propose should be given to the inspector on duty at the station to satisfy himself, I think there would be no danger.

1088. Let me just understand you, Mr. Superintendent Ware. This is what I want to have clear. Supposing a gentleman, we will say, has taken a cab and driven to a particular house, and the cabman were to demand 3*s.* 6*d.*, and the gentleman were to say, " I consider 2*s.* 6*d* sufficient," and supposing the person driven happened to be wrong, that the fare was 3*s.* 6*d.*, do you mean that you would give any power of arrest in that case; would you give the cabman the power of saying, " If you do not " pay me my right fare I will arrest you? "—The hirer has the power to compel the driver to take him to the nearest police station, sir.

1089. No, but I am asking what power of arrest you would give?—Yes.

1090. Would you give the driver power to take the man to the nearest police station?—Yes, I would give the driver the power.

1091. Supposing it were a man in the City, he would pay what the cabman demanded rather than lose his time?—As a fact he might summon him for his overcharge, the law provides that where a cabman receives more than he is entitled to he may be summoned for the over charge.

1092. He would miss his meeting in the City or his business?—He would pay the money and then summon the driver.

1093. (*Mr. Whitmore.*) He need not take out the summons at once?—Within seven days.

1094. (*Mr. Cunynghame.*) Follow what I am driving at. You see the man might lose his fare, the gentleman might lose his time, but what I am coming to is this; might not that power of giving a man into custody be misused to extort fares out of people?—It might for a limited time, sir; till it was generally known. What I mean to say as to that is this, that people would make themselves acquainted with cab fares in a very short time, and would not hire the cab without being themselves acquainted with the distance they would be travelling.

1095. True, but there may be a *bonâ fide* dispute, and a cabman knowing that a man is pressed, may purposely demand more than his fare, and you may have a person

Mr. E. Ware.

25 June 1894.

quite willing to give a shilling in addition rather than be dragged to the police court and lose his day?—There might be individual cases of that kind, but I do not think they would be general, sir.

1096. Of course it is reciprocal, both sides?—Yes, sir.

1097. You mentioned other cases of power of arrest, would you give us other instances of power of arrest for not paying a sum due?—Eating-house keepers, sir, I think.

1098. You mean if a man goes into an eating house?—Knowing he has no money, sir.

1099. Oh! that is different; suppose the eating-house keeper says, "I charge you a shilling," and the man says, "No, sixpence is the right amount, and here is "your sixpence," can the eating-house keeper arrest him?—No, sir, I think not.

1100. Nor do I; can you give another case?—Where fraud was evident, I said just now.

1101. Ah! where there was fraud, that might be another matter?—I said that just now.

1102. You would not be for doing it except in some case of fraud.

1103. (*Mr. Whitmore.*) Not where it is a mere dispute as to the amount of fare?—No.

1104. (*Mr. Cunynghame.*) But would you give that power of arrest, without warrant remember?—Yes, sir, where the fraud was apparent.

1105. (*Mr. Lough.*) But one minute ago you said if a gentleman drove to a house and paid 2*s.* 6*d.* and the cabman asked 3*s.* 6*d.*, then you would allow the driver to take him off to the nearest police station?—I said the hirer had the right to take him to the nearest police station.

1106. But you said you would give the cabman the power to take the gentleman to the nearest police station; you would be in favour of that? Let us be quite clear. Where the gentleman did not pay as much as was asked, would you be in favour of the driver saying to him, "You get into the cab and I will take "you by force to the nearest police station"?—No, if he is driving a gentleman or a person where the circumstances, the suroundings, are apparent, the driver would be wrong in doing it, and the magistrate would punish the driver for that action.

1107. And do you agree with the last witness who was before us that it is unnecessary to give the gentleman the power to compel the cabman to go to the nearest police station?—He has the power.

1108. He has; but would you continue that power? The last witness said he would not, he did not see much use in it?—I would, sir, if the hirer chose to direct the cabman to drive to the police station, I would still give him the power to do so.

1109. Do you not think that would waste the cabman's time with a person who was impecunious?—It happens both ways.

1110. Is it fair to give such a power to the hirer?—It is already done.

1111. I say do you consider that wise and fair?—I could not say as to the wisdom of an Act of Parliament.

1112. I am asking you to criticise an Act of Parliament; put yourself in that position then; it is a new one perhaps to put yourself in. Do you think that it would be a good thing that that provision which now exists should be done away with or that it should be continued. Think for a moment?—My thinking would be this, if you give a driver the power, I certainly would retain this and give the hirer the power.

1113. So would I; but suppose you gave neither the power to do it, what would you think of that?—Well, then, I think the driver should be allowed to take his fare in advance.

1114. I see that; but supposing he has not taken it in advance; that is the point, you see?—If the driver has a reasonable excuse for refusing to carry a man he would be justified in refusing to carry him.

1115. That is another point?—It is very fine, sir; I hardly know how to separate these matters.

1116. In your day I suppose there were a good many people who held duplicate licences, such as a tramcar driver's licence and also a cab driver's licence?—That is so, sir.

1117. What do you say to the system, do you consider it an advantage or a disadvantage?—An advantage.

1118. That the men should be able to do both, according as the trade requires it?—Yes, sir.

1119. (*Mr. John Burns.*) Mr. Ware, you said that no steps were taken to inspect yards unless specially reported upon?—Or where the inspector received instructions for a night inspection, sir.

1120. But do you consider that a satisfactory method of inspection?—I do, sir.

1121. Do you not think that the surprise visit and the unannounced inspection is the best method of seeing that things are right?—In both circumstances the visits were surprise visits, unknown, sir.

1122. Yes, but if as you said in the answer to the following question you were unable to tell the number of yards, that proves that there must be inefficiency and neglect of both systems, day inspection and surprise inspection?—I do not see it, sir.

1123. Well, but if you do not know the exact number of yards and their location, it is impossible for you to give adequate inspection, either surprise or otherwise. Ought not every cab yard to be registered in the local police station and the yards regularly inspected?—That is a point I have not thought of, sir; not the registration of the yards as well, sir.

1124. You would admit the present system is defective if the total number of yards and their location is unknown?—I do not admit it is ineffective.

1125–6. When there is no register kept at the police station?—Not of the proprietors of the yards. I do not think the fitness or the unfitness of the cabs or horses is affected when there is no register kept at the police station.

1127. When coupled with the fact that no inspection is made unless specially asked to be made?—No, sir, I do not think so; I think the inspection would be quite sufficient for all purposes.

1128–30. Well, I have only this to say, that if the sanitary laws were treated in a similar way we should have a death rate of about 40 per 1,000 through infectious diseases alone; if the sanitary official inspected houses in the casual and perfunctory way in which cabs apparently are inspected, I should be sorry to vouch for London's health. Now you say that you supervised inspection by other people?—That is it, sir.

1131. What steps did you take to check that inspection. Did you go round the yards yourself?—Certainly not, sir.

1132. Well, how did you get the reports of the inspections?—They used to send them to the Commissioner's office.

1133. But did you not visit the yards and the property the men inspected to see that the men carried out their work?—I did not.

1134. Did you think it your duty to do it?—I did not, sir.

1135. Scotland Yard standard is very low if that is the sort of surprise visits or that the method in which they were conducted?—And I do not remember if such had been appointed my duty.

1136. (*Mr. Whitmore.*) You are referring now to the previous question?—The previous question.

1137. (*Mr. John Burns.*) What about surprise visits, how were they arranged, and when were they done?—In this way, sir; if a horse or a carriage were reported, it would be the duty of the inspector to pay a visit to the proprietor's yard and see that particular horse or that particular carriage. The proprietors would have no knowledge beforehand of his coming, and then when the night inspections——

1138. Then am I to gather from you that both the local and the central inspector only inspected cab yards, harness, and horses upon complaint made to them by someone who reported?—Or night inspections, when they were directed to make night inspections.

1140–1. (*Mr. John Burns.*) Directed by whom?—By the Commissioner.

1141. But do they not do it on their own local initiative as part of their duty?—Yes, this far, when a horse and carriage were reported,

1142. Independently of that?—When a horse or carriage were reported and the inspector had visited that yard in consequence, he would constantly visit that yard to see that the horse or the carriage was still at rest or not at work.

1143. But it might happen, might it not, Mr. Ware, that yards and horses and cabs of which there had been no complaint might evade inspection and yet be in a worse condition than those about which complaints had been made?—I do think so, sir.

1144. (*Mr. Whitmore.*) Perhaps you are putting that rather too strongly, if I may say so; at all events it would be possible that yards might escape inspection altogether through a whole year?—It is possible, but only possible.

1145. (*Mr. John Burns.*) Are you aware that in several provincial towns they have very efficient inspection of cabs, horses, and harness by the appointment of practical men in the representative departments?—I have not heard of that.

1146. You have not heard of the result of that at Edinburgh and other towns?—No, I have no knowledge of Edinburgh or other towns, except that when I went holidaying I looked about them.

1147. What have you to say about the carrying of sick persons, persons suffering from infectious diseases?—It is prohibited now.

1148. But do you think it has been done?—We know it has, sir. I think there are two or three cases within my own knowledge; there are only about two or three. The fact is this, sir, if I may explain before we go on. A driver is called upon to take a person to a hospital, and he says, "What is the matter with him?" The reply is, "Rheumatism," or something of that kind, and the driver becomes aware for the first time that the person is suffering from an infectious disease when he is informed by the superintendent of the hospital.

1149. (*Mr. Whitmore.*) After he has got there?—After he has got there.

1150. (*Mr. John Burns.*) Then the harm is practically done?—I do not believe the driver would have taken the person otherwise, sir.

1151. Now, do you not think that a better plan would be to save the public from risk in these cases, that upon every local authority the responsibility of carrying infectious patients should be thrown, and that it should not be done under any circumstances by public vehicles?—It is not done in the metropolis—well, only in those obscure cases; in the metropolis it is prohibited by Act of Parliament, by the law.

1152. An obscure case of carrying smallpox to Stockwell Hospital would be sufficient, perhaps, to infect the whole neighbourhood?—But I do not think the cab driver would be sufficient to diagnose, to determine a case himself; if you leave it to the driver I do not think he would.

1153. We will leave that point, and we will come now to the limitation of licences; you regard that as being bad?—I do, sir.

1154. And, I gather, impracticable for the purpose?—Yes, sir.

1155. You said that cabs would not be in the street unless it were remunerative?—That I grant still.

1156. Does not that apply to shops just as well?—Yes, sir.

1157. And you know the proportion of shops that fail from bankruptcy and so forth?—No, I do not; I know shops do fail.

1158. Why should the public walking or riding through the streets suffer either through liability to accident and general inconvenience, the consequences of an unrestricted issue of licences?—I do not think they do, sir.

1159. Do you not admit that frequently in the neighbourhood of Charing Cross, the Strand, Regent Street, and Oxford Street, there are not every day inconveniences and accidents and obstruction due to the excessive number of cabs?—Yes, that is a street limitation.

1160. No, no, no?—A limitation of the general numbers I have been speaking of before, but if you limit the number in the street ——

1161. We can only get to the removal of the general inconvenience by the restriction of the individual licence; do you not admit that the Strand, Oxford Street, Regent Street, and other places show evidence of obstruction and nuisance and inconvenience through too many cabs being in the street?—I think they would be in those congested places just the same if you were to limit the general number of licences.

Mr. E. Ware.
25 June 1894.

1162. (*Chairman.*) But that is not quite the question Mr. Burns asked you. Do you not admit there is inconvenience from too great numbers in these places?—I do not know any, except what comes before one in the shape of allegations and things of that sort.

1163. (*Mr. John Burns.*) But you have seen it with your own eyes in the Strand?—I have seen a number of empty cabs. They would not be there if money was not to be earned.

1164. (*Chairman.*) You must answer the question put to you, and not put in your theories; do you or do you not—you are not forced to admit it—admit that there is public inconvenience caused in the particular places that Mr. Burns has named by the great number of cabs in the street?—I admit that.

1165. (*Mr. John Burns.*) Well, what is your remedy as an officer for that condition of things?—An Act of Parliament, sir.

1166–7. An Act of Parliament, what for?—For regulating the traffic of the metropolis, sir.

1168. The police already have the power of regulating the traffic, would you ask for increased stands as a means of avoiding it?—No, sir.

1169. Well, in what way other than the restriction of licences and approximating the supply of cabs to the demand would you get rid of this congestion?—Only by giving the Police Commissioner power to prohibit the number of cabs that may go up and down the streets empty.

1170. They do that to-day; and the cabmen's complaint is that in the Strand they brutally exercise it, especially at night time?—I am not aware of that, sir.

1171. I gather from your previous answers, Mr. Ware, that you are in favour of a margin of men over and above the actual number at work, from whom masters might employ other drivers for new cabs or other vacancies as they may occur?—Yes, sir.

1172. But supposing that a disproportionately large number of men were attracted to the trade, and the margin got disproportionately large, with the result that wages were generally reduced below a living standard, would you put some limit to the margin?—Not on account of wages, sir.

1173. No, but would you put some limit to the margin?—No, I would not restrict them in any way.

1174. Not by restricting the number of licences?—Not by restricting it in any way.

1175. Then if there was enough work for 10,000 cab-drivers in London and 25,000 or 30,000 men felt disposed to take up licences you would allow that condition of things to continue?—I would, sir.

1176. And you think in so doing it acts for the public convenience?—And the cab trade would benefit by it.

1177. In what way?—Giving the opportunity to proprietors to make selections of better men, better educated men.

1178. But does not that cut both ways?—Possibly so, sir, but I would not limit the licences.

1179. You said that the character of the cabmen was superior to what it had previously been?—Much superior.

1180. But is not that rather due to the general effects of education than to the condition of the cab trade?—It might be, sir.

1181. But do you think that the men's condition, from a wages point of view, is better than it was?—I do not know anything about the wages, sir.

1182. Have you not considered it?—No, sir.

1183. Then you would not be surprised to hear, perhaps, that whereas in 1869 or 1870, cab drivers were earning between 40*s.* and 50*s.* a week, they now do not earn more than from 25*s.* to 30*s.* per week?—I have no knowledge of it, sir.

1184. Is not this disproportionate reduction in their wages due to the inability on the part of the men to earn

Mr. E. Ware.

25 June 1894.

the same wages as they previously did, owing to their being more cabs than are asked for?—I do not think so, sir.

1185. (*Mr. Whitmore.*) Assuming that there has been such a disproportion.

1186. (*Mr. John Burns.*) Assuming that, yes. With regard to sixpenny fares, do you believe that the increased riding the sixpenny fares would create would give a balance of advantage to public, cab owner, and driver?—I do, sir.

1187. How would you enforce the sixpenny fare; would you let the legal tariff of fares be as it now is, but allow them to charge sixpence?—Sixpence per mile, sir.

1188. Sixpence per mile?—Yes, sir.

1189. And you would adapt the tariff to that alteration?—So far; I would abolish the shilling for the first hiring.

1190. You would abolish the shilling for the first hiring?—Yes, sir; that is as far as my individual opinion is concerned.

1191. What have you to say about the radius?—I think it is best as it is.

1192. Do you consider, with the rapid growth of London in all directions, but mainly westward, that the time has arrived when the radius should be altered?—No, sir.

1193. (*Mr. Whitmore.*) Have you never had any complaints from the outlying parts of London as to the present radius?—I think there are papers which ask an alteration of the radius, making it 5 miles or 5½ miles.

1194. (*Mr. John Burns.*) What is your objection to the alteration of the radius?—Well, in the first place it is so well understood at present, and in the next place it is keeping the cabs in their legitimate districts. I mean by legitimate districts the districts where they are wanted.

1195. Oh, but that four-mile district, which was the approved sphere of the cabs 10 years ago, might and has extended to districts one mile and two miles beyond the external ring of the old radius; do you not admit that?—Yes, and I say that the radius has kept cabs there for the convenience of the public, sir.

1196. Yes, but as that district grows, do you not think that the radius should be extended?—I do not, sir.

1197. Well, what is your reason?—Because it is so well understood, and it keeps the cabs in those places where they may be wanted.

1198. Well, but that means that inside the radius you frequently get congestion, whilst outside the present radius you get no cabs at all?—I think cabs would still come into the congested districts, whatever the radius, even if you abolished the present radius.

1199. The tendency of enlarging the present radius would be to distribute more equitably the whole of the available cabs over a larger district with the result of greater public convenience, is that not so?—I do not see it.

1200. Well, now, you seem very emphatic against any machine or automatic check upon the passenger and driver?—I do not know about emphatic, sir; they do not apply; they do not apply to where a fare is chargeable by disantce, under the circumstance; by time they might apply.

1201. What is the difference between the conditions of cab-riding in Paris, Vienna, and London?—This, sir: London is a business place, Paris, Dresden, and Berlin are pleasure places.

1202. That is a matter of opinion, sir?—Well, that is how I point it to myself, sir, and I am telling you my own view. A person here in London is in the Strand, and he says "I want a cab to go to Oxford Circus." There is a cab there, he jumps in, and he gets to Oxford Circus. It does not matter to him what sort of a cab it is, he simply wants to get from the Strand to Oxford Circus. You do not hear of people going out just for an airing here in London—for pleasure purposes.

1203. But how do you reconcile that with the fact that it is the pleasure-seekers, and the people who do ride in London who have demanded the better class of cab property?—Because they come to London with the ideas they have learned in the country, in provincial towns, and Berlin, Dresden, and other places.

1204. You said that man's intelligence was superior to a machine; are you aware that the masters say that is at the bottom of the whole business, and it is the cabman's ingenuity that makes countless owners mourn?—Shall I tell you two circumstances that came within my own knowledge on this very question. Some years ago—I cannot give dates; it just comes into my mind—a cab proprietor (in the Gray's Inn Road, I believe it took place), had two of these machines, two machines of that kind, placed upon two of his cabs. When the drivers went out—two drivers took the cabs out with these two machines on them—one said to the other: "Here is a fakement"—I remember that was his expression. He said: "Oh, I had one of that same "sort the other day; just come down the court yard." They tilted up the side of the cab and made the wheel travel 120 miles by dinner time, and in the other case the machine broke.

1205. But, is it fair to cite a special case like that, and give it a general application?—It is only in special cases that they employ it; they are only special cases where these are employed.

1206. But is it not safe to assume that if one-third, or one-half, or two-thirds of the cabs in Berlin, Dresden, or Vienna are fitted with taxameters, that if the system is as practical system, as it is being worked, it might be worked just as well in London as elsewhere?—My experience is with London; I do not know about Berlin.

1207. But do you not consider that the present system of a cab payment as between the cab master and the man is, to some extent, a kind of gamble, in which very frequently the dishonest man makes the most of it?—I do not know that, sir; I have heard say something of the kind.

1208. But you have no objection to some check being placed?—Certainly not; I would not interpose myself.

1209. Your objection to the machines I would regard as a purely old English objection to new-fangled ideas?—No, the diameter of the wheel being unlimited.

1210. But assuming those mechanical objections could be got over, you have no objections otherwise?—None, sir.

1211. Now, we come to privileged cabs, Mr. Ware. You said you were against limitation of licences, generally, for cabs and cabmen?—Yes, sir.

1212. Why are you in favour of the limitation of cabs at railway stations?—I am not limiting them.

1213. But the privileged system means limitation. Oh, but it does; you cannot get over that. How can you reconcile your objection to limiting cabs and licences for street traffic, and yet by the privilege system limiting the number of cabs available for the public who travel by rail.

1214. (*Chairman.*) Let me, perhaps, put in a word. I think you do admit that, do you not, that the system of privileged cabs at the station, as far as it goes, does limit the supply to the public?—In the streets, sir?

1215–6. (*Chairman.*) No, in the stations. As far as that is concerned, there is a limitation. The system of privileged cabs limits the supply of cabs which are available for the public at the station, does it not?

1217. (*Mr. John Burns.*) Certainly, to the extent of the number privileged. You are against the limitation and restriction of cabs and licences for general street cab traffic?—Yes, sir.

1218. That being so, why are you in favour of a relative limitation of cabs?

1219. (*Chairman.*) May I interrupt? Before saying why you are in favour of it, I want to get the witness to say that it is a limitation. Do you not agree with me that the system of privileged cabs is a limitation as far as the stations are concerned?—Certainly, sir.

1220. (*Mr. John Burns.*) Well, are you in favour of that limitation?—Not a fixed limitation; but according to the accommodation provided?

1221. No, but independent of the accommodation. Let us take one station?—Yes, sir.

1222. Supposing the number of cabs at Victoria Station, say, is 80?—Yes, sir.

1223. Supposing a train comes in with 100 passengers (this, sir, I regard as almost the essence of the privileged system), supposing 100 passengers come in from Brighton, for whom there are 80 cabs, 80 out of the 100 get into the privileged cabs, and away they go?—Yes, sir.

1224. What comes of the accommodation provided by the railway company when the 20 have no cabs at all?—It is not sufficient, sir.

1225. (*Mr. Cunynghame.*) I only want to ask you one question. Supposing that there are 80 cabs at the station, and that 100 passengers or 100 groups of passengers arrive and take away these 80 cabs, and that there are then 20 passengers or groups of passengers left, do they not then let in cabs from the outside? Would not they be called to take away those 20?—They would, sir.

1226. (*Mr. John Burns.*) Then I gather from that, when the privileged system breaks down the general cabs come to its relief?—They do, sir; when it breaks down, sir.

1227. That means that there is practically no limit to the supply of outside cabs, but when the privileged cabs inside are exhausted, then the street cabby has to come to the relief of the limited and privileged number?—He is invited in.

1228. (*Mr. Whitmore.*) But the public suffer no inconvenience?—I do not see that they do, sir.

1229. (*Mr. John Burns.*) I will put another question on that. Do you consider that railway passengers should have extraordinary consideration to the inconvenience of the outside public?—I do not think they should.

1230. (*Mr. Whitmore.*) But why to the inconvenience of the outside public?

1231. (*Mr. John Burns.*) I was going to ask that, Mr. Whitmore. You do not consider that railway passengers should have extraordinary consideration to the detriment of the outside public?—No.

1232. Upon it being proved that the privileged cab system does not satisfy the requirements of railway passengers, and when it breaks down inconveniences the outside public by the choking up of streets, would you be in favour of its abolition?—Under those circumstances I would, sir.

1233. Do you know Victoria Station, Mr. Ware?—I know where it is, sir.

1234. You have frequently been there, I suppose?—I have, sir.

1235. And you have seen the Victoria cab yard and station partly full of privileged cabs, and outside, waiting until the privileged cabs had gone by, some scores of cabmen waitng for the call?—Yes, sir; a cab stand is generally outside.

1236. Do you not think it might be better, both for the cab-riding public who have come in by train, and the convenience and regulation of the street traffic outside, if instead of waiting outside a partially empty yard, all cabs up to the yard capacity of accommodation were allowed to go in?—For myself, sir, so far as I am concerned. No, sir. I would give the persons holding the property the right to exercise their own powers in the matter. If they are not sufficient I would allow the others to come in. But I would not allow them tobe compelled to take anybody in. I would allow them to exercise their own rights of property.

1237–8. What comes of your theory of free trade in cabs if you are to give privileged cab drivers and cab owners all the plums while those outside have all the stones?—It is free trade.

1239. It is protection of the grossest kind. What comes of your theory of free trade in cabs while you allow protection to privileged ones?—I have not admitted that I allowed protection yet.

1240. But you are against restriction of licences?—But licences are issued under conditions.

1241. You have allowed restrictions at the stations?—There are restrictions?

1242. Yes, for the benefit of the owner and the cab driver, not for the benefit of the public?—The public, I presume, sir.

1243. Before I leave privilege, supposing it can be proved that the system of privileged cabs in railway stations inconveniences the outside traffic, and does not serve the railway travelling public, you would not be anxious for its continuance?—Will you repeat that, please.

1244. Supposing it can be proved that the present system of privileged cabs in railway stations does not give that accommodation that general cabs would give with no privilege at all, and that it incidentally attracts outside stations a large number of cab drivers to the public inconvenience, you would not be anxious to continue it, I suppose?—No, sir; but I think the proprietors themselves would be anxious to satisfy the public travelling by their own line of railway.

1245. Which proprietors?—The railway owners.

1246. But the railway owners' interests might be contrary to the general interests of the public outside, and in the event of that being proved you would want to terminate it, would you not?—I should think yes, sir.

1247. Now, with regard to bilking. Bilking you would define not as an attempt to reduce the legal fare, but to fraudulently evade altogether the payment of the legal fare?—Yes, sir.

1248–9. And for that condition of things you would give a cabman the power that every person offended against now has, of summary arrest, in case of felony?—He would not be able to arrest a bilker, sir, unless by warrant.

1250. (*Chairman.*) Would you think it a good plan to alter the law so as to make the practice in this matter of bilking the same as Mr. Burns tells us it is in matters of felony now?—Yes, sir; give him the power of arrest in case of bilkers. But I understand a case of bilking to be when a man runs in at one door and out at another in another street. He cannot arrest that man because he cannot catch him. That is the evidence of the fraud.

1251. If he could arrest him in the other street you think he should be able to arrest him?—Yes, sir, this seven days limit should not operate.

1252. (*Mr. Lough.*) First, a question about inspection, Mr. Ware. Are these six inspectors independent of one another?—They are, sir.

1253. There is nobody over the six—no chief inspector?—Only the superintendent to whom he makes his reports, sir.

1254. But there is no superintendent of the inspection department?—There is not, sir.

1255. Do they give any report of the cabs they inspect?—They do, sir.

1256. If one inspector refuses a cab and another inspector passes it, is there any such report given as might enable them when they come to Scotland Yard, to compare notes to detect that?—First of all, sir, the inspectors are to limited their districts, and a person must change his address to go into another district. That is possible; and it is possible for the second inspector to consider that a cab might be passable and pass it in consequence. I do not say such a thing has ever happened; but it is possible.

1257. Well, you have missed my question. I asked you, is there a machinery at the head office by which it would be detected when they come to compare notes at night?—There is none, sir.

1258. Do you not think it might be desirable that there should be?—Well, sir, I am looking at the utility of the thing. Supposing he paints his cab another colour, it is virtually another cab altogether by the time it goes to the other inspector; the identity is destroyed; you cannot fix the identity of the vehicle.

1259. In a case where nothing takes place, would it not be well to have machinery at headquarters for Inspector A to notice that Inspector B had passed a cab that he had refused?—Yes, sir; if it can be done.

1260. I want you to tell me more clearly what the night inspection is—what is the object of it?—To prevent—to detect—improper cabs running about the streets at night time.

1261. What do you mean by improper cabs?—I mean this, sir, that a proprietor might have property which might have become deteriorated since the last licensing time, and he does not feel able yet to get it done up in a sufficient way to get another licence for it, if he were to present it. It is not in first-class condition, but he might send it out in the evening time to escape observation.

Mr. E. Ware.

25 June 1894.

1262. Would it not have a plate; do you mean a cab with a plate, or without a plate?—With a plate, sir.

1263. And even with a plate a bad cab might be run?—It might not be good enough to be available during the day time.

1264. That is the only object of night inspection?—That and the horses.

1265. That is done just casually on the street?—In the street and in the railway stations, according as is desired sir, or the proprietor's premises visited.

1266. You are in favour of the existing privilege system on the railways?—I do not know that I am, sir.

1267. Are you against it?—No, sir. I have no preference in any way, as far as I myself am concerned.

1268. Now, I want to come to the question of the limitation of drivers. You said that the reason why you wished the number to be any number that applied to be licensed was because you wanted the masters to leave a good number to select from?—That was one of the reasons, sir.

1269. It was the chief one?—I said a man might die or be ill.

1270. Keep to my point. You said you wanted the proprietors to have men to select from?—That is one of the reasons.

1271. Keep to that one. That is the one I want to talk about. What would become of the men who were not selected?—They would not have employment from that particular proprietor.

1272. Do you think that desirable?—Yes, sir, I think it is desirable to continue it.

1273–74. You said that if the butterflies were done away with then the number might be limited?—Be limited—no, sir.

1275. You said if there were not so many butterflies, those men who work only a few days in the year?—Yes, sir.

1276. Then the number might be limited if all men worked regularly. Well, I will put it to you as a question. Do you not think that if all the men worked regularly a large number of days in the year, then the number might be limited?—It would reduce the number of drivers in employment, sir, and the men would not apply for licences if they could not get work with a licence. I do not quite understand.

1277. If you will follow me, and not put another meaning into it, I think you will get it quite clearly. You said, in reply to Mr. Burns, if 20,000 or 30,000 men applied for licences you would give them licences?—Yes.

1278. You observed afterwards—I put it down—that if the butterflies were done away with, those men who worked casually a few days, it might be possible for you to restrict the number of licences issued, to limit the number?—Not the Commissioner, sir, but the number of men getting employment would be limited.

1279. Who would limit it?—The proprietors, by not employing them.

1280. You mean that would not affect the number of licences?—That would not affect the number of licences; that is what I do mean, sir.

1281. Do you think it right to license a poor man, and let him pay 5s., and yet let that licence carry no guarantee of work?—I think it quite right, sir.

1282–3. I want you to make clear now that point about bilking. I think you, perhaps, did not make your meaning of the word bilking clear to the Committee. Do you mean by bilking the entirely refusing to pay anything?—I do not consider that bilking, sir.

1284. (*Chairman.*) You do not?—Bilking, as I understand the question, sir, means this, that a man says, "Drive me to such-and-such a public-house," or to Burlington Arcade, or Lowther Arcade, and he says, "Wait a minute," and goes into that place, and gets out at the other end.

1285. Well, that is not paying anything?—But it is not a man out in the street.

1286. You seem now to be contradicting yourself, As I understood, and I think Mr. Lough's question amounted to this, you mean by a bilker a man who escapes paying altogether.

1287. (*Mr. Lough.*) Refuses to pay anything?—When he takes steps as in such a case as that, going into one street and out into another.

1288–9. (*Chairman.*) I want us all to understand one another, and I believe we do. Certainly it is very important when using a technical word like bilking to see that we mean the same thing by it. I understood you to mean by bilking a case where a man by a dodge escapes payment altogether?—Yes, sir.

1290–1. Intentionally, by going in at one door of Burlington Arcade and out at another, leaving his cabman standing on the street; that is what you do mean?—That is what I mean.

1292. You would not apply bilking to a mere dispute about a fare?—No, sir.

1293–4. (*Mr. Lough.*) I want to put it a little further. Suppose he does not go into Burlington Arcade or anywhere else, but gets out and stands on the pavement, and says, "You are a nice fellow, driver, and so am I, "but I am not to pay you anything, because I have no "money." You would call that bilking, would you not?—I do not know whether I should call it bilking or not, sir.

1295. (*Chairman.*) That is a very good question, and it is a new point. I want to know whether you do contemplate any such case as Mr. Lough puts to you, where a man without any dodge or trick simply refuses to pay?—No, I should not call it bilking.

1296. So that the remarks you have made before about bilking we apply only to such a case as where a man dodges about the street?—Yes.

1297. (*Mr. Lough.*) What would you call that?—Refusing to pay, which is provided for by law.

1298. How is it provided for?—Demanding his name and address, sir.

1299–301. Well, would you authorise arrest in that case?—Yes, sir.

1302. (*Chairman.*) You would apply in that case the same remedy as in bilking?—In this case it would be immediate arrest. The bilker cannot be arrested immediately—he is gone from your grasp; with that difference.

1303. With that difference you would give the cabman the right of arresting him freely whenever he had the chance?—Yes.

1304. (*Mr. Lough.*) In the case of a man who says, "I have only got a 1*s.*; here it is"—while the cabby says 2*s.* is the fare, would you allow the cabby to take that man to the police station?—Yes, I would, sir; go to the police station.

1305. You would allow them to take that man?—Yes, sir.

1306. So that, in effect, over all disputes of fare you would allow the cabman to take the man by compulsion to the police station?—In all refusals to pay.

1307. The full fare, mind you; I want to draw the distinction?

1308. (*Chairman.*) Mr. Lough is now on the question of partial fare—the man giving part and refusing part?—Yes, sir, I would give him the opportunity of going to the police station.

1309. The same in that case as in the other case?—The same as for refusal altogether.

1310. (*Mr. Lough.*) That is my next question. For bilking, for refusing to pay any fare, or for paying a short fare, you would have the same remedy?—I fancy the driver would agree to say, "Give me your "name and address; where are you living—that "will do." That is rather an extreme case, not with any surroundings.

1311. I rather like an extreme case. If the driver wished to take the man to the station, would you allow him?—If they could not come to terms, sir.

1312. Coming to the railways again, do you know the railway unlicensed 'bus?—I do, sir.

1313. Are you in favour of allowing it to ply as it does now?—I should say not, sir; I should like the law to be altered to meet that.

1314. You are against the present system. What alteration would you like?—Plying for hire in the railway station should be made licensable.

1315. Well, you mean it should be compulsory to have a plate?—Yes, sir.

1316. Have you attended the police courts much?—Not much, sir.

1317. Have you ever been there on the day the cab cases were taken?—No, sir; I do not know that I have. It was very rare for me to be at the police courts.

1318. Well, then, one question about the radius. Do you see any reason why the radius should be a circle any more than of a long shape?—I do not, sir.

1319. Would you be in favour of lengthening it towards the West where London is stretching out?—I would be in favour of an irregular circle.

1320. An irregular circle. That is to say, extending towards the West, Hammersmith?—Perhaps not so far as that, but approximately as near the four-mile circle as possible.

1321. Perhaps take it in in some places like Highgate, and stretch it out in another direction?—Yes, but within reasonable bounds.

1322. (*Mr. Whitmore.*) Just one or two things about the privileged railway cabs. On what principle are they selected by the railway companies?—I do not know, sir.

1323–4. Can you say, as a class, they are better than the unprivileged cabs?—I have heard so, sir; but I do not know it.

1325. (*Mr. Hopwood.*) As to the taxameter, Mr. Ware. You gave us an interesting anecdote of a man who turned a cab up and let the wheel run 120 miles. Now, you heard the evidence given by the gentlemen from Germany with regard to this special patent, did you?—I did not hear any evidence meeting that point, sir.

1326. Does it not occur to you that the cabman would have had to account for 120 miles' worth of fares to his proprietor?—No; I do not think he would, sir. The absurdity of the thing would be so apparent that the proprietors would say, "It is not worth using."

1327. With regard to the privileged cabs, and, first of all, the station omnibuses. Is there any reason why the railway companies should not apply for licences at the present time?—Yes, sir.

1328. Why cannot they?—The present law says, "Public street, road, or place"; and if you abolish station omnibuses as they at present exist, every railway carriage that runs on the underground railway would require a licence, every car would require a licence, unless the law be altered to meet it.

1329. But is there any reason why the Great Northern Railway Company should not apply to Scotland Yard for licences for cabs?—Not at all, sir; none whatever.

1330. There is no reason why they should not?—None whatever, sir.

1331. They might, if they liked, become cab proprietors, in your view?—Yes, sir.

1332. And own five or six thousand cabs?—And if they made application for the purpose they would be granted.

1333. They might compete in the same way as regards omnibuses?—I do not know what the law is on that subject. There is a law, I believe, dealing with something of the kind.

1334. You told Mr. Whitmore that you knew nothing of the arrangements of the privileged cab system?—Nothing, sir.

1335 You do know the distinctions which are drawn between the Waterloo Station system and the Victoria Station?—I know there are distinctions as far as the payments are concerned; but how much is paid and generally, I know nothing. I know that there is 1*d.* paid on admission at Waterloo Station.

1336. Can you tell us this, whether the arrangement is made as between the railway companies and the cab proprietors, or as between the railway companies and the men?—As a rule, the railway company and the owners, but where the penny is concerned in Waterloo Station it is between the railway company and the driver.

1337. Do you, from your experience, see any reason why the proprietors' licences should not contain a special proviso forbidding them to enter into contracts to supply cabs to railway companies?—I do not think they would be bound to go in if they chose not to do so.

1338. But at Scotland Yard, have you, as a matter of practice, ever inserted in proprietors' licences special conditions?—Never, sir.

1399. There is no reason why you should not?—Oh, yes, sir.

1340. I do not know myself—I want to get it from you?—The schedule is strictly adhered to in every case.

1341. Is the schedule a statutory form, or is it in a form laid down by the Secretary of State?—By the Secretary of State.

1342. Then it may be altered by the Secretary of State?—Yes, sir.

1343. The proposition I am putting to you is this—that the authorities at Scotland Yard should insert in the form of licence a proviso forbidding the proprietor to supply his cabs to a railway company?—This schedule, sir, is supplied by the Secretary of State; if the Secretary of State made any such alterations, Scotland Yard, I presume, would carry out the instructions, sir.

1344. (*Chairman.*) But I think I understand Mr. Hopwood to mean, do you see any objection to that alteration if the Secretary of State chose to make it?—None whatever myself, sir; none whatever.

1345. (*Mr. Hopwood.*) Then the result would be, that if the railway companies required a special supply of cabs for the special service of passengers they would have to enter into special agreements with the cabmen?—The Act of Parliament says the Secretary of State may licence on any conditions he thinks proper, sir.

1346–7. Can you refer us to that provision?—Section six of 32 & 33 Vict. c. 115?

1348. (*Mr. Lough.*) Do not the words follow, "subject as follows," and then there are provisoes?—Yes, sir.

1349. (*Mr. Hopwood.*) Then, Mr. Ware, although it may be doubtful whether Scotland Yard can refuse to grant licences to proprietors applying in due form, it is clear that Scotland Yard can impose any special form of obligation upon the proprietors as a condition precedent to granting the licence?—If so laid down by the Secretary of State. Perhaps there is a little bit that hinges, if I may interpose, sir. Prior to this last Act coming into operation the licences were issued at Somerset House, and the duty of inspecting the carriages fell upon the Commissioner of Police, and section 1 of 16 & 17 Vict., c. 33 says, "That if such carriage or carriages shall be found by the said Commissioners to be in a fit and proper condition for public use, they shall grant a certificate to that effect." And upon that certificate Somerset House issued its licence.

1350. Now will you turn to section 6 of 32 & 33 Vict. c. 115, and read the first three lines of the second paragraph of the section beginning "Any licence"?—"Any licence in respect of a hackney or stage carriage under this section may be granted at such price, on such conditions, be in such form, be subject to revision or suspension in such evens, and generally be dealt with in such manner as the said Secretary of State may by order prescribe; subject as follows:—

"1. That a hackney or stage carriage licence shall, if not revoked or suspended, be in force for one year, and there shall be paid in respect thereof to the Receiver of the Metropolitan Police, to be carried to the account of the Metropolitan Police Fund, such uniform sum, not exceeding 2*l.* 2*s.*, as the said Secretary of State may prescribe."

1351. Then you point out to us that the Secretary of State has power under that section to impose any conditions he thinks fit on the granting of a licence?—Yes sir, with certain restrictions as to price and length, of course, and all that sort of thing.

1352. Oh, yes, we quite understand that. Now, with regard to bilking, did you ever hear of bilking until you came into this room?—Oh, yes, sir.

1353. Complaints have been made?—I never saw a report in my life about bilking.

1354. Where did you hear about bilking?—Amongst drivers themselves, they talked about it; they said "they were bilked last night themselves." But I never saw a report that I know of.

Mr. E. Ware.
25 June 1894.

1355. You do not know to what extent bilking is practised?—I do not, sir; I think it is very little.

1356. (*Chairman.*) When you say that you think it is very little, do you include in that answer all the different sorts of cheating that we have spoken about?—No, sir, only bilking, as I understand bilking.

1357. Going away by dodging or by a trick?—Yes, sir.

1358. Are the other sorts of nonpayment more frequent; that is to say, a plain refusal to pay, as was the second case contemplated by Mr. Lough?—Just as sparse, just as few, sir.

1359. And the third case, of the dispute over the amount. That, of course, I suppose, is much more common?—More general.

1360. (*Mr. John Burns.*) Where bilking of the pure order, you know, what you have described as by a dodge, does take place, although it is rather rare in occasions, in the amount bilked it is often very large?—I should arrest him, sir; I think he ought to be arrested.

1361. Although pure bilking does occur but rarely, yet when it takes place, the cabmen are deprived of large sums of money, for instance, a man says "Drive me from such a public-house to that music-hall, "and that music-hall, and to so-and-so," and then he gets out at some place and dodges him entirely; it is very frequently a large sum of money that the cabman is deprived of?—I cannot say, sir.

1362. Have not the cabmen told you that?—No, sir. I have heard of a case, but they are exceedingly rare cases, where a man drove for a whole day.

1363. (*Mr. Lough.*) You heard of a case where a whole day had been lost?—Yes, I have heard of a case of a whole day.

1364. (*Chairman.*) We understand they are rare, but are they not in cases of long fares where a good deal of money has been lost?—I have heard so, sir.

1365. (*Mr. Hopwood.*) You have heard of these cases, but in your opinion are they of such frequent occurrence as to make it expedient to have special legislation?—I should say not, sir.

1366. In answering the questions put to you by Mr. Burns, you used the expression several times "fraud apparent"?—Yes, sir.

1367. You said that where the fraud was apparent you thought the power of arrest should be given. What do you mean by "fraud apparent"?—Just such a case as bilking is concerned, sir, fraud is apparent; the man runs away by dodges or by tricks.

1368. Apparent to whom?—Apparent to the driver.

1369. Does it not occur to you that accidents may happen of this description: A man drives to the station to catch a train, he has got no change, he rushes in to get his ticket, and then forgets to pay the cabman?—There may be cases of the kind, but my own experience shows me that the cases are generally the other way, sir; the man gives the driver a half sovereign, takes his ticket, gives his address or something in that way, and says "Send me the change."

1370. Well, whom would you have given into custody in a case of that sort?—No one at all, sir; because the two parties are at one, they are not at variance, sir.

1371. Can you tell me this: is it competent to a fare to give a cabman into custody for using bad language?—No, sir.

1372. What happens when a cabman is abusive to his fare?—Well, sometimes he is summoned, sometimes the hirer takes no notice of it, passes away; sometimes he will summon him if it be a gross case.

1373. There was one point more. You gave us some interesting information with regard to the old sixpenny fares. Do I understand you aright, that under the Act of 1867 a shilling was laid down as the statutory fare whenever a cab was taken off the stand?—Yes, it was, sir; they gave the driver an opportunity of charging a shilling. So I read it, sir. I will read the Act.

1374. I think we might have the reference?—It is section 26 of 30 & 31 Vict., c. 134, "Where the fare "now payable by law on hiring any hackney carriage "standing on any stand shall not amount to one "shilling, the driver shall be entitled to charge one "shilling."

1375. That really raised the minimum fare to a shilling whenever the cab was called from a stand?—Yes, sir.

1376. But for several years afterwards, from what you tell us, the sixpenny fare remained, and was presumably payable in the case of what we should call crawlers?—Yes, sir.

1377. But you cannot tell us why the sixpenny fare in regard to crawlers was subsequently abolished?—I do not know, sir. I was never consulted, and do not know anything about it, sir.

1378. But it is quite clear and from your experience you can tell us with confidence that for several years a cabman who was crawling along the street was liable to be engaged for a sixpenny fare?—Yes, sir.

1379. (*Mr. Bayley.*) You have told us that one of your inspectors could tell whether a horse was lame or not?—Yes.

1380. Can he tell whether it has got glanders or farcy?—I think it is very possible he could, sir.

1381. Could you yourself?—I should not like to determine the thing myself, sir.

1382. (*Mr. Cunynghame.*) One single question. How far would you go in giving these powers of arrest when people did not pay money that is due from them? I would like to test it in this way: supposing a man took a small house, knowing that he had no means to pay for it, at the end of a week would you give the landlord power of arresting him if he did not pay?—I should not, sir.

1383. You would not go so far as that?—No, sir; because it is permissive on the owner whether he will let or whether he will not, It is not permissive on the part of the driver; he is compelled to carry.

1384. But at the same time, if there was a power given to the driver of demanding his fare beforehand, if he chose, would that meet that point?—It would, sir.

1385. (*Mr. Lough.*) I want to ask, is there not such a power now?—No, sir.

1386. Can you show me in the law where the driver is compelled to carry and forbidden to ask the fare in advance?—I think I can, sir.

1387. (*Mr. Whitmore.*) But it may be done in the case of a wait?—I have a cutting here from the *Standard*, headed, "Wandsworth" (16th January 1888). Shall I read it?

1388. (*Mr. Lough.*) Can you not refer me to the law? You have said a dozen times this morning that the driver is compelled to carry, but that he may not ask the fare in advance?—It is not laid down; he is not given the power.

1389. Well, it is not the law that he is compelled to carry and not ask the fare in advance?—He is compelled to carry; but the law says nothing as to his being able to claim in advance.

1390. Well, then, there is nothing to prevent him doing so?—Well, the magistrate decided it, sir, at Wandsworth.

1391. (*Mr. Hopwood.*) It is a question of contract, and the contract is not complete until the man has carried the fare to the end of the journey?—That is it, sir.

1392. (*Mr. Lough.*) Here it is; it is the opposite of what you said:—"An application was made to the "magistrate for a summons against a cab driver for "refusing to drive a fare. The applicant stated that "he hired a cab on Lavender-Hill rank, the driver "agreed to take him for 2*s.*, but refused to drive him "unless he paid the fare in advance. Mr. Paget was "inclined to think that the cabman was right to "require the fare before starting. The applicant said he "never heard of a cabman requiring a fare beforehand; "therefore he thought a cabman had no right to do it. "Mr. Paget observed that it was a case he had never "had before. He inquired whether there was any "other cab on the stand. The applicant said there "was not, and the consequence was that he had to walk "home, and being lame it caused him pain. Mr. "Paget referred to the Act, and asked the applicant if "he desired the cabman to drive to the nearest police "station in order to have the dispute settled. The

" applicant replied in the affirmative, and said the " cabman refused to drive him to the station. Mr. " Paget said the offence was for not driving to the " nearest police station, as he did not find any provision " for payment in advance. It would be hard upon " cabmen if they were bound to drive every beggar " without any chance of receiving the fare. There " was a hardship in both ways, but the case was not " provided for by the Act. He suggested to the " applicant to prepare a written statement of his com- " plaint, and he would consider it." But that does not prove anything. It does not prove that he was compelled to carry?—No, but the magistrate said he could not charge it in advance.

1393. He did not say so; he said the opposite. Mr. Paget said he would consider it?—He said he was right, but he could not do it—he could not claim the payment in advance.

1394. You keep on repeating that. If you say so this does not prove it, and the Act does not prove it. I want you to prove that if you can?—I cannot, sir.

1395. Have you any evidence on that subject more conclusive than that scrap from the newspaper?—I have not, sir.

1396. (*Mr. Whitmore.*) Where exactly is the law which enables the cabman to claim an advance in the case of a wait?

1397. (*Chairman*) You told us a cabman could claim an advance in the case of a wait?—Yes, sir.

1398. What is that law?—I have it here, sir, section 47, 1 & 2 Will. IV., c. 22, that " where any " hackney carriage shall be hired and taken to any " place of public resort or elsewhere and the driver " thereof shall be required to wait with such hackney " carriage, it shall be lawful for such driver to demand " and receive from the person so hiring and requiring " him to wait as aforesaid a reasonable sum as a " deposit over and above the fare to which such driver " shall be entitled for driving thither."

1399. (*Mr. Lough.*) Well, he is also entitled to collect the fare according to that?—Yes, sir.

1400. Therefore, so far as that goes, it shows that he may ask the fare also in advance.—There is no law, in short, against asking the fare in advance?—Against asking it—there is nothing against it.

1401. There is nothing against it?—There is nothing against it that I know of.

The witness withdrew.

Mr. William Beavis, Superintendent P.C.O., called in and examined.

1402. (*Chairman.*) Mr. Beavis, I believe you are now what the last witness was?—Yes, sir.

1403. You have filled the office which he vacated?—Yes, sir.

1404. And you have been in it since last February?—That is so, sir.

1405. What has been your previous experience?—I was in the public carriage office for about 10 years, as second to Mr. Ware, and then I was appointed as chief of the lost property department, and then in February last I was put in charge of both.

1406. How did you begin? Did you originally join the police force as a constable?—That is so, sir.

1407. And you did ordinary street duty at one period of your life?—Yes.

1408. Have you had any experience of cab traffic?—Very little in the street. I was in the country. I was afterwards appointed clerk in the M Division. Shortly after being made inspector I was appointed to the public carriage department.

1409. You never were on the streets in a crowded part of London?—A short time in the Borough, sir.

1410–14. How long ago?—That was about 1864.

1415. Referring to the evidence given on the first day, Question 251—Mr. Bruce was the witness, and Mr. Cunynghame asked him this: " You have given " us, I think, Mr. Bruce, the number of cabs that " are at present licensed; have you made any " estimate of how many of these cabs—what percent- " age—are in practical use on the average through " the year, and what may be estimated as laid up for " repairs or disused?" And the answer is: " About 20 " per cent., roughly, as far as we can make out. (*Q.*) " I suppose it would be difficult to give us any reasons, " would it, for your 20 per cent.; your superintendent " could give us the details, perhaps?—Yes, I think " so." Very good. Then I put that to you—does that answer of Mr. Bruce represent the facts, as far as you know?—We have no means of knowing in the office the number of cabs that are in daily use. It was simply an answer I gave in consequence of some inquiry I made in the short time I had at my disposal. I am not able to say the number; that is simply an approximate number.

1416. You mean you supplied Mr. Bruce with it?—Yes, I did.

1417. But you mean that it is only guess work?—Guess work.

1418–19. You know Victoria Station; what do you say about the obstruction outside it?—I sent for a report from the superintendent of the division. I have not had it at present. I have no doubt I shall have it before the Committee ceases its labours to-day. I hope to lay it before them.

1420. It will come across from Scotland Yard?—Yes.

1421–22. Can you hand in a return of the number of privileged cabs at each station?—Yes, sir.

1423. How many? Tell us, please: it will be as well to get it on the notes?—Yes, sir.

" Public Carriage Branch,
" June 1894.

" Privileged Cabs.

" Return showing the Number of Privileged Cabs at the Principal Railway Termini and the Amount charged for such privilege:—

Station.	Company.	Number of Hackney Carriages privileged.	Amounts charged.
Victoria - -	L. C. & D. Ry. -	97	2*s.* each per week.
" - -	L. B. & S. C. Ry. -	136	3*s.* " "
Paddington -	G. W. Ry. - -	209	3*s.* " "
Liverpool Street -	G. E. Ry. - -	100	4*s.* " "
Fenchurch Street -	L. T. & S. Ry. -	50	4*s.* " "
Broad Street -	N. L. Ry. - -	16	100*l.* per year.
Charing Cross -	S. E. Ry. - -	153	3*s.* each per week.
Cannon Street -	" - -	59	3*s.* " "
Ludgate Hill and Holborn Viaduct.	L. C. & D. Ry. -	80	" "
London Bridge -	L. B. & S. C. Ry. -	110	3*s.* " "
" - -	S. E. Ry. - -	25	3*s.* " "
King's Cross -	G. N. Ry. - -	110	1*s.* 6*d.* " "

St. Pancras - -	M. Railway -	100	2*s.* " "
*Waterloo - -	L. & S. W. Ry. (South Station.)	25	Not given.
		1,452 "	

* Hackney carriages are admitted into Waterloo (General) Station on payment of 1*d.* each; the average number per week so admitted is 6,019.

1424. There are no privileged?—There are 25 licensed cabs privileged.

1425. (*Mr. John Burns.*) Where? At Waterloo?—At Waterloo, sir.

1426. Do they get in without paying?—No, they are privileged by the company; I do not know the amount of payment.

1427. (*Chairman.*) Do you know whether the drivers pay extra for privileged cabs?—I have heard so, I have no personal knowledge.

Mr. W. Beavis.

25 June 1894.

1428. You do not know how much?—No, sir.

1429. You heard all the evidence of the last witness?—Yes, sir.

1430. Does anything occur to you arising out of that evidence that you would like to correct or to supplement; I mean to add any fresh views of your own or to dissent from anything that the last witness has said on any of the points?—As far as the privileged system is concerned, sir, I think that cabs should be admitted into railway stations on the same ground as at Waterloo.

1431. (*Mr. Whitmore.*) By paying a penny?—By paying a penny.

1432. (*Chairman.*) Unrestricted in number?—So long as there is accommodation.

1433. Have you any other suggestions to offer?—Not with regard to the privilege system.

1434. No, I mean with regard to the evidence of the last witness, generally; you heard him all through. Did anything occur to you as his evidence went along upon which you would like to make any remarks, either agreeing or disagreeing?—Only in regard to bilking, I should like to say, as far as my opinion is concerned, the driver should have the power of taking a bilker to the police station, and if a magistrate were sitting at the time, he should have the power to take him before the magistrate; but if the magistrate were not sitting he could be detained at the police station until his name and address had been verified, and then proceedings could be taken against him.

1435. When you speak of bilking, do you only contemplate the case where a man runs off and dodges or openly refuses to pay, or only refuses to pay what is demanded?—In the case of dodges, openly refusing to pay, but not in the case of refusal to pay what is demanded.

1436. In the two first cases, in the case where he dodges or quite openly refuses to pay, would you apply the same remedy?—The same remedy.

1437. And a different remedy in the case where there is a dispute about the amount?—Yes.

1438. (*Mr. Cunynghame.*) Do you think it probable that a certain amount of the property, and if so, what amount, if you can form an idea, that is lost in cabs, is by some of the cabmen not returned?—I think, sir, we get between about one half and one third of the property that is lost; whether the remainder is retained by the cabman or by subsequent fares I do not know, sir, but I rather think in many cases by subsequent fares.

1439. I have left things in cabs, and I have not got above half of them back; I want to know your view. What I was going to suggest to you was this: does not that possibly arise from the regulation which compels a man to take the property at great loss of time to Scotland Yard, which is very often a very long distance off?—Not to Scotland Yard, sir; he can take it to the nearest police station at any time within twenty-four hours.

1440. (*Mr. John Burns.*) You said with regard to privileged cabs you would place all railway stations in the same position that Waterloo now is in that is that every cabman should have the right of entry subject to there being accommodation for him on payment of 1*d.*?—Yes, sir.

1441. Do you think generally that that would operate better for all interests than the present system of exclusive interest in privileged cabs?—I think so.

1442. (*Chairman.*) I think at Waterloo you said there were a few privileged cabs?—25.

1443. When you say you would like the same system as prevails at Waterloo, do you mean the same system completely, with a small number of privileged cabs, or the same system minus all privileged cabs?—The same system minus the privileged cabs.

1444. An unrestricted entry on payment of 1*d.*?—An unrestricted entry on payment of 1*d.*

1445. Up to the accommodation of the yard?—Yes, sir.

1446. (*Mr. John Burns.*) Why the 1*d.*?—In many stations they employ a good many men to take the journey the man is going, which is a very great assistance in making inquiries; then they employ a good many men at the standing.

1447. To sweep up and water?—To sweep up and water, and I think 1*d.* not too much to pay, and I think the drivers, so far as I have heard, are perfectly willing to pay that 1*d.*

1448. The 1*d.* is not necessarily a privilege charge, but the amount necessary for watering, sweeping up, and attendance?—That is so.

1449. Are you aware that all masters and cab drivers are in favour of the abolition of the privilege system?—I heard the drivers are, sir; I have never heard any suggestion on the part of the proprietors; I have not come into contact with them.

1450. Did you not hear at the recent Cab Conference that the men were unanimously in favour of the abolition of the privilege system?—No.

1451. (*Mr. Whitmore.*) When you say drivers are in favour of it, do you include the drivers of privileged cabs?

1452. (*Mr. John Burns.*) Yes?—Drivers generally. I do not come much into contact with drivers, but I have heard this.

1453. Do you think that the system of privileged cabs at all stations other than Waterloo does provide what the railways contend they do provide, namely, a better class of cab property?—I think it is possible the cabs are kept brighter and cleaner than the ordinary street cab. I have noticed myself these last few days, particularly since this inquiry has been on, the cabs at the stations, and they seem to me rather brighter and cleaner than they were.

1454. (*Mr. Whitmore.*) Not than they were?—I mean than the ordinary cabs.

1455. (*Chairman.*) Mr. Burns said that they were the same cabs brightened up?—I think it is a general observation I have made.

1456. (*Mr. John Burns.*) Now, Mr. Beavis, what have you to say about licences other than what the previous witness said?—Nothing, sir, I do not know that I have anything to add to it.

1457. What have you to say as to inspection; do you think that the present system of inspection is the most perfect?—So far as the means at our disposal go, sir.

1458. Have you anything to say with regard to the raising of the age from 17 to 21?—I should say it should be raised to certainly not less than 18.

1459–60. You have no objection, I suppose, to practically qualified inspectors taking the place of those who are now inspecting when their term of office expires?—Well, I do not know; that requires some consideration before I answer, sir.

1461. But, other things being equal, would you rather have a man who knew something about horses to inspect horses, and a man who knew something about cabs to inspect cabs?—Well, I recollect distinctly the difficulties we used to have in the old days when we had a veterinary surgeon appointed to the police, and having that in view——

1462. But things have changed since then; there is a new spirit abroad, and there is a desire to do things in the proper way, even in Government offices, is there not?—Well, we try to do it in Government offices, sir.

1463. (*Chairman.*) I ought to have asked this before Mr. Beavis; I did ask, generally speaking, if there was anything in the evidence of the last witness which seemed to you to call for comment, and I will ask particularly one point on which I questioned him; you heard what the last witness said with respect to Mr. Scott and his evidence, that he had not been inspected. Now have you anything to say on that point?—Yes; may I read a report which I received this morning from the district inspector; it was in answer to a telegram I sent to him late on Saturday night to report on the matter: "I "beg to report that I am unable to give the exact "number of times I have visited the London Improved "Cab Company's premises to inspect hansom cabs and "horses complained of as being unfit; but I can safely "say that at the least I have visited Pakenham Street "yard 15 times (three times during the past week), "Seymour Place yard three times, and Chelsea yard "twice. I generally visit between 8 and 10 a.m., "before Mr. Scott arrives, but on four occasions I have "seen and spoken to him personally respecting the "complaints against hansom cabs or horses, and he "referred me to the foreman over the cabs, &c. I "have only inspected one for being out of repair, the "complaints being generally of want of small plates,

" approval marks, or no bells to rubber-tyred cabs, and " lame horses." This inspector, sir, was appointed to the duty on the 1st January last.

1464. (*Mr. John Burns.*) Then all these visits he speaks of are this year?—Yes, they are.

1465. A great number of them since the cab dispute?—I cannot give you the dates.

1466. Three of thom in Pakenham Street within the past week?—Yes, sir; there are 15 to that yard this year.

1467. Would you give us a correct proof of that, and tell us when these inspections were made?—I will get it done, sir.

1468. I gather the bulk of them have been made within the last six weeks?—I will see what can be done in the matter.

1469. (*Mr. Lough.*) I want you to give us some more precise information about the Waterloo system, which you approve of. You think it the best system in London worked at a railway?—Well, I do not know that it is the best; I think it is the most advantageous for the cabmen, better for the cabmen.

1470. That will do; it is the most advantageous?—I think so, sir.

1471. In the return which you read out there are 6,000 cabs admitted in the week, 6,019?—Yes, sir, that is the average number.

1472. Well, that produces at 1*d.* per cab, 25*l.* per week?—Yes, sir.

1473. That is about 1,200*l.* a year?—Yes, sir.

1474. Therefore at Waterloo the company receives as much as any other railway, or about as much, does it not?—About as much, I should think, sir.

1475. Therefore the difference between Waterloo and other stations is not that nothing is paid, but that it is paid by the driver instead of the owner; is that not so?—That is so, sir.

1476. But, on the other hand, there is no doubt that the privileged cab master requires a little more from the driver for the use of his cab?—Yes, for the privileged cabs.

1477. But still that is the difference?—That is the difference.

1478. The driver pays at Waterloo, and the owner pays at all the other stations?—That is so; in one case the driver pays directly and in the other indirectly.

1479. As a matter of fact, it is a privilege that the driver pays for at Waterloo, the privilege of going in?—That is so.

1480. You would approve of the man at the gate not allowing a dirty cab in, would you not?—I do not know that it is any part of his duty to see that a cab at Waterloo is clean; I do not know that there is any restriction at all there with regard to the class of cab; I think they admit any cab that comes along on the payment of the penny.

1481-2. I will ask you this question—I do not want more of the history of it, but I want your opinion—supposing that system were worked at all stations, do you not think it right that the man at the gate should say, " I will not let you in unless you have a proper cab "?—No, sir, I do not think the responsibility should be put on a railway policeman of saying a cab is fit or unfit.

1483. You said, in reply to Mr. Burns, that the payment only really covered the cost that the railway company went to in having men to water the horses and sweep up the place?—I said so; it is really supposition. I really do not know what the cost is, nor what men are employed.

1484. Would you suppose that the whole 1,200*l.* a year, or 1,000*l.* a year, is spent in that way?—I am not in a position to form any opinion, sir.

1485. I want to ask you, Mr. Beavis, about bilking; what do you define bilking to be?—As defined by Mr. Ware, sir, that is a case where a man goes in at one door and out at the other, and does not pay his fare, and I should describe as bilking a man who absolutely refused to pay his fare.

1486. That is to say a man who stands on the footway and says to the cabman " I have no money; I will not pay you "?—Yes.

1487. You would call that bilking?—Yes.

1488. Would you draw any line between the two?—No, that is my opinion. The man must have known perfectly well when he went into the cab that he had no money to pay the fare, and I should define that as bilking quite as much as the conduct of the man who goes in at one door and out at another.

1489. (*Chairman.*) You would apply the same remedy in both cases, but not in the case of a disputed fare?—Yes.

1490. (*Mr. Lough.*) Have you had experience in the police courts of the cabs, Mr. Beavis?—Not of late years; some years ago I had the prosecution of all office cases under the Public Carriage Acts.

1491. Is there a special day at the courts for trying cab cases?—There was no special day as far as the cases from the Public Carriage Office were concerned; they were cases of obtaining a licence on false representation or anything of that kind; they were taken any day; I have no personal knowledge, but I have heard that there are special days at Marlborough Street.

1492. What are the days?—That I cannot tell you, sir.

1493. In your time at the courts, was it customary to advise the cabmen to plead guilty?—I never heard of such a thing.

1494. They were not told they would get off more easily if they did not detain the magistrate, but said they were guilty?—I never heard of such a thing.

1495. Did you ever see the suggestion of a special court for trying these cab cases?—I have heard it mentioned, sir

1496. Would you be in favour of it?—I should have no objection, sir, but I do not really see the advantage of it. It seems to me that the cases are like ordinary cases; they are treated as any other offence would be sir.

1497. Well, I understand that there are roundly 10,000 men employed driving cabs in London every day; that is the number about actually at work?—Yes, sir.

1498. And we have got a return here showing nearly 5,000 prosecutions per year?—Yes, sir.

1499. Can you tell me of any other trade, any industry in which there are so many as 5,000 prosecutions per annum in a staff of 10,000?—No, I never have sir, but I think the cab trade is somewhat different to any other industry, in this respect, that they are always in the streets.

1500. (*Mr. John Burns.*) And under the police?—Surely, sir, you have to carry out the law as it is laid down by Act of Parliament.

1501. (*Mr. Lough.*) Are you not of opinion that many of these cases are small and trifling cases?—They are cases of plying and loitering.

1502. Those are trifling offences, are they not?—We consider them as minor offences.

1503. It is a criminal court, the police court, is it not?—That is so.

1504-6. Would it not be better, or equally well, if there was a less severe court or tribunal to deal with these small cases?—I do not see any objection to another court.

1507. Well we have got in this return—I am passing to another subject now—the list of the small proprietors?—Yes, sir.

1508. Was it you who furnished that, I take it you did; I think you told us there were 2,000 proprietors each owning one cab?—I think you have some returns of mine there, I have not had an opportunity of seeing them.

1509. It is on one of them, is it not?—Yes.

1510. Perhaps you would read that for us; it is very useful?—" Return showing the number of proprietors " who are licensed in respect of one hackney carriage " only, also those who hold two, three, or four licences: " the number of proprietors holding one licence, 2,063; " number of proprietors hold two, three, or four licences, " 729."

1511. That return does not give any of the proprietors who have a larger number, does it?—No, sir.

1512-13. Can you tell the Committee; can you give a full list of he proprietors up to the biggest?—I can do

Mr. W. Beavis.

25 June 1894.

so, not, of course, at present; it will take some time to get it out.

1514. A return showing the number that every proprietor has up to the largest proprietor in London; in short, accounting for the whole number of 11,000 that are employed?—Yes.

1515. You said, Mr. Beavis, that you were an inspector yourself?—Yes, sir.

1516. For how many years?—From 1868 to 1882.

1517. Did you ever find any practical difficulty because you did not understand the construction of a carriage?—I never had anything to do with the inspection of the carriages. I was an inspector in the Commissioner's office, not a public carriage inspector.

1518. You never inspected the carriages?—No.

1519. Are you in favour of the number of drivers being limited?—No, sir.

1520. You are against it?—Yes, sir.

1521. (*Mr. Whitmore.*) I should just like to ask you, is your view as to the present cab radius the same as that of the previous witness?—Yes, sir.

1522. You have considered the subject, have you?—I have just thought the matter over since the Committee first met.

1523. Do you approve of the circle as the radius?—No, sir; I think, as Mr. Ware said, that it should be irregular; the limits should be irregular, just embracing some districts such as the west, and omitting those that are not so thickly populated towards the north, and I think there should be an irregular line drawn with regard to the radius.

1524. Then you are in favour of an alteration of the present radius?—I think so, sir.

1525. And of its extension towards the west?—An extension towards the very thickly populated districts, sir.

1526. And of its contraction on any other side?—I think the present limit should stand, sir.

1527. Except where it is extended?—I should think it might be extended a little, but the present limit should stand so far as other districts are concerned, take the south-east and the north.

1528. (*Chairman.*) You would not draw it in a little at Highgate and Hampstead?—No, sir, I think not.

1529. (*Mr. Hopwood.*) Where shall I find, Mr. Beavis, the authorised charges for cabs taken outside the radius to come inside, and *vice versâ*?—That is on page 19, sir, of the Blue Book.

1530. That is a cab taken outside the radius to come inside?—Yes, sir.

1531–2. With regard to Waterloo, you say that in your judgment the system is the best for the cabmen; have you formed any opinion as to whether it is the best for the public?—I do not see any objections from a public point of view, sir; there are always plenty of cabs; I am more frequently at Waterloo than in any other station.

1533. Are you aware that it is alleged that at Charing Cross the company gave up the privileged cab system, and found themselves compelled to revert to it?—I believe that was so, but I have no personal knowledge of it; it was after I left the office.

1534. Do you know anything about the regulations as to lost property, so far as privileged cabs are concerned?—The same regulations apply to privileged cabs as to any other cabs, sir.

1535. The lost property found in privileged cabs has to be taken to the nearest police station?—Yes, sir.

1536. Not to the railway station?—No, sir; a man is liable to a fine of 10*l.* if he does that.

1537. If he takes it to the railway station?—Yes.

1538. But I think the railway companies have their own inspectors, and they go off after a privileged cab with luggage upon it which has been taken away by mistake?—I do not know whether they have or not, sir, but there are some cases where luggage has been taken away by mistake.

1539. Is there not a system of railway inspection of their cabs outside the station as well as in?—Not that I am aware of; I never heard of such a thing.

1540. Now you rather astonished me by one observation you made on the subject of bilking; I understood you to say that in your opinion it would establish that apparant fraud, of which we have heard so much, if at the end of a drive a fare discovered that he had no money to pay?—Yes, sir.

1541. Might he not have left it at home?—That may be so, sir; he might have left it at home, but I think that he would have to put up with the consequences of his act; I do not think it would be any hardship to him to go to a police station, so that his name and address might be verified.

1542. Watering at cab stands is a question I want to put to you, not railway cab stands, but elsewhere. What arrangements for watering horses are made?—They have the water posts there, sir, with pails, and the constable on duty is provided with a key; drivers provide themselves with keys in many instances.

1543. Do the drivers buy the water?—No, sir, there is no charge for the water.

1544. It is supplied by the local authorities?—The Receiver will be better able to tell you. I think we pay a water rate out of the Police Fund.

1545. Out of the sale of property which is not recovered?—It is really out of the Police Fund.

1546. (*Mr. Cunynghame.*) You have told us, I think, that you are in favour of unlimited licences being granted to drivers?—Yes, sir.

1547. Would you make any difference whether they used their licences or not?—I would not, sir.

1548. Now I should like to ask you—are you aware that the amount practically earned by the cabman, that he has for his sustenance, that remains over after he has paid the proprietor, varies at different parts of the year—do you know that they have what they call a bad time, and that they have a harvest time as it is called?—That is so, sir.

1549. Well, now, does it appear to you that what the cabman does is to base his remuneration upon the average of the year, taking the bad time with the good time, looking forward to his harvest, in fact, to remunerate him for a loss arising during the winter?—That is probably so.

1550. But may we not regard it as a hardship that a butterfly man, for instance, who has had a licence, but not used it at all during the bad time should come and reduce his harvest?—Yes, probably there is hardship there from the cabman's point of view; I should think it was a hardship.

1551–6. Owing to the peculiar way in which the wages of the cabmen are arranged?—Yes, I should think so; from a cabman's point of view I should think it was a hardship.

1557. (*Mr. John Burns.*) Do you consider, Mr. Beavis, that private omnibuses of railway companies should be subject to cab licences, and that the drivers should have a licence the same as a cabman?—Well, if standing plying for hire at the platform, waiting for a chance passenger, they would require to be licensed.

1558. Do you not consider that railway omnibuses that ply from Euston to Waterloo, and compete with ordinary omnibus traffic, should have the same fees to pay and the same licences to take out, in your opinion?—They have, sir, if the omnibuses ply for passengers; the private omnibuses, those that do not require the licence, are those which are engaged beforehand, but an omnibus standing simply at the platform waiting for any chance passenger that comes along would require to be licensed to ply for hire, sir.

1559. Do you not consider that a railway passenger ought not to be subjected to the ignorance and disqualification that a provincial cab driver, unlicensed, employed by a railway company may display, whilst an ordinary London cab driver has to go through several test examinations. Why should a railway company have their private omnibus drivers and cab drivers exempt and exempted from the conditions that apply to other people?—It is a question of general law, it seems to me, sir.

1560. But other than that you see no reason why they should not comply with the other conditions?—No, I do not see any reason; the only thing is, if under those circumstances a licence would be required by a railway company, you would have to licence every livery stable-keeper, because the railway companies are simply in the position of a livery stable-keeper.

1561. Is it within your knowledge that most of the men who drive the omnibuses and the private omnibuses

are provincials, ignorant of London?—I have no knowledge of that at all.

1562. (*Mr. Hopwood.*) Could you grant railway companies licences if they apply for them?—Yes, certainly.

1563. (*Chairman.*) The report about the block at Victoria Station?—Yes, sir, here it is:—

"Gerald Road, B Division,
"23rd June 1894.

"Respecting attached memorandum I beg to report that I know of no recent complaint of obstruction caused by loitering hansom cabs outside Victoria Station. Obstruction is caused there by hansom cabs, especially on the arrival of certain trains during the day. Oftentimes you can see a dozen or more cabs going at a walking pace in Buckingham Palace Road and Wilton Road. There are four fixed points in the vicinity of the station, and police keep them moving, or else great obstruction would be caused. The drivers take care not to loiter any length of time so that police could summon them for causing an obstruction.

"(Signed) H. Norris,
"S.D. Inspector."

Mr. W. Beavis.

25 June 1894.

The witness withdrew.

Mr. George Isard, Inspector of Public Carriages, called in and examined.

Mr. G. Isard.

1564. (*Chairman.*) What is your position?—Inspector of the D Division, public carriage inspector of the D Division.

1565. How long have you been in the police force?—36 years.

1567. And how long have you been in the particular post that you now occupy?—14 years.

1567*a*. And you are one of the people who have the responsible duty of passing cabs before they are licensed?—Yes, sir.

1568. It has been suggested in the course of this inquiry that there is bribery practised in connexion with this passing of cabs. I want to know if in your experience you have ever known a case of a bribe being offered or received with a view to getting a cab passed?—Never, sir.

1569. You have heard it said, I suppose, that they sometimes leave a piece of money under the cushion of cab with a view to squaring the authorities?—I believe such has been said, but I have never experienced it myself.

1570. Would you kindly describe your system of working in passing cabs. In the first place, is your work entirely confined to the passing of cabs; is that all you do?—It is, sir.

1571. Will you give us a description of how you do your business?—The cab is submitted, and they bring up the papers, the application for the licence. I take them, and see that the name and address is correct, and then I examine the cab. I examine the cab thoroughly, and I use a screwdriver very often or a gimlet to see, if I have any doubt from the first appearance of the cab, whether there is anything shaky about it, anything wrong. I look particularly to the inside and the whole of the frame of the cab. After I have satisfied myself that it is correct, I direct a man to put on the plate.

1572. You say you satisfy yourself by these investigations, but before you actually entered your present office had you any professional or technical knowledge which would enable you to form an opinion upon those mechanical questions?—I had not a great deal.

1572*a*. But had you ever, before you were in the force, for instance, been in that way of business?—No, sir.

1573. Whatever knowledge you have of it you have picked up since you have been in the force?—Yes, since then. I was when I was a young man at a coach and wagon builder's. I was living there some considerable time. I had an insight into the work.

1574. (*Mr. Whitmore.*) That was one reason why you were selected for this particular post?—I put that reason down on my application.

1575. (*Chairman.*) That was before you joined the force?—Yes. I was with horses when I was 13 years of age. I was with horses until a short time before I came into the police force. I was coachman and groom at different places, and with horses, farm labourers' horses, at different places.

1576. Then when you have satisfied yourself that the thing is structurally sound, does that finish your duties; is that all you have to do?—That is all, sir, for the present time; the cab is then licensed.

1577. What about horses; have you anything to do with the cab horses?—Yes, sir; we have to see that the horses are, as far as we can see, fit for work in a public carriage.

1578. And you mean that no horse is used in a London cab that has not passed through inspection?—No, no; that came up at the time with the cab; if that horse is considered, in my idea, unfit, I should not pass the cab.

1579. (*Mr. Whitmore.*) Not pass the cab?—Not pass the cab.

1580. (*Chairman.*) You regard the horse as part of the cab for that purpose?—It is part of the cab, and the harness as well.

1581. Supposing you do pass anything, and it is all right, and the owner immediately next day puts a different horse into his shafts, that animal, the second horse, does not fall under your view at all?—It would not, sir.

1582. So I mean all that the owner has to do is to put in a presentable horse when he sends the cab up to be licensed, and put in a screw afterwards for the traffic, if he wants to do so?—Yes, if he wants to do so.

1583. Or a vicious brute: there is nothing to prevent him putting in any sort of horse after he has got his licence?—No, sir, there is not; the only thing would be a report against the horse when seen on the streets or the ranks.

1584. (*Mr. Cunynghame.*) We have had a return put in here showing the various offences committed by cabmen and brought before the magistrates, and it shows a considerable amount of drunkenness apparently in proportion to the number of cabmen; this is what I want to ask you: do you think that in renewing licences the cases where a man had in the past year committed a good many offences ought to be taken into consideration?—I believe it is so, sir.

1585. Do you mean that the renewal of licences is refused, as a fact, where there has been a prior conviction?—You mean the driver's licence?

1586. Drivers' licences I am speaking of?—I cannot speak on that point, sir.

1587. Does not the driver get his licence renewed, no matter how many convictions he may have had?—That is decided at Scotland Yard, sir.

1588. You do not know that?—I do not know that. I have only to do with the cabs at particular stations that are appointed for licensing.

1589. (*Mr. John Burns.*) What station are you at?—Molyneux Street. That is the principal station in the D District.

1590. Do all the cabs seeking licences come to you for inspection?—In that district, sir.

1591. Do you ever pay a visit to cab yards?—Oh, yes, very frequently.

1592. In uniform?—Oh, no, not in uniform; it is in plain clothes generally.

1593. Your surprise visits are in plain clothes?—Yes.

1594. Do you ever go at night time?—No, unless we are ordered out at night, for a night visit, from Scotland Yard.

1595. What part of the 24 hours do you get bad cabs—night time?—No, I think not.

1596. You get them in the day time?—In the evening.

1597. From 9 to 12?—From 9 up to 11 o'clock at night, that is when the second horse goes out or the second man drives out.

1598. Do you consider that you have more than sufficient to do, that is, if you thoroughly inspect each cab yard, and do your business more thoroughly than you now do; or do you consider that you are sufficient for the district?—Well, I think it has been up to the present time. There is no doubt there is a great

Mr. G. Isard.

25 June 1892

increase of public carriages that does increase our work a great deal. There are complaints made by the police that we have to go and see about, and we visit other yards, taking the mews down, where we have to go to one proprietor, and visit the stables and see the horses as we go along; not that we go into the stables, but we pay that attention to it when we are compelled to go.

1599. Have you search powers conferred on you?—No, we do not go in unless we have a special order from the Commissioner.

1600. Cannot you inspect a cab yard or mews without the special order from the Commissioner?—If the cab owner will admit us.

1601. Without that special authority, which I consider you ought to have, that is not done which would be done if you had special power?—That would make a great difference, no doubt, sir.

1602. Would it not contribute to a more efficient discharge of your duty over cabs, harness, and horses, if you had the same power of entry that a sanitary inspector has?—I do not think it would increase it very much.

1603. Would it not be for the better discharge of your duties if you had the right of entry now exercised by a sanitary inspector in relation to his sphere of duty; that is, the right of going into a stable, and into a cab yard, or down a mews, by virtue of the fact that you had, say, a warrant in pocket that you were able to show?—It would be better, no doubt. At the same time there is very little opposition; we find as a rule that they are open to us.

1604. That is so, but you would perhaps have more power behind you if you had fully authorised power behind you?—We should certainly feel we had more power, sir.

1605. Do you consider that the cab property has improved very much of recent years?—Very much improved, sir.

1606. Have the horses improved?—Yes.

1607. Have the cabmen improved?—Yes, I believe so.

1608. Is he more sober than he was?—Oh, yes, a great deal.

1609. Do you consider him a good deal better?—Better dressed than he was.

1610. And generally more amenable to reason and discipline?—Yes.

1611. (*Mr. Lough.*) Do you say you were 12 years an inspector?—14 years in the Hackney Carriage Branch.

1612–3. Do you use any tools in inspecting a carriage except the screwdriver and the gimlet that you mentioned?—Not for trying the condition of the cab; there are other tools, of course, for fixing the plates and taking the plates off.

1614. But practically you use no tool in your examination of the carriage, do you?—Not beyond those, no.

1615. And you have not any technical knowledge of the construction of cabs, have you?—No, I could not say that I have, sir.

1616. For instance, in a four-wheeler you would not be able to judge whether the arrangement by which the cab could be turned was a safe arrangement or not?—Oh, yes, I could tell that.

1617. Well, that requires technical knowledge, does it not?—Practical knowledge, sir; it would not be technical knowledge; it is being used to the examination of them.

1618. Well, would you be able to tell whether the proper distance existed between the fore wheel and the hind wheel of a four-wheeler; for instance, whether the frame was constructed strong enough in that way?—Yes.

1619. Not from any technical knowledge, just roughly?—Just roughly.

1620. You only pass a carriage when it is newly painted; is not that so? The carriage is expected to be painted up fresh when they bring it to you for the plate?—That is quite right, sir.

1621. Are you quite strict about that, do you pass it if it is not painted?—No.

1622. Are you a judge of varnish, of how the paint is put on and that?—Fairly.

1623. But have not much technical knowledge, and you inspect the horses too?—The horses as well as the carriage.

1624. And the harness?—And the harness.

1625. Have you any technical knowledge about the harness?—No more than I have learned through doing with horses all my life, at least, until I joined the service.

1626. You are alone in your district, are you not—Molyneux Street; have you any assistant?—The constable who puts on the plates.

1627. You are the supreme in command; you are the sole inspector?—Yes.

1628. Is there any co-operation between you and other inspectors of other stations?—Yes, at times.

1629. But there is no necessary co-operation?—No, none whatever.

1630. You do not act together?—No.

1631. There is no chief inspector, is there?—No, there is no chief inspector; there is only the senior inspector, there is one called the senior.

1632. He has no control over you?—No, I happen to be the senior now.

1633. You have no complaint from them?—If another inspector does not pass a vehicle the senior inspector is sent there to see and make a report on the matter.

1634. Do you not think it would be better if there was a chief or senior inspector who would have control over the others, and who would ensure a similar system being practised all over the Metropolis?—I do not think so.

1635. You do not think that would be of any use?—No.

1636. It is better to leave everybody to do as they please?—We are not young men; we are appointed as men of experience as regards the service, although not practical men in the building of a carriage.

1637. You think each man ought to be independent? I think so.

1638. No control over him?—No control over him.

1639. I do not mean with the idea of checking indiscretion on his part, but with the view of having the same system; you do not think that is necessary?—I think not; one system is carried out exactly in every district.

1640. Have you any control over cab yards and places where they keep cabs?—We have no direct control only as far as visiting, as regards complaints against horses and cabs.

1641. Do you know that cabs are sometimes kept on the public street at night and when they are not at work?—No, I am not aware of that, sir.

1642. (*Mr. Whitmore.*) Are there any further powers you would like to have to enable you to carry out your duties more thoroughly?—I do not think there are any further powers.

1643. You are satisfied with the powers you have at present?—Yes.

1644. And you think the system works effectually?—Yes, in every way.

1645. You have no suggestions to make as to its alteration in any way?—No, I have not.

1646. (*Mr. Hopwood.*) Have any regulations for inspection been supplied to you from Scotland Yard to guide you in the inspection of cabs?—Yes, what we call the Form of Fitness; I think that is what you mean, sir.

1647. Has it been put in. Is it before the Committee?—No, it is in that little blue book there.

1648. You said something about the time the second men went out, in answer to Mr. Burns; in your experience do you find that two men drive one cab in the 24 hours?—No, that is not very often; I mean he goes out with the second horse, the same man, but he goes out with a second horse.

1649. I want to ask you whether two men go out with one cab as a rule?—No.

1650. It is very exceptional?—It is very exceptional; I have only known two cases while I have been connected with hackney carriage work, where one carriage is driven by two men.

1651. As to a search warrant for the inspection of stables, I understand that you concur in the view that there should be a compulsory inspection of stables, but do I understand you to limit that compulsory inspection to the premises of the licensed cab proprietors?—That would be from the question the other gentleman asked me. We should have no authority at all for places other than the licensed proprietors' stables.

1652. (*Mr. Bayley.*) Can you tell whether a horse has got glanders or farcy?—Yes, I think I could.

1653. What are the symptoms?—I had a horse with the glanders not many months ago; a man came to me at Kentish Town—I was in that district then—I went and found there was a lump forming there; it was my opinion that the horse had got it, and I said to the man, "You had better send for the veterinary surgeon," and he did, and the horse had got glanders.

1654. (*Chairman.*) Was there anything in the horse's appearance to make you put your hand there, or led you to suspect; was it visible?—It was not visible.

1655. What led you to feel?—A little running at the nose, and that made me suspect that the horse had glanders. He came down to Kentish Town Police Station. I went up to see, and in my opinion the horse was suffering from glanders.

1656. (*Mr. Bayley.*) You saw running at the nose?—Yes. *Mr. G. Isard.* 25 June 1894.

1657. But suppose you saw no running at the nose. Running at the nose is only at a very advanced stage of the glanders; but can you tell whether a horse has glanders if you do not see the running at the nose?—No, I noticed running at the nose.

1658. (*Mr. John Burns.*) Have you formed any opinion whether the troughs should be abolished and the bucket system of supplying water should be adopted. Are you in favour of the trough system of drinking for horses, or the bucket system, each horse drinking out of a bucket instead of out of a trough; have you formed any opinion about that?—No, I have not.

1659. It is a matter that affects the horses, you would admit, very closely?—Yes, I know that point, sir.

1660. (*Chairman.*) With your practical experience, do you think that the troughs as they are now, are sources of contagion to the horses?—No, I do not think they are; in my opinion, the trough system and the pail are not very different, in fact I think it is supposed that the pail is best because it can be rinsed out by the man on the rank or the cab driver himself if another horse has been drinking.

The witness withdrew.

Mr. Edward Henry Troughton, Inspector of Public Carriages, called in and examined.

1661. (*Chairman.*) What is your office?—Public carriage inspector. *Mr. E. H. Troughton.*

1662. Where do you inspect?—In the A, B, T, and V Divisions, sir. Rochester Row is the chief office.

1663. How long have you been what you are now?—20 years in the department, sir, and nine months as public carriage inspector.

1664. What were you during the remainder of the 20 years?—In the public carriage office.

1665. What were your duties then?—Clerical duties, sir, principally.

1666. How long have you been in the force altogether?—22 years.

1667. You went into this public carriage department very soon after you joined the force?—About two years after I joined.

1668. And during all that time you have been a clerk?—Yes, sir, about 20 years a clerk.

1669. And you have had very little outside experience of the police work?—Only at the police courts, where I have been called upon to produce records against the drivers charged with any offence.

1670. But you had very little experience of out-of-door work, of inspecting cabs at first hand?—No.

1671. But you have seen them as an ordinary citizen going about; you have not been stationed on the streets at public places?—I was not stationed on the streets, no.

1672. Where were you as constable?—In the M Division, Southwark.

1673. That is pretty crowded, but not so much with cabs?—Not so much.

1674. How old were you when you joined the police force?—20 years of age, sir.

1675. Had you before that time had any acquaintance with horses, harness, or vehicles?—Oh, yes, my relations had lots of horses and carriages; I have been well connected. I have numbers of friends who have vehicles, not licensed vehicles, but private carriages.

1676. Had you ever had any occasion to have anything to do with horses?—Oh, yes, sir, prior to my appointment I made it a study, and I still continue that study.

1677. That is a matter of professional inquiry, but I mean as a youth and boy, had you ever had anything to do either with the management or driving of horses, or with harness?—Oh, yes, I used to drive frequently, for years, I may say, since I was 16 years of age.

1678. Then you knew something about horses and something about the harness and something about a trap and make of a trap?—Yes.

1679. Before you took up this particular business?—Yes.

1680. And since you took it up you have made it a subject of private study?—Yes.

1681. And all the time you were clerk in the department until you were appointed inspector I suppose you had the opportunity of observing the same work that you are now doing yourself?—Quite so, sir.

1682. Whom were you under?—Mr. Ware, sir.

1683. During the long time that you have had experience of this kind of business, have you ever been aware of an instance in which a bribe was offered or accepted by police authorities for the passing of a cab which was otherwise unfit?—I have heard such things, sir.

1684. You have not experienced it, but you have heard of it?—I have heard of such things, sir, yes.

1685. Do you mean by heard of it, heard the people say it, or heard it in a way which led you to think it is true?—I have heard it generally spoken of.

1686. In the police, or by the general public outside?—I have heard it more generally outside, amongst the cab people themselves.

1687. But you have never seen proofs of it?—I can solemnly declare I have never been offered a bribe since I have been appointed public carriage inspector, and never accepted one.

1688. But, without its being personally offered to you, have you any reason to think that such a thing is commonly done as to put a coin of money under the seat of the cab?—I have heard of such a thing, but I have never seen it.

1689. (*Mr. Whitmore.*) Have you heard that with reference to any particular specific case, or merely current gossip that such things are done?—Merely current gossip.

1690. Never in particular, never with reference to a particular cab or a particular time?—No, sir, it has been merely current gossip. I never knew that.

1691. (*Chairman.*) Then this duty which you now discharge, does that occupy your whole time?—Yes, rather considerably more than my time; eight hours a day duty, and I average 12.

1692. Now, with the work that you now do?—Yes, sir, yes.

1693. Where do you carry on your operations, at one point?—No, sir, I have six inspecting stations.

1694. And your day is passed going from one to the other?—One to another, according to the Commissioner's regulations laid down for the different times and places.

1695. You are always on the job, always doing it at one time or another?—Always doing it, yes, sir.

1696. What is your general method of business, describe. Supposing a cab is brought to you this morn-

Mr. E. H. Troughton.

25 June 1894.

ing, for instance?—I examine that cab thoroughly, sir, four-wheel, two-wheel, as the case may be; the wheels, the linings, particularly the doors of four-wheeled cabs. That is where I find the greater number of cabs unfit, in the four-wheel or Clarence cabs. I think I am a very fair judge of that cab, whether it is fit or unfit for public use. I sound the bottoms and windows, and see that they have sound windows, and that the windows do not rattle.

1697. Quite a competent judge; but do you consider yourself a competent judge of its structural safety?—I think so, sir.

1698. Do you at the same time inspect the horses?—Yes, I inquire whether that horse is to be used. Sometimes the cabs are brought direct from the paint shops newly painted, and not to be used that day, but to be passed, and the horse that is to be in that cab will not necessarily be used that day.

1699. Yes; but still you inquire—you say, "Is that the horse which is to draw the cab"?—I always inquire whether that is the horse to draw the cab.

1700. Is there anything in the world to prevent a cab owner or driver when he gets the thing home substituting a horse and putting in a worse one?—That is what does happen.

1701. There is nothing to prevent it in theory at all?—There is nothing to prevent it.

1702. It is only a breach of understanding; it would not be a crime at law, I suppose?—It would not be.

1703. So that you have to depend entirely upon the trustworthiness of the proprietor?—Of the proprietor or his agent, sir.

1704. The same horse might come, and be passed again and again?—It may do so, and I have known cases where it does occur.

1705. Another horse put in to do the job?—Yes.

1706–8. (*Mr. Cunynghame.*) And, in fact, in examining the horse are you not really going beyond the law; have you the power to examine the horse in strictness?—It is an Act of Parliament that provides that inspection shall be made of the horse.

1709. Could you direct us to that by chance?—I think it is by 16 & 17 Vict. c. 33.; that is the inspection of public carriages and horses.

1710. (*Mr. Whitmore.*) Then it is not going beyond your power?—No; but it is only in case where horses are reported unfit.

1711. (*Mr. Cunynghame.*) What is your reference?—16 & 17 Vict. c. 33, s. 2.

1712. (*Mr. Lough.*) Would you mind reading it?—"It shall be lawful for the said Commissioners of "Police to cause an inspection to be made, as often as "they deem it necessary, of all metropolitan stage and "hackney carriages, and of the horse or horses used "in drawing the same, within the limits of this Act; "and if any such carriage, or the horse or horses used "in drawing the same shall at any time be in a con-"dition unfit for public use, the said Commissioners "shall give notice in writing according to the pro-"prietor thereof, which notice shall be personally "served on such proprietor, or delivered at his usual "place of residence, and if after notice as aforesaid "any proprietor shall use or let to hire such carriage "as a metropolitan stage or hackney carriage, or use "or let to hire such horse or horses whilst in a con-"dition unfit for public use, the said Commissioners "shall have power to suspend, for such time as they "may deem proper, the licence of the proprietor of "such carriage."

1713. (*Mr. Cunynghame.*) Only one more question. You have told us that you examined the windows to see that they did not rattle?—Yes, sir.

1714. Have you ever travelled in a four-wheeled cab yourself?—I have, sir, many times.

1715. Have you ever found one that did not rattle?—Slightly; some more than others.

1716. Is it not a fact that the rattling of the windows in the four-wheeled cabs at present is really very bad indeed?—Not that I have noticed.

1717. You do not think so?—I have always made that a speciality.

1718. What I have asked is whether in putting glass into these windows they put india-rubber?—They put a rubber wheel, a small wheel, that lifts the pane up and down to prevent vibration.

1719. No, but I mean the glass and the wooden frame in which the glass is held?—Some of the modern builders do.

1720. But it is not universal?—It is not universal, no.

1721. (*Mr. Whitmore.*) Would you have power to insist upon that?—Yes, I could make the objection to it.

1722. (*Mr. Lough.*) Do you, as matter of fact?—Yes, I do, sir. It is a very strict order of the Commissioner, and I carry it out.

1723. You have said you have to work 12 hours a day sometimes?—Yes.

1724. Will you tell us how many cabs you pass?—In a day?

1725. Day first, and then per week?—I average 20 cabs per day within the time for passing cabs.

1726. What is the time?—My hours are from 10 to 3 for passing cabs.

1727. Every day?—Not every day.

1728. How often?—At the principal station twice a week, Mondays and Fridays.

1729. (*Chairman.*) You said you licensed 20 cabs a day?—I should say 25 in a day, on the two principal passing days at the two principal stations, on Mondays and Fridays.

1730–1. Not 20 cabs a day all the 365 days in the year?—No.

1732. Is there any season of the year when more cabs come up than others?—Yes, sir, just the week before Epsom.

1733. (*Mr. Lough.*) That is the busy season?—That is the busy time.

1734. You have no rule as to the season or day of the year; you are there?—Oh, no, every day in the year I am there, sir.

1735. You have told us, and we have seen by the Act, that you should inspect horses?—Yes, sir.

1736. Are you an inspector of horses?—I am the public carriage inspector.

1737. Is there any other inspector of horses?—No, but it is combined in the public carriage inspectors; they inspect carriages and horses.

1738. Well, do you take any steps to inspect horses except those you have described to the Committee?—I do. I have certain days for patrolling for that purpose.

1739. Where do you patrol?—Any part of my district.

1740. Do you ever go to a stable to inspect the horses?—I have no right to go to a stable except by special authority.

1741. Then, as a matter of fact, except that casual inspection in the street, there is no attempt to examine horses?—Well, as far as visiting the stables, we only visit those stables where we have a horse reported unfit for public use, where there is any complaint against the horse; we have no right really, according to the Commissioner's regulations, to enter that stable; without his authority we could not make a casual inspection of the proprietor's stables.

1742. Well, then, really the law of inspecting the horses, each individual horse, is not carried out strictly?—Oh, yes, it is carried out, sir; I misunderstood you to ask if I make special days for that inspection.

1743. No, I do not care how you do it, but is it done strictly, is every horse inspected?—Every horse is inspected strictly, sir; yes, once a month, and at an uncertain time; we have a night inspection for the purpose.

1744. But you do not catch every horse at night, do you?—That is when the worst class of horse and vehicle are to be found.

1745. You have just said you inspect every horse; will you tell me what steps you take to inspect every horse?—Every horse in a public carriage presented for my inspection.

1746. All the horses in London in hackney carriages?—I look at that horse if it passes me.

1747. You mean the horses that are brought up in the cabs?—I mean the horses that are brought up in the cabs.

1748. But you told the Committee that other horses are used in those cabs?—Yes.

1749. What steps do you take to get the other horses?—If I suspect such a thing, I make an application to be allowed to visit that cab proprietor's stable.

1750–1. Only if your suspicions are aroused?—Only if my suspicions are aroused.

1752. All the horses are not inspected?—It is impossible; they cannot be.

1753. Every cab is inspected?—Every cab is inspected.

1754. Every horse is not inspected?—Every horse is not inspected—well, every horse that is brought up with the cab is inspected.

1755. All the horses are not inspected?—Three or four horses are used in one day with a cab.

1756. You do not inspect them all?—They cannot be.

1757. (*Mr. Hopwood.*) Is there anything to prevent a fraud of this kind; assuming a cab passed by you, it is taken away, the plate is taken off and put on another cab that has not been inspected?—There is nothing to prevent it.

Mr. E. H. Troughton.

25 June 1894.

1758. Have you ever heard of that being done?—I have heard of that being done; I have had brought under my notice its being done.

1759. What is done then?—The revocation of the licence. We put a stamp on each cab that we pass bearing the month and the approval stamp. I have heard, I have never found it out, that the stamp is taken off by some transfer means.

1760. (*Chairman.*) The stencil mark?—The stencil mark can be transferred from that cab, and put on another cab, and the cab that has been presented for approval taken away and the plate removed, and this kind of thing done.

1761. (*Mr. Hopwood.*) You might pass a cab every day and deal out a plate every day, and that plate might be put on a different cab every night?—That might be so.

The witness withdrew.

Adjourned till Friday at 11 a.m.

FOURTH DAY.

Friday, 29th June 1894.

PRESENT:

MR. HENRY CUNYNGHAME (CHAIRMAN, PRESIDING).

Mr. F. J. S. HOPWOOD, C.M.G.
Mr. E. H. BAYLEY, M.P.
Mr. JOHN BURNS, M.P.
Mr. T. LOUGH, M.P.
Mr. C. A. WHITMORE, M.P.

Mr. MALCOLM DELEVINGNE, *Secretary.*

SIR JOHN BRIDGE, Chief Magistrate of the Metropolitan Police Courts, called in and examined.

1762. (*Chairman.*) You have had a very long experience, Sir John, in magisterial duty in London?—I have had about 23 or 24 years.

Sir J. Bridge.

29 June 1894

1763. And at present you are presiding at Bow Street?—Yes.

1764. I believe that at Bow Street very nearly half the cab cases of the metropolis are taken; you have handed in a return which shows that?—At Bow Street?

1765. At Marlborough Street, I mean?—At Marlborough Street. I have not given one for Bow Street.

1766. It was the Marlborough Street one that you gave?—The Marlborough Street and one in the East End.

1767. And Worship Street?—Worship Street; the others have not yet been made out; I only had the letter saying you wanted them the day before yesterday, and I sent all round.

1768. Now I will call your attention to the Act of 1 & 2 Will. 4. c. 22. s. 41; would you please explain to the Committee the effect that the Summary Jurisdiction Act of 1879 had upon that section?—The effect of the Summary Jurisdiction Act is that if a case is a summons or complaint to recover money without punishment then it becomes a civil debt under the Act of 1879, and being a civil debt must be recovered as a civil debt for which there can be no imprisonment until the process is gone through which is for the recovery of civil debt. That process, among other things, makes it necessary that the complainant, before he can send a man to prison for not paying his fare shall be able to prove that the man has the means to pay the fare, and of course that is information which it is impossible almost for a cabman to get without laying out a quantity of money, and spending valuable time for him, which makes the redress under the Act of 1879 absolutely useless to him, and so when he finds that is all the redress he can get, he says, "No, I will not have that, sir," and he goes away; that is the effect of it.

1769. So that, in your opinion, the operation of the Summary Jurisdiction Act of 1879 upon this Act of 1 & 2 Will. 4. c. 22. s. 41, was to destroy to a great extent its utility to the cabmen in recovering their fare?—Absolutely took away the value of it to them. Whether or not it is quite right to say that it did repeal this section to that extent is, I think, a matter of some doubt; because, although it is said here that it is recovered upon complaint, yet when this Act was passed, 1 & 2 Will. 4. the difference between the complaint and the information was not then laid down, and no doubt was not patent to the mind of the person who drew this Act. Still no person has ever ventured to say that this Act was still in force now; it may be, but it would require to be a very brave man who would put it in force instead of the Act of 1879, because he would be liable to an action if he were wrong; but in my opinion there is very good ground for thinking this Act is still in force, and if that statute is to be revived it would be right to state in a new Act that "Whereas some doubts have arisen as to "the present state of the law, it is enacted that pro-"ceedings may be taken under section 41, 1 & 2 Will. 4. "c. 22. in the same way as if the Summary Jurisdic-"tion Act of 1879 had not been passed." I think it is quite clear that to be just to the cabmen some such remedy as is contained in section 41 ought to be given to him, because he is without practical redress at present.

1770. I gather then that it is your opinion that it would be better to go back to this section 41 of 1 & 2 Will. 4. c. 22?—Certainly. I think it better to go back to that rather than to make any fresh enactment which would be liable to all sorts of litigation before we knew what it meant.

Sir J. Bridge.

29 June 1894.

1771. Now do you think that if that was done, if the law was as it used to be when this Act was passed, would that in your opinion give sufficient remedies to the cabmen, both in regard of cases in which people, bonâ fide perhaps, paid him too little, and also in regard of bilking, or not?—I think with one exception. At present the cabman is bound to go with a fare who says that he is charging too much, or when any other dispute arises to the nearest police station, or the nearest police court, and get the matter redressed at once. That, I think, is a very proper thing to retain, but there is no corresponding right given to the cabman. It would be impossible that it should be said that the cabman should take anybody to the nearest station really in the same way, because it might be used as a great means of extortion when a man was going by railway and what not, and say: "You must go to the police station." Rather than go to the police station he would pay him exorbitantly. But you want something to be a corresponding remedy to the cabman, and I think what he wants is this, that when a man does not pay his fare, or there is a dispute about it, he should be allowed to say to the fare: "Well, sir, please, you "must give me your name and address;" and although it would not be possible to retain that man until that address was verified, yet it might properly be made an offence punishable with a fine of 40*s.*, recoverable summarily, if he gave the wrong name and address, or refused to give his name and address. That power of making a punishment for not giving a name and address is contained, I think, in the last Railway Act with reference to people who travel without a ticket.

1772. (*Mr. Hopwood.*) The Act of 1889?—The Act of 1889, and a similar remedy to that is to say: "If you "give a wrong name and address, or do not give a "name and address, you shall be liable to pay a fine "of 40*s.*"

1773. (*Mr. Lough.*) Are you alluding now to cases where nothing is paid or where the payment is short; do you see the difference I draw? Supposing the cabman claims 2*s.*, and the fare only pays him 1*s.*, is that the case you are alluding to?—That is a case in which if a man refuses to give his name and address he should be liable to a fine.

1774. Do you recommend the same treatment for both?—Oh yes, certainly; I think there should be no difference between the two.

1775. (*Chairman.*) I will put Mr. Lough's question, perhaps, in another way. I think you are familiar, Sir John, with what has been called always "bilking"?—Yes.

1776. Which is different from a bonâ fide refusal to pay?—Oh, no doubt.

1777. It consists in running away—endeavouring to evade payment?—Or getting into a cab when he knows he cannot pay.

1778. That you would consider a form of bilking?—Yes.

1779. Well, are you of opinion (I think Mr. Lough wanted to know) that this provision that you have suggested would be sufficient to enable you to deal effectually with bilkers?—As far as it possibly can be done, and I believe it would to a very great extent stop it. Of course you cannot make any law to prevent thieving or murder, but the only question is to stop it so far as law can stop it.

1780. Would you be in favour of giving any further powers of arrest than those that exist at present, I suppose, for instance, if a person refused to appear before you at all; if a hirer of a cab, after being summoned under this section, absolutely refused to pay or appear before you at all, that you could issue an arrest warrant against him?—We would have power to do that under section 41 of 1 & 2 Will. 4. c. 22.

1782. Would you be for giving any further powers of arrest to the cabman?—Certainly not further than that, because it would be used very likely for purposes of great oppression; and it must not go further than that; that is to say, it could only be granted after application to the magistrate hearing the case.

1783. Would you be in favour, for instance, of giving a cabman the power to arrest a bilker without warrant?—Certainly not, it would not be safe.

1784. I do not know if I need go through at all the present powers of arrest, but speaking very generally I think it may be said that the only powers of arrest without warrant are in cases of felony, and in certain cases of offences committed under the very eyes of a constable?—That is so, and in certain cases where an assault has been committed, then after immediate pursuit you can arrest without warrant; I mean there are a few cases of the sort.

1785. I was not asking you purposely to go into it?—I do not want to go right through them—that substantially is correct, but not absolutely.

1786. And I think also under the Liquor Acts, for being drunk and disorderly there is a power of arrest without warrant given to the police?—In the account of offences created by the Metropolitan Police Acts, there is a large number of cases there where the constables can arrest.

1787. I see that under these various Cab Acts the times for laying the complaints are rather short; for instance—perhaps, Sir John, you will take it from me—I quote here from the book, "Complaint" under 5 & 6 Vict. c. 79. "must be made within 10 days"; under 1 & 2 Will. 4. and under 6 & 7 Vict. within seven days. It has been suggested that these times of limitation for complaints are, perhaps, rather short. Have you any view upon the subject?—I think they ought to be the same length, but I think 10 days would be enough for both.

1788. Would you be in favour of a complaint—that a man had been bilked say, and had only just succeeded in catching hold of the man who had bilked him—would you be in favour of giving the magistrate power to extend that time a little, because otherwise the man might be quite unable to see the bilker or to find him out?—Supposing he had been bilked, he would go to the magistrate next day, or within the seven days or 10 days, and make his complaint and get his warrant.

1789. Get his summons, that is to say?—Summons or warrant; then he has done sufficient to bring him within the Act. It is unnecessary to have him before the magistrate within 10 days simply, he must take proceedings within the 10 days. I think that is quite right; I should not like to extend that.

1790. Then there is a section to which I should like to call your attention. Section 27 of this early Act of 1 & 2 Will. 4. "Be it enacted that all pecuniary "penalties and costs incurred by reason of any offence "committed by the driver of any hackney carriage "against the provisions of this Act shall, unless such "driver shall pay the same, be levied by distress and "sale of the goods of the proprietor of such hackney "carriage, and for want of sufficient distress such "proprietor shall be committed to the common gaol or "house of correction, there to remain for any time not "exceeding two calendar months, unless such penalties "and costs shall be sooner paid." I believe it has been complained on behalf of some of the owners that that is rather a hard provision, that where, for instance, a driver was guilty of an offence that the proprietor of the cab should be liable for it if the cabman could not pay. Have you any view upon that subject at all?—No, I have not, because I have never had this section complained of or used in a way which seemed to me in any way unjust to the cab owner.

1791. Then now I will call your attention next, Sir John, to sections 41, 42, and 43?—41 we have had.

1792-94. That is the one we have had; another question upon it. What I am intending to ask about is the provision for punishing a man who asks more than his due fare—a driver?—That is later on, I think; 16 & 17 Vict. c. 33. s. 17, I think is the last Act that dealt with that. "Every driver of a hackney carriage who shall "demand or take more than the proper fare as set "forth in schedule (A) to this Act."

1795. Would you be for some modification of that section, Sir John?—It might be very hard sometimes for a man to be made guilty of an offence punishable by a penalty, where he does it innocently, where he does not know that he is asking more than his fare. It may very well be that a cabman may be wrong in a few yards, therefore it might be fair to make the section read in this way: "Every driver of a hackney carriage "who *knowingly* shall demand or take more than the "proper fare as set forth in schedule (A) to this Act."

1796. May I ask again with regard to the word "takes"; that section would almost seem to cover the case where a cabman took a present, took money from a person who knowingly paid him more, and wished to?—There is no doubt there are some other sections about that too, in which it would appear that he is liable to a penalty if he takes a present from the man, more than his right; but practically, I fancy, that is innocent in

its effects because nobody would ever think of doing it, and if it was, the magistrate would find some way out of it; he would never punish him.

1797. You would never convict a man?—I would never convict a man.

1798. You would probably take the line that there was no *mens rea*?—They would find some way out of it; it would be monstrously unjust if a man gave him a present like that.

1799. Then with regard to these two sections of 1 & 2 Will. 4. c. 22. ss. 42 and 43?—Section 42 is repealed.

1800. 43 and 44?—44 is repealed at present.

1801. "43. And be it enacted that no agreement, "whatever, made with the driver of any hackney "carriage, for the payment of more than his proper "fare as the same is allowed and limited by this Act, "shall be binding on the person making the same, but "that any such person may, notwithstanding any such "agreement, refuse, in discharging such hackney "carriage, the payment of any sum beyond the proper "fare"?—I think that is clearly an improper section, because it might very well be that a man goes over night, and says to the cabman, "I want you to go down "to my house at half-past six in the morning, to take "me to such a place. I will pay you so much for it." It is monstrously unfair to say that that cabman is to be punished for that. I think 43 and 44 might properly be repealed; I do not think they are any use to the public.

1802. (*Mr. Whitmore.*) Are they practically abused at the present time?—No, not practically. I mean it might be thought a grievance to the cabmen to have it in, and I think it is useless; it is no protection to anybody. Of course you might have a cabman who would agree to come at seven o'clock in the morning to take a gentleman to the railway station, and the gentleman might rely upon his coming, but when he did come he might say, "I will not take you to where you want to "go unless you pay me first the amount you said you "would."

1803. (*Chairman.*) There ought to be some check?—That might happen, not often, because when a gentleman goes to a cabman with a special fare of that sort the cabman is generally a person who knows the gentleman and lives in the neighbourhood, and it would be very much against his interest to go and be dishonest in that way. I do not think that practically it is any advantage to the public, and I think it might properly be repealed, both that section 43, and 44.

1804. I think it is the law at present, Sir John, that a cabman is compelled to wear his badge at all times when appearing before you, even in cases unconnected with the cabs?—I believe that is the law at present.

1805. The strict law?—The strict law.

1806. But a law that would not be very often enforced, I presume?—It is always enforced in cab cases; when a cabman is summoned in a cab case, or even when he comes as complainant, he must bring his badge with him.

1807. That is for the purpose of identifying him?—For the purpose of identifying him. Even in cases of complaint by himself, or when he appears as a defendant for doing something wrong, it is extremely advantageous that he should wear the badge; but in a case which is not connected with the cab business, for instance, if he were summoned for a bastard child or what not, it would be very wrong and unnecessary to make him wear the badge in that case. I mean it should be in cab cases, only that he must wear a badge.

1808. And principally, I presume, for the purpose of enabling the hirer or complainant to identify him; he would know the name?—That is the object of it. He wore such a badge, the constable might say, and the wearing of his badge would enable the magistrate to see that he is the right man. If any dispute arises as to the right man, the badge is very valuable testimony one way or the other.

1809. Either showing that he is or is not the man?—Showing that he is or is not the man if he denies it.

1810. I do not know if you are able to answer this question at once, but could you tell us whether there are any special arrangements for hearing the cab cases in the metropolitan police courts—any special days?—Oh yes, I think at almost all the police courts days are fixed during which cab cases are taken; for instance, at Marlborough Street I believe there are two days, but then, of course, they are taken more often if it is necessary to take them more often. Then, as a rule, cab cases are taken as soon as possible after the court meets, after luncheon. By that time most of the charges are over, and as soon as the charges are over the general practice is, first of all, to take the school board cases, then the hackney carriage cases, and then to go into private party summonses. I do not think you could make any more general rule than that. Of course, it is very important to those men to get away, and for the constables to get away who are the complainants, as it were—the complainants against the cabmen—therefore every effort is made in all the police courts, according to the arrangements in the district in which the court is. They vary very much in different districts as to the convenience of the public, but, as far as possible, cab cases are taken as soon as possible after the time comes for hearing them. They are always summoned for two o'clock; after that time we take them as soon as it is possible to be done at each court.

1811. They are summoned at two o'clock in order not to keep them waiting in the morning?—They are taken as soon as it is possible to be done at each court, so as not to keep them waiting. Summonses are taken at two o'clock, and then they are taken as soon as possible according to what has to be done in the court. I think you may take that as the practice everywhere.

1812. Would you be of opinion that a driver's licence ought to be *ipso facto* voided by convictions for felony; have you any particular view about that; there seems to be no provision in the Acts for voiding licences?—No, there is not. I think it would be in the discretion, probably, of the Commissioner to do what is right in that case; certainly he would never give him another if it were a bad felony, but, on the other hand, I do not know whether in all cases of felony a man ought to lose his licence.

1813. Have you formed any opinion at all upon taxameters—I think they call them taxemeters—the means of measuring the distance driven in a cab?—That is a matter entirely between the cab driver and the cab proprietor, you mean.

1814. I mean also for showing the hirer of the cab how far the cab has gone, by way of settling disputes as to fares?—I have not seen one; I do not know what it is, I have only read a description of it.

1815. We had some German witnesses who explained it to the Committee?—I have only seen accounts of it in the paper. Of course, the main object is in order to protect the cab owner, is it not?

1816. No, it is chiefly to avoid disputes between the hirer of the cab and the cabman. It seems a sort of machine which will indicate how many miles have been gone since the cab has been hired?—I believe anything of that sort would be almost impossible to rely upon in London.

1817. From a mechanical point of view, you mean?—From a mechanical, and also it might be so easily misregulated; it might be a very proper thing for the matter to be discussed between the cab driver and the cab owner, but I do not think that the public would——

1818. (*Mr. Lough.*) I would like to ask two more questions upon that point of bilking that you expressed an opinion about. You stated that even in the worst case of bilking, that is, where a man gets out of a cab and says, "I have no money," and laughs at the driver; that even in that case the driver should have no remedy except taking the name and address of the man who had bilked him?—And getting a warrant next morning—at once.

1819–20. I am speaking of the moment. You say at the moment you would have nothing but the asking his name and address?—No.

1821. Do you not think that the man who had done the bilking would also be capable of giving a wrong address, and what would you do in that case?—I should hope the police would find him; they would have a warrant and go about and find him.

1822. But how would a warrant be issued?—The man comes down next morning and says, "I drove a man of "a particular name and address and he refused to pay "me, in fact he had no money and he laughed at me;" and immediately the magistrate would grant the warrant.

Sir J. Bridge.

29 June 1894.

1823. Supposing he had not the right address—the man gave a wrong address?—The warrant is against the man who bilked, not against the man who is living at a particular address. The address given would be merely the mode of finding him, but the warrant goes against A.B., or whatever name he went by, who committed this offence.

1824. Do you not think that will give the cabman and the police a great deal more trouble than if the driver were allowed to say to him: "Well, sir, I do not "want to bandy any words with you, but you must "come to the police station with me and give your "address there"?—I think it may be made a means of extortion against innocent people in a large number of cases, the power of doing that.

1825. That is the point I want to ask you; could it be an innocent person who had no money?—Of course a man might be perfectly innocent and have no money, he might have left his purse behind him, or ladies especially find out that they have no money when they thought they had.

1826. Do you not think it would be better to leave it to the discretion of whoever was in charge of the police station to decide?—Then you would have to take the lady or gentleman to the police station, and I do not think you ought to compel them to go there.

1827. In this case of giving the driver nothing?—Of course, giving the driver nothing may be for various reasons; in some cases because by accident they have got nothing; giving the power to take persons to the police station in all cases where they did not pay would be a means of putting power in the hands of drivers of hackney carriages to extort money in a way that would be injurious to the general public.

1828. Then you draw no line between the man who pays something, who pays say 2*s.* instead of 2*s.* 6*d.*, a short fare, and the man who paid nothing at all; you would draw no line in the treatment?—The difference would be this, that next morning the cabman would come and complain to the magistrate who would grant the summons; in the other case he would grant a warrant and make such observations to the constable as would make it effective.

1829. That is not my point. I have no doubt when you got him you magistrates would do your duty nicely; but I am on a different point. My point was what the driver would do at the moment the offence occurs; on that point you would allow no difference?—On that point I would allow no difference; in no cases would I allow power of immediate arrest to the driver.

1830. Or take him to the police station?—Or take him to the police station. I say very often you might get a pretence of there being a difference of opinion; the driver knows this gentleman wants to get the train to go off to Paris, and will say, "Come along, "you must come to the station with me." I think he would say, "Well, I would rather give you a sovereign "or two sovereigns than do that"; and I think it would be a dangerous power to give at present. At present there is no power to get a warrant.

1831. Do you think a man would be seeking to go to Paris without any money in his pocket?—He might without money or changeable money in his pocket.

1832. It might be as well to stop him?—I am only showing you the way in which it might be, in possible cases, made use of for a great oppression, and be a great means of extorting money from the public. You must be very careful; whatever you do in that way do not give the cabmen the power of extorting money from the public.

1833. Speaking of that Act where it is an offence to take more than the fare, you said you would be in favour of the word "knowingly" being put in before "takes"?—Yes.

1834. Who "knowingly takes"?—Yes.

1835. Would not that throw upon the fare the difficulty of proving that the driver knew?—I think that, of course, must be a question for the magistrate in each case. Supposing a driver in London were to charge 5*s.* for a fare which was only 1*s.*, the magistrate would clearly say that was knowingly. If he found it was only a few yards one side or the other the magistrate would say, "There is no evidence of its being "knowingly"; he would say, "It is not," and the cabman ought to be dismissed.

1836. But seeing the driver is examined at Scotland Yard about his knowledge of London, and seeing the pains the police take to put up a table of fares to each place, do you not think it would be better to leave the law as it is?—I have no objection to leave the law as it is. I thought it was possibly a grievance in the minds of the cabman, because, when he thought that the fare had come over two miles, and found out it was only two miles and a yard within, that he should be punished seems hard. I want to avoid the possibility of his being punished for that, where he asked me, say, for half-a-crown and it is just a yard or two out.

1837. Yes; but is it not equally hard to throw the onus on the fare; it is the cabman's business?—I do not think so—because sometimes there is no doubt that fares are extremely hard upon cabmen—where the fare is a yard under 2*s.* I think the fare ought properly, if he is a proper-minded man, to give half-a-crown.

1838. Then you say you would repeal the law which forbids the driver to accept an excess fare if he has been able to make a bargain; did I understand you to say so?—Taking more than the fare if there has been a special bargain made.

1839. You would repeal that law?—I would repeal that law; I think it unfair in special cases, where a man wants something specially from the cabman. If it were different, you know, if the bargain were made with a man on the stand, then I think it ought not to be repealed; but if a bargain is made very often by the cabman at his own house it ought not to be applied to that. In what way it could be done I do not know.

1840. Do you not think it would open the door to a great many cases where the cabman would say, "Oh "you agreed to give me 5*s.* or 10*s.*"; and the fare would say, "I never agreed to do anything of the "sort; he asked me a large sum; I got into the cab "trusting to the tariff, and now he wants to say I "ought to pay him a double tariff." Do you not think it would open the door to a great deal of dispute of that kind as to whether the bargain had been made or not?—I do not think the difficulty of it would be practically felt.

1841. Do you know the number of cases that come up at Bow Street on an average each week?—I have asked for reports from all the courts; I have got them given me from two courts only to-day, but I should think there would be something like 40 a week, or something of that sort; I do not know.

1842. (*Chairman.*) We have that return; it is given by police courts?—Oh yes, police courts.

1843. It has been got already by somebody?—Yes, you must have it; the police must have it.

1844. (*Mr. Lough.*) Are you aware that the drivers complain that the magistrates are always very hurried when the cab cases come on?—I do not, practically; from what I have seen in the paper I know it is said. I have never seen any exhibition of complaint on their part that the cases have been too much hurried.

1845. As matter of fact from your own experience, do you find them a bore, if I may say so, or must you take them in a very hurried way—the cab cases?—I should not say that I ever took a case so hurriedly that I did not come to the bottom of it.

1846. Of course, it is rather a difficult matter?—That is all I can say about it; whatever it is, you must come to the bottom of it before you decide it.

1847. Is there a practice in the courts to recommend the men to plead guilty and have a small penalty, in order to dispose of them quickly?—Certainly not with the knowledge of the magistrate. I do not believe that is done by the warrant officers or anybody. I have not the least doubt there are persons belonging to the cab business, cab masters, who say to these men, "You will get less if you plead guilty."

1848. Well, now, is there any ground in the conduct of the case at the police courts for supposing that that is so; that that is a fact, namely, that if he pleads guilty he will get off with 2*s.* 6*d.*, whereas if he gives the magistrate trouble he will have 10*s.*?—I should think not. I will not say this, that supposing a cabman is summoned for an offence, and he deliberately lies, according to the opinion of the magistrate, in his defence, the magistrate would not to some extent be guided by that, but would say, "This is a bad fellow; "I must fine him because he is a liar as well as a "violator of the law in the cab case too." I do not mean that that is a course I should adopt myself, but I say it might act upon some men's minds, I have no doubt; properly or improperly, I do not say which it would be.

1849. Is there any impatience of hearing the driver's witnesses?—Well, of course, I am never in a court in which I am not the magistrate.

1850. Well, I am asking about your court?—All I should say is that I should consider myself to be acting extremely wrongly if I showed or had any impatience in hearing the drivers' witnesses, and I have not the smallest doubt in the world that expression of what I do is true of all my brother magistrates.

1851. Is there any difference in the weight, if I can put it that way, in the opinion of the policeman's evidence on the one side and the driver's or other lay persons who may be on the other side, on the other?—Not the smallest, because I think one's experience is this, that the policeman lies as much and not more than anybody else. There is just as much chance of a policeman lying or a policeman speaking the truth as anybody else, therefore you must judge only as to whether the truth is spoken or not, by the way in which the evidence is given on the one side or the other. There is exactly the same chance to my mind of a policeman lying or not lying as of an ordinary man lying or not lying, except that you will see that the one is sometimes brought there against his will. The policeman is obliged to do it in his duty, and the man who comes on the other side comes there with manifestly a strong bias in his own mind. That is the way you look at all evidence. You do not put so much strength on the evidence of the man with the strong bias as if he came there as a witness who has no interest either on the one side or the other. Of course there has always been a very strong opinion among the poor and cabmen, I think, that the police have an interest in the conviction. Well, that is absolutely untrue, I am sure.

1852. (*Mr. Whitmore.*) You think such an impression prevails?—I am sure such an impression does prevail. I do not know that it does so much now, but in former days I have heard it expressed that the policeman gets money by it, and I have always taken pains in cases of that sort to explain to the people that in all cases where policemen come there as witnesses, instead of being to their advantage it would be to their disadvantage, because they have to come as witnesses when in the natural course of things they would be in bed or asleep.

1853. (*Mr. Lough.*) Would it be better, or a relief to the courts, if there was a special court for cab cases?—Relief to the courts?

1854. Relieve the police courts?—The police courts would have less to do, of course.

1855. Would it be of importance or necessary from that standpoint?—A special court would be absolutely the most injurious thing to the interests of the cabmen and to everybody else that may be, because the necessity is that where a man's mind is doing only one class of cases it would very soon lose its judicial faculty; it would be the same sort of injury to the man always having that particular case before him as a repetition of too much cabbage would be to his stomach.

1856. I see in your case you take on an average 80 cases a month, 20 a week for the last four months?—Yes.

1857. And in London there are nearly 5,000 cases a year. Well now, seeing that there are only 15,000 men employed in the industry, does it not occur to you that that is a very large number of prosecutions in proportion to the number of men at work in the industry?—I do not quite understand how I am to answer that question, because I could not form an opinion beforehand as to what the probability would be. I have no data as to what in your mind would be the number of cases, and I cannot say whether it is larger or less than I should expect.

1858. (*Chairman.*) Perhaps I might explain. This question has been raised before. There are 15,000 cabmen, and the number of cases in the year against them is 5,000 in the average, and I believe what Mr. Lough was intending to ask was this: Is it not rather a large average to have 5,000 cases in a year against 15,000 men?—You see, what seems to me the explanation of this is, that considering the crowded state of London streets, it is necessary for the police in order that the streets should be kept anything like free from obstruction to summon a very large number of people for that purpose, and the offence is a very small one, but it is because of the crowded state of the streets, and however small sometimes the offence may be in point of the idea of the cabman, yet how important it is that the policeman should have obedience from the cabman to his directions as to keeping the streets in order.

1859. Yes; but my point is, if the offences are so small as you now say they are, is it not a pity for those small offences to be brought before the metropolitan police courts and to occupy the time of the magistrate?—Not at all, because, however small, yet it is excessively important to both parties and to the public that a proper view should be taken of the thing.

1860. From your observation of the streets when you are being driven in a cab, have you ever noticed any reluctance on the part of the driver to obey the policeman when he asks him to stop or go on, or anything like that; do you think there is a general reluctance on the driver's part?—To obey the police?

1861. To obey the police?—I say certainly in the great mass of the cases there is not.

1862. If there is not this reluctance, then, how do you account for such a large number of cases?—Because they do not obey. In the large number of cases I see no reluctance.

1863. Perhaps you will tell me what are the chief of those small charges?—These small charges, as far as omnibuses are concerned, are delay; as far as cabmen are concerned, stopping in places where they ought not to stop, and blocking the streets.

1864. That is for plying, as it is called?—Plying or obstruction.

1865. Take plying; they are trying to get a living then?—Yes.

1866. Trying to get a fare?—Yes.

1867. You have a good many cases of crawling?—Yes, and stopping still more than crawling, I think.

1868. What I want to get at is this; might not both these classes of cases arise from the want of proper standing accommodation?—It arises from the standing accommodation not being in the place where cabmen find that it is useful to them to be as being a place from which they can get fares. Of course, the necessity of dealing with these cases arises not only because they are an obstruction to the streets, but also because it is excessively unfair for a cabman to get a fare when he is crawling, when the men who are on the stand obeying the law lose that fare which they ought to have. That becomes really an injustice to them.

1869. Well, I will put it this way: is the cabman to blame because there is no standing in that place?—The cabman is to blame if he breaks the law; I cannot say more than that.

1870. I want to put it the other way, if you will. You have admitted that the reason they are there is because the public want them?—And because they can get a fare there.

1871. Well, that is another way of saying the public want them?—Yes.

1872. And you have admitted also that there is no standing room, or might not be standing room there?—In the street where the people are mainly.

1873. Now my point is, do you not think it unfair that men should be made criminals of—for that is what it comes to—for breaking defective regulations of that sort?—Defective regulations?

1874. Yes; you admit there is no standing where it is wanted?—Because, take a place like the Strand, you could not have a standing in the middle of the Strand.

1875. There might be a standing say at Charing Cross Railway Station, or it might be arranged in some way?—I am afraid it is a matter I am not familiar with to say where the standings ought to be; it would require a good deal of knowledge of the streets more than I have to tell you. I agree certainly with this that all the standing room which it is possible to give to the cabmen ought to be given. Where it should be I could not practically tell you, or whether all is given that could be given I could not tell you.

1876. But my point is that if the driver commits a breach of these regulations, do you not think it is a little hard that it should be immediately made a criminal offence and brought before these important courts?—I think it is necessary in order to stop

Sir J. Bridge.
29 June 1894.

it that it should be made criminal; I do not see otherwise how you would stop it. For an offence punishable by a fine it would be necessary to have a court to hear it. I do not think it could be said that the police court is at all too important a court to take these cases. Every case is important to the person concerned in it, therefore the importance of the case depends entirely on whether or not it is important to the person interested, and they are both interested very much, the public are interested in the streets being kept in order, and the cabmen are interested in being allowed to obtain their fares.

1877. You have admitted that it is in the effort of making his living that the man makes the mistake, if he makes it?—I am afraid that I have heard that very often from men who had stolen fruit in Covent Garden Market: "I did it to get my living."

1878. Do you not think there might be in this case an arrangement to get a middle course between the drastic law of the policeman, making a criminal of everybody who breaks the regulations on the one hand, and letting them altogether free on the other?—Of course there must be that discretion which is exercised by every policeman I should hope. Sometimes he thinks it better to shut his eyes. I have no doubt he does very often shut his eyes, but that you must not make it an offence I do not agree; I think, if it is necessary, that it should be an offence, in order to protect persons in the streets and let the passage of the streets be free; I think you cannot alter the fact that it must be made an offence.

1879. And you do not think it is possible to have any improvement in this system of allowing the police to apprehend these men for loitering and plying and bring them before these police courts?—I think that a special court for it would be very bad indeed, and I have not had suggested to me any other court to which it would be proper to bring them. I think it is a very proper duty of magistrates, and an important one to the public, to see that the streets of London are properly kept, and I think it is one of the things that strikes the foreigner in London. I have often heard Frenchmen speak with admiration of the way in which the police do manage the streets of London. They are as careful to let a poor old woman go across the streets as a duchess, and you will see them taking across young children with the greatest care.

1880. Do not the cabmen assist them in that duty?—There are very many cases in which the drivers disobey the law and go the wrong side of a refuge, to the very great danger of the public.

1881. Thirty-three per cent. of the charges are for plying and loitering; did you know that?—No, I did not know it.

1882. And that cannot apply to plying?—Plying is one of those things which is clearly, to my mind, necessary to make an offence, because it is for the protection of the cabmen themselves who are on the stands that plying should be an offence; if it were not, then you would never have any cabmen on the stands.

1883. But if there is no stand in the neighbourhood?—There always are stands in the locality, but the difficulty is that very often they must be or are in a side street. I have no right to assume that the police do not do all they can to give proper standings.

1884. But it is not a matter of police?—The making of cab ranks is a matter of police, is it not?—

1885. (*Mr. Whitmore.*) Scotland Yard?—Scotland Yard.

1886. (*Mr. Lough.*) What I meant to say was, a municipal authority might be able to arrange a cab stand where the police cannot do so always?—It is done, you know, by the authority who take care of that. I do not know one set of Englishmen who do their duty better than another set of Englishmen. I believe all the servants of the country do their best for the country. I do not know that a municipal authority would do it better than the other. I have no doubt they will all do it equally well. There is no magic in the words municipal authority.

1887. (*Mr. Whitmore.*) With reference to some of Mr. Lough's questions, is it not the fact that the police magistrates now have to deal with a great number of difficult questions which are in no ways criminal, besides these cab cases?—Oh, yes.

1888. I mean difficult cases which are really civil cases, arising under Building Acts and Sanitary Acts?—Yes, a great many.

1889. And that is one?—It is extremely useful, I think, to the mind of the metropolitan magistrate that he has such a variety of things to do; that keeps him clear in the judicial faculty which can only be got by that variety.

1890. If his mind were occupied with one class of cases only it would deteriorate?—Considerably; mine would at least, I am sure it would.

1891. Would it not be difficult to secure a competent magistrate to try only one class of cases?—I think every competent magistrate would get out of it if he could, and if he did take it, or was obliged to take it, he would soon become incompetent.

1892. Have you any views as to the present cab radius—as to whether it is the right radius?—I have not considered that point at all.

1893. (*Mr. Hopwood.*) I am anxious, Sir John, to get upon the notes some of the types of offences which come before the metropolitan police magistrates, and the penalties which are imposed by the statutes for such offences. May I take you through two or three of them?—Certainly; but you cannot hope that I shall recollect them.

1894. No; for aught I know the penalty may be the same in each case. Plying for hire without a licence, for instance, can you tell me what the statutory penalty is?—I could not. I know it is not less than 40*s.*, and one never thinks of putting any more. My impression is that it is 40*s.* I could not tell you. I mean one hardly ever imposes that for any of these offences. One does not clearly know; the penalty inflicted is less than the maximum, therefore one does not take the trouble to look in each case; it quickly goes out of his mind, except to know that a certain punishment is within the powers that you have got.

1895-7. I will not press you with regard to it. I will ask the Chairman to let us have a statement of statutory offences and their penalties if he will be good enough to direct it to be done.

1898. (*Chairman.*) You might suggest them to Sir John, that would be the simplest way?—There is one penalty of 40*s.* which, I think, might be reduced.

1899. (*Mr. Hopwood.*) Is there an appeal under the Hackney Carriage Acts to quarter sessions?—If the punishment is a certain amount, there is an appeal; but I do not know that there is an appeal in every case to quarter sessions where the punishment is very small.

1900. Is there not an appeal where imprisonment is inflicted without the option of a fine?—I think that is so now in every case. I am not sure, but I think so. My recollection is that where there is imprisonment without the option of a fine under the Summary Jurisdiction Act of 1879, there is the power of appeal.

1901. Now, I have the penalties before me, if I may be allowed I will take you through two or three? "Plying for hire elsewhere than at some standing or "place appointed for that purpose, penalty 20*s.*"?—Yes.

1902. That is not a penalty upon which you have any observations to make? I understand you are in favour of an alteration of the penalty in one case?—Well, I do not think that ought to be altered. I have never heard any complaint about it being enforced too rigorously, so as to be——

1903. (*Mr. Lough.*) What penalty do you actually impose in that case on the average?—As an ordinary rule, if it is a first offence, you merely make them pay the costs.

1904. And the second?—Next time I should make them pay 1*s.* and costs, and double it next time, if done more than once within a very short time.

1905. (*Mr. Hopwood.*) "Causing obstruction in any "public street, road, or place by loitering or wilful "misbehaviour, penalty 20*s.*" The same observation would apply to that?—The same observation would apply. There would be a very small punishment first of all.

1906. "Allowing any person besides himself, not "being the hirer or a person employed by such hirer, "to ride on the driving box of his carriage, whether hired or unhired." That is not a serious matter?—

No. But it is an offence which varies very much in its character, because very often it is used for the purpose of giving a lift to what are called touts, who go about and get fares for a particular cabman against the interests of the other cabmen, and, therefore, that ought to be stopped, and has to be stopped with sometimes a substantial fine.

1907. Then I understand that the penalty in practice would in that case approximate more nearly to the maximum penalty?—No; it would be for a first offence 2*s*., and 2*s*. costs. The costs in our court are only 2*s*. as a rule.

1908. "Permitting or suffering any person to ride or "be carried in, upon, or about, a hired carriage without "the express consent of the hirer"?—That is the same thing.

1909. "Standing or plying for hire with hackney "carriage, or suffering it to stand across street or "alongside another carriage, or within 8 feet of the "curbstone, penalty "20*s*."?—That is an offence of which there are very few instances. I do not recollect a man being summoned for that offence.

1910. "Feeding horses in the street, penalty 20*s*."?—That is one of the sections of the Police Act not under the Cab Acts, that.

1911. "Refusing to give way, penalty 20*s*."?—Refusing to give way?

1912. That is, to any private coach or carriage. I take it that is very seldom resorted to?—Very seldom. I never heard of it.

1913. I should think in these days it is extinct?—I am sorry to say it is impossible to keep all these things in my head. I do not know anything about that section in practice.

1914. I wanted to come to the forty-shilling penalties?—Forty shillings?

1915. Yes. "Plying for hire without fare-plate affixed to carriage, penalty 40*s*."? That is a more serious offence in itself?—Yes. Of course it might be one that might have very serious circumstances about it.

1916. I understand you that where imprisonment is inflicted without the option of a fine there is an appeal to quarter sessions?—I think so. You must not take that from me. I do not want to be bound by that answer. There may be some limits to it, you know, in the Act of Parliament.

1917. As your recollection is not very good upon the subject, I may take it that appeals are very rare from these hackney carriage cases?—From these hackney carriage cases; one would hardly know such a case.

1918. As to the summonses, we had it from the inspector at Scotland Yard that a summons would not be applied for to a magistrate until permission to apply had been obtained from a superior officer at Scotland Yard?—Yes.

1919. How is the application made to you? Is anything in writing put in before you to show that the constable has been authorised by his superior officer to apply?—Yes. The officer comes and puts in the writing upon which the summons is granted—the information and the evidence.

1920. Then the constable himself is called?—At the hearing. He does not come before us before the hearing.

1921. The application for the summons is generally made by the superior officer?—The application for the summons is generally made by the superior officer. He puts in the writing from which the summons is made out—the evidence of it.

1922. I assume that in nine cases out of ten the police are the complainants in these cases under the Hackney Carriage Acts?—The Cab Acts?

1923. Yes?—Yes; I should think so, certainly. Probably more.

1924. More than nine cases out of ten?—About that, I should think.

1925. The penalty is inflicted, I assume, upon the testimony of the constable alone? There can seldom be corroborative evidence?—Very seldom. I always begin to doubt if the constable has corroborative evidence. He knows there is something peculiar about it when he calls upon somebody to support him.

1926. Then it rests with the magistrate in his discretion and judgment to probe the evidence of the constable, and believe it or disbelieve it as he thinks right?—Probing gives him some insight into it; but he has to hear the statement of the defendant; and I need hardly say when a man is a defendant in a case of this sort, one puts as much belief—I mean, thinking what his statement is enables the magistrate to bring his mind to judge whether the constable is speaking the truth or not, and if the statement made by the cabman is that which leads you to think that the constable is not speaking the truth, then of course you probe it much more carefully. But the real thing which you go upon is the statement of the defendant.

1927. The magistrate, I take it, puts questions both to the constable and to the defendant for the purpose of testing the statement of each?—I believe that the magistrate has no legal right to put questions to the defendant, but, practically, when he has made a statement you say to him, "Well, the difficulty about your "answer is so-and-so." You are not to put questions to him, "Did you do this or that?" But, substantially, you get the statement, which you probe, of the defendant, and also of the constable.

1928. I wanted to ask you a question on another point. When a conviction is pronounced against a cabman, is his licence marked as a matter of course?—Yes.

1929. His licence is marked for the most trivial offences?—Except, you know, as I have said, for the most trivial offences in practice we only make him pay the costs of the summons. That is not a conviction. But where there is a conviction, and there is a fine, then you must mark the licence.

1930. His licence is not marked where he has to pay the costs only, and no fine is inflicted?—Where he has to pay the costs only, and no fine is inflicted.

1931. But whenever a fine is inflicted for an offence, however trivial, the licence is marked as a matter of course?—It must be. The Act of Parliament says it must be marked.

1932. Do you find you have the same cabmen up before you over and over again, as a matter of practice?—Very often. Under these Acts you have the same men over again. But, of course, if you have the same cabman there over and over again for drunkenness as a cabman, I think very often the best penalty for him is to have his licence revoked.

1933. But you find in practice, I suppose, that some licences are marked over and over again; you have a licence before you which is decorated with bad marks, not only by yourself but by your brother magistrates?—Not decorated, as far as cabmen are concerned. I may say there are cases of omnibus men for delay until there is a large number of entries very often. But for cabmen, as a rule, there are not many.

1934. The magistrate has no power, has he, to mark a licence with an expression of opinion that it should be withdrawn?—No; he can cancel it.

1935. He can cancel it?—He can cancel it or suspend it.

1936. Would he do that because he found a number of convictions endorsed upon it *per se*; or would he only do it in consequence of a case of peculiar gravity having been brought before him?—He would do it for both causes. If a man was convicted very often for being drunk as a cab driver, then you would revoke his licence.

1937. (*Mr. Whitmore.*) There is no appeal against your cancellation of licences?—No; but he can get another licence afterwards. What happens is, if a man's licence is cancelled, then he gets a little probation outside, and gets a good character, and then he comes to the magistrate, and the magistrate writes a letter to say that he might have a fresh licence.

1938. (*Mr. Hopwood.*) That is recommending him for a fresh licence?—But he always gets it as a matter of fact if the magistrate recommends it.

1939. He gets it as a matter of course?—At least, I take it he does.

1940. The question of punishments again. When a penalty is inflicted, the magistrate has power, I believe, to grant time, has he not?—Yes.

1941. Is that power extensively used—time to pay?—It is used a good deal. But if you ask whether it is generally used, I should think not, because one finds from experience, where time is granted there is very often very great difficulty in getting the money. It is abused.

Sir J. Bridge.

29 June 1894.

But whenever it is a case in which it is reasonably to be expected the money would come if you gave time, you give time. In the ordinary cases it is not very necessary, because whether you do it or not the money is paid. They do not often go to prison for it.

1942. You have power to ask for security, have you not?—Yes. But I do not think it is ever necessary to do that; because if a man can give security, he can get the money. If he can give security, the man's friends have got the money to pay these fines.

1943. Do you put it as high as this, that men seldom go to prison because they cannot pay the 40*s.*?—Forty shillings?

1944. Yes?—If they were fined 40*s.*, I daresay they would go to prison. You see, the great object which a magistrate has with reference to all questions of fining, if he does not want the man to go to prison, is to hit the amount which he can pay, and will pay; and he is generally successful in my experience. Of course, on the other hand, if you think he ought to go to prison, you say so at once.

1945. Then may I put it in this way, that if the magistrate is not successful in hitting the amount, and he finds the man will have to go to prison, may I take it that he then grants him time upon his application as a matter of course?—Not as a matter of course, because there must be some reason to believe that the money will be found. If there is reason to believe that the money will be found we grant him time.

1946. If the magistrate is not successful in hitting the amount which will save the man from going to prison, he has power to substitute a smaller fine, I suppose, in order to save him from gaol?—I should be very sorry to say that he has the legal power as a matter of law; as a matter of fact, very often ——

1947. He does?—It is said: "You have fined this man 5*s.*, he has got 4*s.*," and then you take 4*s.* Although it is not strictly legal, or may not be strictly legal, it is done.

1948. Are the applications for time made to the magistrate or to the clerk?—Oh, to the magistrate.

1949. I suppose the police courts, as a matter of fact, with a very small staff, would have very great difficulty in dealing with these questions of time, security, and collection of money, and so on?—If done behind the magistrate's back, do you mean?

1950. No, not at all. I mean that you have a very small staff for administrative purposes at the police court, and the duties of collecting money outstanding where time had been given would devolve upon that small staff?—I do not think there would be any difficulty about that. The real difficulty is if the money is not paid there would be sentence of imprisonment to follow nonpayment. There would be a warrant out against the man, and he would be taken up.

1951. Then it amounts to this, Sir John, that the powers conferred upon the magistrates under the Summary Jurisdiction Act of 1879, as to granting time and so on, are not frequently used, because the magistrate, in his good discretion, imposes a fine which he thinks the man can pay?—And does pay.

1952. Yes; or in the alternative, he sentences him to imprisonment because he thinks he should go to prison?—Because he thinks that he would not get the money without, very often. In the very large number of cases a man would say, "I have not got the money;" then—of course, I do not know how—but somehow or other they find out whether they have the money, they say, "Well, if you do not find the money, you go to "prison." Then it is paid in the course of the day. It constantly happens that they are told: "If you do "not find the money you go to prison;" then it is paid at the end of the day. It is perhaps letting out the secrets, but this is the way in which it is done; they come and say, "A man has not paid at the end of the "day, but he says he has got 4*s.* instead of 5*s.*, or he "promises to pay to-morrow and I think he will, sir," and so on, you see,

1953. Yes?—But, of course, you never send to prison unless you think it absolutely necessary to do so to get the fine.

1954. And where you decide it is a case for imprisonment, and impose an imprisonment and not a fine, then there is a right of appeal?—No, I do not know; in cases in which there is power of imprisonment under the Act—not where the imprisonment comes from warrants of distress.

1955. No; I wanted to bring that point out.—Where there is power to send to prison absolutely then there is an appeal, but where imprisonment comes in default of distress I do not think there is power of appeal.

1956. Then, again, where a man is liable to imprisonment after a warrant of distress has been issued, and there are not sufficient effects, the court can postpone the issue of the warrant for any time it thinks fit?—The warrant?

1957. Yes. Where a warrant of distress has been issued, and there are not sufficient effects, the court has still power to postpone sending the man to prison, has it not?—Oh, yes; the magistrate would not sign the commitment.

1958–9. If he finds that the man cannot pay after distress has been issued?—After distress has been issued, or without distress. Where he can send to prison for nonpayment with or without distress he has always power to keep the commitment over until he thinks it necessary.

1960. (*Chairman.*) I think a magistrate has no power to send a man where a debt is recoverable by civil process, where he cannot pay?—I am dealing with cabmen committing offences. Where it is the case of a fare —a civil process—then there is an order made for payment; then a summons to show cause why he should not be sent to prison; and then it must be proved that the man had means to pay.

1961. (*Mr. Hopwood.*) I only want to trouble you as to one other point, Sir John, and that is this: Have you any recollection of the sixpenny fares that were in existence formerly?—No, I do not recollect them.

1962. You are not familiar with the provisions of the Traffic Regulation (Metropolis) Act?—That is a recent Act; yes.

1963. Of 1867?—Yes.

1964. Under that Act, if I may recall it to your mind, it was provided (section 26) that where the fare now payable by law on hiring any hackney carriage "standing on any stand shall not amount to one "shilling the driver shall be entitled to charge one "shilling"?—Yes.

1965. Before the passing of that Act, apparently, a cab could be called off a stand for a sixpenny fare?—It seems so by that Act; but I could not say whether it was so or not.

1966. I thought it might be in your recollection that the sixpenny fare was abolished by that Act?—I am aware of that section of the Act, but I am not aware whether the sixpenny fare was abolished or in existence before. It may have been. I do not know whether it was or no.

1967. It was abolished by that Act, so far as cabs on stands are concerned?—It may be so.

1968. You do not recollect?—I cannot tell you.

1969. (*Mr. John Burns.*) I am very sorry, Sir John, that I was not present when first your examination commenced. But I have only one or two questions to ask you, and my first is an amplification of what Mr. Whitmore asked you with respect to a special court. Do you not think, Sir John, that purely civil and municipal matters are in sufficient numbers in London at present—such as cases under the Sanitary Acts, and Adulteration Act, and Weights and Measures Act, and Building Act, and school board cases, and many others that I need not mention—to warrant special courts of a non-criminal character for these cases?—Most of these are of a criminal character; school board cases are criminal.

1970. Well, not criminal in the sense that a thief is. There is a greater element of doubt in each of these sets of cases than in the case of a man being charged with thieving from a shop. For instance, take school board cases, and Building Act cases, and adulteration, where there is a very large element of doubt?—I think it would be very improper to have any special court for special offences.

1971. But agreeing, as I do, with you that it is advisable for a magistrate to have a variety of cases for the purpose of giving greater discrimination in each case, do you not think that there should be a grouping of analogous cases, either against the civil or criminal law, instead of school board cases being tried in the same court with cases of a criminal character, such as indecent assault, and theft, and more serious cases?—It is true it is the same court, but practically they are

not heard at the same time. Indecent assaults and the graver class of charges are heard in the morning, and school board cases are taken in the afternoon.

1972. Admitting the necessity for variety, do you not think there might be a classification of certain civil and municipal cases?—I should think it would be very mischievous indeed to do so. That is my opinion, my strong opinion.

1973. I suppose you are aware that cabmen generally are under the impression that it is as difficult for them to get an impartial consideration of their case, and what they describe as fair play, as it is for a camel to go through the eye of a needle? You are aware of the impression are you?—My evidence, that is, so far as I have seen, is that it is certainly non-existent. I have heard it said that that is their impression. I have no doubt they would themselves say so; but I have never seen any exhibition of that feeling amongst them.

1974. That is not the question, Sir John.—You ask me if I am aware of it, I said no.

1975. Have you not heard cabmen so express themselves, even in your own court?—No, I have seen no manifestation of it, so far as appearance before me is concerned.

1976. Would you be surprised to hear that it is a general impression?—Not the least surprised that they should say so, but as to whether it is a true impression I cannot say.

1977. Not the truth of it, but the existence of the impression among cabmen?—I am not aware of the existence of the impression. It may be expressed that they have that impression; but as to whether it is existing I am not aware. If it had been existent I think I would have seen something of it.

1978. Do you consider that the absence of rank accommodation in the neighbourhood of the Strand is an encouragement to crawling and obstruction and consequent appearance before yourself and your brother magistrates?—I have not the least doubt that if the Strand were wider, and we could have cab stands in the Strand, it would save an enormous number of cases coming before us.

1979. Do you not consider, as apart from widening the Strand, it would be possible to have better regulations for the cab traffic, particularly at night time when the theatres are turning out all their people?—I should have to consider it very carefully, and go over the district, before I should like to give an opinion upon it.

1980. Upon that matter, do you not think that the local authority—not necessarily the central authority—would be more likely to be the best judge and the best authority for providing rank accommodation rather than the police?—I think the police must have much more knowledge of the geography of each street and better know the requirements of each street than anybody else.

1981. More than the local authority?—Much more.

1982. (*Chairman.*) Are we not getting rather beyond our scope?

1983. (*Mr. John Burns.*) I am anxious to deprive Sir John of the number of cases that he gets of omnibus men and cabmen, and I want to prove, or I want to know, whether the absence of rank accommodation is the cause?—I am perfectly certain of this, that any authority whatever—local, or gentlemen living in the neighbourhood, anybody in the world, being of opinion that places existed which they could name which would be fit for cab stands—I have not the smallest doubt that the police would give every consideration to their suggestion. I know, as a matter of fact, that the desire of the police must necessarily be to find as many stands as they can. You must recollect the public very often object to a cab stand in their neighbourhood, just as much as other people want it.

1984. You condemned cab touts, I noticed, on the ground that they touted for special cabmen, to the detriment of the general cabmen?—Yes, I understand they do.

1985. Have you many cases of that character before you?—There are a good many cases of men riding on the springs, you know, and who are said to be touts. They say they are friends of the driver. "It was my "brother-in-law" a cabman might say when someone jumped up specially for touting purposes.

1986. Do you suggest, Sir John, that sufficient time is given in your court for the consideration of each cab case?—Certainly I do.

1987. And the impression that the cabmen have that sufficient time is not given is a mistaken one?—In our court, yes. You see, it is very difficult to get a man to think that he has been properly heard; but my opinion is that you have not only thoroughly to hear a man but to get him to think it; and when a magistrate hears a case, I think we all take care that time is given not only to let the man's case be sufficiently heard, but that he may think so in reason, and he generally does.

1988. (*Mr. Whitmore.*) Probably every individual person who appears before a police court thinks his own case is of extreme importance, naturally?—Naturally he does.

1989. (*Mr. John Burns.*) You said you thought a case of bilking would be met by a warrant being granted next morning?—Yes.

1990. Why not a warrant on the same day?—The same day if the cabman could go down to the court at once to get the warrant. Only, as a matter of fact, practically he could not get down to the court till next day.

1991. May I put this case to you? Suppose a man gets into a cab, rides for six hours in that cab, and contracts a fare of 16*s.* or 18*s.*; he goes to a building, in at the front door and out at the back. The cabman sees him half-an-hour afterwards, and naturally he is doubtful as to whether he will ever see him again. Do you not think it unfair to the cabman that he should be compelled to lose a day's pay next day in applying for a warrant against a person whom he is very likely not to get apprehended unless a constable the moment that he sees him arrests the man on the evidence of the cabman that he has been robbed of his money?—The cabman loses his rights, it is quite clear, by it. But that it could be remedied, I do not think—like many other things in this world which are wrong.

1992. But is not the difficulty that is placed in the way of the cabman apprehending, so to speak, the bilker on the spot, a direct encouragement of bilking?—I think not. I think cases of that sort have been so very rare that it would be absolutely unnecessary to give a power to cabmen of arrest which might be used, and would be used, most detrimentally.

1993. But although rare, is not the seriousness of the offence sufficiently strong to warrant strong measures in stopping it altogether, if it is possible?—It is a very serious offence; and if it can be done with safety to the public I should be very anxious indeed that a power should be given. But I am convinced it should not be given to a cabman to arrest a man or to call upon a constable to arrest him simply on the statement of the cabman, "This man owes me money, "and has not paid me."

1994. Then your impression is that the power that would remove that disability from the cabman would impose a greater disadvantage on the public?—Yes.

1995. And would lead to extortion?—Certainly. That is the reason I object to it.

1996. In theory you agree?—In theory I agree it should be done; but it could not be done without power of extortion being given, which would be most dangerous to the public. The remedy which I have suggested would in my opinion very greatly put a stop to bilking.

1997. One puts the question I am going to put to you with a certain amount of hesitation, because it is rather difficult to put to a magistrate; but I will put it this way: In the event of any magistrate having said to a cabman, when the cabman expressed willingness to give references, that he "would not accept a cabman's "reference or a cabman's word"—do you not think that would be going too far on the part of a magistrate?—All I can say is, it is an expression I would not have used myself. Whether it was used or not I cannot say.

1998. Is not that assigning rather undue preference to the policeman?—If it was said, certainly.

1999. (*Mr. Hopwood.*) Would you view with satisfaction any alteration in the law which would enable a cabman to ask for prepayment from his fare under certain circumstances?—As at present advised, I should say certainly I object to it. I do not mean to say that you might not put some circumstances to me where I might not say, "Under those circumstances it

Sir J. Bridge.

29 June 1894.

might be done." But generally, certainly it ought not to be allowed.

2000. (*Mr. Whitmore.*) Might that not be a means of stopping bilking in certain cases?—No, I think not; I do not think it can be properly done.

2001. (*Mr. Hopwood.*) You said at an earlier period that there was some penalty which you had in mind which you thought might with advantage be altered; can you give us some information about that?—That is the penalty—a very small one—6 & 7 Vict. c. 86. s. 17; it is a very small matter, practically it does not affect the driver, because it is never imposed, you know, "Every licensed driver, conductor, "and waterman shall at all times during his employ- "ment, and when he shall be required to attend before "any Justice of the Peace, wear his ticket con- "spicuously upon his breast in such manner that the "whole of the writing thereon shall be distinctly "legible; and every driver, conductor, or waterman "who shall act as such, or who shall attend when "required before any Justice of the Peace, without "wearing such ticket in manner aforesaid, or who, "when thereunto required, shall refuse to produce "such ticket for inspection, or to permit any person "to note the writing thereon, shall for every such "offence forfeit the sum of forty shillings." Forty shillings seems to me too much for that; it ought to be 10*s.*

2002. Ten shillings?—And I have said before about that, that I think a cabman might properly be allowed to come into court without his badge if it is a matter totally irrespective of cab business. I believe they feel they do not like to be always wearing it.

2003. In cases other than cab cases?—In cases other than cab cases.

2004. (*Mr. Lough.*) Have you had any experience anywhere else with regard to cab cases—I mean anywhere out of London—with regard to the law or prosecutions?—No, none sufficient to be able to give any information about it. I mean I have simply the same information that every traveller has going about.

2005. You never, for instance, contrasted the number of prosecutions that arise where the cab system of a city might be under the local authority with what we have in London, where it is under the police?—No, I have had no figures given to me.

2006. (*Mr. John Burns.*) Can you give any reason for this fact, that in the City where there is a greater number of vehicles going through every day, the proportion of cases of cab obstruction and crawling is considerably less than in the metropolitan district where there is a smaller amount of vehicular traffic?—Because during the evening, which is the great cause of it in London in the metropolitan radius, the City is empty; that might cause the whole thing.

2007. Yes, but taking hour for hour?—Well, I do not know whether it is so. If it is so, the only reason that could account for it is that there are more police per man than in the metropolitan district. I believe that is so, there are many more police.

2008. I would ask for it as a fact. I am told it is a fact?—I mean I do not know anything about it of my own knowledge.

The witness withdrew.

Mr. John Ronaldson Lyell, M.A., Chief Clerk at the Marlborough Police Court, called in and examined.

Mr. J. R. Lyell, M.A.

2009. (*Chairman.*) You are Chief Clerk at Marlborough Street Police Court?—I am.

2010. How long have you been there?—I have been Chief Clerk there for 11 years.

2011. Will you please tell the Committee generally, in your own words, what the arrangements are for hearing cab cases at Marlborough Street?—At Marlborough Street we have two afternoons a week set apart for the hearing of cab cases. They have to appear before the magistrate at two o'clock in the afternoon.

2012. May I take it that at Marlborough Street the division of business is that those things which may be called offences of a wicked character, so to speak, are taken in the morning, and that those that are contraventions of statutes rather are taken in the afternoon?—There is a general division of that kind.

2013. Is that division common to the metropolitan police courts generally?—Yes.

2014. It is a general principle?—It is a general principle.

2015. Making that difference between what may be termed an offence and what may be termed a contravention of a statute?—Exactly.

2016. Which might not be a very wicked thing, though punishable?—But you understand, for instance, if a murder case were to be brought in in the afternoon it would be heard.

2017. Quite so; a murder case might possibly come in in the middle of a cab case?—Quite so; or any other serious case. But it would not be taken in the middle of the cab cases. The cab cases would always be heard first. They have precedence of everything during two afternoons a week.

2018. Now have you any information to give us as to the average number and character of the offences there committed by cabmen?—We have in the morning charges of drunkenness in the course of the year.

2019. Cabmen who were drunk would be brought up in the morning, would they?—Yes; who had been apprehended in the night as drunk while in charge of their cab.

2020. And when you speak, then, of the cases in the afternoon you allude to cases like loitering and improper plying for hire, and so on?—Yes, summonses.

2021. You sit in court, I presume, when a great number of these cases are being tried and heard?—I do, sir.

2022. I am not going to ask you any questions upon the construction of the law, because that would be more for the magistrate, but I want to ask you this: Are there many cases in which those who hire cabs are brought up by drivers for not paying—for instance, cases of disputed fares, where the cabman summons the hirer?—Oh, very few indeed; one a week is the average throughout the year.

2023. Have you had many cases of bilking—that is to say, cases where a man runs away and attempts fraudulently to avoid paying anything at all?—No; that is quite beyond my experience as a clerk at Marlborough Street—if you mean by bilking the action of a man who hires a cab and tells the cabman to drive to a certain building, and goes in at one door and disappears at another; we have no experience of that at the court, because, you understand, the man would get off.

2024. (*Mr. Whitmore.*) He is never taken?—Yes.

2025. (*Chairman.*) That may be owing to the great difficulty possibly of detecting these offences?—That is so; he would escape.

2026. Well, then, of those cases in which there is a dispute between the fare and the driver, have you any opinion as to whether in those, as a general rule, the cabman is right or the fare is right? Can any general observation be made?—Where there is a dispute about a fare you may take it that the cabman is almost invariably right, if he summonses the hirer.

2027. Have you many cases of prosecutions or of summonses by the hirer against the cabman, as distinguished from the police? Do many private people bring the cabmen into court?—Very few indeed.

2028. So that most of the cases really are police prosecutions?—Yes.

2029. Now, it has been in evidence before us that to 15,000 cabmen there are about 2,000 of what are called the graver crimes, including drunkenness; and about 2,000 of the minor contraventions, I will call them, such as loitering—in fact, there are nearly 5,000 prosecutions per annum among 15,000 cabmen. Does that strike you as a large average? It is one offence, you see, for every three men nearly?—I think it is a large average, yes.

2030. And of drunkenness there are 1,400 cases, we observe, among 15,000 men?—But with regard to the last answer, in many cases the same driver appears before the magistrate for different offences, and they

would all be considered different cases. For instance, John Smith might appear before the magistrate to-day for being drunk; John Smith might appear next week for loitering; John Smith might appear the week after for plying.

2031. One quite understands that; but still, with 4,900 cases among 15,000 men, that would be, I suppose, a large average?—It is a large average; but still I have known cases of men being over and over and over again convicted of different offences; and I have known also cases where cabmen have been cabmen for twenty-five and thirty years and they had never been once convicted until they came before the magistrate.

2032. (*Mr. Whitmore.*) So that the number of individual cabmen who are proceeded against in the year, in your judgment, is much smaller than the number of cases which has been quoted?—Yes; that is what I wish you to infer.

2033. (*Chairman.*) You mean a good many of the cases would be the same offender over and over again?—Yes.

2034. (*Mr. Lough.*) But does not that apply to all grades of working men—I mean that the same individual may come up—as well as the cabmen?—It applies, generally speaking, to all street offences. It would apply to flower sellers causing an obstruction in the streets.

2035. (*Chairman.*) Now, as at present, Mr. Lyell, the only mode a cabman has of recovering his fare from anyone, either in a bilking case or not in a bilking case, apparently, is to do so as a civil debt?—It is so in consequence of the Summary Jurisdiction Act, 1879, section 6.

2036. From what you have seen, does your experience lead you to think that it might be desirable, particularly in cases of bilking, to give rather wider powers to cabmen, as used to be the case before the Summary Jurisdiction Act?—I have had many years' experience before the Summary Jurisdiction Act of 1879, and I have a very strong opinion that that section, section 6 of that Act, ought to be done away with.

2037. Section 6 of the Summary Jurisdiction Act?—Of 1879, yes. So far as relates to cabmen, you understand.

2038. That is what I mean.—So far as relates to cabmen; and I have a strong opinion that section 41 of the Act of 1 & 2 Will. 4. ought to be re-enacted.

2039. Will you kindly explain the effect that the Summary Jurisdiction Act had upon the old section that you have mentioned in the Act of 1 & 2 Will. 4. c. 22. You might take the statute and please explain to the Committee all the difference?—I think I can explain it without the Act. The old section of Will. 4. treated the nonpayment of a cab fare in the same way as the nonpayment of a fine. It also gave the power, in certain cases of aggravation, to impose imprisonment with hard labour on the hirer who did not pay his fare. By section 6 of the Summary Jurisdiction Act cab fares were put on the same level as any other debt; that is to say, before they could be enforced the cabman must show that the hirer is in a position to pay. First he comes to take out the summons, then he has to appear at the hearing to obtain the order; after the service of the order he has to come a third time to take out a distress warrant, and if a return of nulla bona is made, he comes a fourth time to take out a judgment summons, and a fifth time to the hearing of that when it has to be proved to the satisfaction of the court that the defendant has or has had since the date of the order means to pay. Sometimes the process of distress warrant is omitted.

2040. And all to be done against a man who cannot pay?—Oh, my experience is quite contrary to that. My experience is that the people who do not pay are perfectly able to pay, and my experience is that cabmen almost invariably get their fares and their costs, but they have to wait a considerable time, and are put to a considerable trouble in getting it, and that would be avoided in a very great measure indeed by the re-enacting of the old section of Will. 4.

2041. Are you of opinion that any powers of arresting people for bilking should be given to cabmen; I mean arresting them in the street if they find them?—I have rather a strong opinion against that; that might be made a lever for extensive extortion on the part of cabmen. You mean arresting without warrant, giving a man into custody there and then. "This man does "not pay my fare, he is going to bilk me, take him to "the police station." I say that that would be a lever for extortion.

2042. But with a warrant, you would give power to a magistrate?—By the re-enactment of the section of Will. 4. the magistrate would then have the power, on information, to issue a warrant.

2043. Have you any other suggestions, Mr. Lyell, that you would like to make to the Committee?—Well, it has often struck me that section 35 of 6 & 7 Vict. c. 86., which gives the power to the magistrate to cause the proprietor to pay the cabman's fine, is contrary to our notions of justice at the present time.

2044. Now, would you think that it would be a good plan, where a man was refusing to pay his fare, to give the cabman a right to demand his name and address, and if he refused to give it, or gave a false one, to make that a punishable offence?—Yes, I think that the cabman ought to have the same power as the hirer, to compel the hirer to go with him to a police station when there is a dispute. The hirer can compel the cabman, but I do not think the cabman has the right to do that.

2045. I will come to that in a minute, if you do not mind. The question I asked was whether the cabman ought to have the power to compel the hirer to give his name and address. That is the point?—I think he ought to have, certainly.

2046. As regards the other point, do you not think it possible that a threat of taking a person who is just going down to Brighton, we will say, for a holiday, to the police station would make him pay 5*s.* instead of going there; would not that be used as a lever?—The gentleman going to Brighton would possibly be coming back to London, and he would be in time to lay his complaint against the cabman. I think the cabman ought to have that power.

2047. There is another alternative. Do you think it would be better to take away the power in both cases, leaving it simply optional to go to the police station, rather than giving either of them the power of arrest?—I think that the old provision ought to stand enlarged so as to give the cabman that power.

2048. But do you think it, as a general rule, right, that people should be able to drag one another at once before tribunals? Would you be prepared to extend that generally into law?—I should not be prepared to extend that to every class, but I should not object to give a cabman the power of saying, "If you dispute "your fare, come to the police station." You can reach a police station in five minutes.

2049. I will give an instance of the sort of thing that might occur. A person might be attending the funeral of a relative, and it would be rather awkward for him to be told, "You must at once come to a police station"?—Let him attend the funeral.

2050. Pay the money and summons afterwards?—Pay the money under protest and summons the person afterwards, and that would be an aggravation of the offence that the cabman has committed in the eyes of the magistrate, and would be properly punished.

2051. And you consider that would be better, for both to have this power of taking the other before the tribunals than that neither of them should have it?—Yes, I do.

2052. (*Mr. John Burns*). What is the average number of cases in connexion with cabs that you get at Marlborough Street on Tuesdays and Fridays? That can be put in, you need not trouble about the exact number?—Well, during the winter months we have more cases than during the summer months, as a rule.

2053-4. To what do you attribute the fact that in winter time the cases are considerably in excess of those in the summer?—I have no special knowledge, but my own private opinion might be that it is because during the season and the good weather they have got plenty of business to do, and during the winter they have really to go about the streets and to seek their fares, and in doing so they commit these offences for which they are summoned.

2055. And the difficulty in earning their living, through causes that I will not enumerate, drives them to go near the legal line in winter, while they keep away from it in summer?—Well, I should say so.

Mr. J. R, Lyell, M.A.

29 June 1894.

2056. Can you tell us the proportion of cab cases against cabmen that are dismissed, and the number of them in which the cabman is either fined or imprisoned?—The large majority of the cases are convictions.

2057. Are they mainly for drunkenness?—Not drunkenness only. Plying for hire, loitering, wanton driving, no badge, not giving way, and a great many of those little offences.

2058. Has it come to your knowledge that cabmen complain about the insufficiency of time and consideration that they receive in all London police courts in connexion with their cases?—I have seen it said in the newspapers, but I am prepared to say that in my experience, and I have been at four police courts, there is not the shadow, not the tittle, of foundation for that complaint.

2059. Have you ever heard cabmen say that whilst they were in the witness box or the dock?—What?

2060. That it would be as well to own up to an offence of which they were only partially guilty on purpose to get away, and have a small fine imposed, rather than stay longer with the chance of being acquitted altogether?—If you ask me whether a cabman has said so, I cannot contradict you; but it is so very, very rare that I cannot remember an instance. You understand that the majority of cabmen who are summoned to the police court spontaneously plead guilty. There is no inducement whatever to the cabmen in the court to plead guilty, and the punishment is exactly the same whether they plead guilty or they go into the case and it is proved, because at our court at Marlborough Street, as a rule, for these offences of loitering and plying we have a regular tariff. For instance, in a first offence, that is to say, when a man comes before the magistrate and his licence is clean, our invariable practice is only to fine the man sixpence and the two shillings costs, and that would be whether he pleaded guilty or whether he said that he was not guilty, and the magistrate found him guilty.

2061. You said just now that there was a spontaneous desire on the part of many cabmen to plead guilty?—I meant by that that there was no compulsion whatever.

2062. Yes, "spontaneous" expressed it?—They come before the magistrate: "Do you plead guilty or not?"—"Yes, sir, I plead guilty." Then the policeman says, "This man was loitering at the Criterion on so-and-so day at so-and-so hour." The magistrate says, "Is that right?" The cabman will say, "Yes, sir." That happens in three-fourths of the cases.

2063. Well, but in cases other than these cabmen is there not a spontaneous desire to plead not guilty?—I assure you that is not my experience.

2064. In cases other than those of cabmen, in three-fourths of the cases at the London police courts, is there not a spontaneous desire on the part of defendants to prove their innocence, and to protest against pleading guilty?—People who are summoned for street offences—vanmen for standing longer than necessary with their vans, flower sellers causing an obstruction, and similar offenders plead guilty quite as much as the cabmen do; and really, if you were to ask me about people charged with theft, I should say there were even more pleas of guilty than with cabmen.

2065. You would say that?—Yes.

2066. Then you do not consider the spontaneous desire on the part of cabmen to plead guilty, particularly for the first one or two offences, is due to an impression in the cabman's mind that he had better do that, and that he had better be punished or fined for a slight offence than spend more time and money in proving himself innocent of it?—No. My impression is that they know that they have loitered, or have plied for hire off a standing, and that they plead guilty because they have no defence or because they may have been abusive to the policeman, or guilty of some misconduct, which, if it were all gone into, might aggravate their offence. I believe that is the reason why they plead guilty. But you understand that my impression is this, that a large majority of cabmen are respectable people, and do not come to the police courts. It is only the residuum that come to the police courts, and the residuum in some cases, as in all trades and professions, is very bad.

2067. Then if the cabman were under the impression that undue importance or weight was attached to the policeman's evidence as against his, would you share that view?—The cabman is interested.

2068. In getting off?—The policeman, as far as I can judge, is disinterested.

2069. Then any opinion or impression that a cabman may have to the contrary in your opinion is unfounded?—I do think so.

2070. And policemen who deal with cab cases are moral miracles, are they?—Oh, I do not agree with that at all about their being "moral miracles." But, as a rule, the policeman has never seen the cabman whom he has summoned in his life before.

2071-2. (*Mr. Whitmore.*) What you mean is that by obtaining a conviction a policeman gains no profit to himself?—I do not know of any profit.

2073. Not any actual profit, but any chance of advance in his career?—That would be a matter for the police; that does not come before the police court; I do not know anything about that.

2074. I only wanted rather to show that when you said the policeman was disinterested you were not really justifying Mr. Burns' criticism that therefore he was a moral miracle, but he was merely acting as an ordinary man would—he was not interested?—Exactly so, in the course of his duty; exactly so.

2075. (*Mr. John Burns.*) Then you consider that the uncorroborated evidence of a policeman against a cabman is really more valuable from the point of view of the public interest than the uncorroborated evidence the other way round—of the cabman?—Well, the cabman is interested; he is summoned; he is defendant; he is trying to escape,

2076. A defendant entirely upon the evidence of the policeman that may be unsupported?—Well, in all these cases the magistrate takes all the circumstances into consideration; he takes into consideration the manner in which the constable has given his evidence, the consideration of where the offence has occurred, and all that sort of thing.

2077. Have you formed any opinion as to the advantage that would be given to the public and to the cabman and cabowner if the present system of trying cab cases were abolished and a special court dealing with cab cases and similar cases were instituted?—Well, personally speaking, I should be against a special court for cabmen.

2078. On what ground?—As I should be against a special court for school board cases, because I think that the person, whether he be a magistrate or anybody else who has to deal with those cases, ought to be a person who has more general experience in life; it would tend to contract his views constantly to be trying one set of cases.

2079. (*Mr. Lough.*) I notice in the return you put in, Mr. Lyell, that you have about 50 cases a month during July and August?—Yes.

2080. That is 12 a week, but you get up to 220 cases in some of the winter months, which is 54 a week. Now, I suppose in these winter months when the cases get numerous you find it difficult to deal with them all in a court?—If you mean to ask whether we have plenty of time to deal with them, I think we have plenty of time to deal with the cab cases; I do not consider that we do not have time; you see, as I have said, they generally plead guilty; that does not occupy time, but if they do not plead guilty they receive as much consideration in their cases as any case in the world, and a man may have an hour or an hour and a half to his case, just as it happens, or he may have constant adjournments

2081. But my point was—I showed you that there are 40 additional cases a week in winter?—Yes.

2082. Must not that cause some inconvenience to the court?—Well, they are numerous, certainly, but I do not think they cause much inconvenience. Of course the assemblage of such a large number of defendants must, of necessity, cause some inconvenience.

2083. If they defend the cases and the cases are protracted, then it is still more inconvenient, is it not?—For whom?

2084. Well, for the court, for everybody?—It is our business to attend there each day, and we do not think about convenience or inconvenience to ourselves.

2085. I see; and you do not think that this extra number does, as a matter of fact, overcrowd the court

or give any serious inconvenience to either the clerk, or the magistrate, or the police?—I should not say that it gives serious inconvenience.

2086. It does give some inconvenience, though?—Yes, it may give some. I really have not made up my mind about the convenience or inconvenience; I really cannot give a decided opinion about that; personally I do not see much inconvenience.

2087. Well, do you think this extra number which you spoke of, when it arises in the winter months, creates a disposition to hurry through the cases a little?—Never; I say positively, never.

2088. I want now to ask you a question about the bilking; I did not catch quite clearly whether you are in favour of a man who pays nothing being brought to the police station because he pays nothing, to give his name and address, that it may be inquired into; what do you say about that class of bilker?—If a man pays nothing I certainly think that the cabman ought to have power to take him to the police station to get his name and address.

2089. In order that they may check his name and address?—Yes, to get it.

2090. But if it is a question of short fare, of paying 2*s.* instead of 2*s.* 6*d.* would you allow him in that case to be taken to the police station?—I think it would not become necessary, and I do not think that the cabman would ever seek to take a fare to the police station in a case of that sort.

2091. You said in answer to Mr. Burns that the evidence of the police is as a matter of fact generally accepted?—Certainly.

2092. You said that his manner of giving evidence impressed the magistrate, but do you not think he gets more practice in giving evidence than the cabman who is brought up occasionally?—Oh, I said that was only one thing; I said the magistrate took all the surrounding circumstances in the case into consideration.

2093. Are you of opinion, Mr. Lyell, that the magistrate is influenced favourably to the constables, the policeman's evidence, by the manner in which he gives it?—In certain cases I should say——

2094. (*Chairman*). I understand your question is this: as a fact, do magistrates incline to believe the word of constables more than cabmen, as a general rule; that is the question—do they incline, when a constable says one thing and the cabman says the reverse, to believe the constable, as a rule, more than the cabman or not?—I am unable to give a general statement as to that; it would depend entirely on the case; each case has to stand entirely on its own legs.

2095. (*Mr. John Burns.*) But may I interpose here? You said in a previous answer to a previous question that the cabman was interested and the policeman was disinterested?—Yes, I do say that still.

2096-7. Well, does not that at the outset convey to your mind, as it does to mine, that preference would be given by the magistrate to the policeman's evidence as against the cabman; the fact that the cabman is a defendant necessarily creates in the mind of a magistrate a preference in favour of the constable who gives evidence against the defendant?—I should say if the magistrate is under the impression that the constable is disinterested and the cabman is interested, he would prefer the evidence of the constable.

2098. (*Mr. Lough.*) Now, I want to put a question or two on the point of the policeman being disinterested. Do you not think a policeman has got an interest in proving any case that he brings into the court?—I do think a policeman has got an interest in proving any case that he brings into the court, but I do not see what interest he has in first bringing the case in if he cannot prove it.

2099. If he hastily brings it to the court it is his interest as an officer to prove it if he can?—Oh, of course it is.

2100. Well, I think there is quite as much interest then on his side as there is on the side of the cabman; the cabman after all has only an interest up to 2*s.* 6*d.*?—When I said that the policeman was disinterested I meant this: here is a policeman standing in the street to regulate the traffic; he sees the cabman causing an obstruction, a man that he never saw in his life before; what possible interest has he for taking the man, a total stranger, and haling him before a magistrate?

2101. (*Mr. John Burns.*) Except that he might have sworn at the cabman, and the cabman might have sworn at him?—If the cabman swore at him then he might be incensed.

2102. Or he at the cabman?

2103. (*Mr. Lough.*) Have you ever heard, without going so far as this swearing, of human beings attempting to assert authority?—Oh, yes, I have heard that.

2104. You have; and a policeman is not above the temptations of mankind generally?—Of course not.

2105. And if he knows that he can bring any poor cabman before a court that will rather believe him than the cabman, he would be inclined to take him?—That is an argument.

2106. You said you could not conceive the reason, and that is why I was suggesting it?—That is an argument, but I may say in answer to all these questions that I am of opinion that before summonses should be taken out against cabmen there ought to be some personal investigation by the superior officer of the constable into the circumstances of each case, and I think it would also be a very good thing if a system of cautions could be inaugurated, that is to say, that a printed caution might be served on the cabman for the first offence.

2107. You think it is a little harsh to bring them into the court where they are brought now?—No, I will not say it is harsh, because the police have a very difficult duty to perform in the street, for instance at Piccadilly Circus; as regards the traffic they have a very difficult duty, but I think in many cases a caution would have the same effect as a first summons.

2108. And that if there was some kind of a barrier between these small cases and the police court it might be well; that is your opinion?—Somethinglike what I have indicated.

2109. Some person to investigate what the constable is going to do before he does it?—Exactly.

2110. Well now, you said that you have an invariable rule at Marlborough Street to fine 6*d.* for a first offence?—I say our own magistrate has that rule—you know there are strange magistrates who come—but you may take it that is our general rule. If I used the word "invariable," that is the general rule.

2111. Is this marked on the licence?—Certainly; by Act of Parliament the magistrate has no power to do otherwise. It is a great cause of complaint by cabmen, that these trifling offences are marked on their licences; the magistrate has no discretion in the matter by Act of Parliament.

2112. If the magistrate does not inflict a penalty of 6*d.* and only charges costs, then it is not marked on the licence, is not that so?—That is so.

2113. Well then the magistrate could do that in preference to charging 6*d.*, could he not?—Oh, yes, but there is an extreme difficulty in enforcing the costs.

2114. It is not easier to get the costs and the 6*d.* than to get the costs without the 6*d.*?—It is easier to get the costs and the 6*d.* than the costs alone.

2115. At any rate the 6*d.* is marked on the licence?—Yes, but when I said 6*d.* and costs, I might have added some magistrates make it 2*s.* 6*d.* fine, instead of 6*d.* and costs; but it is the same amount to the cabman.

2116. I want to ask you one other question about the winter months when the court is crowded; at such a time, when you have 50 cases a day instead of six or eight, which is the summer average, or ten, supposing the cabman brings witnesses to state his side of the case, is there any impatience of the cabman's witnesses manifested?—None.

2117. There is no influence exerted in the court against the cabman bringing up witnesses?—Certainly not.

2118. (*Mr. Whitmore.*) Just let me ask, in these winter months, when the amount of cab work is heavier in your court, what does happen; does the court sit longer in consequence?—As a rule, everything gives way to the cabmen, and the cabmen's cases are heard, few or many, whatever be the number.

2119. Yes, but you have not quite answered my question: there is an increase of work; is that increased amount of work met by the court sitting longer hours than is the case in summer, when the amount of work is less?—I do not think it is necessary in winter to sit

Mr. J. R. Lyell, M.A.

29 June 1894

longer hours, because we have plenty of time to dispose of them.

2120. You mean there is less work of other kinds in the winter?—No, but we arrange the work, so that in an afternoon from two to five we can hear the number of cab cases that come before us in the winter time without any particular inconvenience; and the reason of that, as I have said before, is that they occupy a very short time indeed, because they voluntarily plead guilty; you cannot spend time if a man says he admits everything.

2121. But still, if in addition to the ordinary work of your court you get in August 53 cab cases, whereas in March you get 218, I do not quite know, if you only sit the same hours in March that you do in August, how you get through the work with the same amount of care for each case?—We have plenty of time to do the number we have in the winter months. The average is 25 a day in the winter months, I think, about—you have the figures there—and the majority of them only take two minutes or three minutes at the outside. That is even in the winter time when there are 25; we should not have more than 25 cab cases—cabmen.

2122. Now tell me this, are the hours of a London police court fixed hours or are they elastic?—They are from ten to five.

2123. Ten to five strictly?—Ten to five by Act of Parliament. When there is any particular case we sit over; we very often sit after five o'clock, and if a cab case went over five o'clock we sit.

2124. Suppose there is an unusual amount of business before the court, or an unusually lengthy cab case, in that case the magistrate would sit beyond the usual hour?—Oh, yes; we should not ask them to come again; it has happened, but it is very rare indeed that cabmen have to come twice unless it is to suit themselves, you understand.

2125. (*Mr. Hopwood.*) Who are your magistrates now at Marlborough Street, Mr. Lyell?—Mr. Newton and Mr. Hannay.

2126. Do I understand from you that the practice at Marlborough Street is this: the same penalty is inflicted, upon a tariff system, whether the defendant pleads guilty or not?—Yes; you understand that if there is any special aggravation then the magistrate would impose a larger fine, but as a rule, if there is no special aggravation, we have a regular tariff.

2127. That is, if there is an aggravation it is used against the defendant, but any exceptional circumstances by way of mitigation are not taken into consideration?—That is a perversion of what I said, quite a perversion.

2128. I am not putting it against you, Mr. Lyell, at all in any hostile spirit?—No, but still——

2129. I did not intend to put it against you in any hostile spirit, but I think that it follows, does it not, from your statement that a tariff of penalties is imposed, and if there are aggravating circumstances the tariff is departed from, but if, on the other hand, there are circumstances of peculiar mitigation they are not taken into consideration if the tariff is maintained in those cases?—In cases that plead guilty, the offence is just mentioned; the magistrate knows what sort of offence it is, if it is said, for instance, to be plying for hire in the Haymarket he knows exactly what it is; he asks what is the state of the cabman's licence, and if it is clean he has his tariff, 2*s.* 6*d.* the first time, and so on a second or third, but he listens to anything that the cabman has to say invariably; if the cabman wishes to say anything he has ample opportunity, and every weight is given to what the cabman says.

2130. But the punishment remains the same?—Oh, dear no; if a case is gone into and there are mitigating circumstances the magistrate of course would mitigate the penalty, but I am speaking as a general rule of cases where there is no contest at all. In cases where there is no contest we have the tariff. Where there are many cases indistinguishable from one another, the same fine comes to be inflicted.

2131. Now, in your experience of matters of this kind, of criminal matters generally, is not the only inducement to plead guilty which is held out to a person the possibility of a mitigated sentence?—My experience in police courts is this, that no inducement is held out to a person charged with any description of offence to plead guilty.

2132. Not by anybody unless it is the adviser of the prisoner; but as a principle of criminal law is not the inducement which the prisoner has in himself to plead guilty that he will have a lighter sentence than if he fights the case out to the bitter end and is proved to be guilty?—I suppose so; I have never been a defendant and I cannot enter into his feelings, but I suppose that would be so; that is a principle that is applied in every case.

2133. (*Chairman.*) To plead guilty under certain circumstances indicates a repentant mind, which might have its effect in the sentence?—Exactly.

2134. Higher than that you do not mean to put it?—That is a common principle in all courts.

2135. (*Mr. Hopwood.*) I was putting it to the witness as a common principle; but then your tariff of offences at Marlborough Street hardly falls in with that principle?—I do not see it.

2136. Very well, a man goes to the court and says, "I will plead guilty, in the hope that I may have only "to pay 2*s.* costs under the peculiar circumstances of "the case," but according to your practice, the magistrate takes down the bill of fare, and he says, "Oh, "you plead guilty, 1*s.* and 2*s.* costs; indorse the "licence"?—Yes, we hear what he has to say, and if he has any mitigating circumstances he may be discharged, and sometimes is.

2137. Although he pleads guilty?—Oh, dear, yes, if he mentions circumstances. He may have pleaded guilty under a misapprehension or something like that; he would be discharged; we hear all that he has to say. If he pleads guilty, he is asked "What have you to say?"

2138. Then, as a matter of fact, the tariff comes to nothing?—You see I gave you an example of it, that the man admits everything, he pleads guilty, and the magistrate, even after he pleads guilty, and he has heard the constable, will say, "Is that right now?" and the man will say "Yes," and then the magistrate has in his mind for a first offence a certain fine.

2139. A fixed, stereotyped penalty by the practice of the court?—In these cases, in the ordinary cases, where there is nothing to distinguish them.

2140. Very well, then, we will take it this way, to sum it up, that where there are no extraordinary circumstances at all, a fixed tariff is inflicted; but where there are any extraordinary circumstances produced, either on the one side or the other, the tariff is departed from?—The tariff is departed from on either side.

2141. (*Mr. Whitmore.*) Is not that giving too much importance to the tariff? I mean, is not the tariff really this, it is the guiding principle which regulates the scale of punishment?—That is so.

2142. And it does not govern the particular punishment which will be awarded in each particular case necessarily?—That is so, certainly.

2143. (*Mr. Hopwood.*) I much appreciated a suggestion you made, Mr. Lyell, as to a caution instead of a summons for the first offence, but can you tell the Committee the process of administration that you have laid down in order to ensure that a cabman should not be summoned for a first offence?—I do not quite follow you.

2144. Let me put it to you in this way. A cabman is loitering, the policeman takes his number with the view of summoning him; he reports him to the district superintendent; would the police authorities be able to tell when the man is brought into the station whether it was a first offence or not?—I think they would be able.

2145. I shall be glad to hear they can?—I think they would be able, because they have a register of the convictions of all cabmen at Scotland Yard.

2146. The number of the cab, the name of the cabman and his address, and the convictions to which he has been subject?—They have the convictions against the cabmen, against their names.

2147. Then, as I understand it, your suggestion is this, that where a cabman is reported at Scotland Yard for a trifling offence, and it is found to be the first offence, he should be served by the police with a cautionary notice, and not with a summons?—I think so; it is my own idea.

2148. (*Mr. John Burns.*) Do you not think that, instead of a cautionary notice from the police for the first offence, that a good sound talking to from the

inspector would perhaps have the desired effect?—That would be very excellent, but then do you not see the cabman would lose his time in appearing at the police station before the inspector; that would be most excellent, but I was thinking of the cabman.

2149. (*Mr. Hopwood.*) Then upon the question of procedure, Mr. Lyell, do I understand that the police constable who reports the cabman to Scotland Yard applies for the summons before the magistrate?—The police-constable, as far as I understand, has no power of interference whatever, has no power to cause a summons to be taken out; he reports the circumstances, and it is a superior officer of police who directs that a summons shall be taken out.

2150. Then is it the superior officer of police who attends before the magistrate to apply for the summons?—The inspector generally.

2151. Does the inspector put in an application in writing, detailing the facts upon which the summons is granted?—Yes, a written information.

2152. A written information?—A written information; it does not go into details; I will give you an example. Loitering in the street would be mentioned, loitering in Piccadilly Circus, the hour of the day 11.15 p.m., day the fourth of the month, then the number of the cab, and the badge of the driver would be put down.

2153. Do you not think that it would be an improvement upon that procedure if a police constable had in the first place to file a deposition stating in detail the facts upon which the summons was to be applied for, and that when the summons is applied for that detailed deposition should be handed to the magistrate?—In addition to his evidence on oath?

2154. Before any evidence is given, when the summons is applied for?—Oh, I should see no objection except that it would in practice, I should think, cause considerable extra work to the police, that is all.

2155. It is the usual practice in other classes of case, I believe?—To lay informations?

2156. Yes?—But not by special Act of Parliament. You want a summons for assault. Mr. Burns has assaulted you; you say, "I want a summons for "assault against Mr. Burns," and you get it, as a rule, without any written evidence at all; it is not necessary to have written informations in summary cases before granting summonses.

2157. Does it not strike you that a detailed deposition filed upon the application for the summons where the charge is made by a policeman would not only have the effect of enabling the accused and the court to gauge the circumstances upon which the charge is founded, but would give, at the same time, material for cross-examination of the constable after the facts have passed from his mind?—I see no objection to that at all; I only said that perhaps it would give the police extra work.

2158. Now as to bilking, I gathered from your replies that you were not in favour of arrest without warrant under any circumstances?—No, I think that that might be a means of extortion.

2519. But you are in favour of an amendment of the law, under which the cabman is to have power to take his fare to the police station where no money is paid?—Where no money is paid, and have the address of the hirer ascertained.

2160. But how are you to test whether there is fraudulent intent on the part of the fare under such circumstances?—I think that a cabman ought not to have that immense engine in his hand of giving a man into custody in an ordinary case for not paying his fare. I think the public would never permit that for one moment.

2161. Then how about your suggestion, that the cabman should take the fare to the police court?—I said that the cabman ought to have the power to compel the hirer if he does not pay any money to go to the police station and there ascertain his name and address; he then can come and get process the next day.

2162. Do you put it as strongly as this, that the cabman should have power to take his fare to the police station for that purpose where there is no suggestion of fraud at all?—Well, there would be a suggestion of fraud if he did not believe the hirer's assertion that his name and address were so and so; but where he believes that the name and address are correctly given, I do not think that he requires to go to the police station.

2163. But he would have the power of taking the fare to the police station?—Well, yes, he might have the power, but I do not think he would exercise it in those cases where there was no fraud.

2164. That is to say you would make the cabman the judge, whether in his discretion——?—I would give the cabman the same power as the hirer has, exactly.

2165. That is your deliberate opinion?—Yes, I think the cabman should have the same power as the hirer has, and neither more nor less.

2166. Would you apply that law to other offences for which the cabman may be charged summarily?

2167. (*Mr. John Burns.*) You said that you would give the cabman equal power with the hirer?—Certainly.

2168. Had you in your mind the fact that under the existing law the hirer now can insist on the cabman going to the police station?—Yes.

2169. And you would give the cabman co-equal power with the hirer?—Yes, I say that they should be placed upon the same footing.

2170. (*Mr. Hopwood.*) I want to ask a question or two now upon the Summary Jurisdiction Act, not the law, but the practice. Under the Summary Jurisdiction Act I think that the magistrate has power to give time to pay, has he not?—Yes.

2171. Is that a power which is frequently exercised at your court?—Oh yes, it is frequently exercised.

2172. It is exercised, of course, on the application of the cabman?—You mean in cab cases?

2173. I do, yes.—Well, it is a power not frequently exercised in cab cases.

2174. Why not?—Because we find that they do not pay; when they get time they do not pay, and I have frequently seen that a man has said in court that he has not a halfpenny to pay, is fined, and when taken out, he has produced, so I am told, a handful of silver. Now that is what has happened many times in our experience at Marlborough Street.

2175. Now, do the magistrates at Marlborough Street so far endeavour to make the punishment fit the crime as to impose a fine only of such a limited amount as they feel will be within the competence of the cabman to pay?—Oh, certainly, and if you ask me, I am under the impression that the fines imposed at Marlborough Street on cabmen are much less than at any other police court.

2176. Can you give me the per-centage of cabmen who go to prison from inability to pay the fines?—Very very few indeed.

2177. (*Mr. John Burns.*) As much as five per cent.?—I should say less than five out of 100.

2178. (*Mr. Hopwood.*) Less than five per cent.?—I think so; I have not gone into the statistics, that is only my general impression, five per cent.

2179. When it is demonstrated that the man cannot pay the fine, and must go to prison, is it in the competence of the magistrate either to lessen the amount of the fine or to give time to pay? When the man cannot pay, does the magistrate mitigate the fine?—He has that power, and he exercises it on rare occasions.

2180. In mercy; in order to keep a man out of gaol?—Yes.

2181. You have distinct experience of an exercise of that power?—I think that that happens at least three or four times every week; it is a rare thing that we send a man to prison in default of not being able to pay 2*s.* 6*d.*; they generally do pay the 2*s.* 6*d.*

2182. In fact you endeavour in dealing with these cab cases to divide the offences into two classes. Those which, in the opinion of the magistrate, may be properly met by the infliction of a fine, and those which, in his judgment, could only be met by imprisonment?—They are mostly all inflictions of fines, but you see there are some defendants sent to prison in default of paying the fine.

2183. I know, but what I want to get from you is this; you tell me that the magistrate considers, in each case, whether the man is likely to be able to pay the fine?—Yes.

Mr. J. R. Lyell, M.A.
29 June 1894.

2184. Presumably because the magistrate does not think it is a case for imprisonment; is not that so?—When the fine is demanded and the cabman tells the gaoler, "Well, I have not got that money," he often goes into the circumstances of his case with the gaoler, who was not in court when the fine was inflicted, to explain his inability to pay, and the gaoler before the close of the day will either tell me or he will tell the magistrate personally what he has heard, and the magistrate, in the case of small fines, says, "Very well, I will remit it; let him go."

2185. That is the practice?—Yes.

2186. But I have not quite got an answer to my first point; does the magistrate, when estimating the amount of the fine which he proposes to inflict, consider whether it is likely to send the man to prison or not?—A cabman comes before the court and is fined 2*s.* 6*d.*; the magistrate knows that he has the power of sending him to prison of course, but he knows also that in almost 99 cases out of the 100 the money will be paid, and, as I have told you, very often the cabman himself will tell the gaoler his circumstances; but then, of course, if we have any ground for believing that his statement is not true, the magistrate would not remit the fine.

2187. Then do I understand from you that whether a man goes to prison or not for one of these cab offences depends to a great extent upon the good offices of the gaoler?—He is our officer, and they tell him their tale.

2188. (*Mr. Whitmore.*) How do you mean he is your officer?—He is the officer of the court, and he does that. There is no special rule or regulation; it has by custom devolved upon that officer.

2189. (*Mr. John Burns.*) And he is the recognised medium of communication between the prisoner and the magistrate, under the circumstances?—Certainly.

2190. (*Mr. Hopwood.*) You answer my question in the affirmative?—What question was it?

2191. The last question I put to you, whether a man has to go to prison or not for one of these cab offences depends to a great extent upon the good offices of the gaoler?—The man may say that he is not able to pay the fine, and Mr. Newton will say immediately, "Very well, "tell all the circumstances to the gaoler," and he says that in open court.

2192. Are there many appeals to quarter sessions in hackney carriage cases?—Oh, no, there are very few indeed.

2193. There is a right of appeal?—Not unless the fine is over 3*l.*

2194. Not in cases in which there is infliction of imprisonment, without the option of a fine?—Oh yes, in cases of a day's imprisonment they have the power to appeal.

2195. But there are not many appeals?—No, I do not remember any.

2196. (*Mr. Bayley.*) I think you suggested that a cabman might be let off with a caution for the first offence?—By the police, before they were brought before the magistrate.

2197. Yes, I understood so; do you suggest that that should apply to drivers of all kinds of traffic, tradesmen's carts and vans?—I think it would be an excellent thing for everyone.

2198. When a cabman is summoned, we will say, for drunkenness or loitering, do you not think that the summons should be served upon the offender himself?—You would relieve the proprietor, you think.

2199. Well, I put it to you that the offender, that the man who has been guilty of drunkenness, should be the person who is summoned?—Well, you see, ever since 1 & 2 Will. 4. the proprietors have been obliged to produce every man, and we have got into that custom.

2200. The cabman himself is treated like a child, and some one else is summoned, who has got to bring him to the court; that is so in practice, is it not?—Well, the master, in whose employ he is, knows him and he sees him every day. He is by law compelled to produce him, and if he does not produce him he is fined.

2201. That is exactly what I am putting to you?—Well, that is it.

2202. But is not that a roundabout way of getting a man summoned?—Of course, in almost every case except cab offences the prisoner himself is summoned.

2203. Exactly; can you give me any reason why an exception should be made in the case of cabmen?—I think it is more convenient.

2204. When another person is drunk, is it usual to summon his employer?—No.

2205. Then why should an exception be made in the case of cabmen?—I think there are more facilities in that way for getting at the man himself; I do not think that there is any harm done to the proprietors.

2206. That is not the point. Why are there greater facilities for getting a cabman through the man he hires his cab from than by going to the cabman direct?—Well, that is a matter you are quite as able to judge of as I am; that is a matter rather for our law-givers.

2207. (*Mr. John Burns.*) But is not the liability of a cabmaster as against that of the butcher, say, due to the fact that a cab-master takes out the licence for his cab, which the private butcher does not?—Yes, I suppose so; yes.

2208. Roughly, what is the age of the cab defendants at Marlborough Street; are they mostly young men or mostly old men, or middle-aged men?—Twenty-five to thirty-five I should think.

2209. Is there a greater proportion of young men than old men before you?—I should say the most of them are between 25 and 30.

2210. That is, rather under 30 than over 30?—Well, that is so: I think that is about the average. There are some old cabmen, you know,——

2211. (*Chairman.*) There is just one question I wanted to ask you. You told us, I think, that you are against giving the power of arrest to cabmen, arrest without warrant. Do I understand that in no case, not in bilking, you would have arrest without warrant?—If bilking were properly defined and made a criminal offence, and a man were found in the act of committing that offence, I should say that the police ought to arrest him.

2212. That is when he is in the act of committing the offence; I want to know, suppose he has committed it in the morning, and he is seen in the afternoon, would you give a power of arrest there?—Certainly not.

2213. What I want to come to is this: you have told us that you would be in favour of allowing a cabman to take a person who is either endeavouring to bilk him or to pay too little to the police station. Supposing the person will not go, what is the cabman to do? Suppose he says, "I will not get into your cab and go"?—I should say that the cabman ought to be able by law to have power to call a constable and make him go.

2214. What is that but arresting him?—Arresting him is taking him into custody on a charge for an offence, but this is merely compelling a man to go to a place where his address may be ascertained.

2215. But what is the difference between compelling a man to go to a police station and arresting him and taking him there?—A man that is arrested is taken to the police station and put into a cell, and he is kept there until he is taken before a magistrate. A man whose address only is required is taken to the police station and when he gives it he is let go.

2216. (*Mr. John Burns.*) But is it not rather the difference between option and compulsion which means the restraint of a man's individual freedom?—You see the hirer can take the driver.

2217. (*Chairman.*) Then, Mr. Lyell, you see the hirer has no power to take the cabman by the neck and drag him there by force; all he has the power to do is to have him fined if he refuses to go. The hirer can say no more than, "Come to the nearest police station." If the man will not come he can summons him for that as an offence, but it is a very different thing from saying, "Now, then, get into that cab; if you do not I "will make you; I will arrest you; I will take you to "the police station by force." That is the point I want to ask you about?—I should say that would be evidence of extreme fraud if a man persisted in refusing to give his name and address and paid nothing for the fare.

2218–9. Would you be in favour of that being done?—Yes, in such cases I should.

2220. And in all cases of criminal law generally of a similar character?—Yes.

Mr. J. R. Lyell, M.A.

29 June 1894.

The witness withdrew.

Adjourned till Monday at 11 a.m.

FIFTH DAY.

Monday, 2nd July 1894.

PRESENT:

MR. HENRY CUNYNGHAME (CHAIRMAN, PRESIDING).

MR. F. J. S. HOPWOOD, C.M.G.
MR. E. H. BAYLEY, M.P.
MR. JOHN BURNS, M.P.
MR. T. LOUGH, M.P.
MR. C. A. WHITMORE, M.P.

MR. MALCOLM DELEVINGNE, *Secretary.*

Captain J. W. NOTT BOWER, Head Constable of Liverpool, called in and examined

Capt. J. W. Nott Bower.

2 July 1894.

2221. (*Chairman.*) You are the Head Constable of Liverpool?—Yes.

2222. Would you tell us, please, who is the authority in Liverpool by whom the cab laws are administered?—The city council is the authority, and both carriages and drivers are licensed under the Liverpool Improvement Act of 1842; and the city council exercise their authority through a sub-committee of the watch committee, which is named the Hackney Carriage Committee.

2223. (*Mr. John Burns.*) Before we leave that point it would be interesting to know what is the police supervisory connexion between the council, through its watch committee, and the cab drivers?—Well, before any licences are granted to carriages, the carriages themselves are submitted for inspection to the police inspectors of hackney carriages, and they have to obtain a certificate of fitness from the police inspector. The certificate is only granted to carriages which meet the requirements of the council as to size and so forth, and I have a return with me which shows the requirements as laid down by the council.

2224. (*Chairman.*) You will put that in?—Yes, I will put that in.

2225. Would you tell us the year and the date of that Liverpool Improvement Act?—1842.

2226. And there are Amending Acts, I daresay?—Not, I think, with reference to hackney carriages.

2227–8. I suppose we may take it it is through the watch committee that the council act?—The council act through the watch committee and a sub-committee of the watch committee that is appointed specially to deal with the hackney carriages.

2229. (*Mr. John Burns.*) And under them the police act?—Yes.

2230. (*Chairman.*) We are not going further into the constitution of it—simply that fact. What we want to get at is simply the state of law that exists. You were describing to us the system of licensing cabs and drivers in Liverpool?—I had gone so far as the dimensions, the police have also to report on the upholstery and the harness of the cabs, that they are in proper repair, and they have also to report that the horses are fit for the work that is required of them.

2231. You are acquainted, I presume, with the present cabs of London? You have been in London, I mean, several times?—Oh, yes.

2232. Now, would you give us your view as to which are best, the cabs of Liverpool or of London?—I consider that the four-wheeled cabs in Liverpool are decidedly superior to the four-wheeled cabs in London, taken as a whole; and I think with regard to hansoms that London has an equal advantage over Liverpool.

2233. Do you issue any notice to persons who wish to have licences given them for cabs; do you issue any notice of requirements to them?—No, we do not. They are informed verbally at the hackney carriage office, where they make inquiries. They know that they have to apply at the office, and when they have given that notice and the police inspector has signed the certificate of fitness that I have alluded to, they then take the certificateto the town clerk's office, and at the town clerk's office they sign a formal requisition for the licence, stating on that requisition the rates of fares at which they intend to ply for hire. It is left optional in Liverpool for the owners of cabs to specify what fares they intend to charge.

2234. They do not paint that on the outside of the cab, do they?—They have painted on the plates in the cabs the fares that they charge.

2235. The inside plates?—The inside plates.

2236. You mean any proprietor is allowed to fix any price he likes?—Fix any price he likes; but as matter of fact they all fix one price, a shilling a mile.

2237. And they fix the same tariff for waiting?—There are no detention charges in Liverpool.

2238. Am I to understand that where a person keeps a cab waiting for an hour extra——?—The driver has no legal claim to anything extra, no matter what length of time he keeps it, but he has the right of option as to whether the total fare charged is by time or distance.

2239. But the driver would not be bound to wait?—Yes, but he could exercise the option I have just mentioned. The only provision that affects detention at all is that where a man takes a cab out for a certain distance, paying by mileage, and then detains the cabman, he is entitled to take the return fare at half the charges of the out fare. It is a shilling a mile out, sixpence a mile back, provided he does not detain him beyond a certain time; if he detains him beyond that time he has to pay the full fare back.

2240. Then I gather that there is no compulsion at Liverpool on a driver to take a fare?—Yes; certainly the driver is bound to take the fare that is offered to him.

2241. At the price that happens to be painted on his cab?—At the price that happens to be painted on his cab.

2242. Supposing he does not do so, what could be done; could he be punished?—Well, he would be brought before the hackney cab commitee, and dealt with.

2243. Therefore he is not at liberty to change his tariff every morning; he would have to stick to the tariff?—He would have to stick to the tariff. If he wished to change his tariff he would have to come down and obtain a separate licence, because the fares are named in the licence.

2244. So that almost all the cabs in Liverpool would adopt one uniform tariff?—Yes.

Capt. J. W. Nott Bower.

2 July 1894.

2245. Have you got a copy of that tariff for us?—I have not a copy. It is a shilling a mile or 2*s.* per hour.

2246. There would be a good many other things more than the shilling a mile?—No; there are no extra charges for passengers or luggage; they are all included in the shilling a mile.

2247. Are there limitations as to the number of passengers that may go in a cab?—Limitations, according to the size of the cab—two in a hansom; five in a four-wheeler—four inside and one on the box.

2248. And limitations as to baggage?—I do not think there are. I would rather like to refer to the hackney carriage byelaws; I have them with me.

2249. If you would hand them in; we do not want to go particularly into that?—I hand them in.

2250. One would like to know next the number—I will come presently to driver's licences. But in the meantime one would like to ask is there a limitation in the number of cabs in Liverpool?—No; the statute empowers the watch committee, or the council, to limit the number, but it has never been put in force; no limitation has ever been tried with us.

2251. So that every cab then that comes up to what you consider a proper standard would be licensed as by right in fact?—Yes.

2252. Unless the watch committee should otherwise order?—Yes.

2253. What is the number of cabs licensed by you, say, at present?—There are 771 licensed for the year 1893.

2254. How many hansoms and how many four-wheelers?—I am afraid I have not got the figures for that.

2255–6. (*Mr. John Burns.*) Would you send the figures?—Oh yes, certainly.*

2257. Is there any specified area within which those cabs are licensed to drive; would it be for the whole area?—Within eight miles of the city boundary.

2258. Up to the city boundary, and eight miles beyond?—And eight miles beyond.

2259. And the same prices would rule, would they, over the whole area that you have described?—That is so, yes.

2260. Eight miles beyond the city boundary?—Yes.

2261. Can you first tell us at all what is the population residing in the city boundary; and then can you give us an idea of the population within that larger boundary?—Yes, the population within the city boundary by the census of 1891 was 517,980. I could only give a very rough guess over the larger area, but I should think it would be about 800,000.

2262. (*Mr. John Burns.*) At this moment could you tell us the radius of the city boundary?—The city is bounded on one side by the river, the centre of the city is really on one edge of the boundary, down by the river.

2263–4. (*Chairman.*) Perhaps you could give us the area of the city, roughly in square miles, very roughly?—It would be about two miles by, I should think, five.

2265. That is five long and two deep?—Five along the river and two from the river.

2266. (*Chairman.*) What are the fees that you charge upon carriage licences?—The owner would first of all have to deposit 3*s.* as security for the plates; he is supplied with three plates—an inside plate, an outside plate, and a fare plate.

2267. At the expense of the committee?—At the expense of the committee.

2968. What else do they give him—a book of fares or anything of that kind, or is that given to the driver?—That is given to the driver.

2269. Then we will deal with that presently, if you please. We are only dealing with the proprietor at present, to keep things clear. Three plates they get?—Three plates.

2270. Now what do they pay?—They pay 3*s.* deposit on those plates—would you kindly leave that question over for a little?

2271. It is a matter of some importance; you will give us a correct view of it afterwards?—Oh, yes, certainly.*

2272. At what I will call the examination of the cab, when it comes up for the first time for its licence, do they examine the horses as well as the cab?—Yes.

2273. But it might be, might it not, where a proprietor had several cabs and a large number of horses, that he would be interchanging the horses between cab and cab—he would not drive necessarily the same horse?—That of course would be possible. They have no system, I should say, in Liverpool, of two horses to one cab. There is only one horse to the one cab. They have no system similar to that in London; and if they were driving a bad horse in the cab it would be found out.

2274. But it would not be illegal to change the horse for convenience?—It would not be strictly illegal to put in a bad horse, but practically if he took advantage of the committee, and used a horse that would not have been licensed, then he would be hauled up at once and charged with an offence.

2275. At the examination he presents a horse which he represents it is his intention, provided it is well, to use for that cab?—That is so.

2276–7. Well, now, in addition to that examination, is there any inspection of the cabs and horses from time to time?—Yes, there is an annual inspection of all cabs and horses a month prior to the renewal of the licence; the licence is an annual one.

2278. But in addition to that, is there any weekly, fortnightly, or monthly inspection of any kind?—There is a daily inspection of the cabs on the stands by the officers of the hackney carriage department. The inspectors spend a good deal of their time seeing to the stands—seeing that the cabs are kept up to the mark, seeing that the drivers are properly conducted, and so forth.

2279. Do you set aside a special staff for that purpose?—Yes, we have six police inspectors appointed for the purpose.

2780. Now, what grade would those inspectors be in the police; they are out of the police force?—They are out of the police force.

2781–2. What grade would they be?—They have been at various grades at different times. At the present time we have one inspector, one sergeant, and four police constables.

2283. Do you give the preference, in appointing those, to persons who have had any experience in cabs and horses—as a fact, I mean?—They have had experience before getting into the higher ranks, but not in the original appointment to the department; as a rule, the inspector in that department would be a man who has risen in the department.

2284. He would have acquired his knowledge of horses and cabs simply by experience?—That is so.

2285. You do not select preferentially some person who has been a coachmaker, for instance?—No.

2286. Or a groom?—No.

2287. Or coachman?—No. There was a demand recently made by the Trades Council that that should be done, but the hackney carriage committee did not think it very desirable to lay down any rule of that kind.

2288. Was any view expressed by the committee—any reasons expressed that you are able to tell us why they thought it would be inexpedient to do that?—They thought that the principal duties of these officers were disciplinary—that the knowledge of cabs, horses, and upholstery which is required was only a superficial one, that any man of ordinary intelligence could discharge the duties, and that a man appointed simply on account of his knowledge of upholstery of cabs might not be the very best man to have to deal with the conduct of the drivers.

2289. I will not ask you your view, whether you concur in that, because, perhaps, it would be better to take the view of the committee?—I think I would rather take the view of the committee.

* *See* Appendix III. 11. 2.

2290. If you have anything to say about that we should be glad to hear it?—I do not really differ very much from the committee in this; I think I rather agree with the committee generally. I think, if you could get the necessary qualifications of other sorts conjoined with some knowledge of cabs ——

2291. It would be an advantage, you mean?—It would be advantageous. But, I think, to have an intelligent constable, who has a good manner, and gets on pleasantly with the men, and at the same time has the power of keeping them in order is more important than the mere knowledge of the trade.

2292. True. It might be useful to have one of the police who could recognise glanders, or horses in disease?—Yes, that would be so, and in regard to that question we receive a great deal of assistance from the Society for the Prevention of Cruelty to Animals. Their inspectors really work in with our inspectors, and one of our inspectors goes out with one of their inspectors constantly.

2293. This gives a different complexion to it. How many inspectors do they employ?—I should think half-a-dozen, but of course those are not all employed in connexion with cabs, but one of their inspectors is out nightly with one of ours.

2294. And works harmoniously with yours?—Yes.

2295. That saves you three inspectors, probably more?—I should think it saves us one.

2296. Are those inspectors for the Society of the Prevention of Cruelty selected at all with reference to their knowledge of the diseases of horses?—Oh, I think they are decidedly.

2297. Specially?—Yes.

2298. So that, in fact, you do get the benefit of veterinary knowledge in that indirect way?—Yes.

2299. Is it considered, do you know, whether horses catch diseases at all from water troughs in that city?—I have never heard it suggested. Horses are mostly watered from buckets filled from stand-pipes.

2300. You have a very good water supply?—We have a very good water supply.

2301. A plentiful one?—Very plentiful, and very good.

3202. Is the disease of horses large in Liverpool?—No, very small.

2303. Can you account for that in any way?—No, I do not know that I can. The water supply is good; the horses, I think, employed are of a very good class, and I think they are very well cared for. I cannot go beyond that, I think, generally.

2304. (*Mr. John Burns.*) The relative absence of disease in Liverpool amongst horses, such as farcy and glanders, is not that due to the vigorous enforcement of the Contagious Diseases (Animals) Act by the Sanitary Committee?—I have no doubt it has very much to do with it.

2305. They have a special inspector for that?—Several.

2306. (*Chairman.*) Of course an inspector who deals with all horses, whether of cabs or not?—Yes, whether of cabs or not, under the medical officer of health.

2307. (*Mr. John Burns.*) Can you tell us whether cab yards furnish a greater proportion of farcied and glandered horses as compared with other industries?—I could not tell you that; no.

2308. (*Chairman.*) Now we come to drivers. Is there any limit of age for drivers?—Yes, no driver is appointed under 18 years of age; that is the only limit.

2309. Are you able to give us any statistics of the number of drivers of different ages in Liverpool?—No, I could not do that.

2310. No record is kept?—No.

2311. What examinations do you give drivers before permitting them to have a driver's licence?—They have to be able to read and write sufficiently to enable them to read addresses and so forth; and beyond that the hackney carriage inspector has to certify that they are strong enough to handle and carry passengers' luggage. Then they are examined by him as to having a thorough knowledge of the city and suburbs. They are required to produce a certificate of good conduct for at least the last two years from some ratepayers or well-known persons, and they have to be capable of driving, in the opinion of the hackney carriage inspector.

2312. What test does he put them through to see whether they can drive or not?—He merely sees them driving the cab up to the office and driving about in the street; but in exceptional cases, where there has been any doubt, the question has been referred to the inspector of mounted police, who is more or less of an expert, and he has put them through an examination; put them to drive a pair of horses and a brake, and tried them in that way.

2313. Are you satisfied you get good drivers who are efficient from the point of view of being able to drive well?—Yes.

2314. Would you put the quality as a very high one, or not?—No, I should put it moderately good quality; moderately efficient. I do not think the ordinary driver there is up to the standard of a first-class London hansom driver.

2315. Would you say he was up to the average of London or better?—Up to the average, I should say; but not better, decidedly.

2316. (*Mr. John Burns.*) Is that due to a difference in the experience of the two sets of drivers?—I think probably it is.

2317. Then on this point you seem to have a fairly good opinion of the capacity of hansom drivers?—I have a fairly good opinion of the capacity of hansom drivers. We have very little cause to complain of them in the way of accidents.

2318. (*Chairman.*) Would you tell us how the drivers pay the proprietors; what is the system there in vogue? Is it the same as London?—No, the great number of drivers are paid by weekly wages in Liverpool. It is the exception for it to be otherwise. The drivers employed at the railway stations generally receive about 1*l.* a week wages from the employers; the stand drivers receive about 14*s.* a week; and that is the system adopted for the great majority of the cabs in Liverpool.

2319. Now, is that wage uniform all the year round, or does it vary with the season?—It is uniform all the year round; at least practically so.

2320. Do they get any advantages or allowances beyond that?—No, none; except, of course, anything they get from passengers.

2321. Then you mean that when a fare pays a cabman in Liverpool he would separate from the fare what he gives him for himself?—Yes, he would.

2322. And if he paid, even by accident, suppose, rather more than the fare, the driver would feel himself justified honestly in keeping that for himself?—Yes.

2323. So that we may take it that it is certain that the men do earn practically higher wages than you have just now given us?—Oh, I should think undoubtedly, yes.

2324. (*Mr. John Burns.*) Would you roughly state the average?—The average wage?

2325. (*Chairman.*) What they really earn?

2326. (*Mr. John Burns.*) Roughly?—I am afraid I could not do that. It is almost an impossibility. I mean to say so much depends on the man himself. A man with an insinuating manner would probably get more than others.

2327. (*Mr. Bayley.*) What check is there on the drivers?—There is none.

2328. There is no check at all?—There would be the monetary cheque. If the driver was not bringing in what the employer considered a fair money for the cab he would change him and get another.

2329. (*Mr. John Burns.*) On this point—I think it is rather important—would you take steps to secure for the Committee from one or two representative cab proprietors any answers to a set of questions that the Chairman might send on to you?—With pleasure, sir, either from cab proprietors or drivers, if the Committee would wish it.

2330. Both?—Yes. Then I ought to say that there are about ten per cent., I should say, of the cabs in Liverpool let out somewhat on the London system to the drivers—not exceeding ten per cent.; and they are only let out with one horse, and the charge to the men who take out these cabs is from 4*s.* 6*d.* to 5*s.* a day.

2331. Is that for hansom or four-wheeler?—For both hansoms and four-wheelers; they are let out on those terms. But they are what I should call the second class cabs. The best cabs are not let out in that way.

Capt. J. W. Nott Bower.

2 July 1984.

2332. (*Chairman.*) But do you mean that it is possible for a proprietor in Liverpool to keep a cab—to keep it in repair, to feed the horse, and pay all the up-keep of it—and yet to receive only 4*s.* 6*d.* a day from the man?—He does it.

2333. Can you give us the price of hay and corn—do you happen to be able to—in Liverpool?—I could not give it you. It varies so much in the markets. I know the price is very high at present.*

2334. (*Mr. John Burns.*) Would you include such questions as the Chairman is now putting among those that may be sent on to you?—Oh, yes. In regard to the price of forage, I could get it most accurately, if the Committee cared to have it, from our own veterinary surgeon, who purchases for ourselves. I could find out the cost of forage to a nicety for any length of time you wish.

2335. (*Chairman.*) You mean the veterinary that buys for the patrol horses?—Yes; for the patrol horses—our own mounted police.

2336. That would be 31*s.* 6*d.* a week, apparently?—Yes.

2337. That is, with one horse, of course?—One horse, yes.

2338. Are you able to give us the price when two horses are supplied?—I do not know of any case where it is done in Liverpool.

2339. Then the number of hours that a man takes a cab out for would be small, would it not, if there is only one horse?—Oh, they would be small.

2340. Is there an arrangement as to the number of hours they may drive them?—I am not aware of any fixed arrangement, but I should say, as a rule, the hours do not exceed twelve.

2341. What hours of the day would they chiefly be?—Between 9 a.m. and 12 midnight would be the most likely hours. But, of course, they would take them out different hours. Down at the stages they take them out quite at late hours to take the place of better cabs that have left earlier in the day.

2342. In regard to the other cabs. In Liverpool you tell us that in all the cabs there is only one horse used?—One horse. In addition to the 4*s.* 6*d.* or 5*s.* a day, there would be a small gratuity—perhaps a shilling a week that the man would have to pay to the ostler or horse-keeper in the yard. It is not officially recognised; but practically the man has to pay it.

2343. But there is no other charge, is there, that the cabmen would pay?—No other charge.

2344. Now, we will take, if you please, the railway companies—the relations of the cabs with the railway companies. You are aware, perhaps, of what is called the privilege system in London?—There is a privilege system in Liverpool; I conclude it is the same.

2345. Would you describe to us briefly what your system is?—The owners of cabs pay 3*s.* a week each to the railway companies for the privilege of having their cabs in the stations, and the companies exclude from the stations all other cabs or private carriages plying for hire.

2346. (*Mr. Bayley.*) Three shillings per week per cab?—Yes, per cab.

2347. (*Chairman.*) How many railway stations are there in Liverpool within the area we are speaking of that are so licensed in this way?—Of course, there are the three principal ones in the centre of the town. But then there would be outlying stations besides.

2348. Is the system uniform at all the stations that exist?—It is uniform.

2349. I mean there is no difference of treatment between one station and another?—No, I believe not; they all have the same system.

2350. When a cab pays its 3*s.*, is it attached to a particular station, or is it at liberty to go from station to station?—It is attached to a particular station.

2351. Is there any undertaking from the proprietors that the cabs shall attend at particular times at the stations?—Yes, the privileged cabs are bound to attend at the stations in such numbers and at such times as the railway companies lay down.

2352. Have you heard any complaints in Liverpool of that system from any quarter?—No, there has been no complaint at all from the drivers or otherwise.

2353. The railway companies, I suppose, justify their charge of 3*s.* a week on the ground of the expense of inspection—keeping inspectors there?—Possibly, as they have inspectors checking the entry and departure of cabs, but the police do the ordinary inspection, the hackney carriage inspectors. They are allowed by the railway companies to take advantage of the railway stations for the purpose of inspecting the cabs there; and if one of the hackney carriage inspectors believes a carriage to be out of repair and to require attending to, the railway companies order it out of the station until it has been put right.

2354. Then the railway company gives no *quid pro quo* for the 3*s.*, in fact?—Not beyond what I have mentioned. The only reason they can assign is that there is an additional opportunity of earning money, and that they are entitled to a share of it. I cannot see any other.

2355. When a non-privileged cab comes and deposits a passenger at the station, and then happens to see some one who immediately desires to go away, would he be prevented from doing that?—No, he would not, but of course the chances would be very small, because the arrival and the departure platforms are separate.

2356. (*Mr. Lough.*) How many privileged cab are there?—I am afraid I have not the number of those. We have no record of them in our office. I could get it for the Committee if they wish it.

2357. (*Chairman.*) Take a note kindly to get it, if you please?—Yes.*

2358. Now, I suppose that disputes between persons who hire—the fares I will call them—and the drivers, would be regulated in the magistrates' courts, would they?—No; as a rule they would be regulated by the hackney carriage committee. They are dealt with, of course, in the first instance, by the police.

2359. I would like to deal with that a little further, please. Suppose, for instance, that a person takes a cab, and then refuses to pay the fair price for it—refuses to pay the proper price—offers a shilling or two shillings too little, through a bonâ fide dispute as to the number of miles traversed?—There, of course, it would be necessary to summon that person before the magistrate.

2360. What would be done, then, by the police, anything?—The police would do nothing beyond, if the complaint was made to them, endeavouring to obtain the address of the driver, or, if it is a case of a complaint by the driver, trying to obtain the address of the person who has not paid the fare. Of course there is the power of taking the person into custody.

2361. We will come to that presently. But, first of all, you told us that the police had some powers with regard to disputes, too?—Yes.

2362. Would you tell us what they are, apart from the magistrates?—They receive all complaints against owners and drivers from the public, and they either report those cases to the hackney carriage committee for them to deal with the more serious offences, or they take out a summons against the driver before the magistates, the magistrates dealing with the less serious offences.

2363. Well, then, what punishment can the committee inflict for the more serious offences?—They can either deprive the owner or the driver of his licence, or they can suspend that licence for any time that they think fit.

2364. But they cannot inflict, of course, any pecuniary fine of any sort?—No; but the punishment in the hands of the committee of being able to revoke or suspend the licence is really more serious than the powers the magistrates have in dealing with most of these cases.

2365. Now, would you tell us, suppose a cab was obstructing the way—do you have cases of obstruction in Liverpool?—Occasionally; but very rarely. There are very few offences of that sort by drivers.

2366. I want you to give us, if you can, some idea of the different cases that would be taken before the magistrates and before the committee respectively. For obstructing the way, for instance, would the police

* *See* Appendix III. 11, 2.

* *See* Appendix III. 11, 2.

take him before the committee, or before the magistrate?—They would take him before the magistrate; but the cases are very few.

2367. What sort of cases would they take before the committee with a view to suspension of licence?—Cases of continually leaving a horse without any person in charge, or loitering for hire off the stands that are appointed, for furiously or recklessly driving. Then in cases of drunk in charge of a horse and cab, it is sometimes thought desirable to take them before the committee; and, in case of men with repeated previous offences, they would probably be taken before the committee even after the magistrate had dealt with the case. And in cases of overcharge they are taken before the committee.*

2368. (*Mr. John Burns.*) Am I to gather from you, Captain Bower, that even before a cabman goes to the magistrate—— ?—Never before. The committee are always very careful about that. They never interfere with the magisterial prerogative in any way. If it is intended to take a case before a magistrate, the magistrates are left to deal with it, and then the committee deal with the case after the magistrate's decision, in so far as it affects the conduct of the driver.

2369. Only for trivial cases; they never act as a buffer between the driver and the magistrate?—In no way. The magistrate's decision is entered on the conduct book of the cab driver. The only way it would be considered would be, if there were a number of these entries when the licence came up for renewal, the committee would consider whether he was a desirable driver. They never consider the details of the particular case.

2370. Do you consider that it would be an advantage or otherwise for the sub-committee of the watch committee, with perhaps the head constable present, to warn, or give notice to, or caution cabmen for trivial offences, that without such warning would probably be taken to the magistrate?—I do not think there would be any great advantage over the present system.

2371. (*Mr. Lough.*) Did I understand you to say that of the cases that went before the committee, these were types? I think you gave leaving a hackney carriage unattended?—Yes.

2372. Furious driving?—Yes.

2373. Overcharging a fare?—Yes.

2374. Plying off stands?—Yes.

2375. Could you give me any other cases?—No; those are the main cases. Of course there is a number of other offences that might occur. For instance, if they did not hand over property found in cabs promptly. There are others. I only gave those as the instances that were most common.

2376. (*Chairman.*) I understood those did not go to the committee first if they are going to the magistrates afterwards?—Certainly not. If they go to the magistrates the magistrates deal with them once and for all. If they go to the committee the committee deal with them.

2377–8. (*Mr. John Burns.*) May I ask you this, to be perfectly clear: what class of cases goes to the magistrates first and then to the committee; and what class of cases go to the committee which are not to be reviewed by the magistrates?—There are very few cases that go to the magistrate first, and afterwards to the committee. It would only be what I might call an accidental case. A man might, for instance, be drunk in charge of a horse and cab; it might be a very serious case, and the man might be locked up for it. Being on the charge-book, the magistrate would deal with it; the case might be so serious that it might be thought desirable to take action. But the magistrate, though he has the power under the local Act of taking away the licence, never does it; he always prefers to leave the question of dealing with the licence to the committee. A case of that sort might go to the committee after it had been before the magistrates; but the great bulk of the cases are dealt with either by the one authority or the other—not by both.

2379. And which of the two authorities deals with the hackney carriage cases?—The committee and the magistrates alike.

2380. (*Chairman.*) In fact, we may say, the work, as it were, is divided between the committee and the magistrates, the committee taking those cases which involve loss of licence, the magistrate taking those cases which might involve merely fine or imprisonment?—Exactly.

2381. (*Mr. Lough.*) I think the witness means to say exactly the opposite. The great bulk of cases—according to our London experience—lie under these heads: Hackney carriages unattended, overcharging, furious driving, plying for hire off the stands, and all these and such cases, you say, are decided by the committee?—I am afraid I did not make that quite clear when I said those cases. Though I have given the principal offences, there might be what I might call serious offences under the different headings and light offences. If it was a very trivial offence which would be met by a small fine, the man would be summoned before the magistrate and dealt with by a fine. If the hackney carriage inspector thought the offence was one of a very serious nature, and that it was necessary to withdraw the licence instead of summoning him before the magistrate, he would order him before the committee.

2382. (*Chairman.*) You might put in a statement, Captain Bower, in explanation of that, and giving, if you can, the numbers and any general details that you can?—Of course I could easily get out for the committee, if they wish, the exact cases dealt with by each authority and specify what they are.

2383. (*Mr. John Burns.*) Has there ever been during your occupancy of the office any conflict or disagreement between the magistrate and the committee as to overlapping of jurisdiction or interference with the functions of each other?—No, none.

2384. None at all?—None at all.

2385. Then, one can take it for granted, can one, from your last answer, that there has been in the interest of the public who ride and the general city interest harmonious co-operation between the watch committee on the one side and the magistrates on the other?—Perfectly harmonious. I can speak from personal knowledge for 13 years; and I do not think that ever before that there has been any conflict.

2386. (*Mr. Bayley.*) But the police are under the orders of the corporation?—Yes, or of the watch committee, which is pretty nearly the same thing.

2387. Who appoints the magistrates?—The magistrates are appointed by the Chancellor of the Duchy.

2388. (*Chairman.*) Do you know what is meant by bilking?—Generally, I do; I do not know about it specially with reference to cabs.

2389. There are, Captain Bower, in fact, two ways that a fare may rob a cabman?—Yes.

2390. One is bonâ fide refusing to pay the man the fare that he owes him, but bonâ fide believing that he, the fare, is right?—Yes.

2391. The other is a case of fraud, where the fare knows that he is wronging the cabman, and yet does so?—Yes.

2392. And he may do so either by running away, or by standing on the pavement and laughing at him, telling him, "You are a fool for taking me, because I "am penniless; I took the cab knowing I could not "pay for it"?—Yes.

2393. Those are two distinctly different things. Let me take, in the first place the case, where a man has bonâ fide a dispute with a cabman, what is done in that case in Liverpool respectively by the cabman and the fare?—The usual rule is to go to the hackney carriage office and see the inspector, who deals with the question. If it is an intricate question he will assess the fare, and say what ought to be paid, and, as a rule, the matter is settled at the office. If there is any difficulty about the matter beyond that—if the cabman is making an overcharge, and persists in making that overcharge—he would be ordered to attend before the hackney carriage committee at their next meeting, and the passenger would be asked to attend and substantiate his complaint. If, on the other hand, the fare was thought to be to blame, the only course that could be taken would be to take the name and address of the man, and leave the cabman to summon him if he were a known person; if, on the other hand, he were absolutely unknown, he might be locked up for refusing to pay cab fare.

* *See* Appendix III. II. 2.

Capt. J. W. Nott Bower.

2 July 1894.

2394. I am speaking now of a bonâ fide dispute?—Yes, but I have never known a bonâ fide dispute in which the name and address could not be ascertained.

2395. We will come to the other presently. This is a bonâ fide case; what steps would be taken to compel a fare to pay—because, of course, the committee could not put the law in force—through the county court or the magistrates' court? — Oh, the magistrates' court.

2396. I suppose that would be under the Summary Jurisdiction Act?—Yes.

2397. In addition to giving a judgment, is there power to give compensation for loss of time to the cabman?—There would be power, I think, in the shape of costs.

2398. No, in addition to costs?—I am not aware that there is any power. It is under a local statute. I do not think there is any power to give compensation.

2399. (*Mr. John Burns.*) But would not that ordinarily be within the discretion of the magistrate?—Compensation or costs?

2400. Costs for loss of time?—The costs are practically within the discretion of the magistrate, and I think that very often indirectly compensation is given in the shape of costs.

2401. (*Chairman.*) Yes, but it would not be a legal compensation. I mean a magistrate might often give a liberal sum for costs, but he has no legal power to give compensation as in London?—No.

2402. You could get it in London by law?—I do not think there is any legal power to give compensation.

2403. (*Mr. Hopwood.*) I see by section 199 there is an express power to give costs.

2404. (*Chairman.*) Costs and compensation in London?

2405. (*Mr. Hopwood.*) No, I am speaking of the Liverpool Act?—There is costs in the Liverpool Act, but no compensation.

2406. Section 199. I will read the section to you, and then you will confirm it—say you know it or do not know it:—"And be it enacted, that if any person "shall refuse to pay on demand to any proprietor or "driver of any hackney carriage or cart plying for "hire, or to any errand, message, or luggage porter, "such fare or rate as shall be authorised to be taken "and received by the byelaws to be made as herein "directed, such fares or rates may, together with costs, "be recovered as any penalty imposed by this Act"?—That is the section under which they would proceed.

2407. (*Chairman.*) And that would be, would it, the only powers which a magistrate would have there, to make it recoverable as a civil debt by virtue of the Summary Jurisdiction Act, 1879? Perhaps you have not followed that peculiar point?—I do not think I have followed that peculiar point. But I rather think there is special power under that Act for the recovery of all penalties inflicted.

2408. The point would be this: supposing in London a man could not pay, and was bonâ fide, he could not be imprisoned unless they could show that he could pay and would not. Would that be so in Liverpool?—I am not quite certain about that point. I should like to have that Act looked up.

2410. (*Mr. John Burns.*) Have you ever had in your 13 years in Liverpool a clear case of a cab fare getting into a cab and positively refusing to pay at the end of his journey?—Only in the case of men who were drunk. We have had several cases of that kind, a man who is drunk will not pay; a man gets stupidly drunk, and will not pay.

2411. What has happened in that case?—He is locked up.

2412. (*Chairman.*) For being drunk?—He is locked up generally on the double charge of being drunk and refusing to pay cab fare.

2413. (*Mr. John Burns.*) And when he becomes sober what action is taken by the cabman, the police, and the magistrate in relation, not to his being drunk, that is dealt with separately, but to his not having paid the cab fare?—He is dealt with under that section.

2414. What happens?—The magistrate inflicts a penalty, and orders such costs as he thinks fit to the cabman.

2415. (*Chairman.*) As to the mode in which that penalty is recovered?—By distress warrant or, if no goods, by body warrant.

2416. (*Mr. John Burns.*) Have you ever had a case within your term of service of a man being sober and refusing to pay his fare?—I cannot recollect a case of that kind, but there have been such cases.

2417. (*Chairman.*) It would be as in London; there would be no power there of imprisonment unless a man could pay and would not?—Yes.

2418. (*Mr. John Burns.*) Supposing this case were to happen in Liverpool. Supposing I were to take a cab in Lord Street, drive down to the landing stage and be four hours in the cab, and supposing I were to tell the cabman to drive back to Lime Street Station, and that I then went into the main entrance, told the cabman to wait for me, and went out of the other side, was away half-an-hour intending to defraud the cabman, and the cabman were to see me going down Lord Street an hour afterwards, would the cabman have the power to call a policeman and to arrest me for the non-payment of that four hours I had been in his cab?—Oh, I think so, certainly.

2419. You think so?—I think he would call a policeman, demand payment of the cab fare, and on your refusing to pay it, the policeman would take you into custody, or if you were known, take your name and address for summons.

2420. He would either arrest me or take my name and address?—Yes.

2421. And then what would happen?—Well, you would be proceeded against under the section which has been referred to.

2422. (*Chairman.*) Just be careful here, are you prepared to say that there is power in the law for a cabman, in those circumstances mentioned by Mr. Burns, to give a man into custody; it is a delicate question; you have answered as if he would?—I think we should deal with it in that way. We should demand the fare in the first place, so as to have a refusal to pay, because I think the mere fact that four hours have elapsed does not deprive the cabman of a right to a fare which was justly his due.

2423. (*Mr. John Burns.*) Or half an hour?—Or half an hour.

2424. (*Chairman.*) Are you able to point out to us any section of any Act of Parliament which enables a constable in those cases to arrest a person at all?—Well, there is a section in that 1842 Act that gives a most peculiar power to Liverpool constables to arrest persons for any offence whatever who are unknown to the constable.

2425. Would you read that section; now we are on something very unusual?—I am afraid I cannot refer to it now. There is a very peculiar power given, it runs somewhat to the extent that you may arrest a person whose name and address is not known or who refuses to give his name and address, and who has committed any offence.

2426. I should like to ask you, do you not think those are very excessive powers to give to the police of a capital?—Undoubtedly they are; we do not very often put them into force.

2427. (*Mr. Lough.*) You have spoken repeatedly in these questions about so-and-so being taken before the watch committee; is there a power to take people before the watch committee?—Other than cabmen?

2428. I mean cabmen alone?—We cannot take them against their will, but the committee would deal with the offence in their absence if they did not go. A cabman would receive the summons to attend the committee from the hackney carriage inspector, and if he did not attend the committee the offence would be dealt with in his absence, and he might lose his licence.

2429. I thought it was that if a man got into a cab and said, "Drive me to such an address in Lord Street," and then said, "I will not pay you," he would be taken before the watch committee; now I ask you, can he be taken before the watch committee?—Certainly not, he cannot be taken against his will.

2430. There is no power to take him before a magistrate?—There is power to take him before a magistrate; there is power of arrest if he has committed an offence.

2431. And if the offence is merely that he declines to pay his shilling in Lord Street, then the police have power immediately to take him before a magistrate?—Yes, if he is unknown to them.

2432. (*Chairman.*) There is a general power of arrest in Liverpool that certainly does not exist in London, of arresting anybody for any offence?—Yes.

2433-4. (*Mr. John Burns.*) On that, has there been any abuse of that before?—No, none; it is one that we put very sparingly into use. I need hardly say it is one we discourage in every possible way.

2435. Has it led to acts of extortion on the part of the cabmen?—No, I never heard of such a case.

2436. And, generally speaking, very few cases arise in the course of the 12 months?—Very few indeed; scarcely any.

2437. (*Chairman.*) The power of arrest we have heard of, that, in your opinion exists, is at all events reciprocal; the cabman can be arrested and the fare can be arrested?—Yes.

2438. According to your view?—Yes; only the cabman would generally be known.

2439. (*Mr. Bayley.*) I take it the cabman has no inducement to overcharge, being paid a weekly wage?—No, except that he would take what was over and above the legal fare and put it into his own pocket.

2440. (*Chairman.*) A little further on this question of bilking. When a fare is brought up before a magistrate for having not paid, does the magistrate make a distinction in the case before him between a bonâ fide refusal to pay, and bilking—cheating?—I have hardly any experience of those cases; but I take it there would be a considerable difference in the amount of penalty.

2441. Would you tell us what provision of stands and shelters for cabmen there is in Liverpool?—With reference to stands, they are appointed by the hackney carriage sub-committee on the request of either the owners of cabs or of the residents in different localities, and the number of cabs that each accommodates is laid down, and the committee have regard to the amount of traffic in the streets, of course, and the position of the neighbourhood. There are about 100 stands altogether within a certain one and a-half mile radius of the centre of the city, and the number of cabs assigned to each stand varies from one cab up to 60 cabs, 60 being at the landing stage.

2442. And how many cabs can be accommodated in the whole of those 100 stands?—There would be accommodation for, I should think, nearly 1,000 cabs on the whole of them exclusive of railway stations.

2443. Then the stand accommodation at Liverpool is considerably in excess of the total number of cabs?—Undoubtedly, because there are certain stands that are filled particular times of the day and that are almost deserted at other times.

2444-5. But considerably in excess?—Oh, considerably in excess. 770 is the number of cabs, and I think I am under the mark in saying 1,000 for the stand accommodation.

2446. That stand accommodation for 1,000 is within a mile and a-half radius of the centre, I believe?—Yes.

2447. Are there other stands outside that mile and a half radius?—There are other stands, but as a rule the other stands are stands outside the different stables of the cab proprietors; there are very fair stands for any number of cabs outside.

2448. There are other?—Yes, for two cabs.

2449. Are there many stands of that character?—There are a large number of stands outside the radius.

2450. Capable perhaps of holding 1,000 more?—Scarcely so large a number as that.

2451. Can you give us statistics of the number of offences committed by drivers of cabs in Liverpool for the past year?—I have got a note to send those; I have not got the particulars with me.

2452. You could not, I suppose, give us any idea as to whether the proportion, say, of drunkenness among cabmen was larger than amongst the rest of the population of an equal age and sex?—I think I would not say that at present; I have got an opinion, but I would rather verify it by statistics.

2453. You would rather not express it until you have verified it by statistics?—Yes.

2454. Do you allow advertisements on cabs in Liverpool?—No, sir.

2455. The same rule as in London, I suppose?—There is a clause in the same Act, the Liverpool Improvement Act, that prohibits it.

2456. Now about badges. Are the cabmen compelled to wear a badge when on duty?—Then they have a brass badge, which they wear fastened with a strap on the left arm; they have to pay 5*s.* deposit on receiving a badge, which is returned to them when the badge is handed in.

2457. Do they have a book of byelaws and rules given to them?—They have a book of byelaws similar to that one I have handed in to the Committee. That is supplied to them free, but if they lose the book they are charged 6*d.* for a duplicate of it.

2458. Are they bound to produce that book to a person taking the cab; are they bound to produce that book to fares in addition to the tariff?—They have also a book of distances for which they are charged 6*d.*, and that they are bound to produce to the person who takes their cab, and in addition to that every cabman has to be supplied with tickets that I have got a copy of here; I will hand a copy in to the Committee; and he is bound legally to hand one of those tickets over to every person on entering his cab. That is a thing that is never done practically; we do not deal with them if they hand a ticket over when it is asked for.

2459. Would it not be sufficient for the cabman to show the book of distances to a fare, with the number of his licence marked on it instead of being obliged to carry these tickets about with him; is there much use in these tickets?—I do not think the ticket is demanded in more than one case in a 1,000, it is very rarely demanded; very few people know that they are entitled to demand it.

2460. Do you regard it as a useful thing to have the power of having the ticket, or would it be enough only to require production of the book of fares with the man's name and style on it?—I think the ticket is rather useful, it is practically the cab driver's card. Supposing a person has complained about the cab in any way, it contains the number of the cab, the name of the owner, the address of the owner, name of the driver, the number of the driver, and on the back of the ticket a notice as to where the inspector's office is, and how he can get any complaint attended to.

2461. Is it an offence not to produce this?—It is really an offence not to give one even without being asked for it to a person entering a cab; we do not deal with them for not doing that, only when they refuse to give one when it is demanded.

2462. Do they compel the cabman to wear his badge when appearing before a magistrate?—I do not think there is. When they come before the committee, they have to take off their badge and leave it on the table before they are dealt with. The badge is handed back to them if the offence is dismissed.

2463. We are not going much into the question; I do not think it is part of the Committee's duty to go into the question of strikes, but I should just like to ask you, has there been any strike in Liverpool?—No, none. I did not answer your question with reference to shelters, I stopped at the stands. I do not know whether you wish that to be dealt with. There are eight shelters in Liverpool altogether. One of these was erected and is maintained and governed entirely by private individuals, two were erected at private cost and were handed over to the corporation, who look after the control and maintenance; five were erected at the cost of the corporation, and they maintain and control them. The city council make regulations for the shelters, and I have brought a copy of the regulations up with me. I will put it in; it is put up at each shelter.

2464. (*Mr. John Burns.*) Those shelters come under the hackney carriage committee?—Those shelters come under the hackney carriage committee. Then each shelter has a person appointed as keeper by the hackney carriage committee.

2465. Paid by the corporation?—Well, he is not paid by the corporation, he is not paid at all. He is really appointed by the hackney carriage committee on the nomination of the drivers frequenting the stand. The drivers nominate a man, and if the committee are satisfied with their nomination they appoint him, and he then has the control of the shelter subject to the supervision of the hackney carriage inspector, and he makes his profit by supplying refreshments to the drivers.

2466. At a fixed tariff?—At a fixed tariff in each shelter, and it is put up in each shelter.

Capt. J. W. Nott Bower

2 July 1894

2467. (*Mr. Whitmore.*) Is that tariff supervised?—If it were unreasonable. It does not come formally before the committee, but if it were an unreasonable tariff the hackney carriage inspector might bring it before the committee, and the drivers might complain.

2468. (*Mr. John Burns.*) Generally, are they well used, the shelters?—Well used; they have had no complaints whatever about the management or supply of the refreshments. We are extremely particular that no cabman is in any way interfered with in his use of the shelter when he does not desire to have refreshments; we are very particular to see that there is no compulsion upon any man using the shelter to take refreshments.

2469. Are intoxicating liquors sold in the shelters?—No, intoxicating liquors are not sold in the shelters, and the corporation supply water and gas free of charge.

2471. (*Mr. John Burns.*) You say that the hackney carriages of Liverpool are under a sub-committee of the watch committee acting for the city council?—Yes.

2472. The police in relation to hackney carriages in Liverpool act only as the agents of the watch committee?—Yes.

2473. Do the police act as police or only as supervisors of the hackney carriages?—Of course they have the double qualification. Up to a very short time ago the hackney carriage inspectors were not police at all, they were private servants of the corporation; but it was thought undesirable to continue that principle, and on vacancies occurring I was asked to nominate police officers to undertake the duties.

2474. It is a double-barrelled qualification?—It is a double-barrelled qualification.

2475. They act not as police officers, but as hackney carriage supervisors?—They act not as police officers, but as hackney carriage supervisors.

2476. Have the public ever been inconvenienced or put to any disadvantage by the police acting in this capacity for the city council?—I think not; I have never heard of any complaint.

2477. And there is no desire on the part of the police, as police, to alter the present arrangement?—No, I think on the whole it works very well, and it is advantageous, I think, to have the connexion with the hackney carriage department in many respects; it practically gives us additional powers in the control of cabs at theatres and places of amusement, having the hackney carriage officers available for doing the two duties.

2478. I see; the watch committee acting for the council have a discretionary power to limit the number of cabs?—Yes.

2479. Has that ever been exercised?—Never.

2480. As apart from this discretionary power to limit, which you say has not been exercised, is there any understanding amongst the proprietors themselves to limit the number of cabs?—No; I think not.

2481. You have never heard of it?—No, I have never heard of it. I made inquiry about it, I could not ascertain that anything of the kind had ever been done. With reference to that, I may say, that the number of cabs licensed appears to be decreasing annually, whereas the number of drivers appears to remain normal.

2482. You have no evidence within your knowledge to account for the diminution in the number of cabs?—No, none.

2483. Except the superiority of the tramway and other communications?—No doubt that has had a good deal to do with it; and of course there is another matter which somewhat limits the numbers in Liverpool, that there is a very large number of private owners who keep cabs that they do not license, but which they run at the ordinary cab fares from their own yards. They are practically private broughams, but they go at the cab fares.

2484. What is the difference between the total number of cabs running and the total number of cabmen licensed?—Roughly speaking, there are five drivers for every four cabs; the exact numbers I could give you—there are 771 carriages and 1,074 drivers in the present year licensed.

2485. Do the men ever complain of the excess of drivers' licences issued over cabs qualified to run?—I have not heard of any complaint, and as you will see the number is not very excessive.

2486. And the men have never asked for a restriction of licences?—No.

2487. Then you would consider that five drivers for four cabs is no more than is necessary as a working margin for illness and holidays and so forth?—I do not think it is very much.

2488. What do the men pay for their licences?—That is a point I ought to know, but I am afraid it is a point I cannot get hold of in my proof, and I have not got it in my mind.

2489. Will you send us that?—Yes.

2490. They do make a payment for their licence?—I am not very sure whether they pay more than a security for the plates.

2491. What do they pay for the book, anything?—I have mentioned that they pay nothing for the first book, 6*d.* for additional copies; for the book of distances they pay 1*s.* 6*d.*, and the same on renewal.

2492. What do the proprietors pay for their licences for their cabs—for the plates?—They pay a 3*s.* deposit.

2493. They do not pay any such sum as is paid in London, namely 2*l.*?—Oh no, sir.

2494. Has there been any desire on the part of the cabmen, the cab proprietors, or of the Liverpool public, to have a smaller radius than that which now prevails?—No, I do not think there has been any request made.

2495. Has there been any demand for a cheaper cab fare than 1*s.*?—Yes, and it has been tried. A certain number of owners a few years ago tried a sixpenny fare, but they found it did not answer and they discontinued it.

2496. (*Mr. Whitmore.*) Sixpence for each mile?—Sixpence for each mile, yes.

2497. (*Mr. John Burns.*) What was the reason of the abandonment of the sixpenny fare?—Simply that it did not pay; they dropped off one after another, those who had started it.

2498. You license cab drivers generally in the interests of the public?—Undoubtedly.

2499. Do the proprietors in Liverpool retain the licence of the cabman?—The proprietor retains one copy, the driver a duplicate.

2500–1. In the event of a cabman committing an offence, who is prosecuted, the cabman or the proprietor?—The cabman. There is power under the Act to prosecute the owner, but as matter of fact that power is never put into force.

2502. You say that your inspection is annual?—Yes.

2503. Do you think that a biennial inspection would be better than an annual, or is an annual sufficient?—I think an annual is sufficient; it is a very big business; I might put this in also, it is a notice as to the inspection both for cabs and drivers, the notice that is issued for the annual inspection.

2504. I see by the book that Liverpool cabmen are not supposed to solicit for passengers?—Yes.

2505. Generally is that complied with?—I think fairly. Of course there is always a certain amount of soliciting going on in the streets, but it is put down where the police possibly can. I think we may say generally it is complied with. It is not very openly done, or done to the annoyance of people.

2506. You would in a city like Liverpool, and particularly like London, regard the penalty against soliciting as a chief check upon obstruction and crawling, to public inconvenience?—Oh, yes.

2507. And you consider that by stopping soliciting, and having stand accommodation in excess of the number of cabs, you remove incentives to crawling and obstruction?—Undoubtedly, to a very great extent.

2508. With regard to the age, I see that you are one year above London?—Yes.

2509. Would you suggest any alteration?—I think eighteen is young enough.

2510. Are the offences committed by cab drivers in Liverpool mainly confined to young drivers or to what period of age, can you say?—I think it goes over any age. I could not say it was confined to young drivers. I should say it ran a very fair proportion over the whole, irrespective of age.

2511. You grant no exceptional privilege to proprietors' sons?—No.

2512. You do not give them, say a year or two years under the 18?—No.

2513. And you treat all the proprietors and their sons, in the matter of drivers' licences, the same?—The same.

2514. As you would a man who is not a proprietor?—Yes.

2515. Or not the son of a proprietor?—Yes.

2516. You say that weekly wages are paid varying from 14*s.* to 20*s.* per week, with a 1*s.* per week as a custom to horse-keepers?—That would not apply to a weekly wage man—the shilling. The shilling a week to the horse men is paid by those who take out their cabs.

2517. Do you find any desire on the part of either the masters or the cabmen to depart from the system?—No; they have been working very harmoniously. We have had no complaints from either side recently.

2518. Do you think that the weekly wage tends to more civil conduct on the part of the cabmen than the daily wage?—Yes. The cabs that have the drivers at a weekly wage are, as I have said before, the better class cabs and the better conducted drivers; they are, as a rule, the best men that we have employed in that way. I should class the cabs—speaking, of course, very generally—as follows: I should put in the first class of cabs those that I have already alluded to that are not licensed at all, that are the private cabs going from the yards; I should put in the second class cabs driven by the men at a weekly wage; I should put in the third class the cabs that are driven by the men who pay 4*s.* 6*d.* or 5*s.* a day to the proprietors for taking them out; and I should put in the fourth class the cabs of the small owners who drive their own cabs.

2519-20. That is your experience, is it, that a regular fixed weekly wage——?—Secures the better class of men.

2521. And is in your experience an incentive to good conduct, to civility to the passenger, and generally better behaviour all round?—Yes.

2522. Now, you said that there were certain cabs of of second class character in Liverpool that paid from 4*s.* 6*d.* to 5*s.* per day?—Yes; 5*s.* I think.

2523. That is for one horse only?—For one horse only.

2524. And you said, roughly, for about twelve hours?—Roughly, about twelve hours would be the time they would be entitled to take them out.

2525. Have you formed any opinion as to the advantage of the one-horse system for the horses and the men and for the general convenience of the public and the police management?—I have no great experience excepting the sort of general knowledge that every one possesses of what goes on in London, which enables me to compare the two.

2526. No; I am speaking for Liverpool only?—I have no experience in Liverpool of any other system. The one-horse works very well on the whole, very satisfactorily. But I have no experience of the other.

2527. Do you consider that the two-horse system, with its consequent long stretch of hours on the streets, tends necessarily to the irritation and the general extortion and abuse that one finds among men where long hours are worked?—I should be of that opinion; but, as I have said before, I have no experience to qualify me to give any exceptional judgment about it.

2528. You have spoken about privileged cabs; you say there are no complaints in Liverpool about privileged cabs?—No; none have come to my knowledge.

2529. Is the supply of privileged cabs at the railway stations sufficient for the demand?—Oh, ample.

2530. In the event of the supply of cabs not being sufficient for the demand on a train coming in, what would happen? Would the outside, non-privileged cab be called in from a stand?—I have not known of a case of the kind; but undoubtedly they would. I am sure the railway officials would be the first to do it themselves if there were no other cabs to be had.

2531. Then are we to assume that the supply of cabs in the railway stations in Liverpool is also similar to the stand accommodation, greatly in excess, the very opposite of what happens at London stations? You have never known a case of insufficiency of privileged cabs?—I have not known an instance. I have not made special inquiry with reference to the point. I could do so if you wish.

2532. (*Mr. Whitmore.*) Do you know what the number of privileged cabs is?—No, I do not know what the number is.

2533. (*Mr. John Burns.*) Have you any private railway omnibuses in Liverpool, running from station to station?—No, from station to station private omnibus.

2534. Are they licensed?—They are licensed just as omnibuses.

2535-6. Have you any private railway omnibuses in Liverpool?—We have private railway omnibuses in Liverpool.

2537. Are they licensed?—I believe they are licensed; but I think, perhaps, I had better make certain about that,* because I think these private railway omnibuses are licensed for other reasons—I think when they are not wanted at stations they do ordinary work; but I would like to look up that point.

2538. What I should like to gather—if you will kindly send on, as I know you will—is, if there are private omnibuses in Liverpool, whether the omnibus proprietor pays the same licence fee for the omnibus, and whether the driver of that omnibus has a hackney carriage licence from the hackney carriage committee?—If they are licensed, they certainly have. But I should like to find out whether they are.* I know there are exceptions made with reference to the licensing.

2539. What is the character of your inspection? Do you ever pay surprise visits to the cab yards?—Yes, occasionally.

2540. And at night time?—Yes.

2541. And what proportion of cabs have you in the last year condemned?—I am afraid I could not answer that.*

2542. You will send it on perhaps. Generally, you agree, do you not, that where it is possible it is better for an inspector to have wheelwright and veterinary experience than not to possess those qualifications?—Knowledge is always useful, sir.

2543. Do you keep a register of cab yards?—No; we do not.

2544. Then you leave the veterinary inspection of cab horses and cab yards?—That is done under the medical officer of health.

2545. The next point I would like to ask you is, do you allow a man to take out a new licence, say in 1895, when his licence for 1894 has not been used at all?—I think the committee would require to know what he wanted it for, and he would have I think to attend the committee and explain matters.

2546. Generally speaking, do you agree with men having licences given to them unless they use them?—Certainly not; unless they intend to use them they should not.

2547. I see you have a Regulation 19:—"The drivers "and conductors shall be sober, cleanly, and decently "clothed in such manner, and with such distinctions "as to classes, as the council may from time to time "reasonably direct, and shall conduct themselves in a "proper, civil, and decorous manner at all times." What steps do you take to enforce this regulation with regard to sobriety, cleanliness, decency of clothing and behaviour?—We have a daily inspection of stands going on all the year round.

2548. A daily inspection?—These six inspectors of hackney carriages are employed daily visiting different stands; some of them they will visit twice, three times, in one day. They will take note of the condition of all the cabs, and also the clothing, and as to the sobriety of all the drivers, and notice whether they are properly in attendance at their cabs or gone too far away from them.

2549. Let us take the personal appearance and cleanliness of the driver, would that come within the cognizance of the inspector?—Yes, it would.

* *See* Appendix III. 11. 2.

Capt. J. W. Nott Bower.
2 July 1894.

2550. Supposing his clothing were very dirty?—Caution him, the first time, to be more tidy and respectable; the second time report him to the committee. I have known cases where they have been taken before the committee.

2551. What has happened?—So much depends on the conduct. Caution him, suspend his licence for three days, and so on, increasing the penalties if the offence were repeated.

2552. Could you hand in to the Committee subsequently the list and number of cab drivers who have either been fined or had their licences revoked for soliciting passengers?—Yes.*

2553. I see that drivers are not to carry deceased persons or corpses. Do you make that obligatory and impose a penalty?—Well, I do not find that they are generally very anxious to do it. I do not know any case where they have tried to do it. But we always employ spring carts for that purpose.

2554. You have a special carriage of the local authority?—We have a number of ambulances that we use, but as a rule for a deceased person we hire a spring cart. There is a large number of spring carts for carrying luggage and so on. We generally take one of those.

2555. By penal regulation No. 40: "Every "person breaking such of these byelaws as relate to "hackney carriages, and the owners, drivers, and "hirers thereof, shall be liable to a penalty not exceeding the sum of five pounds for any one offence; "and every person breaking such of these byelaws as "relate to omnibuses, and the owners, conductors, "drivers thereof, and passengers therein, shall be "liable to a penalty not exceeding forty shillings." Does that apply to a person who refuses to pay his fare?—I think there is a separate clause altogether of the Act dealing with refusal to pay. I think it would be an offence rather on the part of licensed persons that that clause refers to, would it not?

2556. (*Mr. Hopwood.*) Would not the penalty referred to by Mr. Burns be recovered under this section: "And "be it enacted, that the justice before whom any such "complaint may be made or information exhibited "may, without issuing any summons, forthwith issue "a warrant for the apprehension of any person "charged with any offence against this Act, or any "byelaw made in pursuance thereof, and of the said "recited Acts or any of them, whenever good grounds "for so doing shall be stated on oath before him"?—Yes.

2557. Is that the section that you referred to?—That would be the clause I wanted to get.

2558. Does it not appear from that clause that it is necessary to apply for a warrant before you can arrest?—That is not the arrest clause I was referring to. There is a general arrest clause under that statute.

2559. So I understood. But is not that the clause that would apply where a penalty ——?—Oh, undoubtedly.

2560. Now is this the clause to which you refer. I will not read the whole of it; but I will read enough to remind you:—"And be it enacted, that any person "found within the borough committing any offence "punishable either upon indictment or as a misdemeanor upon summary conviction by virtue of this "Act may be taken into custody, without a warrant, "by any constable of the police force of the said "borough, or may be apprehended by the owner of the "property on or with respect to which the offence shall "be committed, or by his servant"?—No; there is a further power than that.

2561. That disposes of a second clause as to arrest. Now, I will give you a third:—"And be it enacted, that "it shall be lawful for any constable belonging to the "police force of the borough to take into custody, "without a warrant, all loose, idle, or disorderly persons within the borough, whom he shall find disturbing the public peace, or in his own view committing "any offence against this Act, or whom he shall have "good reason to suspect of having committed or being "about to commit any felony, misdemeanor, or breach "of the peace, or to instigate or abet any such breach, "and all persons whom he shall find between sunset "and the hour of eight in the morning lying or loitering in any street, yard, or other place within the "borough, and not giving a satisfactory account of "themselves"?—That is a further power, and there is more still contained in section 341 of the 1842 Act.

2562. (*Mr. John Burns.*) I see the watch committee have also the licensing of the omnibuses—the omnibus drivers and conductors?—Yes.

2563. They also enjoy the same discretionary power as to limit as with regard to cabs?—Yes.

2564. Generally speaking, do you find that the cabmen of Liverpool, in the 13 years that you have been there, have improved in appearance and character?—I think they have. They are a very respectable body of men, taken as a whole now.

2565. Have you found any desire on the part of the cabmen who are not privileged cab drivers to ask for the revocation of the privilege system in force at railway stations?—No. As I have said already, I have never heard of any demand of the kind being put forward.

2566. You have never found the privilege system at railway stations lead to obstruction and inconvenience of the traffic outside the stations?—No.

2567. The restriction to stands of the cabs prevents that, does it not?—I should think it would; but as a matter of fact we never have found any difficulty.

2568. In the event of the privilege system operating, as I am glad to say it does not, for public inconvenience, you would consider it advisable to alter it?—Oh, undoubtedly.

2569. (*Mr. Lough.*) I notice that all drivers who have obtained licences must come up on a certain date in June to get them renewed, is that so?—Yes, that is so.

2570. Are new licences issued all the year round?—All the year round; but they all terminate on the 30th May or 30th June.

2571. Then I see by this paper that you hand in that the driver's licence will be renewed free of charge on these ten days in June?—Yes.

2572. But if he does not come up then he will be charged 1*s.* 6*d.*?—Yes.

2573. That is stated here, so I suppose it is stated in the law?—Yes. Perhaps I ought to qualify that by saying that that does not apply to men who have been twice convicted of drunkenness, or three times convicted of any other offence during the year. They have to make personal application to the committee before they can renew the licence.

2574. But ordinarily it is as I have stated?—But ordinarily it is.

2575. Equally the licences for carriages expire at the latter end of May?—Yes.

2576. And they have to come up for inspection then?—Yes.

2577. And you renew every hackney carriage licence for a payment of one shilling, I see stated here?—Yes.

2578. There is no attempt at all to make a municipal revenue out of either hackney carriages or drivers?—No, there is not.

2579. The principle is not recognised in Liverpool?—No.

2580. You spoke, then, of private owners having the best class of cabs?—Yes.

2581. Are they required to licence these private cabs?—No. They ply only from their own yards; they are not allowed to take up a fare in the streets. Strictly speaking, they are not cabs at all; they are really private broughams, but are more of the character of cabs, and they charge the same fare as the cabs do, so they are an important number of vehicles that compete with cabs in Liverpool.

2582. (*Mr. Whitmore.*) I suppose at Liverpool one season of the year is not appreciably more profitable than another for the cab drivers?—Yes, I should think that, as a rule, the summer season, when the American traffic is on, is a little more profitable. But there is not the difference in Liverpool that there is in London between the season and out of the season.

2583. I mean there is no temptation to a man to take out a licence for use during one restricted portion of the year?—Oh, no, not at all; and as I have already mentioned to the Committee, the wages of the cab

* *See* Appendix III. 11. 2.

drivers do not vary between one time and another. They are paid the same all the year round.

2584. That is because practically the profits are very nearly the same?—Because practically the profits are very nearly the same.

2585. (*Mr. Bayley.*) There is not much night work, I suppose, in Liverpool? I think you said a cabman began at 12, and finished about eight or nine?—I was only speaking of the larger number. There is night work, but it is very small, the amount of night work. And we have a certain amount of difficulty about the night work. If there is a bad horse or anything night is the time they are taken out, and it is at night that the Prevention of Cruelty to Animals Inspectors assist our inspectors in going round, I think.

2586-7. The work generally is much lighter than in London?—Oh, undoubtedly.

2588. I mean it is more intermittent in Liverpool, meeting trains and that kind of thing?—I do not think there is the same number of short fares taken in Liverpool as there are in London. I do not think people jump into a cab for a shilling fare.

2589. There is not as much life and movement in Liverpool as there is in London?—Oh, no.

2590. (*Mr. John Burns.*) But in your opinion, even with the small knowledge that one in the provinces must necessarily have of London cab life, is not the four-wheel cab traffic in Liverpool, from the point of view of luggage and number of persons carried from the railway station down to the docks, relatively larger and heavier?—Very much heavier. There is no doubt the amount of luggage carried, and the number of passengers per cab carried, is very much larger.

2591. (*Chairman.*) Is not the period of repose that the horses would have larger proportionately in Liverpool than it is in London?—I should think it would be.

2592. (*Mr. Lough.*) Do you know the parts of London called Islington and Clapham?—I do know them. I do not know them very well. I have been there.

2593. Well, have you any reason to suppose that life in Liverpool is quieter than it is in those districts?—If you compare the centre of Liverpool with Islington or Clapham, I should think the traffic in centre of Liverpool would be heavier.

2594. What I wanted to put was, you are only thinking of the greater streets in London?—I was rather comparing Lime Street with Charing Cross.

2595. Lime Street is as crowded as Charing Cross, is it not?—Oh, I do not know about that.

2596. (*Mr. Hopwood.*) It is because the short distance traffic is light in Liverpool, probably, that the 6*d.* fare scheme failed?—I should think it very probably was the reason.

2597. Can you tell us whether the watch committee has ever considered the expediency of applying a taxameter or some mechanical machine to the cabs?—No. It has been talked of, but that is all; it has never been seriously considered at all.

2598. (*Mr. John Burns.*) Have you seen it?—I have not.

2599. (*Mr. Hopwood.*) Will you explain to the Committee how the plates are fixed to the cabs?—They are fixed with nails, I think, or rivets.

2600. Cannot a plate be removed from a licensed cab and applied to an unlicensed cab without a chance of detection?—I think it would be difficult, because, of course, the number of cabs is not so very great but that the hackney carriage inspectors have a pretty good knowledge of them. I think it is a thing that would not go very long without detection.

2601. You have no system of branding a cab in such a way as to prevent fraud?—No. *Capt. J. W. Nott Bower.*

2602. With regard to the privileged cabs, do the forms of licence which you issue refer on the face of them to the fact that cabs are to be let to railway companies?—Oh, no; that is a purely private arrangement between the owner and the railway company. 2 July 1894.

2603. You have no cognizance of it at all?—No. These are the forms of licences to drivers and owners. I will put them in.

2604. Under the Liverpool Act the forms of licence may be altered in any way which the watch committee may direct?—Yes.

2605. Subject to the regulations being approved by the Secretary of State?—Yes.

2606. From your experience, do you see any objection to the agreement with the railway companies being made with the drivers rather than with the proprietors?—I have not considered that question, but I rather think it would be objected to by the proprietors.

2607. By the proprietors?—Yes; and I do not think it would work satisfactorily in the interests of the railway companies.

2608. But how about the public?—Well, I look on the interests of the railway companies and of the public as almost identical, except so far as the mere money paid for the privilege is concerned.

2609. Only one question more. Can you give me a sketch of the procedure which is adopted when a policeman makes a complaint with regard to the conduct of a cabman?—The report would be taken down at the hackney carriage office by one of the hackney carriage inspectors, and he would then instruct the policeman as to when the next meeting of the committee would be.

2610. Let me understand. Would the policeman go to the hackney carriage office and make a statement of the facts to the inspector?—Yes, to the inspector.

2611. Very well; what is done with that statement of facts?—The inspector would keep that, and he would then tell the policeman when he was to attend before the committee, and he would serve what was properly a summons on the cabman to attend before the committee at the next meeting. He would enter the charge then from the statement of facts; in a sort of charge-book that is kept, or a "complaint book," I think they call it; and this book is placed before the chairman of the committee, and they investigate the case as if they were a court. They hear the evidence on both sides; then the parties to the charge are ordered outside; the committee then discuss the question, and they decide what penalty, if any, they would inflict; then the parties are again called in, and the decision of the committee made known to them.

2612. Then, as I understand it, before proceedings are taken by a constable against a cabman in Liverpool a form of deposition is put in by the constable stating the facts upon which the proceedings are to be taken?—For a hackney carriage offence?

2613. Yes?—Yes.

2614. What are your police powers over privileged cabs in railway stations—the same as the police powers over unprivileged cabs?—No. We have none practically; they are in a private place.

2615. Then a railway station in Liverpool is a private place?—We have practically all the powers we require, because the companies give them to us. The companies are only too glad to get us to assist them. They invite inspection themselves there.

2616. That applies to inspection as well as to police duty?—Yes.

The witness withdrew.

Mr. James Scott recalled and further examined.

2617. (*Chairman.*) You are secretary and manager of the London Improved Cab Company, Limited?—Yes. *Mr. J. Scott.*

2618. I do not think I need ask you about the provisions in force with regard to the licensing of cabs, because we have had them very fully described already; we might go on to your opinions on them. Is it your opinion that the class of cab that is to be found in London is inferior to what it ought to be or up to the mark; would you give us your views upon that?—There is a proportion of cabs that are running on the streets of London which are, in my opinion, inferior.

2619. To what they ought to be?—To what they ought to be.

2620. Are those cabs four-wheelers or two-wheelers chiefly?—Principally four-wheelers, but there is also a number of hansoms—two-wheelers.

Mr. J. Scott.

2 July 1894.

2621. And you think that there are a good many cabs running which ought not to be allowed to run by reason of their inferiority, is that so?—I think so.

2622. Have you seen lately any cabs in that defective condition?—I have. During the recent strike I saw a great many; I thought probably that was because night cabs had come out to do duty during the daytime. There were certainly cabs there which any man with a practical knowledge of cab building would consider unfit for public use.

2623. Do you consider that those cabs that you have described as unfit for use belong to large or to small proprietors?—I could not say.

2624. Is it the age of those cabs that you complain of, or is it their state of repair generally?—I would not condemn a cab because it is an old cab if it were thoroughly fit in other respects. An old cab could be made thoroughly serviceable if it underwent a proper overhaul, but those cabs were worn out.

2625. Are you of opinion that the inspectors, whoever they are, who are told off to inspect cabsought also to inspect them during repair as well as after the repairs are done?—In my opinion there is no man who can judge properly of the state of repair or the condition of a cab if he has not seen the repairs going on; if he only sees the cab after it is painted and varnished.

2626. You think there should be some further inspection beyond the existing inspection?—I think all public vehicles should be inspected in the workshop as well as at the police station.

2627. You think it is possible by paint and varnish and putty to conceal the defects in the cab?—That is so; if the inspector is not a practical coach builder he can very easily be deceived.

2628. Now, supposing that the cabs were brought up to the standard that you think they ought to be brought up to, what, in your opinion, would be the amount of diminution in the numbers; can you give us any idea of that?—Do you mean by that, if all the cabs running on the London streets that are unfit now were withdrawn what number would be left?

2629. What number would be left? Have you formed any idea of that at all?—Roughly, I should say there are 1,500 cabs on the London streets that should not be there.

2630. That is to say about 10 per cent of those which exist should be rejected?—From 7½ to 10 per cent.

2631. Mr. Lough points out to you that your figures would be considerably larger if 1,500 cabs are rejected out of 9,000; that is a larger proportion than 10 per cent.?—Out of 11,000.

2632. Out of 11,000; that is a considerably larger proportion than 10 per cent.?—It is the licensed cabs that I am going by.

2633. Do you choose as your answer 7 to 10 per cent.?—I should say 7½ per cent.

2634. I think in your evidence given the other day you told us that you did not remember inspectors coming to your yard?—That answer was given in reference to the inspection ordered by Scotland Yard referred to in the Act; I have never had a special inspection of our company's cabs.

2635. You have had inspectors constantly coming to the yard; I do not know that they have always seen you, but they have seen your foreman or other people?—If a plate is loose on a cab it is reported to us that a plate is loose on that cab.

2636. Is it not a fact that there have been a great many visits paid to the yards by different inspectors?—For what purpose?

2637. For some purpose; seeing whether the cabs were in order or not; is it not a fact?—I have had an inspector come to report that a plate on a cab had been reported loose by the police, and if the police have noticed a horse working with a sore, that is reported to an inspector, and he comes and reports that.

2638. And he comes and looks at the horse, I suppose?—He will come and look at the horse; but it is not an inspection of the company's cabs, horses, and harness.

2639. What you mean is that there have been visits of inspectors to look at this particular cab or this particular horse, is that so?—That is so. When that matter was mentioned to me when I was last here I understood that general inspection ordered by Scotland Yard was meant, and that general inspection I have never had.

2640. But that there have been inspectors who have come to inspect this or that horse or this or that cab I understand is the case; is that true or not?—Trivial matters reported by the police to Scotland Yard; the inspectors come to see after these reports.

2641. As a fact the inspecters have regularly come to you?—They have.

2642. (*Mr. Whitmore.*) And then when they have come they have inspected a particular horse or a particular cab?—They inspected whatever was wrong; if there were a plate off a cab they would see that the plate was properly put on; there was no general inspection.

2643. (*Mr. John Burns.*) I gathered from you, Mr. Scott, when last you were here, that for general inspection of cabs, horses, harness, premises, and sanitary condition during the period you have been with the London Improved Cab Company—namely, nearly eight years—you had not had a single general inspection?—Not one.

2644. And that the visits paid by the inspectors to you have been rather more to your office about a specific trivial complaint than for a general inspection within their regulations?—They are visits paid to the superintendent of our carriage workshops.

2645-7. But in no case an inspection of the cabs, horses, premises, and plant?—No.

2648. How many of those inspections have there been, can you say?—It depends upon when they are necessary.

2649. They have been mainly since the dispute?—No, I cannot say that they have.

2650. (*Chairman.*) How many have there been, do you say?—Just so many as are necessary; it depends upon the reports sent in by the police to Scotland Yard; all these reports are sent on to the inspector of the district, and he attends to them.

2651. As to the sub-letting of cabs, have you anything to say upon that point?—I think that sub-letting of cabs is a distinct evasion of the Hackney Carriage Act.

2652. Can you give us any idea as to how much sub-letting of cabs takes place in London?—I have heard it variously stated, but I believe that I am within the mark when I say that there are a thousand cabs sub-let.

2653. By whom are those cabs sub-let and to whom?—Chiefly perhaps by a small cab builder, who goes about and attends repository sales and takes up really discarded cabs—cabs which the legitimate cab owner has done with; he picks them up for a mere bagatelle and he takes them down to his shop, has them done up and lets them out to whoever applies. That man I do not consider is a licensed proprietor in the usual sense of the word, because if the police were to go there to inspect his premises they would find no horses or harness, they would find he had no cab drivers' licences in his possession, although he has sent these cabs to Scotland Yard and he has taken out licences for them. Perhaps a laundry man comes down and he has two horses; he works them in his van for two or three days in the week, the other three days they would remain idle if he did not hire a cab in this way; he hires a cab and he lets it out to a driver. In the same way a small coal merchant has a day or two in the week when he can use his horse in a cab, and greengrocers and others. A cab driver who is really a bad character, whom no respectable proprietor would employ, if he still retains his licence can go and get a cab in this way; perhaps he can hire a horse and hire a cab, and in this way he can pursue his business on the streets.

2654. Chiefly, I understand, then, your objection to sub-letting is that it promotes the putting on the streets of bad cabs?—The worst cabs are those cabs which are sub-let; really the sub-let cabs are the refuse. The legitimate owner has done with them, and this man who sub-lets the cabs gets hold of them and does them up and lets them out.

2655. But apart from the bad quality of the cab, is there anything in your opinion objectionable in principle in a man letting a cab, we will say, to a person who wants to become the proprietor of it, instead of selling it outright?—Well, it is a divided responsibility; for instance, if the driver of that cab has an accident, who

is responsible? Is it the licensed proprietor or the middleman? The police have decided—at least I believe it has been decided—that it is the man who supplies the motive power who is responsible.

2656. Generally the man who chooses the driver, as a rule?—Well, he is not a licensed proprietor.

2657. But might it not be an advantage for some perfectly responsible men to be able to hire their cabs and then to drive them as proprietary private drivers; might it not be an advantage possibly to the men to be able to do that?—That is a different thing altogether; that is a direct hiring from the licensed proprietor to the man who is going to drive the cab.

2658. No, I beg your pardon, I did not make myself clear; might it not be an advantage for a driver who could drive a cab well to be able to hire a cab for so much a month, provide the horse himself, and then go and drive in the streets with it, provided the cab were in other respects a first-rate cab; might it not be an advantage for him?—It would be to him.

2659. And to the public, possibly too?—It might be.

2560. You mean you could see no objection?—I could see no objection to that.

2661. Your objection, then, is confined to the fact that sub-letting practically has produced a bad class of cab that does not exist otherwise?—That is my idea of it.

2662. (*Mr. John Burns.*) Do you contend that sub-letting can only exist on the basis of supplying bad cabs?—No, I do not think so, but at the present time it does exist on that basis.

2663. Can you suggest a system of sub-letting which would not have as the basis the direct ownership of horses and cabs?—No, I do not think I could.

2664. (*Mr. Lough.*) You said that when this sub-letting is going on, if an accident occurs and the police want to follow somebody, it has been decided that they must follow the person who supplies the motive power, that is the horse?—Yes.

2665. Can you tell me where that law is?—I do not know where it is, but I believe that has been decided; there are cases that could be cited to prove that, I believe.

2666. You cannot give the authority?—I have not got the authority.

2667. (*Chairman.*) Have you any opinion upon the limitation or non-limitation of cabs and drivers?—I am of opinion that the limitation of cabs and drivers should be ruled really by character and class.

2668. And efficiency?—And efficiency. That is, the character of the driver and the class and efficiency of the cab.

2669. Do you mean that every cab that came up to a certain standard of quality should be licensed, and every driver who came up to a certain standard of efficiency should also be licensed; that is your meaning, I understand?—Well, I mean the driver should be a man of good character, and that he should be able to drive well; that would be a very essential point, that his driving capabilities should be fully seen into, and that his general conduct should be satisfactory.

2670. And that there should be no what I might term an artificial limitation of the number?—I do not think that there should be any limitation to the number of really genuine drivers, men of good character.

2671. (*Mr. Whitmore.*) You mean whatever the number of capable and high-class drivers might be, and whatever the number of really good cabs might be, you would not limit their number because of population, because of any disproportion between that number and the population?—I should think both in drivers and in cabs they would find their own limit, the demand would limit them.

2672. (*Chairman.*) Are you of opinion that there are at present too many cabs on the London streets. We have heard that stated a great deal, but what is your opinion upon it?—I am of opinion that there are not too many good cabs on the London streets; there are too many when you add to the good cabs which really should ply for hire the inferior cabs.

2673. Do you think that if the standard of cabs were raised that the number would be diminished automatically?—I think so.

2674. I mean the good cabs would not come into existence to replace the bad ones that were rejected?—Not for some time, at any rate until the abolition really demanded the increased number.

2675. Have you any opinion about the fees that are charged on cab licences?—I consider that we pay far too much, the 2*l.* paid by the proprietor to Scotland Yard for the licence for a hackney carriage is far more than is required for the expenses of the department.

2676. But would you be in favour of reducing fees, then, to such sum as was reasonably required for the expenses of the department?—I think at the present time it is an unreasonable sum which is charged, because they run into such a tremendous surplus.

2677. But what I am asking you is, do you consider that such fees should be charged as would be sufficiently reasonable to cover the expenses of that department?—Yes. To cover all the expenses of that department.

2678. You have no knowledge, I presume, of the exact sum that is really expended by the department?—I should think something between 12,000*l.* and 13,000*l.* a year.

2679. And the amount realised by the cabs would be something like 22,000*l.* apparently.

2680-2. (*Mr. Whitmore.*) You do not think that the amount of the fee charged at present tends to discourage a poor class of proprietors from taking out a cab licence?—I do not think so.

2683. (*Mr. John Burns.*) Do you think that its diminution, say to the amount necessary to cover the expenses necessary for the department, would act as an incentive to more cabs being put on the streets?—It is a very small matter when you come to work out the average on a cab throughout the year.

2684. The difference between 9*d.* a week and 4*d.* a week would not add or diminish?—No, I do not think it would.

2685-6. (*Chairman.*) Still you put it rather as a matter of justice?—That is really what I should do.

2687. (*Mr. John Burns.*) In the event of those fees being abolished, who is likely to gain the advantage, the public in a better cab and the men and masters in slightly higher profit and better wages, or would it show itself in a better cab entirely?—I should think there would be a general advantage all round; you might be sure that the driver would have his portion out of it.

2688. (*Chairman.*) Now the law at present is that the proprietor may be summoned to appear and produce his driver in case of any complaint against any driver?—Yes, that is so.

2689. Have you any opinion upon that?—I think it bears very hardly on the proprietor that he should be compelled to attend a police court and produce the licence of the man for a trivial offence, such as loitering or overcharge.

2690. I should like to ask you, as a fact does the proprietor often have to attend?—If the proprietor does not attend he must send someone to represent him.

2691. And he does, as a fact, send somebody to represent him?—He does that always.

2692. Now I was going to ask who pays, does the magistrate ever order any costs to be paid to the person who attends by anybody?—Never.

2693. Not even where the complaint is dismissed as wrong? Suppose that a person wrongly brings a cabman up into court, and the proprietor has to come there or to send somebody there, does the magistrate not award costs to the person or proprietor who has so appeared?—It has never been done so far as I know.

2694. The costs generally given have been to the cabman himself?—To the cabman.

2695. There is another provision in the Act which I daresay you are aware of, and that is, if the money cannot be got out of the driver there is power to get it out of the proprietor; have you anything to say on that provision; are you aware of it?—I know of it.

2696. Have you anything to say as to that, as to the fairness or unfairness of it?—Is that in the case of an accident?

2697. Well it appears—I do not know if you know it that in fines inflicted on a cabman, if he does not pay that fine the fine may be inflicted on the proprietor?—Generally there is the option of the man going to gaol.

Mr. J. Scott.
2 July 1894.

2698. I am not speaking of the man going to gaol, but the fine itself may be levied on the proprietor?—I know that is so, but I cannot remember, at any rate, a case in which it was done.

2699. It is never done in fact?—I do not think so.

2700. I do not think it is ever done, but I was merely asking you whether you had any opinion as to its desirability?—It is merely as to trifling offences.

2701. Would you be in favour of or against it?—I would be against it, of course.

2702. Now, as to the liability of the proprietor for lost luggage; at present the proprietor is liable, is he not, to an unlimited extent for lost luggage?—Yes, he is.

2703. Have you anything to say as to that?—Well, we have thought that he should be put on the same footing as a carman contractor or a hotel proprietor; there is a fixed sum, I believe, in their case.

2704. Let us take that; do you know what the fixed sum is in the case, for instance, of a carman, a carrier?—I believe it is 10*l.*

2705. Well, yes, that is right, but the carman is bound to take goods of greater value than 10*l.* if they are declared beforehand; is not that so?—If there is a declaration signed.

2706. Otherwise not?—If there is no declaration his liability only amounts to 10*l.*

2707. You have mentioned an innkeeper; there the amount, I think, is 30*l.* if no declaration, and more still—an unlimited amount—if the goods are left at the office?—I cannot say for the innkeeper.

2708. It does not matter; these are illustrations rather. As regards railway companies, can you tell us what the rule is there?—For liability?

2709. Yes?—I believe they are liable to a fixed amount if no declaration has beeen made, just in the same way as the carrier.

2710. And you contend that cab proprietors ought to be subject to some similar regulations of that kind?—That is my opinion.

2711. Then you would, I suppose, require a fare if he were placing on a cab luggage worth more than 10*l.* to make a declaration—to tell the cabman so?—The cabman ought to be told, at any rate, that that was a specially valuable portmanteau or parcel or whatever it was, so that he might give it more attention.

2712. But still you would render the cabman and the proprietor respectively liable for valuable packages of more than the value of 10*l.*, but not unless special charge was given them regarding it?—I think it ought to be intimated that it was a specially valuable package.

2713. Now with regard to the railway companies, would you tell us your opinion—you need not describe it to us, we know it very well—but would you give us your opinion as to how the privileged cab system works, whether it is wrong or right, or what you think of it?—Well, in my opinion it is right.

2714. You approve of the railway companies, do you, charging the proprietors 2*d.* to 8*d.* per cab per day; that is what it comes to?—I do.

2715. (*Mr. Whitmore.*) On what ground?—Well, the railway companies have a responsibility to the passengers they carry; they are bringing people up from the country very often with very valuable property, and they want to have some security that those people will be conveyed to their destination by thoroughly respectable men, and I think in the privileged system, as it is at present worked, they have this security.

2716. (*Chairman.*) But could not a system of similar character be worked by giving a special privilege of entering a station to drivers who were men of specially good conduct, attaching the privilege of entering a station to the man and not to the cab, and as a reward of uniform good conduct, would not that secure the end you have in view?—You would have a register, I suppose, of those men?

2717. They would have a special badge, I presume; would not that possibly meet your view as well as the other? I am expressing no views, Mr. Scott, I am rather seeking to get yours?—The one thing there really is is the security for the safe conveyance of passengers and their luggage.

2718. But what security is attained? I should like you to explain to us what is the security attained?—Well, the privileged master must supply to the railway company the names and addresses of all the drivers who have these privileged cabs.

2719. One minute, if you do not mind taking it by degrees. Could not these names and addresses be also got from Scotland Yard just as well?—Certainly they could.

2720. Well, go on, please—the other points?—Well, then, those cabs are under the inspectors at the railway stations and so are the men.

2721. You think that that extra inspection at the railway stations gives extra security?—I do.

2722. Might not that inspection possibly be as efficient if all licensed cabs were allowed to enter?—I do not know how it would work.

2723. You think it would not work so well?—I think it would not work so satisfactorily.

2724. Would you still be for attaching the privilege of entering the station to the cab instead of the man?—To the man and to the cab as well.

2725. Oh, no. At present the privilege is attached to the cab, no matter who drives it in; let us be quite clear about that. I want to know whether you are in favour of attaching the privilege to the cab rather than to the driver, in the interests of the public?—I consider at the present time the privilege is attached to both.

2726. Very well now, we will test that; as a fact the privilege of entering a yard is granted to the owner, is it not, who possesses the cab?—That is so.

2727. And he may employ any man he likes to drive that cab into the yard, let that cab to any man that he pleases?—Well, I think you will find that these drivers who are driving out of stations have driven there for 20 or 30 years.

2728. (*Mr. Whitmore.*) As a matter of fact, do you, because the privilege is attached to a particular cab, assign to the driving of that cab a man whom you know to be of good character?—I do.

2729. (*Chairman.*) You can choose any driver you like to drive that cab?—We can.

2730. But you do, as a fact, generally take a man of better character, is that so?—Well, we take a privileged driver for that cab, that is, a man who drives out of a station. You must remember there are men who have driven out of stations all their lives; they are lost on the street, they can do nothing on the street; and again a man who has spent all his time driving on the street is nowhere on a station.

2731. Just let me understand that; is it so much more difficult to ply in a station, or is the work so different to plying in the street, that a man who is plying in the street could not do it equally well?—He could, but those first-class drivers on the streets would consider it beneath them to go into the station.

2732. Do you mean that the men who wait in the station do not earn as good wages?—I do not think that a man who waits in a station does earn as good wages as a first-class driver in the street with a good turn out, if he knows his way about.

2733–4. The system does not put the very best men in the trade in the stations?—No.

2735. (*Mr. Whitmore.*) Are they, these men who have for years driven from stations, are they as a class men of steady and quiet habits and respectable men?—They are men who have stood the test of years, and they are well known to the station authorities; every porter knows them, the inspectors know them.

2736. (*Mr. John Burns.*) Respectable and steady, but not brilliant?—That is so.

2737. (*Chairman.*) Then another advantage you would perhaps put down to the system is that by having particular cabs at particular stations the drivers get known thoroughly to the station authorities at the station, and therefore there is a greater security in case of lost luggage, is that so?—It is so; they really become part and parcel, you may say, of the station staff.

2738. Then again, it comes back, does it, to this, that it is more important that the driver should be a respectable man than that any particular cab should be privileged?—They will only have cabs of the very best quality.

2739. You think also the system secures a good class of cab at the railway station?—Certainly it does.

2740. And the railway station four-wheeled cabs, at all events, will be better as the result of the system than the four-wheeled cabs that we see about elsewhere?—That is so, a different class of cab altogether.

2741. Then there is this, I suppose, further, there may be this at all events further, that by the system of the railway companies contracting with responsible owners of cabs, in case of lost luggage there is a better chance of the person who loses the luggage getting a sound man to go against—to recover from? That merely occurs to me; I want your opinion upon that; if I am wrong, please tell me so?—I think that is so. Of course, the driver who leaves a station with luggage is back again within a reasonable time, within an hour or so, and if anything has gone wrong with luggage it can be looked into at once.

2742. Then you charge to the driver the extra sum that is payable to the railway company; that is under the new system, I think?—Mr. Asquith has given an award to that effect.

2743. (*Mr. Whitmore.*) May I just ask, as a matter of experience, do these railway cabs practically confine their work to going from the railway station; I mean, take a privileged cab, when it has made one journey from a railway station and deposited its fare at its destination, it does not loiter on the street and pick up a casual fare, but goes back to the railway station?—He ought to find his way back to the railway station, but if he finds a passenger on the way to the station he would take the passenger up, no doubt, and drive him.

2744. (*Chairman.*) I suppose you would have no objection, Mr. Scott, to the fees being abolished altogether; it is the system you approve of, not necessarily the charge; is that so?—That is to secure the privilege.

2745. But I mean, supposing that the privilege system remained the same, or on somewhat similar lines, as it exists now, there is no particular advantage to you, or the drivers, or the public, in the payment that is made to the railway company, or is there something that we have not, perhaps, heard?—There is an advantage to the proprietor, it really enables him to get hold of the best class of drivers, at least men of good character.

2746. The fact that he pays the railway company?—The fact that the privilege exists.

2747. I am speaking of the fact of the payment; although the system went on you would have no objection to the payment being abolished, if it could be done?—No, we would not object to that.

2748. Would you give us your views upon taxameters, please; are you acquainted with the tamaxeter?—I would prefer to have some practical experience of a taxameter before I said much about it.

2749. I am not going to ask you anything about the details of the manufacture of a taxameter, but I should like to ask you this: a taxameter might have two objects; one to show how many miles a cab has gone in the day, another one would be to tell how much the driver owed the proprietor, and a third to tell how much the fare owed the driver. There might be those three objects attained by the taxameter. Would you give us your views upon any or all of those, whether there would be an advantage in it; you have followed me, I think, have you not?—Any taxameter that I have had explained to me—I have only seen taxameters and heard explanations given—seems to depend entirely on the honesty of the driver for the correct working of the machine.

2750. Now, with your experience, do you think that—of course it would in a great many cases—but that it would work well in all cases? I am not impugning the honesty of men at all, but there are some persons with whom it would not work, I suppose?—In individual cases you might work a taxameter, or a man might select a few drivers and get on very well with it, but I should think for the great mass of drivers in London it would be very risky.

2751. (*Mr. John Burns.*) But would not a relatively rigid system of checking fares have a tendency to convert the positively dishonest man into a relatively honest one?—If you could guarantee that there would be no collusion between the passenger and the driver.

2752. Well, but that is not likely to happen; it does not happen to a great extent in omnibuses?—I think it is very likely to happen.

2753. It does not happen much on the omnibuses?—They have a system of inspection of omnibuses, but it is impossible to inspect a cab.

2754. Given the mechanical difficulties of the check overcome, do you see any substantial objection to it?—Not if we had honest men all round.

2755. (*Mr. Whitmore.*) And not if any amount of dishonesty could defeat the accuracy of the instrument?—It could be defeated by dishonesty and collusion.

2756. Yes, but supposing that was not so; supposing a machine could be invented which could prevent dishonesty from operating, then you would have no objection to it?—Certainly not.

2757. (*Mr. John Burns.*) You would prefer it?—Certainly.

2758. (*Chairman.*) Supposing we had a taxameter that did not pretend to show all these fares in this elaborate method at all, but was nothing more than an ordinary machine that is put on a bicycle at present, a pedometer—you are aware of those machines?—That is for registering distances.

2759. Simply for registering distances; not to be conclusive, but to be an assistance to the passenger in calculating the fare he had to pay; would that be any advantage, so that he would not be able to quote it, but look at it, and from that calculate in his mind what the fare was; would that be any assistance?—A machine attached to the cab independent of the driver?

2760. It would be independent of the driver?—It certainly would be of assistance to the passenger.

2761. As to the extension of radius, you are aware at present that the radius, of course, is four miles; have you any view as to that?—The radius at present is four miles as the crow flies. It is impossible to drive a cab in that direction, and it is found very often that before you reach the radius the man has to drive, I am told, five miles from Charing Cross.

2762. Yes, but what I am asking you is, would you leave the four-mile radius as it exists now, or would you extend it in any way?—I would have five miles of measured roadway, I should think.

2763. That would give rise to terrible disputes, would it not?—I do not think it would.

2764. I will suppose you have a certain point, and that there are two ways to it, one of which is five miles and 20 yards, and the other road is five mile only; which of those roads are you going to take?—The five-mile one.

2765. The shortest whatever it is?—The shortest whatever it is.

2766. Measured by a road?—Measured by a road.

2767. Supposing a new street were suddenly opened by the municipality that would cause a contant contraction and expansion of the fringe?—You must go from a certain point. I suppose you would take Charing Cross as a centre.

2768. I do take Charing Cross as a centre; suppose the County Council makes a new road, makes a shorter way, the five miles would get altered year by year; your distance of five miles from Charing Cross would be subject to fluctuations, would it not?—By the opening of a new street?

2769-70. Yes, because you measure by the nearest road; supposing suddenly a new bridge is made across the Thames, say, then your area would alter, would it not, your distance of five miles might alter?—It might do so.

2771. (*Mr. John Burns.*) Let us give you a clearer case, Mr. Scott, if I may. The Government will not allow cabs to go through Hyde Park; supposing Hyde Park were open to-morrow, that would save a mile and a quarter, in some cases two and a-half miles, every fare this side of Hyde Park; how would you have that distance measured?

2772. (*Chairman.*) Would not that alter the area?—It would.

2773. (*Mr. Lough.*) I think the witness has made a slight mistake; do you mean to tell the Committee that the fares now are measured as the crow flies?—No; the radius I was speaking about.

2774. Suppose Mr. Scott, that in going to the four-mile radius, a cab driver has to travel by the nearest road six miles, suppose that extreme case?—Yes.

Mr. J. Scott.

2 July 1894.

2775. What will he be able to charge—six miles—what will he be able to charge?—Three shillings.

2776–7. Therefore the fare is fixed by the streets, the distance the man travels along the streets?—The fare is fixed by that, but the radius is fixed as the crow flies; it is really the leg of a compass taken and drawn round a certain point.

2778. (*Mr. Whitmore.*) In the case Mr. Lough put to you, you would allow the cabman to charge for the last two miles according to the fare charged outside the four-mile radius?

2779. (*Mr. Lough.*) No, sir.

2780–1. (*Mr. John Burns.*) I gathered from Mr. Scott that if a cab travelled 10 miles within the radius with one fare, that every four miles travelled inside the radius should be on that basis.

2782. (*Chairman.*) I think what Mr. Scott means is this, that while the radius is four miles distance as the crow flies, he would take the irregularity produced by taking five miles from Charing Cross by the nearest road?—By the roadway.

2783. Therefore your area would be a slightly irregular one?—It would be an irregular circle.

2784. But not only irregular, but liable to slight fluctuation as streets were made?—It would be very slight, I think.

2785. It would be slight, but that is what would happen. Are you aware that there is a certain number of cab drivers that exist, men who drive their own cabs, just outside the four-mile circle in the suburbs?—I am.

2786. Is it not a fact that the interests of these men outside are divided into two classes, namely, that those whose business leads them to come into town, and ply for hire in the town, are in favour of an extension of the four-mile circle, whereas those who ply in the suburbs are in favour of retaining the present four mile circle; are you aware of that?—That is so.

2787. So that there is a conflict of opinion?—Regarding the radius.

2788. Produced by the difference in the mode of carrying on a trade?—That is so.

2789. And we should get different opinions, do you think, according to the different witnesses that we summoned, according as their trade was one or the other, as far as the advantage to them was concerned?—I should think so.

2790. Are you in favour of a reduction of fares?—I am not in favour of a general reduction of fares, but I think there should be an optional sixpenny fare within certain limits.

2791. Within the City, you mean, in business hours?—Within the City for anyone who might jump into a cab and say, "Drive me five or six hundred yards."

2792. Would you propose that any cab within those limits should have a power of exhibiting a special label, a conspicuous label, showing that it was adopting the sixpenny rate?

2793. (*Mr. Lough.*) What do you mean by the word "optional," you use the word optional sixpenny fare?—I mean it should be in the option of the driver.

2794. (*Chairman.*) How would he exhibit his choice to the public so that they would know before taking his cab?—He might have some indicators showing short distances 6*d*.

2795. And you would leave him to put that on at any time that he pleased, and for as long as he pleased?—I would leave it entirely in the hands of the driver—entirely; better that he should have a few sixpenny runs than none at all.

2796. You think that would work well?—It would help the driver.

2797. (*Mr. John Burns.*) And encourage cab riding?—And encourage cab riding.

2798. (*Chairman.*) We have had some evidence that as a trade the trade of cab driving has rather diminished of late years, owing to various causes; do you agree with that; I mean that the public do not spend so great an amount of money in cabs as they used to years ago; have you any view upon that?—I believe that is very generally the opinion.

2799. What is yours; have you any grounds for a different opinion?—I have no grounds for thinking that it is so, we have gone rather in the other direction.

2800. As far as your company are concerned, but speaking generally over the trade?—There is no doubt that the cheap busses, underground railway, and one thing and the other have educated people into another mode of travelling; I do not think there is the rush for cabs that there used to be.

2801. (*Mr. John Burns.*) But the small section of cab riders ride perhaps more now than ever they did, as the hansoms have improved; is not that so?—We always find that during the season, at any rate, cabs are as busy as they possibly can be.

2802. (*Mr. Whitmore.*) Have you any difficulty in getting good drivers yourself?—Not the slightest.

2802–4. (*Chairman.*) Well now, would you give us your views upon the inspection and treatment of horses?—The Hackney Carriage Act gives the police full power and authority to deal with all cases of cruelty and lameness seen on the streets. But bit by bit the Royal Society for the Prevention of Cruelty to Animals, seems to have superseded the police in this, and it is very rarely that you see a prosecution by the police for cruelty; it is generally brought up by the officers of the Royal Society for the Prevention of Cruelty to Animals.

2805. (*Mr. John Burns.*) Are you opposed to that, Mr. Scott?—That is a thing we are very much opposed to. We do not see why a charitable institution should really usurp the position of the police and act in this arbitrary way.

2806. (*Chairman.*) I should like to get from you now, if you would, the reasons why you do not like the operations of that charitable society, in what respect is that operation of a voluntary society less desirable than the operation of the more regular police; can you give us reasons?—Well, I think that a prosecution should be really conducted on proper lines; I have only had one or two cases myself, but in each of those cases I have felt the injustice of it very much.

2807. You mean the prosecution was not fairly conducted?—It was not a fair prosecution.

2808. You mean it was conducted with unfair rancour?—I do.

2809. That there was an animus?—You will see those officers of the Royal Society for the Prevention of Cruelty to Animals loafing about, and you will have a broken-down veterinary surgeon, some fellow who has no business really of his own who will loaf about with those fellows till he pounces upon a case. Then when he comes to a police court he has the usual string, he has it all off by rote what he repeats to the magistrate; a whole string of ailments that the horse has got, and you may take what veterinary surgeon you like to the police court then, the President of the Royal College of Veterinary Surgeons, as we have done, and he will be told that the other man's evidence is preferable to his, and you lose your case.

2810. (*Mr. Whitmore.*) And you think a police prosecution in the case of a cab offence is more likely to be fairly conducted than a prosecution undertaken for the Royal Society for the Prevention of Cruelty to Animals?—I believe that the authorities of Scotland Yard should have for every district a veterinary surgeon, a thoroughly qualified respectable man, and that when a policeman finds a horse that he considers lame or unfit to work, that horse should be taken direct to the veterinary surgeon, and if he recommends prosecution, if he finds that matters are all wrong, then I should think the proprietor would have every confidence.

2811. (*Chairman.*) There would hardly be a necessity in the state of affairs you have pointed out for one surgeon for every district; it should be possible to work with less even, if the police took the horse to the veterinary surgeon?—I think there ought to be a veterinary surgeon at any rate.

2812. (*Mr. Lough.*) You said just now, Mr. Scott, in the imaginary case you gave the chairman, that the evidence of a broken-down veterinary surgeon was preferred to the evidence of the President of the Royal College of Veterinary Surgeons?—I think you will see cases reported in the papers recently where several veterinary surgeons of the very highest ability were brought to prove that a certain horse was not suffering from what it was said to be suffering from, and their evidence was not permitted.

2813. The broken-down veterinary surgeon was preferred?—I believe so.

2814. What magistrate, what court was that in, can you tell me?—I think I could produce you the papers to show it.

2815. (*Mr. John Burns.*) Might I put this question to you? Do you consider, Mr. Scott, that the inspectors of a philanthropic society give those hostages to good conduct and impartiality that a qualified police inspector would who was liable to lose his pension, and to be disrated, in the event of him showing a prejudice against a certain proprietor?—I have not exactly caught your idea, Mr. Burns.

2816. That was not your fault; do you consider that the inspector of a voluntary philanthropic society—for that the Royal Society for the Prevention of Cruelty to Animals is—gives those hostages to good conduct and fairness and impartiality in the discharge of his duties, that a public inspector paid out of the rates would, who was subject for breach of good conduct to disrating, and if prejudice were shown in his duty, liable to lose his pension or to be dismissed?—I do not think he does.

2817. Do you think, generally, that the inspectors of this particular society possess that knowledge and general information in relation to horses that in your opinion a properly qualified inspector should have?—I do not think they do.

2818. Do you object to these inspectors on the ground that no society, however good its object, ought to assume and usurp the functions of either a municipality or a State department; that is one objection, is it?—That is one of my objections.

2819. And you think that the scheme of veterinary inspection that you sketched out would act better, both for horses and for masters, than the present system?—I am certain it would.

2820. Is it your experience that this Society is gradually gaining ground to the exclusion of the police?—Well, it did up to a certain point; but perhaps you are aware that there is a society started recently—the Horse Owners' Protection Association—which take this matter up with the Society for the Prevention of Cruelty to Animals with the result that——

2821. They have restricted their operations?—Well, they have had to do their duty.

2822. Generally, are the masters and men and police agreed about this point?—I do not know about the police.

2823. Are the masters and men agreed?—The masters and men are.

2824. Is it their opinion that sometimes these inspectors capriciously exercise their powers?—It is.

2825. And it is less with a view to finding out cases of bad horses than justifying their salary that they sometimes act; is that the impression?—Sometimes it is a feeling they have got towards a particular man, I think.

2826. And you think that both with regard to locality and persons these society inspectors are more susceptible and prejudiced than a properly constituted public official would be?—I think they are.

2827. (*Mr. Hopwood.*) They have a direct interest in obtaining convictions?—They have, and the veterinary surgeon is paid by results.

2828. (*Mr. John Burns.*) Would you apply to horses the same system of inspection that applies to weights and measures and adulteration, viz., by a local authority?—I would apply the system of inspection that the police have under the powers of the Act.

2829. (*Mr. Lough.*) In reply to the last remark you say the police have full powers of inspection?—They have.

2830. Do they use them?—They want stirring up a bit, I think.

2831. Do you judge by the way in which they use the powers, or by the nature of the powers in the book?—If they would carry out the powers as they are defined in the Act it would be quite enough.

2832. Do you think the police carry out the powers as defined in the Act?—They do not, because they find that another power has come in and superseded them.

2833. Now you have some opinion upon water-troughs, I think, as to their being a mode of spreading disease?—I believe they are a very fruitful source of spreading glanders.

2834. Do you allow your drivers to water the horses at troughs?—No, there is no necessity for watering the horses at the troughs, and we have a notice in all the yards that watering of horses at a trough is prohibited. If I find him watering a horse at a trough I suspend him, the second time he is dismissed.

2835. You consider it is so dangerous to the health of the horses?—I do.

2836. That is a very disreputable state of things, is it not, that the water-troughs provided for the use of cattle are positively dangerous?—Well, they are positively dangerous. I have seen a trough on the Embankment where a glandered horse was drinking, and I saw the discharge fall from the nostrils of that horse into that trough, and afterwards I saw four or five little children, one of whom was lifted up to drink water out of that trough where the glandered substance was floating about on the surface of the water.

2837. Would you tell us how many water-troughs there are in London; have you any knowledge of that, including the charitable ones, I mean?—I could not say; I have no knowledge.

2838. Do you know who has the inspection of those water troughs?—It would be the Association, I suppose; they are all put up by the Metropolitan Water Trough and Drinking Fountain Association.

2839. (*Mr. John Burns.*) Do you consider, from your general observation, that these troughs, from the point of view of cleanliness and order, are kept as well as they might be?—I do not think they are.

2840. And you think that they are insufficiently washed down and cleansed?—I do; I have repeatedly got off my trap when I have been going round just to examine a trough, especially if one of our own men has been watering a horse there. I have found down at one end of the trough there was just a whole mass of scum or discharge, it may be, from a horse's mouth and a horse's nose. A horse goes up and he certainly drinks that, and we know that there are some diseases which are more infectious than others.

2841. Considering that the Metropolitan Association for Troughs and Fountains are in a very low financial condition, as proved by Saturday's paper, would you be in favour of transferring the provision, not only of troughs and of all other methods of giving water to animals in the streets from a voluntary society to a local authority that now provides water for all other purposes?—I should think it would be much better.

2842. (*Mr. Hopwood.*) Would you apply the same suggestion to the shelters?—The cab shelters?

2843. Yes?—They are worked under a committee just now.

2844. They are in the hands of a private voluntary committee; would you be in favour of their transfer also?—I think they ought to be under proper control as well, because during this last strike we saw that a man who was not a union driver could not get a cup of coffee in a shelter.

2845. (*Mr. John Burns.*) Is that a fact?—That is a fact.

The witness withdrew.

Adjourned till Friday at 11 a.m.

SIXTH DAY.

Friday, 6th July 1894.

PRESENT:

MR. HENRY CUNYNGHAME (CHAIRMAN, PRESIDING).

Mr. F. J. S. HOPWOOD, C.M.G.
Mr. E. H. BAYLEY, M.P.
Mr. T. LOUGH, M.P.
Mr. C. A. WHITMORE, M.P.

MR. MALCOLM DELEVINGNE, *Secretary.*

MR. FREDERICK WEBB called in and examined.

Mr. F. Webb.

6 July 1894.

2846. (*Chairman.*) You are the chief constable of Leeds?—That is so.

2847. Is Leeds a city as well as a county by Act?—Yes.

2848. I do not want to know any more details, but just this: The cabs are under the Watch Committee, are they, there?—They are under the Hackney Carriage Committee.

2849. There is a special committee, is there, for dealing with hansom cabs?—A special committee for both classes of cabs, hansoms and four-wheelers. Two of my officers are specially appointed hackney carriage inspecters.

2850. We are going to ask you about that presently. Now, first, will you tell us, please, are there separate licences for cabs and for drivers?—Yes.

2851. Will you first tell us what is the method adopted of procuring licences for cabs?—The cab owner sends into the Hackney Carriage Committee his application. The vehicle for which he applies for a hackney carriage licence is then inspected.

2852. As well as the horse?—As well as the horse by a veterinary surgeon, and then licensed.

2853-4. What are the fees paid for the licence?—Five shillings for the cab licence and half-a-crown for the driver's.

2855. (*Chairman.*) Little more than enough to pay for the plates which you provide?—That is so.

2856. How many horses on an average are there to a cab in Leeds?—Well, roughly speaking, there would be about two—I do not think more—for each cab.

2857. Is there any limitation as to the number of licences that are granted to cabs?—159 is the maximum. They will grant no more.

2858. (*Mr. Whitmore.*) How long has that been so?—Oh, for a great number of years. It was slightly less than that; it used to be 120

2859. (*Chairman.*) Will you tell us the population of Leeds?—367,000 in round figures.

2860. That is about one cab for every 2,000 of the inhabitants?—That is about it, sir.

2861. Are you aware that in London the proportion is one to 500 of the inhabitants, or thereabouts?—I am not exactly aware of that. I know they are more numerous, being a Londoner myself.

2862. Would you say that the conditions of life in London, so far as the requirement of cabs is concerned, are different, or the same as Leeds?—I should rather say they are different, sir, People do not fly to cabs in Leeds so much as they do in town.

2863. They are not so much used?—No, they are not so much used.

2864. Then people use tramways more in Leeds?—That is so, and busses.

2865. There is also an electrical tram service?—That is so on one road, one section.

2866. (*Mr. Whitmore.*) Do these cabs include hansoms as well as four-wheelers?—Oh, yes, both.

2867. What is the proportion of two-wheeled cabs?—The two-wheeled cabs are greatly in the minority, we have about 50 hansoms.

2868. In Leeds cabs are mainly used for taking luggage at railway stations?—That is so; people want them to go from one point to another with baggage.

2869. (*Chairman.*) Do you know any reason why this limitation of number was adopted?—It is a very old matter, it has been in force more than 20 years; but I believe the idea was to have better control over them, and likewise that they should not be clashing about in the streets as they used to be.

2870. As they used to be?—As they used to be before the limitation. Before the limitation they were clashing about so much, and were not under the proper supervision that they are now.

2871. Of course supervision is one thing, and inconvenience to the traffic is another. By a sufficient number of supervisions you might supervise, I presume, any number of cabs?—That is so.

2872. Apart from obstruction, I mean?—That is so.

2873. Do you remember the old days when there was an unlimited number?—Oh, no, I cannot do that.

2874. You are speaking from what you have heard?—From what has been reported to me.

2875. I might first ask as to fares. What are the regulations as to fares in Leeds, the prices?—Well, there is a fixed scale; it is in the bye-laws that I have put before you.

2876. (*Mr. Lough.*) One shilling per mile, 2*s.* 6*d.* per hour. That is in the return?—One shilling per mile, and 3*d.* each quarter of a mile after the first, 2*s.* 6*d.* per hour.

2877. (*Chairman.*) What is the area within which the cabs are compelled to drive in Leeds?—The greatest distance from point to point is nine miles.

2878. What is the greatest length that any cabman is obliged to drive in Leeds?—That would be the distance, sir; nine miles is the greatest; that would be from one side of the city to another.

2879. That is to say, four and a-half miles from a centre?—Four and a-half miles from a centre.

2880. So it is a radius of four and a-half miles?—Yes.

2881. (*Mr. Whitmore.*) Completing a circle?—Not completing a circle, because one way it is seven miles; it varies. Driving from one point to another, our greatest distance is nine miles.

2882. (*Chairman.*) Then within that nine miles you have nothing corresponding to our inner circle, have you? There is no similar area carved out of that nine mile?—No, I think not.

2883. Not corresponding to the four-mile radius in London, for instance?—No, I do not think so. Our biggest distance, take from side to side, is nine miles one way and seven miles another.

2884. (*Mr. Lough.*) That makes 16 miles?—Taking the different points. Taking one centre, it is three and a-half miles.

2885. You are speaking of the diameter in both cases?—Oh yes! the circumference is 38 miles.

2886. (*Chairman.*) Are you aware whether in Leeds there has been any demand for or talk about a reduced fare—sixpenny fares, for instance?—I have not heard of

anything, sir. I have been holding my office for four and a-half years at Leeds.

2887. There is no movement in that direction?—There is no movement in that direction.

2888–9. Do they in Leeds charge extra for luggage?—Yes, over a certain quantity, 1 cwt.

2890. Now, then, as to drivers; will you tell us, please, how drivers' licences are granted?—A driver sends in a written application with testimonials; those testimonials are tested as to authenticity, and then they appear personally before the committee. The testimonials set forth their character, their ability as drivers, and their knowledge of the district. There is no examination.

2891. You do not test the driving capacity yourself at all?—No, sir, there is no examination, no test.

2892. Is there any limitation in the number of drivers' licences?—No, I think not.

2893–4. I mean, do you ever refuse a driver who otherwise appears a fit man?—Not on the strength of numbers, sir.

2895. How many driver's licences have you?—I am not prepared to answer that, sir.

2896–7. You could answer that if we asked you to send up a return?—Oh, yes; anything that you please to ask I will send up.*

2898. Do a good many cabs come up every year—apply every year—and are refused?—Oh, no, sir; I think they have got thoroughly into the way, and unless it is to replace a cab they do not make applications for any new ones; I fancy it is so well known to them.

2899. So that the same man runs his business regularly on, you mean?—That is so.

2900. And it gets renewed, and renewed, and renewed?—That is so, and if one gives up the business somebody takes it over with the same stock.

2901–2. And if you have two applicants to take the place of anyone giving up business, how does the committee proceed to choose which to have?—The simplest way I could answer that question is to say that it is put to the vote of the committee. Beyond this I do not know how it is managed.

2903. The testimonials of the applicants are considered?—Oh, yes, sir—fitness.

2904. And have there been any complaints in Leeds of an insufficient number of cabs?—Not at all.

2905. Have you sufficient acquaintance with London to be able to tell us whether, as a rule, the cab drivers in Leeds are a better class, should you say, or a worse class, than those in London?—No. I should not like to say that there was any difference from my experience of London and Leeds.

2906. And now as regards the cabs—are they better, should you think, or worse; the four-wheelers I will take?—Our four-wheeled cabs are far superior to the London ones structurally, but the hansoms are not so light as the modern ones in London, principally I should think because Leeds is so hilly that it needs a strongly-built vehicle. So far as the cleanliness goes, ours are equal.

2907. Are yours built, as a general rule, specially for cabs, or are they old disused carriages?—Oh, I think they are built for cabs, unless some of the night ones; they turn some funny things out then occasionally.

2908–9. Could you tell us at all what are the usual hours of working a cab in Leeds?—That is a thing I shall have to write to you about. I could not give it you correctly.

2910. Roughly the average number of hours that a cab works in Leeds.—Yes, sir.*

2911. If there are differences, you will explain to us the differences?—Yes, sir.

2912–3. And would you also inform us whether there are particular night cabs or night drivers?—I believe there is no difference.

2914. Do you know how the cab drivers earn their money in Leeds? Is it like the London system?—No, they do not hire the cab; they are paid by wage.

2915. What is the wage a week?—That I cannot answer, sir.

2916. You will procure that for us, I daresay, the average wage?—Yes, sir.*

2917. Are there any complaints about the men not bringing home their money properly in Leeds?—I have never heard any, sir. I know of none whatever.

2918. How are offences by cab drivers dealt with in Leeds?—They are dealt with before the magistrates. Our committee has no power except by taking away a licence. Of course they would have power that way.

2919. They do occasionally take away licences, do they?—Yes, sir.

2920. Do they generally take the cab driver before the magistrate before taking away his licence, or do they sometimes consider the case themselves without its being before the magistrate?—It is entirely according to the merits of the case. If it is a man who is drunk, or a man who has charged excess fares, he is always taken before the court.

2921. But what cases would be taken before the committee without going to the court?—A minor matter, where the man was disobeying the orders of the hackney carriage inspector.

2922. Refusing to move on, you mean?—Yes, a minor matter.

2923. A selection is made, you think, according to the gravity of the offence?—That is so.

2924. Does a magistrate take away the licence, or is that done by the committee?—I do not think I have ever known the magistrate take away a licence; it is always done by the committee. In fact, the conviction generally carries it if it is of any seriousness at all.

2925. And then the committee deal with the offence upon the question of taking away the licence after the magistrate has dealt with the man?—That is so, sir; whatever offence is reported against a cabman and by whatever member of the force, a hackney carriage inspector is always present at the trial, and reports to the Hackney Carriage Committee, and likewise takes the driver before them.

2826. Can you give us an idea of the number of offences of cabmen in the course of the year that are brought before the magistrates and the committee?—I think I may safely say, sir, without any reference at all, not 20 in a year. We have very very few offences; I could give you the number positively, but I think I may very safely venture to say that.

2927. Well, that would be not as large as the London proportion then?—Oh, no, sir.

2928–9. Twenty small offences even out of 159—I must take more because there are more drivers—is rather a large proportion of offences, is it not?—I am giving you a maximum; if I referred to the books it might only be seven or eight a year.

2930. I daresay you can give us, perhaps, a return specifying the various offences, so that we can see whether they are big or small?—I can do that by Monday or Tuesday.*

2931. In your opinion, from your experience, are the drivers improving as a class in Leeds, the character of the men?—I believe so, sir; they seem a steady and civil lot.

2932. What laws are in force in Leeds against a man who refuses to pay his fare for a cab — first, if he does it through a bonâ fide dispute; secondly, if he does it with an attempt to cheat?—Well with regard to bilking I may say we have an immunity from that. I think in 4½ years I have only known of three cases that have been brought forward—men that have been actually summoned by the driver himself before the court.

2933. That is for bilking?—That is for bilking; for not paying the fare.

2934. Are there many cases of disputed fares—bonâ fide disputed fares?—I receive very few reports.

2935. Can you tell us what the state of the law is about that, if a man refuses to pay a cabman, bonâ fide, we will suppose: what is the cabman's remedy?—To summons his fare before the court; then he is ordered to pay the proper fare, the fine, and the costs, including the cabman's attendance. Sometimes a dis-

* *See* Appendix III. 11. 3.

* *See* Appendix III. 11. 3.

Mr. F. Webb.
6 July 1894.

puts as to a fare is settled amicably by the hackney carriage inspector.

2936. Can you tell us whether those sums for fare, costs, and compensation, are recoverable under the Summary Jurisdiction Act as a civil debt, or are they recoverable like a fine after an information?—The latter, I believe, sir; it is a criminal matter, I believe.

2937. You must understand it, they are both criminal matters; they are both before a magistrate?—Yes.

2938. You are aware that the Summary Jurisdiction Act, in operation in London, makes money recoverable by a cabman only recoverable as civil debt; it is recoverable before a magistrate, but there has to be a distress put in. Can you tell us, in Leeds, what that would be?—Distress would follow.

2939. Supposing it is shown that the fare was not possessed of money to pay or the power to pay, would he be imprisoned or not; he would not be under the Summary Jurisdiction Act?—The first thing would be the distress.

2940. If he cannot pay?—If he cannot pay, and there are no goods to distrain upon, he would be imprisoned.

2941. You are aware that is different from the law in London?—I am not, sir.

2942. Perhaps you can tell us under what Act of Parliament these proceedings are taken, so that we may verify that for ourselves?—I am afraid I cannot do that, because I do not frame these summonses myself; they are done by the magistrates' clerk.

2943. You would not be prepared to say that the Summary Jurisdiction Act and its provisions applied to such a case?—Not definitely.

2944. You will let us know about that?—Yes.

2945. Perhaps you would prefer to give us your answer after reflection in the case of bilking too, or would you tell us what can be done in the case of bilking?—Well, I do not remember a case in Leeds. I sit in the courts daily, and I do not remember a single instance.

2946. As to the law?—I would prefer to leave that with the other matters, and consult with the magistrates' clerk about it.

2947. There would be, I suppose, no power on the part of a cabman to arrest a fare by force if he did not pay?—Oh no, sir.

2948. At least, you are aware of none?—I am not aware of any; he would merely keep him in view until he saw a police officer, who would take his name and address. In our city we perhaps exceed our duties a little; if we have any doubt about the name and address given, we generally march them to the nearest police station and test it.

2949. Is there any provision in your Act making it an offence for a fare not to give his name and address?—There is nothing at all.

5950. You have no real powers?—No.

2951. Could you summon a man for not doing that, or for giving a false one?—We could not summon him for doing that; in some cases we have known them to be actually locked up until they have given it.

2952–3. That is what we mean, what powers are there?—As to the legality, I can only say when people actually refused to give their name and address, we have done that until we have satisfied ourselves through them or some one else that the name and address is correct.

2954. You will look this up, please, and tell us what you can about it?—Yes.*

2955. How often are public vehicles inspected?—The cabs twice a year, I think, by the committee, and by the hackney carriage inspector, who spends about three days in going round all the yards; he has a register, and goes once a month.

2956. Could you tell us, roughly, how many yards you think there are in Leeds?—Over 30, large and small, sir; some are very small.

2957–8. What staff is your inspection done with?—Only two permanent inspectors.

2959. (*Mr. Whitmore.*) Are they in the police force?—Yes, they are under me.

2960. (*Chairman.*) What class of men would they be, a simple sergeant or a simple constable?—They are generally selected after having done the traffic duty; the same as your pointsmen, your traffic men who, after regulating the traffic for a length of time, when a vacancy occurs are put on to do this duty; they know the drivers.

2961. Have these men any special qualification as being carriage builders or wheelwrights?—No, they have not.

2962. Do you get any professional assistance, of a veterinary surgeon, for instance, at the inspection of horses?—We have always a veterinary surgeon at the half-yearly inspection, and the yearly for the 'busses.

2963. Have the men who go round and inspect monthly any veterinary knowledge?—Only from general observation.

2964. Could they detect glanders, for instance, do you think?—I rather doubt it. They have a good deal to do with horses in a general way, but I should doubt whether they would be able to do that.

2965. Have you much glanders or horse disease in Leeds?—Very little indeed. We have 13 horses of our own connected with the establishment.

2966. (*Mr. Whitmore.*) You have 13 mounted police?—Mounted and fire brigade.

2967. (*Chairman.*) Are there public water troughs in Leeds?—Yes.

2968. How about the healthiness of those? Are they ever complained of as a means of spreading glanders?—I have not heard them complained of. Of course I have my ideas, as well as other people, about them.

2969. What are your ideas?—Well, that it is not a healthy thing; that it is not a proper thing.

2970. How would you water horses, then?—By buckets and taps, with the water running.

2971. You think that a horse trough is a mistake altogether?—Is unwholesome, certainly I do, and I have been among horses all my life.

2972. Do you suggest, then, that a small sort of permanent trough should be fixed so that the water should run in?—So that each horse would have fresh water and a clean vessel.

2973. You think the rough rinsing out of the vessel would be sufficient to prevent glanders?—It would be a great improvement on the trough, where so many drink from the same vessel or same water.

2974–5. How many stands are there in Leeds?—Forty.*

2976. That would be 40 for 159 cabs?—Yes.

2977. So that there is much more standing room in Leeds than there are cabs to fill it?—Yes. You see there is such a large area; in some places there are two cabs.

2978. With the small number of cabs you have mentioned, that would naturally be so?—Yes, sir.

2979. Is it an offence to ply for hire except on a stand in Leeds?—Loitering, of course, if that is what you mean, is an offence.

2980. Otherwise a man might take up a fare?—On going to the rank.

2981. Then you have not many cases of obstruction in the streets by cabs, have you?—Very few indeed.

2982. Are there any cab shelters in Leeds?—There are.

2983–4. By whom are those provided?—Philanthropists.

2985. How many of those shelters are there?—That likewise I have put in in writing.

2976. Are there as many as half-a-dozen?—Oh, yes, there would be that.

2987–93. There are no intoxicants supplied in them, I suppose?—Oh no, sir.

2994. How are the shelters managed; who supplies the refreshments at the shelters?—The men themselves, sir.

* *See* Appendix III. II. 3.

* *See* Appendix III. II. 3.

2995. Some one man, I suppose, deputed by the others?—I do not think so; I think every man looks after himself, so far as I know.

2996. From whom in the shelters do the men buy the food; who sells it?—They do not buy it at all, sir; the wives take it to them, or the children, or they take it themselves, some of them.

2997. Then there is no real providing of food there; the shelters are only places of refuge?—That is all, sir.

2998. So that they might bring beer into the shelters if they pleased?—Oh yes, we have no law to prevent that, although I have not heard of such a thing being done.

2999. I think the cabs are divided, are they not, into three sections?—That is so.

3000. A, B, and C cabs?—That is so.

3001. What do you mean by that division; how is it arranged?—The A division are all lettered A, the B division B, and the C division C, and if we have any cause of complaint or any complaint made to us—maybe by a stranger who does not know the cab at all—we simply ask where that cab was located, where it was taken from, and we know by its section what stand it was upon. It would not matter if it was 10 years back, we could tell. The A division takes a stand one day, and another stand another day, so that it works round.

3002. There are particular stands for particular cabs are there?—Every cab takes every stand in its turn, but each section takes a certain district of Leeds on a certain day.

3003. Geographically, Leeds is divided into three sections?—That is so.

3004. 1, 2, and 3?—That is so.

3005. Then A, B, and C cabs go round amongst those?—That is so.

3006. Supposing there is more than the number of cabs that can be accommodated desirous of going to a particular stand, what is done?—In the sections?

3007. Yes?—We will take the "A" section. If a cab moves off from one stand and is taken away, another cab will go from a supplementary stand and fill up that one rank, and so they will go on in that section.

3008. Early in the morning it is first come first served?—First come first served in the morning.

3009. (*Mr. Whitmore.*) But each cab must in turn ply in a certain section in Leeds, geographically?—Oh yes, that is so, in the railway stations and everywhere.

3010. Is your object by that to secure that no cabs should be used entirely in one portion of the city?—It is done for two purposes; first of all, fairness to the men, and secondly, better control, because people do not know these cabmen probably, do not notice their numbers, and we can get at them quickly by this system.

3011. (*Chairman.*) That system runs through the seven days of the week?—Yes.

3012. So that by the ratio of seven to three there is a rotation?—Yes.

3013. One man does not get a fixed day of the week; he takes his rotation?—Oh no, and they work it among themselves; we have never any difficulty at all.

3014. (*Mr. Lough.*) With regard to that A B C arrangement, does any inconvenience arise owing to some of the stands in section 2 being a long distance from the stables, say, of the "A" class of cab?—The proprietors raise no difficulty at all, sir, so that I do not know of any.

3015. You see my point?—Oh yes.

3016–7. Your borough is nine miles across?—Yes, but then you will perhaps understand, sir, we have no cab ranks actually a long way out. There are little yards where they keep two or three cabs, as there might be in an outskirt of London. There are no actual cab ranks outside the centre.

3018–9. Are those small cabs out in the suburbs that you have spoken of licensed?—No, they do not ply for hire.

3020. To come to the railway system, is there any privilege system at the railways?—None at all; that is in the section business; they take their turn.

3021. I see that you have three railway stations, and they are all included in section 2?—Four, but three are really one joint station.

3022. The three classes A, B, and C come in their turns in there?—That is so.

3023. And no cab or proprietor has any privilege over the other?—Oh no, not at all.

3024. And has the municipality authority over the cabs in the railway yard just the same as on the street?—Exactly the same.

3025. In short, you treat the railway yards as you would a street standing?—Exactly.

3026. Is the point of the railway yard being private property ever raised?—I think not. I think the railway companies seem to think it is to their benefit that they should be under the police.

3027. And the municipality exercise just the same control in the yards of the railway as anywhere else?—Exactly.

3028–30. I think about bilking, if I may say so, you are not quite clear. You said, did you not, there was no law empowering a cabman to give a fare into custody?—I think I rather asked to be excused from giving a definite answer to it. Probably in a bilking case that was so, sir; I have no experience.

3031. As matter of fact, the practice is that a man may be given into custody if there is any reason to suspect the address he gives. In short, he may be brought to the police station until the police are satisfied with his name and address?—That is so. I do not want to commit myself for illegalities that we may carry out in Leeds; but there are many things, as you are well aware, in police matters, in which we are bound to use a certain amount of discretion, and trust to what may follow.

3032. If a man drove to the railway station, and refused to pay the cabman, and then went and was going into the train, would you stop him?—Oh, undoubtedly we should.

3033. That is a case of arresting a man who does not pay his fare that we have not got in London?—Yes.

3034. (*Mr. Whitmore.*) Is it in any Act—any special law in Leeds?—Not any special law; it is matter of fact or act.

3035. (*Mr. Lough.*) Did you say how many shelters there were?—It is in the book. I will not venture to answer positively.

3036. You said that, as far as you could observe, that there was little difference in the character of the men between London and Leeds?—There is very little, so far as my experience goes.

3037. But have you any evidence as to the London men officially?—Only as a fare.

3038–9. But no official experience?—Oh, not official. I am a townsman myself, and I am often with them.

3040. But you do not know anything about the number of cases in London, for instance, which are dealt with?—No, I know nothing, except what I read of.

3041. You said that the reason the licences were limited was because the nuisance existed in the olden times of too many being on the streets?—Well, you see it is 20 years ago, and I can only say what I am told. I cannot speak positively as to that, but I do know this, that both the drivers and the owners are very pleased indeed with the limitation.

3042. Could you tell us anything, even that you were told, about the nuisance that existed before 20 years ago?—Yes; when there were so many cabs, and, of course, population even less than now, these fellows were loitering a good deal more than they do now, and there was not the same control over them that there is now. I do not know whether the laws have been made more stringent since.

3043. And the system of limitation is perfectly satisfactory?—Perfectly satisfactory both to the owner and driver.

3044. The population of Leeds sounds very large to us, 367,000, for so small a number of cabs, but I suppose it is mainly a manufacturing population?—That is so.

3045. The great bulk are manufacturers in the outside, and workpeople who do not take cabs?—That is so. Then, the great number of the better-class people

Mr. F. Webb.

6 July 1894.

reside out of town, and have their season tickets; their contract tickets by rail.

3046. (*Mr. Whitmore.*) Is the population of Leeds increasing?—Oh, yes.

3047. I want to ask you—it is a hypothetical question—but, supposing it increased appreciably in the next 10 years, do you suppose that the corporation would increase the number of licences?—I do not think so, because we find that the number already existing is more than sufficient for what is required.

3048. (*Mr. Lough.*) Then you do not think the present system is based on an attempt to proportion the number of licences to the population?—Oh no, sir. I think they are simply licensing what they think are really perfectly sufficient for the requirements, that is all.

3049. But they did increase the number lately, you told us?—Yes, it was increased some time ago;* that was before my time in Leeds; it used to be 120.

3050. That would be owing to the growth of the city?—I do not know whether it was that the people were getting richer, and taking cabs instead of omnibusses.

3051. But if the population increased, you would consider——?—It is very possible we should wait and see; the population has considerably increased since the last census was taken.

3052. (*Mr. Whitmore.*) And that increase has not tempted you to increase the number of licenses?—No, they have not been increased since the last census.

3053. Are any of the cab drivers owners of the cabs they drive?—In some few cases, certainly.

3054. They are not uncommon?—No.

3055. Do you look upon them as a superior class?—Not more than as the struggling man who drives one cab, perhaps, or a couple of cabs.

3056. (*Chairman.*) You do not know anything about taxameters, do you?—No, only what I have seen and read about them.

* *See* Appendix III. II. 3.

The witness withdrew.

Mr. James Scott re-called and further examined.

Mr. J. Scott.

3057. (*Chairman.*) I think last time we got down as far as water troughs. You told us your views on water troughs?—Yes, sir.

3058. Would you tell us whether you think the number of standings for cabs in London sufficient or not?—I do not consider that they are sufficient.

3059. Do you think that there might be with advantage more small stands or more large stands?—Well, I would advocate the formation of small ranks, to accommodate perhaps two, three, or four cabs—plenty of them.

3060. You think the large long ranks, where they have, perhaps, 20 cabs of a row, are not a good thing?—Well, they are placed in out-of-the-way places, and we want the ranks really where the work is, in public places, where people want cabs.

3061. Now, for instance, could you indicate to us some place in the locality, we will suppose between Trafalgar Square and Temple Bar, where cab stands might be placed which do not exist? I am purposely taking a rather crowded part of the city first?—I do not know that I am sufficiently familiar with the existing stands there to indicate where I would place a rank, but I should think wherever you could get advantageously in a crowded part standing for one or two or three cabs, not a lot of cabs, but two or three, there there should be a rank.

3062. I have heard it said, Mr. Scott, by one driver, that the very best class of hansoms, with india-rubber tyres, do not go to stands at all, but take up their fares when they are themselves going along the streets; what do you think with regard to that?—That is so, and it is to obviate that that I would have those small ranks in those crowded parts.

3063. Then it is true that rather the inferior class of cabs and hansoms at present go to stands?—The cheap cab you will always find at a stand. If you were to go about the Embankment, and just take a look at the cabs that stand round there—Northumberland Avenue—you will find they are all cabs of very inferior type, not the cab that you see on the street.

3064. But we have been informed that men with the best class of hansoms with india-rubber tyres would consider it a waste of time to go to a stand, and would not go to a stand even if any number were provided?—I do not think so. I believe if those small ranks I would propose were placed really in public places, where cabs are wanted, that you would find that class of cab would go there at once.

3065. The reason being, I presume, that a man would not have to wait so long as he might have to wait where there was a larger stand?—That is so; if there was a rank where work exists, you would always find those stands filled.

3066. To carry out practically your views you would find it rather difficult to indicate to us where the stands could be placed, we will suppose between Westminster and Charing Cross, up to the Strand on the one side, in the crowded part, and the way towards Hyde Park on the other?—I do not know that there would be a difficulty; there can be shelters erected at different points in crowded thoroughfares, and alongside those shelters standing for cabs, perhaps two or three.

3067. You think it would be possible?—I think it would be, and I think it would be a great help to the traffic, because having those stands and the shelters there would obviate the clashing of traffic that we sometimes see.

3068. You think the question ought to be inquired into, and if it could be done it would be a benefit?—I am sure it would be.

3069. To the public and also to the cab drivers themselves?—I believe it would.

3070. In your experience is there a good deal of standing about at public-houses by cabs; I mean do they frequently take up their stand at a public-house while the man goes into the public-house to refresh himself?—You can always depend on finding a cab at a public-house door, I should think.

3071. Would that be from want of stands?—Very often a passenger takes a cabman in to treat him.

3072. You do find, as matter of fact, a good many cabs outside public-houses?—Well they are more often found there than you will find them in front of a grocer's shop.

3073. Now, as to drivers' licences; I think you suggest that more should be entered on a driver's licence than exists already?—I think so; the driver's licence, I consider, should really be the man's character.

3074. But would you give the proprietors a right to make entries on the drivers' licences?—I think that, in addition to the ruling we have there, there should be another column, "cause of leaving."

3075. (*Mr. Whitmore.*) Leaving his situation?—Leaving his situation.

3077. (*Chairman.*) You would only have the "cause of leaving" on the licence; you would not have constant entries by the proprietor while he was in the employ of the proprietor?—Oh, dear no; if a man's character were so bad, he should get rid of him, but if he kept still employing that man, I do not see why he should be writing up a bad record against the man so long as he was in his employ; but if a man left, and really refused to pay his day's money, I think there should be an entry to that effect—that he left without paying, or if he was the worse for drink, and perhaps lamed a horse or broke up a cab, I should think that should be put down. No proprietor could put anything in the column but what was actually the fact, otherwise he would be liable.

3078. Why?—Well, he would be pulled up for it.

3079. Before whom?—Before the magistrate.

3080. What for?—For libel.

3081. But would there not be a defence of privilege there?—I do not see how there could be.

3082. We will not go into that legal question. It appears to me there would be the clearest defence I ever saw, except for malice?—Well, it would show malice, I think, if he put anything there that was not true.

3083. I do not know; would it not be like the character given by a master to a servant? If a master put down something bonâ fide, which is even untrue, he cannot be punished in any way.—But if a man had stated that a man had left him without paying his last day's work, that could be inquired into whether it was true or not.

3084. True, but it would depend on whether the person putting it down had done so maliciously or not?—As it is, a proprietor has no means of finding out what character a man he is going to employ has. He has a sheet, in which there is the last proprietor's name, the date when he entered his service, the date when he left it, but nothing further.

3085. And each sheet is clean for the year; each sheet is only a sheet for the current year?—For the current year.

3086. Now, do you think that where a man has been convicted before a magistrate the offences of past years ought to stand as well as those of the current year?—Not all past years. I do not see why all a man's previous record should be held over his head, but I think there should be something which should be continuous, and that a licence should not be handed in and the man get a clear sheet every 12 months.

3087. He should not do that?—I do not think so. I think that the licence might be made continuous, and instead of the man handing in his licence he could go down to Scotland Yard and get it stamped.

3088. Then you are apparently in favour of having the past offences of years gone by appearing on licences?—That would only be for a limited period.

3089. For three years or so?—Two years or so; I think they should always know the previous year's record, at any rate.

3090. Are you aware that in the evidence given before the Labour Commission, I think, some of the cabmen themselves said that the clean sheet system was hardly fair, as it puts a man who had led a very good life for 15 years in the same category with a man who had not?—I think it is hardly fair, because a man may have been convicted of drunkenness or furious driving, or some other offence, and that man at the beginning of his licence starts on the very same basis (so far as a proprietor is concerned) with a man that has perhaps for 15 or 20 years never committed an offence. Of course they have got it all recorded at Scotland Yard.

3091. But you would not have any entry made by the proprietor on the licence further than the cause of leaving?—I do not think so. I do not think it is necessary.

3092. And you would in some way make the proprietor responsible for the reasonable accuracy of the statements?—There ought to be some protection of the driver. Of course it would be an absurd thing if a proprietor could put anything down there without being called in question for it or punished for it if it were wrong.

3093. You think that where an entry of that kind was made the man ought to have an opportunity of saying it was wrong, or erroneous, or malicious?—I think for any entry put there which was not accurate, the proprietor should be liable to a very heavy penalty, which would secure accuracy. All that is wanted is to get the character of the man you are employing.

3094. Are you in favour of more than one class of cab; I mean would you have something like a cheaper cab and a better cab?—I do not think that would possibly work; I think it would only lead to confusion.

3095. Even if they were painted in distinctive colours?—I think so.

3096. I think you gave us your view about sixpenny fares last time?—I did, sir, when I was here before.

3097. Now, in your experience what is the daily percentage of cabs not in use?—Well, I have always found this, that when horses and cabs, harness, &c., are maintained in an efficient state, that you will never have any cabs at home; they will always be in use. It is with the inferior cab where the difficulty comes in. In our own company, during the months of April, May, June, and July, the height of the season, we never have a cab left at home. Even when we take into account foggy days and inclement weather, our per-centage of cabs at home throughout the 12 months does not average more than 2 per cent.

3098. And you have told us, I think—do you adhere to that opinion—that about nine-tenths of the present number of cabs would be sufficient for the metropolis if the bad ones were weeded out?—I do not think I said that; I said that I thought about 7½ per per cent. of the present cabs needed weeding out, but that I would have no check on the good cabs that would be put on the street.

3099. And you think others better would come in the place of those that were so weeded out?—I believe so.

3100. (*Mr. Lough.*) You said 7½, but you gave a different number, Mr. Scott; you said that 1,500 cabs were on the street that should not be on it?—How many cabs are licensed altogether this year?

3101. Eleven thousand, and 1,500 is 15 per cent. of that, is it not?—Hardly.

3102. Well, it is 15 per cent. of 10,000, so it would be about 14 or 13½. I will put it this way—do you stick to the number, that there are 1,500 cabs on the street which should be removed, if there was efficient inspection?—I think I said this, that the cabs which are sublet would number something about 1,000; I have not seen my evidence.

3103. No, it was on a different point; I was going to ask a question upon that. You did say that about 1,000 cabs were sublet?—Those cabs, I said, were the inferior cabs, which ought to be out of the road. I do not think I would be very far out if I said 1,500, at any rate.

3104. I think it is perfectly right; I only wanted to get it, because 7½ is a different per-centage?—Yes.

3105. You say you are against different classes of cabs; have you ever seen anything of the working in a city where there are two classes?—No, I have not; but I know pretty well what it means in London at the present time.

3106. There are not two authorised different classes in London?—There are not two authorised classes, but cabmen class the cabs themselves, and the public class the cabs.

3107. (*Mr. Whitmore.*) You say you know what it means in London; are you now explaining that?—I know what classing of cabs means in London amongst the drivers.

3108. Would you explain what it does mean?—The driver of an inferior cab stands a tremendous amount of chaff from his fellow drivers; and if there were two classes of cabs in London it would lead to a very great amount of that, I am sure.

3109. (*Mr. Lough.*) Can you give us any other difference between them; does a driver pay less for a bad cab than a good one?—He does.

3110. How much less does he pay?—I cannot say, because we have not a bad cab in our establishment.

3111. But you know something of the trade outside your own establishment?—I try to stick to my own business as far as possible; I do not interfere with other people's.

3112. But you do know he pays less for a bad cab than a good one?—I believe that he does; he would be a very foolish man if he did otherwise.

3113. Do you think that it is fair if he, having taken out a bad cab, and paid less for it, should be able to charge the public the same fare as your men can for your cab?—I think it is quite fair.

3114. You think it is quite fair?—I think it is quite fair. The public are quite as discriminating as the cab driver. If a cab driver thinks he is getting a benefit by getting a cheaper cab, he will find he loses all that benefit by losing custom, because the cab rider always looks out for the best property.

3115. Old ladies, who do not ride very often, are they skilled in that as clever people in the city?—They are not in the majority, I think.

3116. Well, but even minorities must be considered a little, must they not?—Certainly.

3117. Do you not think that it is rather hard that an old lady should have to take one of those cabs, which are hired out by the driver at a very cheap rate, and yet pay the same fare as for using one of your excellent hansoms?—I do not see how otherwise it would pay the man; I do not see how he could make a living unless he had the present fares.

3118. I do not go into that; you admit that he pays less for it?—He does pay less for it.

Mr. J. Scott.
6 July 1894.

3119. Would it not be fair, then, that he should charge less for it?—Well, it cuts both ways, because the man cannot get so much custom.

3120. Surely, if he gets a cab for 25 per cent. less than they get one for, it is hardly fair for him to charge the same price as your man charges; however, I do not want to press you, if you think it is quite fair?—I think it is quite fair, because it balances itself later on, when the man is at work.

3121. You have never studied the cab system in Berlin; they have two classes of cabs there?—I have had no opportunity.

3122. You are not aware that they work satisfactorily there to the men and the public?—I am not aware of it.

3123. You were asked a moment ago about the per-centage of cabs not in use, and you said that so far as you were concerned you had only 2 per cent. the year round not engaged?—I think that is about our average.

3124. Does that include when you are painting and repairing the cabs?—I do not know that our system is like other people's; supposing we have 300 cabs working——

3125. You have got exactly 281 licences; we have got that return, so that you had better deal with the actual figures?—Supposing we had 281 licences; there is always a proportion of cabs, say about 30, going through the workshops. That means that our stock of cabs actually, I think, is 323, though our licensed cabs number 281, and as a licence falls out, and the cab goes to the workshop for repairs or overhaul, we have always another cab that is through the workshop ready to take that cab's place, so that we never stop our licensed cabs; the licensed cabs are always at work, but there is always a per-centage of cabs laid up for repair, and overhauling, and painting.

3126. Well then, your answer now is that there is a much larger per-centage than 2 per cent., only that through the excellent management of your business you arrange that those cabs that are being painted or repaired are not the licensed cabs?—The excellent management of our business does not effect that at all. Other proprietors will do the very same thing. There is no reason why a man should allow his licence to run on during the time a cab is in the workshop; it may be in for three weeks or a month.

3127. Then you think it is a regular system that cabs are not laid up for repairs or painting or any other reason during the existence of the licence?—It may be in some instances, not in ours. I know some other firms that adopt our system.

3128. Do you think that your system is adopted by the small proprietors?—Well, they could always find a cab somewhere; it may be a sublet cab, I could not say.

3129. You know that 4,000 of the cabs are owned by proprietors of four and under?—Yes.

3130. Then my question is, do you suppose that they also have alternate cabs which are repaired and painted outside the period of the licences?—With a man that has only four cabs, he perhaps would take a month or two or three weeks in the dead season, August or September, and have his cabs done up then.

3131. Then he would have them done up within the period of the licence?—I should think he would.

3132. Including those, and including repairs, what per-centage of the whole body of cabs do you think would not be in use?—I do not think it will touch 10 per cent.

3133. You do not think it will be more than 10 per cent.?—I do not think so.

3134. I wanted to ask a question or two about drivers; you have had plenty of experience of drivers?—I have had a good deal.

3135. What sort of fellows do you find them?—I think they are first-class fellows as long as you rub them the right way.

3136-7. (*Mr. Lough.*) Do you find them honest?—I believe they are a very honest class of men. I have never once in my experience in London had a case of dishonesty that could be proved with our men. On the other hand, I have had a great many cases where men have been very handsomely rewarded for their honesty.

3138. Do you find them sober?—I should think that one-third of our men are teetotalers.

3139. You are aware that Mr. Burns thinks that one-third of all the cab drivers in London are teetotalers—did you ever hear him say so?—No, I have not heard him say so; but there are temperance societies which will prove, I should think, that one-third are members of temperance societies; whether they are teetotallers or not, that is a different thing.

3140. But, at any rate, so far as your experience goes, it is the fact that one-third of the men are teetotalers?—In our yards, I believe we have fully one-third.

3141. You said that other particulars ought to be marked on the licences besides what is now marked. I want to ask you this question: do you think that the number of days that a man works in the year should be marked on the licence?—I do.

3142. (*Mr. Whitmore.*) Who would keep a record of that?—The proprietor. Of course a man may miss a day in the week, and I would never think of counting that as though a man was not working.

3143. (*Mr. Lough.*) But you would mark the number of days he worked in the year; that could be discounted at the end of the year, could it not?—There are men who have different days of working. Some men will go out for a long day, and only work four and a half or five days a week.

3144. That would be a good average on the year?—It should show a good average. What I meant was that if a man were to absent himself from his work for a fortnight, three weeks, or a month, without any reason for it, and then come back, that should be entered on his licence.

3145. But do you wish to qualify your answer that the number of days a man works in the whole 12 months should be marked upon his licence?—I would qualify it in this way, that I would not certify as to him being in the employment if there was a broken period of a week or over, but anything under a week I should think would ——

3146. Do you not think it might be left, in considering this amount, to make allowance for the four days a week? For instance, four days a week would be two hundred days in the year, and might it not be recognised that 200 days in the year was a very fair service, or 250?—That is fair, I think, if you take it in that way. But some men might be absent for three months, and still you would have about 200 days left if he worked pretty regularly through the other period.

3147. (*Mr. Whitmore.*) The value of the day's work depends somewhat on the amount of hours which it really comprises?—It does.

3148. I mean the mere record of so many days' work might mean a much larger number of hours worked in one case than another?—It would; for instance, in our own company we have men who work, perhaps, four and a half days, but those are always long-day men, who will be putting in 16 hours. Other men will work five days, and they will only work 12 hours; they will never go beyond that.

3149. (*Mr. Lough.*) I think I will ask a question that will enable you to give the answer you want. Would you be in favour of marking on the licence how many days each man works in each of the 52 weeks of the year?—It would be a very laborious job.

3150. Well, there is no other way of getting at your point?—I think there is.

3151. How would you do it?—What I mean is this. If a man absents himself from work for more than a week ——

3152. Well, then it would be shown he worked no days in that week?—It would be shown that for the period from —— to —— that man was not at his employment. But if you are going to deal with a single day in a single week, I think that it would be ——

3153. I did not say a single day. But you think it would be too much trouble to mark how many days he worked in each week?—I think so.

3154. Well, then, would you take the months. I will ask you distinctly—would you approve of marking on each licence how many days a man worked a month?—I would approve of marking the days that he was absent from duty beyond a week.

3155. And in addition to that you would mark the number of days that he worked in the year?—It would lead to a lot of bother.

3156. Well, according to your answer now, Mr. Scott, if the man worked only one day in each week, there would be no mark on his licence at all; you would not like that, would you?—He would not stay in the employment.

3157. I am taking an extreme case in order that we may get to a practical step. If the man worked only one day in each week there would be no mark on his licence at all. That would not be satisfactory, would it?—It would not.

3158. You would like to know how many days he worked or did not work each week, would you, suppose you were to employ him?—I could not conceive such a case. No man will ever keep himself alive working one day a week.

3159. I am not asking that. You want the number of days he worked or did not work in some period?—No, we do not want to know that so much as what becomes of a man during a certain period of the year. We know there are drivers who only drive a cab a certain period of the year, and we want to know how long that man continues to drive a cab.

3160. Well, I will leave the point then. You said you would also like them to mark on the licence the cause of the man leaving his employment?—I think there ought to be a column for that.

3161. Is that system adopted now?—Not that I am aware of.

3162. Did you ever hear of what is called chair-marking?—I have heard of it.

3163. What is chair-marking?—I have never inquired. I have heard it said that instead of writing, say, the "26th" of May, you would put "twenty-sixth," or something of that sort. But we never have had a case of that in our company.

3164. (*Mr. Whitmore.*) I do not understand the answer?—For instance, I believe that when a man's licence is filled up, if he has been in your employment from the 26th day of May till the 26th day of June, you could put it down in figures 26th May till 26th June; but if a master were to spell it—"twenty-sixth," that would be chair-marking, I understand.

3165. (*Mr. Lough.*) What is the object of chair-marking, Mr. Scott?—It has a sort of Freemasonry in it, I believe.

3166. A Freemasonry among whom?—I do not know. I am not in the society. I am not a member of it.

3167. Of what society?—Of the associations. We are not connected with the associations in any way.

3168. With what associations—the Owners' Association?—The Owners' Association. There is a book, you know—what is termed a book.

3169. Are you not a member of the Owners' Association?—No, we are not.

3170. What part did you take in the last strike, then, on behalf of the masters?—That is a different thing altogether. That is where the owners are combined for one object—mutual protection.

3171. Then are there two associations?—There are dozens of them, I believe.

3172. You do act with the others when they are combined for mutual protection?—For protection, yes.

3172. I want to go back to the chair-marking for a moment. What is the object of it? What have you heard is the object of it?—I believe it is to indicate to a certain extent what the man is that is in possession of the licence—what character he has.

3174–5. Why he left his last employment, is it not?—I believe so.

3176. (*Mr. Whitmore.*) You mean the substitution of the written letters for the figures carries a certain meaning with it?—I believe that it does.

3177. (*Mr. Lough.*) And what meaning?—I believe it is very often done inadvertently. I would do it either way myself, and never think it was chair-marking a man's licence.

3178. We are not speaking of your company, but your experience of the trade, which is very great, and I am asking you generally what is the object, so far as you know it?—Just what I have stated.

3179. Well, I did not get your answer clearly?—It is meant to indicate the character of the man.

3180. (*Mr. Whitmore.*) To the next employer?—To the next employer.

3181. (*Mr. Lough.*) Does it not particularly mean why he left?—I cannot say that it does. I tell you frankly I have had no connexion with owners' societies beyond the Mutual Protection Association, and I know nothing regarding chair-marking whatever, other than what I have heard—what I have stated.

3182. Well, then, I will put that to you. In your company you do not use it at all?—We do not.

3183. You never chair-mark a licence?—Never have. That is the reason that I would have the thing fair and square, and above-board. Let us have the cause of leaving put on the man's licence; it is his character.

3184. Well, then, it amounts to this—that at present there is a sort of Freemasonry in use, or that you have heard there is a sort of Freemasonry in use, that is not recognised by the authorities, and you would like that to be supplanted by an open and fair system that every one would understand?—That is what I want.

3185. (*Mr. Hopwood.*) Chair-marking is used detrimentally to the men?—I believe it is; and a man may have a spite against a man, and might injure him in that way; he might have great difficulty in getting another cab, I should think.

3186. (*Mr. Lough.*) Now, I want to ask another question about it. You said a moment ago there was a book—what book is that?—I do not know; they call it the Red Book. I have never seen it.

3187–8. Who call it that?—I believe the drivers call it that. At the beginning of the last strike I saw the book was mentioned, and that there had been an amalgamation of associations, and they said that was really the reason of the strike. If it had been the case they should not have struck against us, because we are not in it.

3189. But what is the Red Book?—I do not know.

3190. Whom is it kept by?—I could not say.

3191. Is it kept by masters or by drivers?—I do not know anything about it.

3192. Who was it showed it to you during the strike?—I never saw it.

3193. Who was it spoke to you about it?—I saw it in the papers.

3194. So far as you have heard about it now, is it a book kept between the masters for the character of the drivers?—I believe that is so. I do not know for the character of the drivers. I know nothing whatever about it. I am not in their secrets.

3195. Your society does not use it at all?—What society do you mean?

3196. I mean to say your company?—Our company, no.

3197. You never refer to it for the character of a man, do you?—No.

3198. And you never enter a man's character in it if he were leaving you?—I could not do it, as I have no connexion with it.

3199. If you dismissed a man for some strong reason, such as roguery, you would not enter it in that book?—I should think if I dismissed a man for roguery, it would be pretty well known.

3200. Would it be entered in that book?—It would be a police case, and all the world might know of it.

3201. Would it get into the book too?—It could not possibly. I have no connexion with the book.

3202. Now, are you connected with the Owners' Association?—I am chairman of it.

3203. What is the nature of the association?—That is the Cab Proprietors' Mutual Protection Association.

3204. Well, what is the nature of it?—Well, it is only recently started; it has hardly got into form yet.

3205. (*Mr. Whitmore.*) Has it started since the strike?—It has started since the strike. There was an original association, the Metropolitan Cab Proprietors' Strike Fund Association; that association is now merged into the Metropolitan Cab Proprietors' Mutual Protection Association.

3206. (*Mr. Lough.*) And you are chairman of it?—I am chairman of it.

3207. You only became connected with it, say, two months ago, or during the strike?—No; I have been

Mr. J. Scott.

6 July 1894.

connected with it for years, the old one, the old original one; it was the basis of the new one.

3208. Then it embraces all the masters in London, all the large masters?

[*Room cleared to discuss whether these questions were covered by the terms of the reference.*]

Examination resumed.

3209. (*Mr. Lough.*) Does it embrace all the large masters in London, the Masters' Association?—Our rules are not completed yet.

3210. Do you know about how many masters are engaged in it?—The thing is just in the course of formation.

3211. (*Mr. Hopwood.*) Do you propose to seek incorporation?—We shall.

3212. Under the Companies' Act or as a Friendly Society?—I suppose it will be under the Friendly Societies Act.

3213. (*Mr. Lough.*) This is the only question I want to ask of this nature. If it is one you do not want to answer you need not. Is it going to be an association that is to be public, and the drivers and the public will know all that it does, or a private association in the master's interests?—The name of the association tells exactly what it is for—the Metropolitan Cab Proprietors' Mutual Protection Association.

3214. Is that the body that keeps this Red Book you spoke of?—No.

3215. Do you know what is the body that keeps it?—I believe there are a good many Red Books. There are different associations. I think the association of masters at the present time is divided into districts.

3216. You think the association of the masters is divided into districts?—The associations are in different districts. I know nothing at all about them. I am not a member of them. I cannot speak of them.

3217. Can you tell us the name of any other association except the one you have mentioned?—Not a cab-masters' association.

3218. Now we will come to stands. You said that stands were near public-houses, generally?—No, I did not.

3219. Well, perhaps I am wrong?—I was asked if ever I saw a cab standing by a public-house door.

3220. Do you think in the arrangements of stands at present there is a tendency to put them near public-houses?—I should think there will be always a tendency for a public-house to try and get where there is a stand. I do not know whether the reverse is the case.

3221. Do you think that men try to get a public-house licensed in the neighbourhood of cab stands?—I think they will go in the same way as with the termini 'busses.

3222. But, as a matter of fact, do not 'busses generally stop at a public-house?—That is so.

3223. In the same way, do you think, and for the same reason, is a cab stand placed near a public-house?—I do not know what actuated the gentlemen who regulated that.

3224–5. I only asked you, from your wide knowledge of London, was it generally true that cab stands were placed near public-houses?—There are generally public-houses near the cab stands; you will generally find that.

3226. You said that a number of small stands were required for two, and three, and four cabs, you thought?—Yes; I would have them very thickly scattered over all public places where cabs are wanted.

3227. I want to ask you a question about that. Do you not think that if there were a committee to recommend where cab stands should be placed, say a committee comprising one master, one cabman, a representative of the police, and a representative of the municipal authority, it might make recommendations of a useful nature?—I should think that the police, with their knowledge of the congested districts, would be better able to judge of that for themselves and decide.

3228. What is the authority now that settles the stands?—It is the police authority, I understand.

3229. The police. And you disapprove of how it is at present settled?—At the present time I do.

3230. Then you admit that the police have settled it badly?—So far as they have gone, they have.

3231. Now, I ask you whether you could suggest any improvement?—They have powers to do what I suggest now.

3232. Yes, but how are they to get information about it? I am only speaking of an advisory committee for the police authorities. Would you think such an advisory committee would be helpful?—I should think a recommendation from a committee such as this would be helpful.

3233. But this committee will go out of existence in about a month or two, we hope?—The recommendation would last.

3234. Yes, but we will not make any recommendation as to where a particular cab stand should be. What I am asking you, Mr. Scott, is to suggest any machinery by which these small cab stands could be provided and placed in the proper places?—I think they have ample machinery at Scotland Yard for that if they only grasped the idea.

3235. (*Mr. Whitmore.*) Do you think the vestry would be the best authority for acting as an advisory body?—In conjunction with the police, yes.

3236. I mean, have you thought of that?—Well, the two together I should think would be—but for drivers and proprietors to be upon it ——

3237. (*Mr. Lough.*) You disapprove of the idea of drivers and proprietors being on such a committee?—I should think the vestry and the police are quite sufficient.

3238. But you think the vestry ought to be consulted about the *locus* of stands?—I think so.

3239. You said, when you were speaking of those cabs that were sublet from a coachbuilder, that there was a difficulty about inspecting them, I think?—There is a difficulty.

3240. Does not the licence of them carry a responsibility in that case just as well as in every other case?—It does.

3241. So that they can get at the man to whom they have licensed the cab?—In the Act it states that a cab proprietor's premises must be open at all times for inspection by the police if the inspector comes with a mandate from the Commissioner. Well, a man, say, has five cabs which he has cab licences for, and he sublets them. If you go to the man's premises you would not find any cabs there—you would not find any horses or harness.

3242. Well, you would not find any cabs at your place on a day that they were all out?—You would find the stables, and you would find the cabs there at night.

3243. You mean by this system of subletting the cab is taken right away for a month?—It may be taken right away to a greengrocer's premises, or a coal merchant's premises, or a laundryman's premises.

3244. Is your point that the licence should only be given to the bonâ fide owner of a cab?—That is so; the man who hires the cab to the driver.

3245–6. You said you were against the limitation—the restriction—of the number of carriage licences in London?—No, I said I was against the restriction of licensing good cabs, or men of good character.

3247. Well, do you think that, supposing application were made, say, for 20,000 cabs in London, that the police should issue them all?—I could not conceive of such a thing.

3248. Would you issue, instead of the present number of 11,000, 15,000 or 20,000 if they were applied for?—If they were applied for I should think I would, because London would really require them. But there will only be that number applied for which is required, you may be sure of that.

3249. Do you know that there are too many now?—Not too many good cabs.

3250. I am not taking good cabs. I am taking good and bad, and all as they are—I am asking, do you think there are too many?—I believe it is the bad cab and the bad driver that is really hurting the trade, and if they were out of the way there are not too many.

3251. I will ask you about quality in a moment, Mr. Scott, if you will allow me. But I am speaking now of quantity, and I am asking you, do you think there are too many cabs licensed now?—If they were all good cabs, I do not think there are too many cabs licensed now.

3252. If they were all good? How would that alter the fact—I mean if they were all good, how would that make a number that is too large right?—Well, I mean this, that if the bad driver were struck out, and the bad cab struck out, that the cab trade would have the confidence of the public, and far more cabs would be engaged. It is because there are so many inferior cabs, and a number of drivers of a very low type, at the present time, that those old ladies that you mentioned some time ago are afraid to take a cab.

3253. You are against the limitation of the number of good cabs and good drivers?—I am.

3254. Well, then, are you of opinion that cabs of a very bad quality are now passed by the police?—A certain number, as I have stated before, are passed which I think no practical man would consider fit under the Act.

3255. You think that the system of inspection under the police is done very badly?—I did not mean that. I do not think the men are fit for their work?

3256. I am speaking of the cabs only?—I do not think the men are sufficient for the work.

3257. (*Chairman.*) You think the system of inspection ought to be altered?—I do not think there is sufficient number of inspectors to do the work well. I do not think I could blame the men for having too much work.

3258. (*Mr. Lough.*) I will take the Chairman's own question: do you think the system of inspection ought to be altered?—I do.

3259. Are you against the limitation of the number of drivers?—Licences?

3260. Licences, yes?—Just in the same way as I am against the limitation of cab licences. In the one case it is a case of character, in the other case it is a case of class.

3261. No; there must be a difference. I will put it to you this way: do you think there should be any relation in the issue of driver's licences to the number of cabs licensed?—It is a very difficult matter to decide that, because there are so many drivers who hold two or three licences.

3262. What sort of licences?—Perhaps a driver will hold besides a cab driver's licence, a conductor's licence, and a 'bus driver's licence—and these men may all appear as licensed cab drivers.

3263. Do you know of any case where a man holds those three licences?—I believe the cases are very general.

3264. But do you know of one yourself?—I cannot say that I could name a case; but I have no doubt that I could produce cases.

3265. Supposing your former recommendation of marking on the licence the number of days, or the period that a man works in the year, was carried out, do you not think that that would lead to the men working much more regularly than this present answer of yours indicates? Would not that lead to their working more regularly?—Would you kindly repeat that question?

3266. Supposing this information that you thought ought to be marked on the licence, with regard to the number of days a man worked in a year, or the number of weeks he worked in the year—if that were carried out do you not think that it would lead to the men working more regularly as cab drivers?—That is the reason of my suggestion.

3267. If it were done, do you think there might be any relation between the number of drivers and the number of cabs licensed?—I should think supply and demand would regulate that.

3268. But can supply and demand regulate a trade like that if it is deliberately over-stocked?—What do I understand by being "deliberately over-stocked"?

3269. Well, this way. You have 280 cabs, have you not?—Yes.

3270. How many drivers do you employ for them?—It takes 405 drivers to work our 280 cabs.*

3271. Then there is a relation between that number of cabs and the number of drivers?—In our company there is.

3272–3. Do you not think there ought to be the same in the general system of licensing in the metropolis?—Certainly not.

3274. Why not?—If you were to go round and make inquiry, you will find there is a tremendous number of cabs that work 23 hours a day; they are only in the yard for one hour—that is to get the harness and the lamps cleaned and the cab washed. Two drivers work the one cab.

3275. Do you know how many cabs there are that do that?—I could not say, but I have heard of a great many instances. There were two men there on that committee before Mr. Asquith who worked the business in that way.

3276. I know that. But, roughly, what number do you think there are?—Well, I could not give you a figure.

3277. Would you say 500?—Oh, more than that a good deal.

3278. A thousand?—Oh, more than that. I think if you get to 2,000 you will get nearer it. That means two men to each cab, not counting spare men at all; and those men, you must remember, will only work about four days a week, so that you may say three will be another man—a third man—to each cab there required to keep it going. Those are the difficulties that lie in the way of limitation.

3279. You would not like, though, to have three men licensed for every cab, would you?—There are cases where you can quite conceive of it.

3280. Now, I pass to another question. You think that the 40*s.* licence cab plate is an unfair charge on the cab owner?—I do.

3281. Can you recommend what amount it ought to be, what would you suggest?—A sum equal to the expenses of the department for that particular branch of work.

3282. Then, when you were on the privileged system, you said you approved of the privileged system?—I do.

3283. You gave several reasons. I want to ask you as to another reason. Do the masters who have got privilege make a good profit out of it?—I do not think they make any more profit out of it than the others.

3284. You do not think there is any particular advantage to the master in it?—Well, there is this advantage—that it secures to you genuine drivers.

3285. Well, even your company, I suppose, what it works for is a dividend, is it not?—We try to.

3286. Well, then, does it help a company to pay a dividend to have some good privileges—does it pay the master?—There have been so many companies started, and they have never come to anything.

3287. Had they privileges, by the way?—I do not think they had.

3288. That is the point. Yours gets on well with them. I only wanted to ask you quite clearly whether your judgment in favour of the privileged system was influenced by the fact that it was a profitable thing to the particular masters who had it?—No, it was not influenced by that fact at all.

3289. (*Mr. Whitmore.*) Is it a valuable privilege in the way of money to the owner?—There is this—you have regular employment, and you have good men; but beyond that I do not think there is any special advantage to the owner.

3290. (*Mr. Lough.*) But there may be?—There is a decided advantage to the driver.

3291. But my point is—to put it quite clearly—does it pay, the privileged system?—I should think it pays as well as the other.

3292. And no better?—I cannot say. I have not had experience of the other, so I cannot tell you.

3293. Your experience is generally of the privileged?—Yes; our property has been almost all acquired for that one special purpose.

3294. For privilege?—Yes, it is of that class; you know we work a great many broughams, which are only fit for that work.

3295. (*Chairman.*) Broughams as well as cabs?—Broughams as well as cabs, brougham cabs.

3296. (*Mr. Whitmore.*) Licensed?—Licensed brougham cabs.

* *See* Eighth Day's evidence.

Mr. J. Scott.

6 July 1894.

3297–8. (*Mr. Lough.*) What is a brougham cab?—A brougham cab. That is about as much as I can tell you of it. It is a brougham with a plate on.

3299. (*Mr. Whitmore.*) It is a superior four-wheeler?—Yes.

3300. (*Mr. Lough.*) Will it take luggage on the top of it?—It does.

3301. And what is the difference between it and a non-brougham? What shall I call the other; a growler?—A growler; well, there is all the difference between them that you see between a yacht and a ferry-boat, I should think.

3302. Do you charge any extra price?—No, we get no extra price.

3303. Does it ply for hire in the same way as an ordinary cab, or does it go by appointment to the stations?—It is a licensed cab plying for hire.

3304. In the ordinary way?—In the ordinary way, only it is of a better type.

3305. (*Mr. Whitmore.*) Do you use it only for station work?—That is its primary use, but when they get out in the street, you know, they will take a fare.

3306. (*Chairman.*) Do the drivers pay a small sum in excess, or more for it than an actual cab?—They pay the actual amount that is charged to the privileged proprietor by the railway company for the privilege.

3307. Does a man driving a brougham cab pay more to the proprietor than the driver who is driving not so good a one? Is an extra charge made?—In our company we have no other; they are all one price.

3308. They are all brougham cabs?—Yes; that is the four-wheelers.

3309. (*Mr. Lough.*) Is this brougham cab much better than the ordinary street growler?—You could not class them together.

3310. Do you think it fair, then, that they should be let at the same price to the public?—I do not think it is let at the same price.

3311. Do you think it fair that the fare should be the same for the brougham as the growler that you could not class with it?—Yes, I think so, because the other one will not get so much work.

3312. (*Mr. Hopwood.*) Are the brougham cabs specially constructed for your company, and for this particular purpose?—For station work, yes. We have over 200 cabs in privileged work, and they are all specially painted and constructed for that special work.

3313. (*Mr. Lough.*) Have they india-rubber tyres?—They have.

3314. All india-rubber tyres?—Not the broughams the broughams in Paddington have india-rubber tyres.

3315. How many broughams have you with india-rubber tyres?—I could not say exactly.

3316. Forty or fifty?—We are always increasing them.

3317. You said you were in favour of an optional sixpenny fare, Mr. Scott. I want to ask you a little about how that would work. You said it should be optional with the driver to carry a person, if he liked, for 6*d.*?—Short distances, within certain limits.

3318–19. It is the word "optional" I want a word or two on, Mr. Scott. Would it not be in the regulations that he should carry the fare for that distance, whatever it might be, for 6*d.*?—Well, I have looked at it in this way. Supposing a man puts up in theatre rank at night; an old lady comes out, sees it is raining, says, "I am going to have sixpennyworth down to Charing Cross;" she would take that man away if it were compulsory though. He may have been standing there a couple of hours waiting for a good job, and loses perhaps a 5*s.* fare.

3320. You would not be in favour of it being in the tariff?—I do not think I would.

3321. Then you would not put for any distance, even 500 yards, a sixpenny fare on the tariff?—I think it would be very hard on a man just in that special instance I have given there, to be taken away from the opportunity of having a good hire.

3322. Well, that is the reason, I know. There are hardships in every law, you know; there is a maxim about that. But I want you to take that into account, and answer my question: do you think, on the whole, taking these hardships into account—taking everything into account—there should be a sixpenny fare on the tariff?—I believe that a sixpenny fare on the tariff might be for so many hours in the day, up to a certain time.

3323. (*Chairman.*) Would you be in favour of a compulsory 6*d.* on the tariff?—I would be in favour of a compulsory 6*d.* for over-short distances up to a certain hour at night.

3324. (*Mr. Lough.*) What hours would you suggest, Mr. Scott?—I should think during the business time of the day, when business men are going about and rushing, perhaps we could do a sixpenny cab for 500 yards, or 700 yards, or half-a-mile.

3325. Never mind the distance. Would you suggest the hours; it will be very helpful to the committee?—Well, say from ten till six.

3326. And you would not allow it in the evening at all?—If a man cared to do it.

3327. I am speaking of a compulsory 6*d.* in the tariff?—No; I do not think it should be compulsory after that.

3328–29. What would be the distance you would say?—Anything under a mile, I should think.

3330. I want to ask you a question about police courts. You said you think it a great hardship for masters to be compelled to produce their drivers in the police court, did you not?—For trivial offences—for the personal acts of their drivers.

3331–32. The driver is personally responsible for almost everything, is he not, Mr. Scott?—No, he is not.

3333. Is he not responsible for luggage?—No, the proprietor is responsible for luggage; the proprietor is responsible for all accidents.

3334. For accidents, but to luggage?—If luggage is lost in the cab.

3335. If an umbrella is lost?—Not an umbrella—that is under the charge of the occupant of the cab.

3336. Then for any luggage inside under the charge of the occupant of the cab the driver is responsible?—The driver is not responsible.

3337. If the rider proved that he left his umbrella in the cab—if he could prove that, supposing there were two of them, would the driver be responsible or the owner?—I have never heard of such a case.

3338. If there were a little bag with 100*l.* in it left in a cab, who would be responsible for it?—The man would have to prove that he left it there, of course.

3339. Supposing it were proved, supposing three men in a four-wheeler?—If the bag of gold were given in charge of the driver, and he put it on the top of his cab, and lost it from the top of his cab, the proprietor would be responsible for the loss of the driver.

3340. If he left it inside—knew he left it—ran back in half-an-hour, and could not get it?—If he did not find it in Scotland Yard he would have to prove that he left it there.

3341. If he did prove it?—I never heard of such a case.

3342. Supposing it did happen, can you tell me who would be responsible?—You would have to ask a lawyer, I am afraid.

3343. Do you say the owner is responsible for all cases of articles left—articles lost in a cab?—Not in a cab—on a cab, anything given in charge of a driver.

3344–5. If the thing lost is in charge of the fare inside, but it can yet be proved that it was left in the cab, is the driver responsible?—I could not say.

3346. Is there any other improvement beyond that of giving the owners immunity that you would recommend with regard to the police courts?—I do not know that there is, except the other thing that I mentioned—the getting some sum fixed for lost luggage.

3347. Does your company suffer much inconvenience by drivers being taken away to the police court for trivial offences?—We do.

3348. A good deal?—We do. We have always to send a man to produce his licence, and to produce the man.

3349. You have to send two men when men are summoned to the police court?—You have to take the driver along with you as though he were a child unable to look after himself.

3350. So even in trivial cases two men must go to the police court—the driver and one other?—Yes.

3351. Do you think it is reasonable that for these very small offences, such as plying and loitering, the drivers should be brought up so frequently as they are in the police court?—I do not think they are so very frequent, those cases. There is generally some reason for it.

3352. Reason for what?—For their being brought up.

3353. Quite so. Do you know the number that is stated in the return which has been presented to the committee?—I have not seen it.

3354. Are you aware that there are 4,925 offences in a year charged against drivers?—I could quite understand that, because I should think there are some men that will be charged regularly.

3355. And then you do not think it is unreasonable that men should be brought up for this loitering, as it is called, or plying, is it?—I think it is unreasonable that a man should be brought up for plying where they have not provided a stand where he can stand his cab.

3356. In many places they have not provided stands at present?—That is so. They would have hundreds and hundreds every day. Anyone walking along the Strand will see lots of men there who are really walking along with their empty cabs, but they do not take them up for that.

3357. Do you know that 900 of these cases were for loitering and obstruction?—That is a very small number in a year.

3358. And 600 for plying. You think it is very small?—It is very small; three a day for 11,000.

3359. You do not think the total is too large?—No, I do not think so; I think it shows the police are very lenient with the men.

3360. And you think the jurisdiction of the police courts is as perfect as it can be?—No, I do not think that.

3361. I mean with regard to these small offences?—I think they treat the cab drivers very leniently, the majority of the magistrates.

3362. Is not a small fine of even 6*d.* marked on the licence?—When there is a conviction, that is marked on the licence.

3363. Any conviction is. Well, do you think it is reasonable that a conviction for a small offence should be marked on the licence?—It does not count much.

3364. Do you think it is reasonable?—They must have some means of recording the fact.

3365. And you do think it is reasonable that it should be marked on the licence, any conviction of that kind?—It is a matter of opinion.

3366. Would you be in favour of a special court for trying these cab cases, apart from the police court?—No; I do not think I should.

3367. Would you be in favour, in the case of these cab offences, of an inspector considering the case before the policeman brought it into court?—I would.

3368. You would be in favour of that?—I think that is done.

3369–70. And would you be in favour of a system of giving a printed notice or warning to a man for a first offence before he was brought up to the court and charged?—It would depend entirely upon what the offence was.

3371. Plying or loitering, one of the trivial offences?—Before he was brought up and convicted?

3372. That he should get a warning that if it was to happen again ——?—I should think they get far more than one warning at present.

3373. The suggestion was made to the Committee by another witness of considerable authority, that it would be well to give some printed or other warning, perhaps, in cases of small first offences, in order to rid the courts of them, and I want to ask you, would you be in favour of that or against it?—Well, I have stood myself in the Strand, and I have heard policemen repeatedly warning men standing there, and warning them when they might reasonably have taken the men up.

3374. (*Mr. Hopwood.*) The suggestion was rather this, Mr. Scott, that where a case is entered by the constable for report to his inspector, a case in which the inspector would now apply for a summons, the inspector, instead of applying for that summons, should send a written warning to the person who otherwise would have been charged?—I would certainly be in favour of that.

3375. (*Mr. Lough.*) Turning to bilking: I do not think you said anything about bilking?—No; I do not think I did.

3376. In a case of bilking, would you be in favour of a person who refused to pay his fare being brought to the police station to give his address and have it checked?—I have had very little experience of bilking. I think there is very little bilking where you have respectable men, that it is a certain class of cabmen that get bilked, the men who are of very little use either to the proprietor or anybody else.

3377. Well, my question is, where the man does get bilked.—If there was a real case of bilking, I think that nothing would be too hard for that man who tried to cheat the cabman.

3378. "Nothing would be too hard" is a little vague?—I think he ought to be dealt with summarily.

3379. Would you give power of arrest?—If you could get hold of him; a real bilker gets out of the way.

3380. You heard the case lately of a solicitor who drove to the police court and stayed in the police court and kept the cab with a 1*l.* fare, and then said to him, "Well, now, I am very sorry, but, you know, "I have not got a shilling"?—I did not hear that case.

3381. Well, suppose that case, where the man keeps a cab for six hours, and runs up a fare of 1*l.*, and says, "Well, now, I am very sorry but you know I "have not got a shilling," would you take him to the police station?—I think he ought to be dealt with at once.

3382. You would give power of arrest in that case?—It is a dangerous power to put in the hands of a cab driver, you know.

3383. Then do you think that because of the danger of the power there should be no amendment of the present law?—I think there should be some amendment, but what it should be I am hardly prepared to state. I think that some protection should be given to the cab driver against bilking

3384. Would you go the length of letting him bring the fare to the police station?—He may call a policeman and get an explanation then, and if it was not satisfactory to the policeman and the cabman, then there might be recourse to the police station.

3385. (*Mr. Hopwood.*) I do not understand why you say that successful bilking depends to a great extent upon the class of cabman?—I believe that a great number of cabmen say they are bilked when they have never been bilked. They will come home without any money, and they bilk the proprietor really, by representing that they have been bilked themselves—a certain class of drivers. Now, I think I have only heard of three cases—and we employ a lot of men—of genuine bilking amongst men in our company.

3386. Can you tell us anything about those three cases?—One of them was at a public-house where there were two entries, a bar entrance and a jug entrance, and the fellow had gone in at one and come out at the other.

3387. Another case?—The other case was down at Richmond, I believe. I believe it was a genuine case—that a man drove down to Richmond, down to Hampton Court and got the driver to put up his cab, and the driver went to the expense of having a good dinner as well, and expected that the man was going to come back and put it right for him; and he failed him.

3388. That was a bad case. And the third?—I cannot remember the particulars. I am certain they have been very, very few.

3389. In how many years' experience?—Getting on for eight years.

3390. (*Mr. Whitmore.*) If the privilege system were abolished would you still keep your brougham cabs?—They would be of no use on the street.

3391. Well, what would you do with them?—They would have to be disposed of.

Mr. J. Scott.

6 July 1894.

3392. In fact, you would not retain your brougham cabs?—You could not work them on the street to advantage.

3393. So that the abolition of the privileged system would lead to your giving up——?—That good class of property.

3394–5. The improved class of four-wheeled cabs?—it would. They are specially built just for the station work.

3396. (*Mr. Hopwood.*) If the privileged system were abolished, and the stations were thrown open, and a toll were charged, I assume that your men would take these particular cabs daily to a station, and pay that toll?—No; there would be no guarantee that they would do that.

3397. (*Mr. Whitmore.*) How would they be sure of getting access to the station?—There would be no guarantee that they would get access. At the present time we have a guarantee that a certain number will get access to the station. There is no limitation in the privileged system. There is a certain number that we guarantee, and then if more are required of course the station is open.

3398. (*Mr. Lough.*) You told us that you require 405 drivers for 281 cabs?—Yes.

3399. Will you explain a little more to us why you require so many extra drivers?—Well, some drivers only work three days a week, or four. I should think the most of ours will work at the very least four days a week. Some are six-day men; some will only work five days a week. A number are off sick, and what with one thing and another, that is just the proportion that we require, and we fully employ them all. They are quite satisfied.

3400. Supposing a man whom you expect to work only four days comes down on the fifth day?—We do not expect any of them to work four days.

3401. You expect them all to come every day? Well, have you any inconvenience—you will see my point—from two of them clashing—two of them coming down on Monday morning, and both wanting the cab?—An odd man, perhaps, who only has employment three days a week.

3402. Is that understood by you, or does it just fall out so?—That is about the way it works out—three days a week, sometimes four. When work is bad he will get the week nearly all to himself—he will get employment nearly every day. When work is bad the regular driver may be away for his holidays, or he may be working only two or three days.

3403. When you speak of 405 men in your employment, really there are no men in your employment at all?—They are not in our employment, but we hold their licences.

3404. If you do not hold a man's licence, you do not give him a cab?—No; no man gets out a cab unless we have his licence.

3405. Then out of these 405, the required 280, you have told the committee, come up practically every day?—Every day.

3406. Did you ever find 20 come up for whom you have not cabs?—Never 20, I think.

3407. How many do you find?—There may be one or two.

3408. Would you say that there are one or two every day disappointed of getting work?—I do not know that they are disappointed. They know perfectly well they are odd men. We have regular men who have the cabs; those others are odd men.

3409–10. How many regular men have you, would you say, with cabs?—287 now, I think it is.

3411. And these men always get the first pick?—They leave word over night if they are going to rest. Then the odd men come down in the morning, and they get away all those men's cabs who are resting.

3412. So practically you come to require the 281 men; that is the number of cabs that you have licensed?—Yes.

3413. And you have only got the other as you might say surplus licences or occasional men for cabs that any of these 280 men may happen to have left in?—That is so.

3414. (*Chairman.*) It is like the case of a casual labourer?—They are there waiting on, of course; and if a regular man was to die, or leave there, then just in rotation they come in and become regular men.

3415. And the regular men work 5 days or 5½ days a week?—Well, 4 days a week.

3416. No more than 4?—4½ and 5.

3417. Could you tell me how many out of the 287 regular men are found to work not more than four days a week, about?—I have in my evidence before the Labour Commission; I worked it out there exactly.

3418. Well, perhaps we can get your figures afterwards; but what I want to ask you is this: you hold the licences of all the casuals as well as the regular men?—We do, sir.

3419. But that fact prevents the casuals who cannot get work with you going and trying to get work with somebody else, does it not?—No; if he wants to go and get work with somebody else he merely asks me for his licence and goes.

3420–1. He can go into the office: "Please give me "my licence, as you cannot employ me, I am going to "see whether I can get work elsewhere for the day"?—That is so.

3422. That would not prejudice your employing him next day?—No.

3423. You would not object to that?—If he went away he would have to give some reason why he came back again We would ask whether he had dealt fairly with the other man. There are cases where a man will have a bad day, and he will come and ask for his licence, and come back in two days again and want to pay up the last day that he worked for us.

3424. I am not speaking of a case of that kind, but of a case where you are unable to offer a cab to a casual man—there would be no objection to his taking his licence to another man, getting work for that day, and then coming back to you the next day, when you could give him a cab? Would you refuse him the next day when he arrived?—I would never refuse him.

3425. What would be the objection to that?—They never ask for it.

3426. Practically speaking, then, the extra men really rely entirely on you for their casual employment, and not on other people?—That is so.

3427. It has been said there is a number of men they call butterflies in the trade, who only use the licence they get for three months in a year; they take the licence for a year, and only use it during the profitable time?—That is so.

3428. Are any of your casual men of the nature of butterflies?—At this time of year, I should think, some of these men come and present licences of that description. But we have no regular drivers.

3429. You have no regular butterflies, you mean—you would not employ them if you had them?—No, we are most particular in that matter. That is the reason why we should have the period recorded on the man's licence, to see whether he was a genuine driver or not.

3430. There is what they call a harvest time in the trade, is there not?—There is.

3431. And the drivers themselves think, perhaps, that it is unfair that the butterflies come in and share their harvest who have not shared the worst part of the year with them?—They think so. It is a hardship to the all-the-year-round men.

3432. You agree with that, do you?—I do.

3433. (*Mr. Hopwood.*) Would you be prepared to put in, for our assistance, a statement showing the working of your system for a week or a month?

3434. (*Mr. Lough.*) As regards these 405 men?—How they were employed?

3435. (*Mr. Hopwood.*) Yes.

3436. (*Chairman.*) If you have any objection to it, we can hardly ask it.

3437. (*Mr. Lough.*) One to 405, and the number of days worked?—You have got the whole thing here, I think, in my evidence before the Labour Commission. This was before Lord Derby. May I read this?

3438. (*Chairman.*) Certainly.—"(*Q.* 19,286.) As to "the hours worked by the drivers, I suppose that is a "matter entirely in their own hands, except in the "case of the few drivers who are working for wages?

" (*A.*) We have no drivers working for wages. We " keep a record of outgoings and incomings. We have " a register of it, so that we can tell what hours the " driver actually works. (*Q.*) What does he work, as " a rule?—(*A.*) . . . . . To work 250 cabs it is " necessary to employ 315 drivers, an average of 12·6 " drivers to 10 cabs. The hours, including meal hours " and changing times, during which a hansom driver " is employed averages 13 hours 21 minutes daily; " those of four-wheelers average 14 hours 5 minutes " daily. Hansom drivers worked, on the average " throughout the year, 5½ days per week, or 75 hours " and 25 minutes. Four-wheeled drivers worked, on " an average, five days a week, or 70 hours 25 minutes. " Thus, taking the average week of six days, we find " the average daily hours of a hansom cab driver to be " 12 hours 14 minutes, and of a four-wheeled driver " 11 hours 44 minutes; that is, reducing it to six days, " in one case 5½ days being worked on the average, " and in the other five days a week." That is page 1134, " Minutes of Evidence " (Labour Commission), 6th May 1892.

3439. (*Mr. Hopwood.*) May I suggest to you, to answer my question in this way? I will ask you for the statement showing the working of your system for a month, and you can reply that it is unnecessary, and refer us to your evidence before the Labour Commission. The shorthand writer will then get the proper answer on the note?—Yes, I think so; you will get it there.

3440. (*Mr. Lough.*) The figures you give there are 250 and 315; you have given us 281 and 405, so that that is about 15 drivers——?—Well, that 405—that was at Christmas last year—the number of licences we held at the time. I did not think I would be asked the question; but I could find out exactly how we stand to-day.*

3441. That was the Chairman's suggestion, Mr. Scott, If, without any names or any details, you might not like to give the Committee, the numbers showing what proportion worked a very few days in the year? Would there be any objection to your giving that?—I do not know that there is any objection; it would take some time to get it up—to go over a year.

3442. (*Mr. Hopwood.*) I have only one or two questions to ask you. With regard to the sixpenny fares, I understand your attitude to be that you are not in favour of the imposition of the sixpenny fare; that is so, is it not?—That is so.

Mr. J. Scott.

6 July 1894.

3443. Have you any objection to an obligation being imposed upon a driver to carry a fare for sixpence when he is not upon the stand, but crawling on the street?—For a certain distance.

3444. Well, say a mile?—I have stated that I think there might be a compulsory sixpenny fare from ten to six o'clock, during the business hours of the day.

3445. When you give us a time from ten to six, do you mean that a cab may be called off the stand for sixpence?—Yes, I think so, for short distances within certain limits.

3446. The privileged system. As I understand it, in some cases the cab proprietors still charge a larger sum per day to the men who use the railway stations; is that so?—I do not exactly understand your question.

3447. Do the owners, in any cases, now charge a larger sum per day to the drivers of privileged cabs for those cabs?—They charge the actual amount paid by the proprietor to the railway company for the privilege.

3448. That is the new system?—Yes, at present.

3449. You told us that an association was in course of formation. Have you considered the propriety of taking powers to form an advisory board for any purposes which may hereafter be determined upon?—What special board?

3450. An advisory board; you understand what I mean?—Yes, quite.

3451. In the boot and shoe trade, and some of the large trades, the unions have a board, not for conciliation alone, but an advisory board, to discuss and consider with full powers all matters relating to the trade?—I stated that this new association—of course there is an old association—but the new association is just in course of formation. We have not got so far as that.

3452. I was throwing out the suggestion to you for consideration that is all?—There was a matter referred to by Mr. Burns, regarding the Society for the Prevention of Cruelty to Animals—the action they took—and he asked me to bring some newspaper report. I have done so. I can hand it in for the Committee.

3453. (*Mr. Whitmore.*) A case where you alleged that the inspectors of the society conducted the case in an improper way?—What we masters think is an improper way.

* *See* Eighth Day's evidence.

The witness withdrew.

Mr. James Ridge, Selborne, Hassocks, Sussex, and Mr. Horace Edwin Hupton, called in and examined.

3454–5. (*Chairman.*) Will you exhibit your taxameter, and explain it, please?—(*Mr. Ridge.*) I will. This indicator, sir, is fitted on the back wheel of the cab, on the hind spring, one of the hind springs, it is quite immaterial which, and this is the index for the passenger which is fitted inside the trap.

Mr. J. Ridge.

3456. Does this rotate with the wheel?—This does not.

3457. How is it moved?—This is the action of it. This eccentric is fitted on a wheel, and this eccentric strap works to and fro, so (*illustrating*) that gives it this motion.

3458. What makes that eccentric strap work in that way?—That turns with the nave of the wheel.

3459. It is a cam arrangement?—It is, sir. This key will illustrate the motion of this, you see.

3460. It is a rocking motion; the wheel by means of a cam is made to communicate a rocking motion to a small clock, by which the clock is driven. The clock is also provided with a time-keeping apparatus, so that on the clock is shown the time of the journey, and the distance traversed. An arrangement is made whereby the apparatus is put into gear by the stepping in of the passenger, by means of his weight on the step or seat. When the fare is paid the arrangement is put out of gear by the driver pulling a spring. By means of a paper placed on the top of a piece of black transfer paper, the motion of the clock above-mentioned is automatically recorded. A pneumatic connector causes the record of the clock upon the wheel to be transferred to another dial placed within the cab, within view of and for the information of the passenger, on which dial is shown the distance traversed, and the fare to be paid. The time may also, if desired, be transferred on to the dial which is in view of the passenger. This records every revolution of the wheel: the number of revolutions are increased to a mile, here this hand goes round once, and this hand moves one space, you see, an outer line, an outer circle recording miles up to 60; this hand here records the time, and when the passenger gets in—it is impossible for me to show that action here—but when a passenger gets into the vehicle these hands are forced forward.

3461. By the opening of the doors?—By the weight of the passenger on the step or seat.

3462. On the step or seat as you may choose?—Yes.

3463. (*Mr. Lough.*) A heavy man would press it further than a light one?—It would not signify at all, sir. You might have a vehicle filled with people.

3464. (*Chairman.*) If a fare gets out and then gets in again it begins to count all over again?—The passenger may hire a trap for a day and may break his journey a hundred times, but if he leaves the vehicle and a fresh fare gets in that records another fare. On the point of each of these hands is a little stile at right angles. When these hands are forced forward they are pressed against one of these papers, turned backwards against that carbon paper, in the same manner as a linen-draper would give a receipt. Then all the times and distances are absolutely recorded on that paper for the information of the cab owner as soon as the day's work is done, whereas, here, this shows, as the passenger goes along, the distance he travels and the fare he has to pay when he leaves the vehicle. You can hear that beat recorded here. That is caused by a pneumatic arrangement inside. Those German gentlemen have got a pneumatic arrangement, but, as I think, I have prior patent rights.

Mr. J. Ridge.

6 July 1894.

3465. They may find themselves in a difficulty?—They may find themselves in a difficulty.

3466. That is the whole apparatus, is it not?—That is the whole of it; one can see it all.

3467. One can see it perfectly?—I think you will believe it is very simple.

3468. It seems simple. That in the mud would be very liable to get very muddy?—It is so constructed that it is very free from dust, dirt, or damp of any sort.

3469. What is the expense of this apparatus?—We do not propose to sell them; we propose to charge a certain rate per day.

3470. How much, have you made up your minds as to that?—I have not, sir, but at any rate it would not be more than sixpence.

3471. Sixpence a day?—Sixpence a day.

3472. (*Mr. Hopwood.*) You keep them in order?—We keep them in order. If one should happen to be out of order from any cause whatever, although they are not much liable to get out of order, but if it should from any cause whatever get out of order, they would simply have to fetch it to the yard and have a new one put on in place, and this may be made a new one in the course of half an hour.

3473. (*Mr. Lough.*) Are they in use?—In Brighton only, sir.

3474. How many are in use?—I have none in use at the present time; we are just starting a company for the purpose of floating them in a financial way. There are none in use except this one, and this one has been running a long while. It has met with the approbation of everyone who has seen it. I should like you to see this testimonial I have received from the Borough Inspector of Hackney Carriages:—

"Town Hall, Brighton.

"I HAVE carefully tested the time, fare, and distance indicator of Messrs. Ridge, Fuller, and Edwards, and find it perfectly accurate in the results it affords. It is a machine which, in my opinion, should be placed upon every vehicle plying for hire, as all disputes as to distance and fare would, by the use of this invention, be absolutely avoided, while any charge of furious driving may be at once reported or substantiated by a reference to the dial, which records the speed at any hour of the day.

"FREDERICK DUMFRIES,
"Inspector of Hackney Carriages for the
"Borough of Brighton.
"19th June 1891."

3475. (*Mr. Hopwood.*) What is the weight of the apparatus, do you know?—I should say 10 lbs. or 12 lbs. at the outside, all included.

3476. There is nothing to prevent collusion as between the driver and the fare?—Oh yes, sir, there is, pardon me; there is everything to prevent collusion between the driver and the fare. The cab driver can exert no influence whatever; all he has to do is to pull this spring, which sets these two hands at zero at the same time.

3477. If the fare steps over the step, and sits on the front seat instead of the back one, that will not set the machine in motion then?—Certainly it will.

3478. To what part of the cab do you attach the indicating apparatus?—We attach that to the hind spring, either, no matter which. Of course, it could be attached to one of the other springs, but we prefer the hind one, as it is easier got at. A child of 10 or 12 would be sufficient to actuate this machine.

3479. (*Chairman.*) Suppose a fare left his handkerchief in the cab and gets into the cab to get it, that would reckon him as a fare?—No, it would not do that because he would not pull the spring; in such a case he would be careful not to do that.

3480. No, but he would have pulled the spring when the last fare got out?—He would pull the spring when a new fare got in.

3481. Not till a new fare gets in?—No; that explains the legend below this dial: "Please observe on entering "that the index stands at zero." Now this one shows —we have been working it since we have been here—about the eighth of a mile. You see that small hand; I will set that at zero; this has marched on one further space, indicating a further passenger; those indices now are set for another passenger.

3482. (*Mr. Lough.*) Well, then, if the cab driver did not pull the string there would be no record of the fare?—Here, sir, there is a record of everything; in here; this is only a double check, this is not at all necessary, this one, not the least bit necessary, but in here we have a record of everything.

3483. Yes, but you have missed Mr. Cunynghame's point; you are arguing about anybody getting in putting it in action, and you replied that the driver would not pull the string if a man got in for his handkerchief; it must be one thing or the other?—If he did that the cab would be at a standstill. There would be no motion on the cab, and if he made the slightest mark by forcing these hands forward it would simply indicate the tiniest dot; it would be imperceptible. That would not make the slightest difference, indeed, sir; if he got in the cab would be standing still; he could not get into the cab while it was in motion, and the cabman for his own sake would not pull that string. If he pulled the string he would simply indicate a fresh passenger.

3484. (*Chairman.*) Is this all recorded?—Yes. I will let you have this (*copies of specification put in.*)

3485. We can send it back to you; it is a complicated thing?—I have the specifications here of those German gentlemen, and I simply brought this to you, sir, in order that you might see that my patent was taken out before, by some few weeks only.

3486. We could not enter into a question of this sort; only for the purpose of understanding your invention, we might have a look at this?—I hope you will approve of this little instrument?

3487. Well, it is too soon to say that.

The witness withdrew.

Adjourned till Monday next at 11 a.m.

SEVENTH DAY.

Monday, 9th July 1894.

PRESENT:

MR. GEORGE RUSSELL, M.P. (CHAIRMAN, PRESIDING).

Mr. HENRY CUNYNGHAME.
Mr. F. J. S. HOPWOOD, C.M.G.
Mr. E. H. BAYLEY, M.P.
Mr. JOHN BURNS, M.P.
Mr. T. LOUGH, M.P.
Mr. C. A. WHITMORE, M.P.

Mr. MALCOLM DELEVINGNE, *Secretary.*

Mr. JOHN BEASLEY called and examined.

Mr. J. Beasley.
9 July 1894.

3488. (*Chairman.*) Mr. Beasley, do you come here to represent any society?—No, sir.

3489. You only come to give your own individual experience?—That is so.

3490. In the first place we should like to know what you think about the system of inspection as practised by Scotland Yard. As that is rather a large question I will ask you one more particular question. In the first instance, have you in your experience any reason to believe that this is true, namely, that men wishing to get their cabs licensed in fact have to bribe inspectors in order to get them through?—Well, my own experience is that in years gone by that was the system; I do not think that it exists so much to-day. I remember about 1872 and 1874, when the inspection became more stringent than it was previous to that date, that that was very much the practice. The only system that might be construed into bribery, and which I dare say is under a cloak, is that when each cab inspector retires, the cab proprietors generally give him a testimonial, so that he is always looking forward on his retirement from office to that? That may be so, I do not know that it is.

3491–2. Who do it; who give the testimonial?—As a rule it is done by the local proprietors' associations. I do not happen to have a circular with me to-day, but I have some; being out of the business for some two years I have not kept up to date, but I remember Tobin of Westminster was the last one that I had the opportunity of seeing.

3493. Have you ever heard of it being done in this very crude form, putting a coin under the cushion of the cab?—I have heard of that, oh, yes.

3494. In the good old times more than the present?—Yes.

3495. Not so much in a more recent date?—Well I do not think so; I will tell you why. I do not think that it is so profitable to run bad class property as it was when there was more demand for cabs.

3496. You mean there is not so much inducement to get these things passed?—Not so much inducement, because when there was a greater demand for cabs, well then almost anything so long as it was in the shape of a cab suited the public, but now they are very particular in their selection; as far as inspection goes I must say that I do not think that the improvement in the property, up to date at all events, is occasioned by the inspection of the Scotland Yard authorities; I think the improvement has come more from the enterprise of the owner.

3497. May I interrupt you there a little; I should like to clear up one point; that is all you wish to say on the question of bribery?—That is all I wish to say.

3498. I will ask you some further questions on the inspection generally; do you think that the system of inspecting is efficient?—No, I do not.

3499. Do you think it is inefficient as regards the structure and the mechanism of the cabs?—No, I suppose theoretically they go through the measurement, they have certain measurements for room and that sort of thing, which were introduced in 1869 or 1870—I forget which. They are very particular about that and general cleanliness, but so far as inspection beyond goes, it really amounts to nothing.

3500. Then what do you mean by the inspection that amounts to nothing; as regards the structure of the cab you say the inspection is pretty good?—Oh, I think so.

3501. Then where does it break down?—He might have room on this seat for two persons, but the fittings and the cushions and that might vary very much according to the proprietor's idea of what the public required. It is merely a matter of room and it might be a cab worth 40*l.* or 20*l.*, which would pass the inspection and it might be one worth 120*l.*

3502. As regards the drivers and their capacity for driving, do you think that the examination that they put them through at Scotland Yard is worth anything as regards testing the power of driving?—It is impossible for it to be worth anything; they just simply get some one to say that they can drive, but never an expert. It used to be the custom, I think you will find, of some of the old proprietors, when I was a lad, before a cab proprietor engaged a newly licensed driver, that he would just let him mount the box and go for a ride with him; but we live, I suppose, in more competitive times, and they do not trouble about that now. As long as they have a licence and are insured against accidents, they do not trouble whether he is a good driver or not. That used to be the custom, or is the custom, just to see whether a man could drive. I suppose it is in driving, like everything else, there is nothing like practice, and a carpenter can tell immediately another workman picks up his tools and starts work whether he knows anything about his business, and so can a driver tell almost immediately a man picks up the reins and whip and feels the horse's mouth whether he is a coachman or whether he is a barber.

3503. That testimony of the two competent witnesses which they rely on at Scotland Yard does not amount to anything, you think?—Not so far as driving is concerned; it is impossible.

3504. Well, then, as regards horses, they also are passed at Scotland Yard as part of the cab, are they not?—Oh, no. I believe that the abstract provides that the police should make inspections of the various cab yards, and of course some of the cab proprietors stable and look after their horses wonderfully well, but there are others who have no consideration whatever for their animals.

3505. I did not mean cabs actually running, but when the cab is taken for a licence do not the Scotland Yard people profess to look at the horse as well as the cab?—I do not think so, and if they did, the proprietor could always take down his best horse in a cab. I might say, that I have known even cabs taken to be passed with the cab proprietor's pony, nothing whatever to do with the working stock at all, the same as a coach builder sends home a carriage to a private individual, just something to draw it, and I have known cabs taken down by men and passed.

3506. By men?—Yes, when the yard has been near the police station just two men pull the cab round, so that the horse has nothing whatever to do with the passing of the cab.

3507. We have spoken now of the testing before the cab is licensed; what do you think of the continuous inspection afterwards? Do you think that is efficient or not?—I certainly do not. Very much depends upon the proprietor as to the condition of the cab; I know proprietors who have their cabs painted twice a year, and some of them have them painted and done up nice and clean perhaps in about 15 months.

Mr. J. Beasley.

9 July 1894.

3508. But good or bad it depends upon the proprietors?—To a very large extent.

3509. And Scotland Yard has very little to do with it?—Yes, I think so.

3510. Well now, about the fee for the plate, is it your opinion that the fee ultimately comes out of the drivers' pockets?—Well, I suppose it must be so, but it is a very small matter; it is only a matter of 2*d.* a day. The only thing is what it is devoted to. The cab plate revenue is about 32,000*l.*

3511–12. Do you consider that it comes out of the driver's pocket?—Well, there is no doubt the proprietor reckons it in the cost of supplying a vehicle, but the maximum cost must be about 2*d.* a day. I think that if the powers could take a paternal view of it, they might devote that 2*d.* a day, with equal interest to the proprietor and the driver as well by erecting covered standings or proper shelters. It is a very wide question. I think that the time will arrive when the congested state of street traffic—I think that ought to be considered conjointly (pardon my suggestion) with the standing accommodation — will demand some drastic move so far as cab standing accommodation is concerned, and I think that an ornamental covered stand on the Thames Embankment would not be much more disgrace than the hideous Metropolitan railway station or buildings of that character. It would not be, at all events, such a nuisance as the cabs in line right along one side of the Embankment.

3513. We will come to that question?—I think the cost even of the land and that sort could be supplied by that fund, and the cab proprietors will bear me out that if the cabs were housed in inclement weather that would very much decrease the wear and tear.

3514. Have you any opinion on the question of dividing cabs into two classes, first and second class?—Yes. I believe they should be classified, first, second, third, and fourth, or anything of that kind.

3515. You mean more divisions than two?—Well, it is possible that that might be necessary, but that would have to be done by practical people.

3516. Say for the purpose of argument that we only have two classes, that would probably be the first step; what would you make the difference as regards fares?—Oh, you mean fares between the driver and hirer, not between the owner and driver?

3517–8. I was thinking of fares to be paid by the hirer?—Yes; I think it is the custom now, and I think that custom could be very well established as a principle, that with many of the West End swells instead of paying 2*s.* 6*d.* an hour to pay 3*s.* Even in my time they said, "Well, I want a cab by time; I will "give you 3*s.* an hour if I have a good one." That might be the difference.

3519. Is there much done by way of hiring cabs by time?—Oh, yes; there are some known cab hirers who reckon to pay about 3*s.* or 3*s.* 6*d.*, those men that frequently use cabs all day long.

3520. But they take them by time, do they?—Well, yes, on conditions. I might say that on the other side the driver would say, "Well, 2*s.* 6*d.* an hour, sir, or 3*s.*" if he were an enterprising man, and of course it just depends upon whether he gets 2*s.* 6*d.* or 3*s.* the speed he goes.

3521. You have already spoken of the inspection of stables. Have you noticed any mischief arising from the troughs—drinking water?—Well, not as an expert, but I have had experience with men who know something of glanders, and a little with veterinary surgeons, and they tell me that they are one of the worst possible mediums for conveying glanders and farcy from one horse to the other. It is very difficult for me to say whether it is so; I do not profess to be a veterinary surgeon, but it seems to be fairly well accepted that that is so. I have known cab proprietors forbid their men to water their horses at the troughs.

3522. Do you happen to know what proportion there is between the number of cabs licensed and the number of drivers' licences?—Well, of course, I shall be able to explain my analysis of those figures.

3523. That would do very well?—I think, taking them in round figures, there are about 15,000 to 11,000; that is the maximum of each; but that looks very well, and I think it comes down to something like 13 and a decimal to every 10 cabs. We have about 15,000, we will say, licensed men and about 11,000—it is really 10,812—for 1892; that is the only report that I have at hand, but I do not think there is much alteration in the figures; take from that 4,000 men small proprietors who own from one to four cabs, and each of whom would drive their own, and the odd man required for working those small proprietors' cabs—at least it would not pay them to keep an odd man, a man that keeps four cabs cannot keep a rest man, you see, because there is not sufficient work for him—consequently we bring the cabs down to 7,000, and to work these 7,000 at present there are 11,000 drivers, you see, so that there are 4,000 drivers that are really in the field of competition, so far as contract masters are concerned.

3524. Do you think that that disproportion between the number of cabs and the number of drivers is an evil to the public?—To qualify that statement I may say that there are 4,000 unemployed thrown on the field, as it were, to work the 7,000 cabs.

3525. I put that question; do you think that the disproportion between the two sets of licences is a mischief to the public?—Certainly; because there are 4,000 unemployed, well, odd men—that is a man who has just a casual day occasionally, and he may have to depend for his week's work on that day or two. If he can get the opportunity to over-charge, well, he will make use of it; he has to, in fact, for a subsistence.

3526. Well, do you think it would be a good thing to limit the issue of licences?—Yes, I might say that I was opposed to it at first, but after careful matter-of-fact observation from matter-of-fact experience, I am convinced that the public would be better served and that the driver would be a much better driver if the proportion was reasonable, because my contention is that the cab driver, after all, is a public servant.

3527. Well, in order, then, to secure that better service of the public you would recommend stopping the issue of licenses for a time, would you?—Well, what I would recommend would be one of two or three courses. The first course, in order that the thing might be considered, would be, say, stop the issue of licences until January next and then go back. We do have to go back occasionally to the old system of issuing licences, we will say in January only. I would not issue them in the summer months, when it is most profitable, but in the winter months, when it is least profitable. Issue the licences in January, and let it be one of the conditions of the proprietors' licences and the drivers' that the licence shall be used a reasonable amount, at all events bar illness, during the time that it is taken out. I think that would be one method as a trial. It would be very difficult to say the number of cabs that are really needed for public requirements, because that might differ from time to time, and for that purpose I think some power should be vested either in the Board of Trade or the County Council to determine what number of licences there should be, whether there should be any fresh licences issued from year to year, or whether they should be decreased, almost as they do public-houses. The spirit of the times seems to be this. A cab is like a public-house; every gentleman likes a cab on a wet day, but he does not like a cab standing outside his door, and no matter what gentlemen he is, he is like the man that has a glass of beer, who likes the public-house, but he never likes the public-house next door to him.

3528. Are you sure people would not like a public-house near them?—That is a question for the licensing authorities.

3529. One of the remedies that you proposed was to issue the licences only in the winter?—Only during one month annually.

3530. I suppose the object of that limitation would be to prevent the increase of what are called butterfly drivers?—Yes, with that qualification that I make, that the licences should be used bonâ fide, say 10 months out of the year.

3531. Now, I want to ask you about the butterfly drivers. Do you consider that they are a nuisance?—Well, not such a great nuisance as they used to be in years gone by.

3532. Not so many of them, do you mean?—I do not think so.

3533. Now, I want to ask you about the congestion of traffic in some particular streets. I suppose you, as an experienced man, will admit that in some places the cabs are very much congested indeed?—Yes, they are nuisance to themselves and the public also.

3534. What is the reason for the congestion in those particular districts?—Lack of proper standing accommodation is my contention.

3535. Is it also partly due to the fact that there is more lucrative employment to be had there?—Well, I almost have to make a statement here. I do not know whether it has ever occurred to any of Committee, but anyone who has had the opportunity of either favourably or unfavourably observing the congested street traffic, must have noticed of late years that the crawling cab has been a greater nuisance than ever, and yet that seems somewhat of an anomaly when we find out that the cabs are decreasing; but it is easily accounted for if we first start from the premises. The field where cab fares are to be obtained is lessened, that is, whereas in years gone by when there were more cabs, before the other competitive systems, such as the 'bus service and so forth, they had longer fares; now it is confined to about 2½ miles radius of Charing Cross, therefore that brings all the cabs into the busy thoroughfares where there are no cab standings.

3536. Well then, would you be in favour of increasing the cab radius?—In some districts.

3357. You mean that, taking the present radius, you would extend it in some parts of London further out?—Yes.

3538. Not equi-distant the whole way around?—Oh no, that is impracticable.

3539. Do you see any particular use in keeping the circle as it is now, or would you extend it in any shape that met the public convenience?—I think the radius should vary very much, according to the locality.

3540-1. Now I am going to take you to another department, and that is the police court practice. I suppose you have had some experience of it, have you not?—Yes, sir.

3542. Well, what is your experience with regard to what we have heard so much about under the name of bilking; do you consider it a very common practice?—Well, it is a grievance that has grown very much.

3543. Grown?—Yes, of late years. That is, some of the unscrupulous people begin to find that it is easy to bilk, and so I think they bilk; but it has such a very decided detrimental effect upon the driver that it makes it a very serious question. It is not so much the amount of money that he loses by being bilked by the fare, but having been bilked by a fare very often puts him out of employment for a week, fortnight, or three weeks, according to the season of the year, perhaps more. That is, if he has a fare and is bilked he cannot pay the demands of the proprietor, and consequently is out of employment.

3544. Is it true, as we are told by other witnesses, that where bilking takes place it is a large fare, such as a journey out of town and back?—Generally a few hours.

3545. Not so much little fares from street to street, but where you have had a journey?—Yes, where it amounts to something like half-a-day's work or a day's work.

3546. What do you think should be the remedy for bilking; do you think the law ought to be strengthened in the interests of the driver to protect him against bilking?—Yes, I certainly do.

3547. In what way would you suggest?—Well, the great trouble is, of course—I suppose you know better than I do—that if I, as a cabman, drive a fare about for four or five hours and he gets out of the cab and refuses to pay me, I cannot even demand his name and address, neither can the police detain him. Well, I know one case of a professional bilker, if I might use the term; the cab driver was informed whom he had got, and he drove him directly round to Bow Street Station, and he got out on the pavement and he said, "Well, what are you going to do now?" "I want your name and address." "You cannot do it." And the officer in charge there had no power to make him give his name and address.

3548. That is the state of things as it now is, but we asked you what would you suggest as an alteration?—Well, I think that we ought to have the same power almost—I know there is a danger—vested in the cab driver to detain at all events a professional bilker at a police station, the same as any other fraudulent person, or give us the same powers as are extended to some of the tramway companies and railway companies by their byelaws of detaining a person who does not pay the fare.

3549. These legal questions some of the rest of the Committee will have more to ask you about, so I will go on, if you please, to some other points connected with the court. Is it a ground of complaint among drivers, as far as you know, that they have to have their cases heard on particular days of the week only?—Yes, that is more so in the West End courts, in the West Central courts, at Bow Street and Marlborough Street. The chief complaint of that is that there is a lot of cases heard on one day, and very often the driver has to be out with his cab on that day, and he might be down at Marlborough Street Police Court or Bow Street for three or four hours, and it has been known as long as that, and all that time he is paying perhaps 1*s.* or 1*s.* 6*d.* an hour for his cab, and even if the fine is a small one, it increases his expenses considerably.

3550. Some people have suggested that there should be a special court for nothing but cab cases; do you think there would be any advantage in that?—I think that would be very advantageous in many instances, not only to the driver but to the public also, especially so far as the recovery of fares and summonses for over-charge and anything of that kind are concerned. I will just give you one instance I know of. A cab-driver who had been driving a well-known man, one of the chief men on the East End wharves, about till two o'clock in the morning, set him down at Limehouse, and the man refused to pay him. He went to the police station, and he still refused to pay him. Well, I wrote a letter for him and asked for payment by return of post and received no reply, so I went down with him to the Stepney Police Court. It is not possible to obtain a summons for cab fare except the cab driver himself apply; and then we waited an hour and a half with his cab before we could see the magistrate, and then it took us about half-an-hour to obtain the summons. Two forms had to be filled up which the average cab driver who has been driving for 10 or 12 years, who has so little writing to do, cannot fill up—two legal forms; they are simple enough to a man who is doing a little clerical work, but to a man who has been on a cab 10 or 15 years, with no occasion to write his own name once in six months perhaps, it is impossible to fill up these forms, and consequently when a cab driver who has to summon for 1*s.*, 2*s.*, 2*s.* 6*d.* fare sees these forms he very often says, "Oh, I cannot get on with that; I must let that run." That is so unless he has a friend with him who can fill up the forms.

3551. Now I am going to ask you about the railways and the privileged cabs; do you think that the system of privileged cabs at the railway stations is an advantage to the public?—That I do not; I might say that I drove a privileged cab in Victoria for one man for over five years, and at that time there is no doubt that the cabs in Victoria were the best in the neighbourhood.

3552. May I ask when that was?—That was for Tom Cane; it would be from about—not confining myself to a year; I have rather a bad memory for dates—from about 1876 to 1881.

3553. And you drove at that time, and you think the cabs at Victoria were the best in the neighbourhood at that time?—At that time, yes.

3554. You do not think that the system was a convenience to the people coming in?—No, the public are very much dependent on what are known, to use a cabman's term, as bluchers, that is cabs that have to follow in. I may say, "How many bluchers did she call"—that is a big train; that is to say, how many cabs were required off the streets besides the privileged cabs. Take the Brighton express or the Portsmouth express at Victoria in the morning, it is the custom for the cabs in the Westminster district to go down and to wait round the station to see whether the express wants more. There are more cabs needed for that train than the privileged system supplies, and if it happens to be a wet morning the passengers have to wait and carry their luggage out in the street and get cabs in the best way they can. The porters are not allowed to go outside, only outside porters; directly they go outside to get cabs they have to charge so much, so it is not infrequent, even up till

Mr. J. Beasley.

9 July 1894

to-day, to see at Victoria and many other stations where long trains come in that need a great many cabs, the passengers waiting, and they have to wait much more even, if there was a greater demand for cabs in the streets. I have not had an opportunity just lately to take the numbers, but numbers could be collected, of the cabs each station requires beyond its own privileged few.

3555. Then you mean that as far as your experience goes the privileged system might be done away with?—Yes.

3556. And that the public would not suffer any inconvenience?—As evidence of that I think you will very rarely find a scarcity of cabs at Waterloo; that is an open station where there are no privileged cabs, each one who has a decent cab, and has not misbehaved himself in the station, can enter that station by payment of a toll; and there I do not think you will find any scarcity of cabs, although there are more cabs needed at Waterloo than at any other station in the whole system.

3557. Now I am going to ask you if you have given any attention to that strange thing in the corner of the room there, any machine for testing the distances travelled, or any similar machine, what are called taxameters?—No, I have not.

3558. Have you ever heard them discussed among cab driving people?—Yes, and I believe that different machines have been tried, not in my time, but previously, or if they were in my time it was when I did not take much notice, and they have generally proved a failure. I do not know the merits of that machine, but it has generally proved that there has been some way of tricking them, either by backing the horse or turning round a few times, or something of that kind. I have heard men that have used them say, that by backing the horse with the machine on force puts it all out of gear, and in congested traffic you will find that it is often necessary to back. I do not know this particular machine.

3559. This particular one we happen to have it in the room and we examined carefully into it the other day; but as far as you know, there is no general desire in the cab driving community to have mechanical contrivances of that sort introduced?—I think not; I think it would be very much against the proprietor's interest.

3560. (*Mr. Whitmore.*) The proprietor's interest?—Yes.

3561. Why?—Because if the bare fare were paid it would really be impossible to pay the tariff that is charged to-day. Some portion of the public pay liberally from benevolent motives, and a portion because they do not know the fare.

3562. (*Chairman.*) Now I want to take you back; I ought to have asked you this question before in strict order, but I omitted it. We were speaking of the system of testing men at Scotland Yard before they come to drive, and we gathered from you that you think it is a mere farce, and that the testimony of the two witnesses who were asked for their opinion is not worth anything as to the fitness of a man to drive?—No, not anything.

3563. I was going to ask you what is your experience of the class from which, as a rule, cab drivers come; do they come from all classes indiscriminately, or do any great portion of them come from any particular class?—My own experience is that a great many of them have been butchers, some come from the skilled trades, and there is no doubt a great many of them make their applications and say they have been coachmen, but they never have, but they happen to have worked in a stable perhaps for a few days just to get that recommendation, have a friend in court, or something of that kind, or a friend who will give them that recommendation. A great many butchers, cheesemongers, barmen—a great many barmen—and I know a few old professionals.

3564. Well, of course, gentlemen's coachmen, and butchers, and cheesemongers, and people who have driven tradesmen's carts, they would all be, from the nature of their previous avocations, more or less conversant with the practice of driving?—Some of them.

3565. Taking them in classes, those sort of people would have of necessity, as a rule, some practical acquaintance with driving?—Yes.

3566. Are the people who have had such preparatory acquaintance with driving the majority, or do the majority consist of men who have never driven, as you say, barmen and people from indoor occupations?—Well, speaking roughly, I should say that they come from all classes.

3567 Yes, but would you be able to say, quite roughly, of course, whether in your opinion the majority of cabmen have had previous experience of driving, bonâ fide experience of driving, or not?—The majority?

3568. Yes?—Well, I should think it would be half one side and half the other.

3569. Not more than that?—A great many of the stable chaps, horsekeepers, who are licensed have had no practical knowledge, no more than a man shovelling coal for an engineer has any knowledge of driving an engine.

3570. Quite true. Then it would not be safe to say that in the case of any particular cabman the chances are in favour of his having had previous experience?—I hardly follow your question, sir.

3571–2. You would not say that the great majority have had previous experience of driving before they come?—No, I would not.

3573. A little while ago you said something about shelters and cab stands, and I interrupted you at that point, because it did not seem to fit in quite with what we were talking about, but I should be very glad now if you would give us your opinion, in your own words, about cab stands and cab shelters. They are two different subjects, of course, but still they are connected with one another?—Well, of course, the police report figures say that there is accommodation for a certain number of cabs. Yes, well, that is on paper. The accommodation for cabs is generally round perhaps Euston Square, Red Lion Square, and out-of-the-way places where cabs are not needed. If a careful examination was made of the standings used really for cabs, business standings, not merely rests, that is, where cabmen put on for the purpose of obtaining a fare, I think it would almost be reduced to a quarter of the number which are enumerated in the police report. I know there is a difficulty. I might say that during my experience as a cab trade union officer, I tried, and was successful in getting several standings appointed, one outside the Metropolitan Station at Westminster Bridge was appointed on my intercession. There is another one outside here and one at Dean's Yard, Westminster, where cabs are needed, but if the ranks are put round in out-of-the-way places they are of no use. Commercial men and men about town, now, directly they come out of a restaurant or house of business, want a cab in front of them or else they do not want it at all, and I think that could really be easily supplied in the Strand. It has been suggested before, if the congestion of the traffic of the Strand demands some drastic move, covered standing or standings on the Thames Embankment could be made which might feed as several other standings do to-day, one or two cabs at different points in the congested parts of the Strand, and would really act as rests, as we call them, or obelisks, and really regulate the traffic. Now the one in Pall Mall. For years the appointment of that standing has been advocated by the different associations, both of proprietors and drivers, as far back, I think, as 1874, that stand was suggested, and only about two years ago it was appointed, and I believe it is found to work very well on the whole.

3574. (*Mr. Hopwood.*) The one in Pall Mall?—The one in Pall Mall, in the centre. It is a convenience to the public, and saves wear and tear, and although some people might say there are cabs up and down the sides, yes, there are some up and down the sides, but those that are standing still are not going up and down the sides. But anyone who cares to watch will find at Northumberland Avenue and ranks of that character, the Army and Navy Stores, where there used to be a standing, that wherever there is work to be had the ranks are always full. You will find now, I suppose, at this particular moment nearly 300 cabs round the different ranks, just round the Metropole, the Victoria, and underground station at Charing Cross, because that is the field where they can make sure of having a fare within a reasonable time; but if you make a standing in some out-of-the-way part where, if they were to put in this morning they would stay till it was time to go home, you cannot expect men to stay there.

3575. (*Mr. Whitmore.*) Do you think the stand in Pall Mall has diminished the number of cabs moving up and down each side?—Oh, yes, it must do so.

3576. (*Mr. Hopwood.*) Partly because the club porters will only call a cab off a stand?—That is so. Of course it is necessary to have the same co-operation by the public which is extended by the hotel proprietors, of making a practice, unless specially directed by their customers, to call cabs from standings.

3577. (*Chairman.*) Now I am going to ask you a question about the shelters. According to your experience have the shelters been very beneficial to the drivers?—Not really as a shelter, only as an eating house.

3578. Well, but even as eating houses, do you think that they tend to promote sobriety and wholesome living?—I do not think so.

3579–80. You do not think it makes any difference?—No, I will tell you why. As a rule when a man has a glass of beer he might have a cup of coffee if he had a choice of the two, but I can assure you that if you went into a shelter and asked for a cup of coffee they would not care much for your custom; they want the man that has a feed generally. I am sorry to make that statement, but it is so.

3581. (*Mr. John Burns.*) They want a man who will have a steak and potatoes and coffee?—Something with the coffee. If you went into an ordinary shelter within the radius that I mentioned as a field of operations—2½ miles of Charing Cross—for a cup of coffee, you would get a black look from the attendant, because out of your penny it would be impossible for him to have any profit after paying his rent to the shelter committee.

3582. (*Chairman.*) What I was submitting was the case where a man has a meal and drinks coffee with it instead of beer; are there not such cases as that?—Very few; they are quite the exception. When a cab driver goes for his dinner he very rarely goes for his dinner to a public-house, he mostly goes to a coffee-house or a shelter.

3583. Yes, but I mean in a shelter; do not the men get their dinner and coffee with it in a shelter?—Occasionally, the same as they do at a coffee-shop

3584. (*Mr. Whitmore.*) Is it cheaper—the meal—than at a coffee house?—No. I might say I could give you very practical information of that sort; I happen to be a coffee-house keeper myself. I charge 1½*d.* a pint for tea, while the shelter people get 2*d.* That you can bear out by their tariff; it is a printed tariff, it is not a matter of assertion; and I serve more cabmen.

3585. (*Chairman.*) In what way do you think the shelters have been an advantage?—There are some shelters which are an advantage, where there does not happen to be a coffee-shop near, but whereever there is a coffee-shop near, the coffee-shop is preferred by the cabman, because he has more comfort. There is only room for a limited number of men in a shelter; you will find some shelters where the men will have to order their food, wait outside while it is being cooked, then come inside and eat it as quickly as they can and go. I could give you one or two shelters where you could go and see.

3586. (*Mr. Whitmore.*) At a place like Piccadilly, the shelter there on a winter night is really useful as a shelter, is it not?—Oh, I think so; the only thing is that they do not provide sufficient accommodation; they are very small.

3587. (*Chairman.*) I think you said just now when you were talking about the Strand, that as a trades union officer you had tried to get the stands increased?—Yes.

3588. I only wanted to get that point out of you; are you now an officer of the union?—No, I am not, sir; I take a part in most movements, but only as a free lance.

3589. But you have been an official?—Yes.

3590. Were you so for many years?—Two years as a paid official, but I have held minor offices always in many of them.

3591. You told us to-day you only spoke for yourself and not for the union?—Yes, that is so. I was giving you my experience; I am looked upon by the men, I might say, as a representative man, and they come to me for data and so forth. But I am the largest shelter-keeper in London to-day, that is to say, I serve more cabmen and have to deal with more cabmen than anyone.

3592. (*Mr. Whitmore.*) As a coffee-house keeper?—As a coffee-house keeper.

3593. (*Chairman.*) In the evidence you have given or will give to-day you do not commit the organisation, you merely give your experience, an individual opinion?—That is so, yes.

3594. (*Mr. Cunynghame.*) You have told us now, I understand, that you have a coffee-house or a shelter?—A coffee-house, sir.

3595. So you are not driving now, you have ceased?—I have not driven since 1890, at least, the beginning of 1891; I drove up to 1891.

3596. In reference to stands, we have had evidence that it would be more desirable there should be smaller stands placed in better places; do you coincide with that view?—My qualification of that is that—I have alluded to the Strand as an example—it might be possible to have large standings on the Thames Embankment.

3597. I will come to that presently; you will find I shall bring you to what you want, I think Would you be in favour of smaller stands in better places where the men would have to wait less long?—Yes, similar to the stand in Pall Mall.

3598. Now, you have given us an idea of what may be termed reserve stands; that is to say that, in a bye-street, where they do not do much harm, there should be a large stand; in the more crowded thoroughfare a small stand; and then men should work up from the large stand to the smaller stand when their turn came?—That is so.

3599. That the big stand might act as a feeder to the small stand; that is your idea?—That is my idea. The public are getting tired of crawling cabs and the congested state of the traffic.

3600. Not alone to get rid of crawlers, but for their convenience?—It is well known that crawling is equally offensive to the cabmen as it is to the public, only he has no alternative but to crawl.

3601. All the best cabs, I understand, do crawl, the best hansoms?—No, that is not so. If standings are placed in such places as Pall Mall, Piccadilly, right direct where cabs are needed, well then the best property will use those neighbourhoods.

3602. But I am asking, if you do not mind, what exists. Is it not the fact that the best hansoms, for instance, with india-rubber tyres, do not stand much upon stands, but take their fares when they are in movement?—That is said to be the fact.

3603 Do you agree with that?—Oh, yes; that is because there are no stands in such places where they are needed.

3604. Never mind the reason, let us get the fact. That is the fact?—That is so.

3605. Now, with regard to the passing of cabs. Have you known, personally, any cases of bribery in passing a cab, 10*s.* under the seat, or anything of that kind. Have you seen it done yourself?—No, I have not seen it done myself.

3606. Is there any case that you know, in which you are acquainted with the whole circumstances, any details, or is it only by report?—Well, as I said, I do not think it is so much the case to-day as it was in years gone by.

3607–8. Would you kindly tell me, have you known an actual case in which you have been acquainted with the whole details?—No; not where I could give the name, date, and time.

3609. You have told us that there are differences between cabs and hansoms, some better, of course, and some worse?—Yes.

3610. Can you give us, first, with regard to hansoms, an idea of the cost of a very good hansom, completely turned out, and an idea of the cost of some of the worst, to give us an idea of the difference in price?—That would be taking a new one.

3611. A new one in each case. I am speaking of a first-rate one compared with a bad one?—It is possible to get a cab built for 60*l.*, and you could go as high as 120*l.*

3612. That is a hansom?—Yes.

3613. And a four-wheeler?—Well, I suppose the same figures could be given, although it is very high;

Mr. J. Beasley.

9 July 1894.

I do not know of one at the present time that is fitted so elaborately as to cost that amount.

3614. I am speaking of what cabs are. You may say that some of the cabs that are in use have cost twice as much as others that are in use?—Oh, yes.

3615. I understood you that you do object so much to the charge of 2*l.* for licensing cabs, provided that whatever balance was over was spent in better accommodation for the cab stands and so on. That is your position, is it not?—That is my position; because to a small proprietor it would be a very small matter; it would be only a very large matter to a large one, and about 2*d.* a day for the driver if he had to pay the cost.

3616. With regard to first and second class cabs, you have told us, I believe, you would be in favour of second class cabs, at all events, with different prices to the public?—Yes. That exists so now, although it is not legalised.

3617. Could you indicate to us, roughly, the kind of division of price you would have; can you name what price you would charge for a first class and what for the second class?—Well, by time I think 3*s.* for the first class, 2*s.* 6*d.* for the second.

3618. Yes; and by distance?—Well, for really a first class appointed cab about 8*d.* a mile, I think, is paid to-day; a great many of the public make a practice to give 1*s.* 6*d.* in a 1*s.* fare for a good vehicle.

3619. Can you please give us what you would make a legal charge, for your first-rate cab; and what for your second-rate cab. Just indicate roughly, kindly, in each case?—Under existing circumstances, I should say, taking property as it is, 8*d.* and 6*d.* per mile.

3620. Now, with regard to sixpenny fares, do you think it would be advantageous or not that a cabman by putting a placard on his cab, a conspicuous placard, should be able to announce to the public that he was willing to take sixpenny fares, in such place as the City particularly I mean?—Oh, yes; I think that the whole cab service, so far as between hirer and driver is concerned, ought to be, if I may use the term, revolutionised. I believe cab proprietors and cab drivers are very much behind the time, as far as enterprise is concerned. You quite understand this is my own opinion, and I am not speaking on behalf of a large or small section, that if sixpenny fares existed to-day within different radiuses, that is, within a mile of Ludgate Hill Circus, within a mile of Charing Cross, or within radiuses of the kind similar to the cheap 'bus fares in the congested districts where commercial and business men and men about town move all day long they would be beneficial to the public, would very much reduce crawling cabs, and would be remunerative.

3621. But I want to come to this: would you legalise those sixpenny fares by enabling the cabman to put out a sign saying, "I am taking a sixpenny fare," or would you make that compulsory? That is what I want to know, the mode of doing it?—Well, I think it should be voluntary, that is, taking the Act. You see you have to take things as they are. If we had a board existing of cab owners and cab drivers and the public for the purpose of carrying on the business in the best possible way, well then I dare say an arrangement might be made not only to have sixpenny fares, but to advertise them the same way as railway companies do in all the theatres.

3622. I want to know, as things are, whether you would have it voluntary, that is to say, a man should have a right to hang out a ticket, "I am a sixpenny fare man for this hour," and go to another part of the town and take it in again. Would that suit you?—He has that right now.

3623. No, he has not got that right now. Forgive me, he can do it now.

3623*a*. At all events, it is not done; you never saw such a red label, or anything of that kind?—No, quite so.

3624. Now as regards the limitation of cabs. I understood you to say that your ideas of the limitation of the cabs and drivers were in the interests of the public?—Yes.

3625. Are you of opinion that the limitation of the number of cabs could be effected by a compulsory improvement in their quality, by rejecting the bad ones, and going on rejecting them?—That would be one way of reducing the cabs.

3626. Would that be a good method?—Well, I should think so. There are many cabs passed now which are of inferior quality, which work in the suburbs and belong to small owners. So it is a very difficult question. I think the examination of the cabs should be efficient. But what are you going to make your standard?

3627. I am only asking whether that limitation might be effected by insisting on a much better standard of cab altogether—gradually bringing it in, of course, so as not to be too severe on people, at first, who have an inferior cab?—Slightly, only slightly.

3628. Now then, I will come to the limitation of drivers. You have told us you think there are too many drivers' licences out; do you think that in the same way the limitation of drivers might be effected by gradually weeding out from among the drivers those who have got a thoroughly bad character, who damage the trade by a bad character, and who are incompetent in driving?—Yes, by refusing licences to those who do not pass the driving examination.

3629. Exactly; and possibly refusing licences to those who are convicted over and over and over again of offences, of being drunk, would that effect it, in your view?—Oh, yes, it must reduce them.

3630. Now, the cab radius that you spoke about. You are unwilling, I understand, to have a circle of five miles; you think that might act prejudicially?—Yes.

3631. Still, I understand you to be in favour of an extension of the four miles?—Yes.

3632. What I want to get at is this: can you suggest to us any mode of fixing that radius which it would be easy for the public to know and avoid disputes?—Yes.

3633. You will understand me, if you simply draw it on a map deposited at Scotland Yard; it would be very difficult for the public to know what the radius was, and perhaps the cabman, too; how would you get at that?—Why, by abolishing the cab radius, and establishing a five-mile distance, measured by wheel, we will say to Hammersmith, and all the main roads in the district, and instead of putting the post as it is to-day, just in the Hammersmith road, you erect a post or paint a post, paint one of the lamp posts in the neighbourhood a certain colour which indicated that it was within the five-mile radius.

3634. And then you could draw a straight line from post to post like a ring fence round the whole metropolis. That is your idea of doing it?—In different districts.

3635. That would be your way of doing it?—Yes.

3636. Now, then, with regard to bilking. You told us that you thought there should be a power of making it an offence, at all events, for a passenger to refuse his name and address, or to give a false address?—Or to give a false address.

3637. Now, I want to go further than that. Do you think any power of arrest ought to be given to a cabman, of handing men over to a constable?—Well, I think if they refuse to pay a fare in front of a constable that he ought to have power, at all events, to retain them at the station to see that their address was bonâ fide.

3638. I will suppose a driver had taken an old lady into the suburbs where there were not any constables about, and he said, "My fare is 4*s.* 6*d.*," and she said "No, it is only 3*s.* 6*d.*, and that is all I will give you." Now, would you give the cabman power to push her into the cab and take her against her will to the station?—No, certainly not; that is not a bilk, that is only a matter of amount.

3639. Now, then, supposing that a man had bilked a cabman early in the day, and that the cabman saw that man who had bilked him later in the day—had bilked him by taking a drive and then laughing at him and telling him he had no money—which is a thing that is sometimes done, would you give him power to arrest that man by force and take him up as he would a thief?—Only to obtain his name and address.

3640. Yes, but still you would give him power to lay hands on him; we must contemplate clearly what we are going to do?—Well, I think, previously to that that he ought to have made some declaration either at the police station or at the police court.

3641. Apply for a warrant in fact; but armed with a warrant you would give him that power of arrest?—Certainly, I think it would be safe.

3642. In the case of a warrant I think I agree. Are you aware of the change made by what is called the Summary Jurisdiction Act of 1879, in the rights of cabmen, and that, perhaps by an accident, their rights conferred by a previous Act were taken away from them?—That is so.

3643. You would be in favour of restoring those Acts?—Yes. I will tell you why I would. The law on the one hand compels them to drive a man while it does not compel him to pay; so it is all one-sided.

3644. Are you able, of your own personal experience, to give us a case of bilking?—Oh, yes.

3645. Have you been bilked yourself?—Yes.

3646. Will you tell us the circumstances?—My last case that I remember definitely was in 1890. I might say in the summer of 1890, I drove one of the best lots then in London, for which I paid the owner a guinea a day; and I was engaged at Waterloo Station by two men who looked like the ordinary swell cab rider, and drove them about from restaurant to restaurant, and one or two places shopping, and they left me at St. James' restaurant at the finish——

3647. After how many hours?—After seven hours. Expecting them to come out I waited till 10 o'clock; pouring wet evening it set in, in the summer, and I was in great trouble—I had a wonderful good horse—about having the horse out so long; I could not very well leave the fare, and I happened to see one of my fellow servants—we call them fellow servants, you know—going home to change. I said "Tell the governor I "am afraid I have got a bilk here." At any rate I waited eight hours and a half, went all over the restaurant——

3648. You found they had gone out at the other door, I suppose, into Regent Street?—Found they had gone, and consequently I had to start my day's work at half past nine at night, and that was only a concession, breaking the regulations of the yard, to get a horse at all.

3649. Several cases of that kind have happened to you, I suppose?—Several.

3650. (*Mr. Lough.*) Did you ever see those men?—Never any more.

3651. (*Mr. Cunynghame.*) One more question. You have told us that you think a large number of cab drivers in London are very inexperienced in driving?—A large number of them when they commence.

3652. But would you be prepared to say that the number of accidents caused by the bad driving of cabs is larger than that caused by the bad driving of vans, and broughams, and carriages?—No; I could not say that, because I know it is the reverse.

3653. How then do you account for the fact that the class of men, which has the greatest proportion, I suppose, of bad drivers among it, has the less accidents?—I do not know that they have the greatest proportion of bad drivers amongst them. I do not take that stand.

3654. I see. Taking all drivers, you would say the proportion is not much worse among cabmen than among the general drivers in London?—Oh, no. I only say, as being public drivers that there ought to be greater caution than there is.

3655. (*Mr. John Burns.*) Do you consider the age of 18 too low for a licence?—Yes.

3656. What would you put it at?—Twenty-one.

3657. Do you consider that a cabman should be asked for 5*s.* for his licence?—Yes.

3658. Are you in favour of limitation of licences by raising the standard of qualification and examination, or by allowing a certain period to elapse until the margin of drivers had been reduced to something like what was necessary for the number of cabs; which of the two systems?—Well, I think that both are necessary.

3659. Both?—That the examination is very necessary, and that the proportion of drivers should be sufficient to work the cabs with sufficient odd men.

3660. With a margin sufficient for holidays, rest, and so forth?—And especially that the licences should be granted in the most unprofitable months.

3661. Have you considered raising the standard of disqualification for holding a licence? What offences, misdemeanors, or crimes should in your opinion disqualify a driver from carrying on his trade and having his licence?—That is, taking that each offence is tried in the courts and not by report.

3662. That is so?—Drunkenness, furious driving, overcharge.

3663. Cruelty to animals?—Cruelty is a very wide question, because it is very often promoted by the proprietor. The majority of cruelty cases are for driving lame horses, if you search the reports I think you will find so, and horses with sore shoulders.

3664. And you are in favour of the standard of disqualification being raised?—Oh, certainly.

3665. Do you consider that proprietors should have the privilege of allowing their sons to take out a licence at 17 years of age, or one year sooner than a man who was not the relative of a proprietor?—No, I do not.

3666. What have you to say with regard to cabmen's earnings?—I see before the Labour Commission you said that "in 1869 cabmen's wages were 50*s.* per week—"they have now been reduced to 30*s.* or 35*s.*" Do you still adhere to that?—I think they are still reduced.

3667. You think they are lower still?—I am sure the standard of living is being gradually reduced by cabmen themselves, even within these last 12 months. By my own personal observation as a practical coffee-house keeper I know that where they used to spend 10*d.* or 11*d.* they only now spend 7*d.* or 8*d.*

3668. (*Mr. Whitmore.*) A day?—No; when they have what they call a "square meal."

3669. (*Mr. John Burns.*) And as their wages and spending power have diminished, has the price of cabs disproportionately increased?—Since when?

3670. Since 1869?—Generally, yes.

3671. To what do you attribute this diminution in the earning capacity and the spending power of a cabman, to an excessive number of cabs?—Well, the want of employment for the number of cabs that there are now on the streets.

3672. Excessive number of cabs, one reason?—Yes.

3673. Increased competition of other methods of travelling?—Yes.

3674. And does that necessitate the cabmen being on the street a longer number of hours than 10 or 15 years ago?—Yes.

3675. Do the cabmen work longer hours generally than they did 10 or 15 years ago?—Yes, they have many facilities for so doing.

3676. With regard to police courts, is there not a general impression amongst cabmen that cabmen do not have justice meted out to them at police courts?—Yes.

3677. What is your experience with regard to the time, the attention given, and the preference, if any, given to witnesses hostile to the cabman over the cabman himself? Have you any experience?—Well, I have had a very wide experience, because, as an officer, I have been in the court sometimes. It is almost a saying amongst cab drivers, "I will plead "guilty, I shall get off cheaper, I want to get away." One will say to the other, "Up you go, hurry up; "just plead guilty; if you plead guilty you will get off "cheaper." That is thoroughly well understood at the West End courts, at all events.

3678. At what courts does that condition of things apply?—At Westminster, Marlborough Street, Bow Street; not in the City.

3679. (*Mr. Cunynghame.*) Do you mean men plead guilty who know they are not guilty?—Yes; oh, yes.

3680–1. (*Mr. John Burns.*) You said in your evidence before the Labour Commission that frequently 90 cases were taken in a period in which a magistrate could not do justice to 20 or 30. Do you still adhere to that?—I do. The Report for 1892 gives 60 per week for petty offences, and 12 for offences which I enumerated just now, which should go against the men.

3682. But, generally speaking, there is not sufficient time and attention given to the cabmen's cases?—Oh, no. It has been known for a magistrate to say, "Well, "those who plead guilty can pay the costs."

3683. (*Mr. Whitmore.*) Where?—Marlborough Street.

Mr. J. Beasley.

9 July 1894.

3684. (*Mr. John Burns.*) Can you give us an instance of that?—I have not got the date now. I think probably some other witness will be able to trace the date out; I had it, but I cannot lay my hand on it.

3685. In the event of your coming across it, will you send it on?—Quite so; I will.

3686. What have you to say as to the relations between the police and the cabmen?—Well, the policemen nearly always have the advantage.

3687. Are the relations between the police and the cabmen better now than they were?—Oh, yes; I believe so, generally. The only thing is that although the fines are less than they used to be in years gone by——

3688. Do not let us deal with the fines. I am speaking now of the relations between the policemen and the cabmen?—In some localities.

3689. But, generally, the relations between the police and the cabmen are better than they were?—Generally.

3690. (*Mr. Whitmore.*) To what do you attribute that improved state of things?—Well, they have improved very much, I am bound to say, since about 1877 or 1878. Previously to that, very rarely was a cabman defended, but a powerful organisation came into existence which defended every one of their members never mind how petty the offence. The magistrates came to be very much more lenient; I think it can be borne out by figures that although there are very much fewer cab drivers, take the day through, than drivers of other vehicles, and although cab drivers work many more hours, and cause less accidents, there are more of them summoned than any other class of carmen or anything else for petty offences which other tradesmen and so forth might commit.

3691. May I sum up what I think was the effect of the earlier part of your answer, that you think the improved relationship between the police and the cab drivers has been caused by the care which has been taken in defending cab cases?—Yes; and a little judicious bringing their grievances before the public from time to time.

3692. That has made the police more careful about charging cabmen carelessly and recklessly?—Oh, yes. I might say these relations were greatly improved in Colonel Henderson's time as the Chief Commissioner; he gave a lot of consideration to the cabmen's side of the question; he was the first Commissioner who had given any consideration to the cabmen's side of the question.

3693. (*Mr. John Burns.*) Have you any remedies to suggest for improving the relations between the police and the cabmen?—Well, I think if there was a separate court, or a day set apart in some court, for hearing cab cases alone—that is, petty offences under the Hackney Carriage Act, and not such as furious driving or drunkenness, because they could be decided in the ordinary way in the ordinary court, but loitering, recovery of fares, and a man stopping to have his meal somewhere who gets summoned frequently, though he is bound to stop with his cab, he must do some stopping to rest his horse; I think if those cases were tried in a court away from the criminal associations of a police court, that greater justice would be done, and the public would reap the benefit of it in the long run. I mean, it was so in the hackney coach days; there used to be a court in Essex Street, Strand, where cases of that kind were tried.

3694. With regard to ranks, do I gather that, in your opinion, in all wide thoroughfares, squares, market-places, &c., such as Covent Garden, a cab should have liberty to stand, and that they should be accommodated in the vicinity of theatres and concert halls to a greater extent than now happens?—Yes.

3695. What suggestions have you for improving the conditions of the Strand at night time from the cabman's point of view?—Well, I think if the ranks now are only allowed just while the theatres are open, just when the theatres are what we call bursting, that is, over; if some standings were allowed at the bye-streets, say Burleigh Street, Wellington Street, Cecil Street, Savoy Street, two or three cabs at the end of each street, at the busiest times of the evening, and the public try to co-operate with the cabmen in taking cabs from those places, and hotels and that were induced to call cabs from those points, that it would reduce, at all events, the loitering in the Strand that much; it must do so.

3696. You believe that the diminution of congestion in the Strand at night time is simply a matter of arrangement and organisation?—Yes, by practical people.

3697. Is not your objection to shelters mainly to insufficiency of size rather than to any other reason?—Yes, insufficiency of size, and being, of course, over-rented.

3698. Is the rent too high?—Some of them pay a much as 12*s.* a week, I think, for a shelter.

3699. Is that higher than what would be paid for a similar space in a coffee shop?—Well, it is relatively very much lower.

3700. (*Mr. Whitmore.*) Are they rated, by the way?—No, they are not rated, I think.

3701. (*Mr. John Burns.*) No, I think the local authorities exempt them. Would you favour a different system of watering horses, the single standpipe and bucket in preference to the trough?—Oh, I think it is much better.

3702. With regard to privilege. It is urged by those who favour the privilege system that the privileged cabs at railway stations are a guarantee for lost luggage; is that so?—I think not.

3703. Is it true that the privileged cabs at railway stations are better as to property, and better as to class of character of drivers, than general street property?—That is not so. I think it is the reverse, taking it generally; there are a few exceptions.

3704. The privileged cabs are not so good as the general street property?—No.

3705. I want to ask you this on that question: does it frequently happen that railway station yards are emptied of privileged cabs whilst passengers are waiting for cabs on the platform, and there is a superfluity of non-privileged cabs outside?—Oh, yes.

3706. At Victoria?—Yes.

3707. At Charing Cross?—Yes.

3708. And at all privileged railway stations?—Yes. Very often they have to call up the others. You will see that at Liverpool Street.

3709. Upon that point, have you seen, rarely or frequently, passengers at Victoria Station, when all the privileged cabs have been out, go out to the pavement outside at the restaurant, and ask for non-privileged cabs, that in coming to them blocked up the approaches to the station?—Oh, yes; one of the worst stations I should think.

3710. Do you think that condition of things could be prevented by allowing, in fact compelling, all railway stations, as semi-public places, to let in all cabs up to their capacity of accommodation?—Yes, providing they were fairly good cabs.

3711. (*Mr. Whitmore.*) But you would give a controlling discretion to the railway company?—The same as they have, as to class, and number, and accommodation.

3712. (*Mr. John Burns.*) What have you to say, Mr. Beasley, about the inspection of horses, and horses and cabs being stopped by the officers of the Royal Society for the Prevention of Cruelty to Animals?—Well, my experience is that it has not been all that might be desired. I do not know for what reason, I am sure; they generally seem to direct their attention to the wrong class of animal. I do not know how it is. I suppose the more acute ones dodge them, and the innocent men get caught.

3713. Do you consider from your experience that the officers of the Royal Society for the Prevention of Cruelty to Animals are competent?—No, I do not.

3714. Would you have their powers exercised by a public authority instead of by a voluntary society?—Yes.

3715. Is there an impression amongst cabmen, or have you any evidence upon the point, that these officers sometimes exercise their power of inspection, to put it mildly, capriciously?—Yes.

3716. You think that public officers would not so act?—Oh, I do not think so.

3717. (*Mr. Whitmore.*) May I just ask, when you say public officers, do you mean the police?—Well, they have that authority now—the police; but, for what reason I do not know, the police exercise it much better in the City than anywhere else.

3718. (*Mr. Hopwood.*) I assume the officers of such a society have a direct incentive to obtain convictions, have they they not?—Certainly.

3719. (*Mr. John Burns.*) And you consider that that operates unjustly occasionally to cabmen as well as to cab masters?—To both.

3720. You do not object to this form of inspection ——?—Oh, no, I do not object to it.

3721. You do not object to it because it stops cruelty—horses from being worked; but because in its operation it does not stop so many horses as a more efficient system would?—It stops the wrong ones.

3722–3. Have you any experience of the sub-letting of cabs?—Cabs only, without horses.

3724. Yes. Both cabs and horses; take them separately?—Do you mean from a proprietor to what might be a poor proprietor?

3725. Let us take cabs only?—There is a little of that done; not so much as there used to be. Only some of the builders now who own cabs, let them to other owners while their cabs are being repaired.

3726. Do you know anything of the sub-letting of both cabs and horses?—No, not much.

3727. Would you think that there were 1,000 cabs and, say, 2,000 horses in London sub-let?—Sub-let for other proprietors to work?

3728. For other men to work?—Directly?

3729. Yes? That driver A., instead of driving for a cab proprietor as ordinarily understood, would drive for B., who neither had a yard nor stables?—Well, that might be so, in fact; but I could not prove it.

3730. With regard to the radius; you are not for a general change in the radius by making it five miles instead of four?—Oh, no.

3731. You said you were for the erection of radius posts; I presume you mean the nearest lamp post on the verge of the radius to be painted some distinct colour; is that so?—Yes, that is so.

3732. Are you in favour of the cabmen being paid a weekly wage instead of the present system of taking all over what the proprietor demanded?—No doubt it would be revolutionary, but, ultimately, it would be most beneficial to all, I think.

3733. Do you think that the present system of payment is best for the public and best for the men and masters?—I have not given the question a large amount of thought. The wages question has been talked over by a few, but as the driver has to deal directly with the fare, I am of opinion that the present system, taking the ownership as it exists to-day, is the best.

3734. (*Mr. Whitmore.*) I do not quite understand. It is rather important to know exactly what your view is. I thought you had said that you would prefer the system of payment by wages?—Yes, but it would need some other qualifications. I think it would be an unfair thing to say yes or no.

3735. (*Mr. John Burns.*) In theory you agree with the weekly wage?—Yes.

3736. But in practice, considering the relations of cabowner to cabman, and cabman to fare, and what is fair to the driver, the present system should prevail?—The relation of the fare to the cabman is a very important matter.

3737. Have you considered what would be the advantage to the public and to the cab driver and to the cab master of some method of ticket or automatic check?—The difficulty would be—of course I do not know the merits or demerits of any taxameter.

3738. Assuming that a mechanical check could be had which was perfect and could not be tampered with, and no collusion could take place between driver and fare, would you be in favour of the cabman paying all in to the master instead of the present precarious and gambling method of remuneration?—And receiving a wage?

3739. Yes?—Yes.

3740. Have you formed any opinion as to the change for the better that the ticket system has made upon the omnibus men?—No; I have not gone into the matter in detail—only what I have heard others say.

3741. The general impression is that the ticket system has improved them?—Well, not amongst the men themselves.

3742. But the general impression is, is it not?—Well, I believe the companies say so; they ought to be the best judges.

3743. (*Mr. Whitmore.*) The men do not like the change?—Well, if you ask me for my opinion, I think you will find that some of the men on the odd 'busses who have no ticket at all can pay in just as much or a little more than the companies' 'busses.

3744. (*Mr. John Burns.*) That is due to other causes?—The fact that they are always in their business, and a variety of causes; of course they profit really on the ticket system being adopted by others, because they are always on the alert.

3745. But the convenience and comfort of the public in travelling is considerably improved by the ticket system?—It is considerably improved; I do not know whether the ticket system has been the cause.

3746. Does the large margin of precariously employed odd men, or the large margin of unemployed men, lead to extortion from passengers on the part of those men when they happen to get odd jobs?—Oh, I think so.

3747. Then can it be taken that the most severe instances of extortion and abuse are more likely to happen from precariously employed odd men than from the regular driver?—It is more likely, sir.

3748. And that the incentive to extortion is greater with the odd men than it is with the regular driver?—They do not know whether they will do duty the next day or not.

3749. (*Mr. Lough.*) Speaking generally, you think the present system of control of the cabs is defective?—Very defective.

3750. I will just take the points. As regards limiting the drivers, which was one of our first questions, you said that there were 11,000 drivers for 7,000 cabs; how many do you think would be sufficient to run the 7,000 cabs?—9,000.

3751. You think the drivers' licences might be reduced by 2,000?—I do.

3752. I want a question or two now on how they will be reduced. You say no licence ought to be issued till 1st January?—Yes.

3753. That would only bring them down 300. You would want to take other steps?—Only 300?

3754. It would only bring them down 300 or 400?—How is that, sir.

3755. Because that is all that will be issued between this and January according to the present system?—But that is giving the men——

3756. I will get at it. Then you admit that the mere stopping of licences till the 1st January, according to the present system, would not be sufficient, would it?—I will say yes or no, but it will not be a fair answer? No, it would not.

3757. Then, what else would you do?—That is, taking the present system of issuing them every month, but if you call all licences in before next January, and issue them annually only, and tell men that unless they renew them in January they will not have the opportunity of renewing them again, it would make a very vast difference.

3758. We are not talking of quite the same thing?—No. I do not understand you.

3759. I will get it right now. Did you mean when you said no more licences till January, no more new licences, or that you would not even renew the old licences between this and January, which did you mean?—Oh, stop issuing new ones.

3760. Then that was what I meant by saying that that would only reduce you 300?—You must do it gradually.

3761. I want now to bring you on past January. What other steps would you take to reduce the number by 2,000? Would you only renew the licence of a man who had worked so many days in the year?—Quite so; illness, of course, would be an excuse.

3762. You would do that subject to illness or good reason?—Yes.

3762. How many days would you think would be sufficient for a man to work?—I think that the man ought to work 10 months during the 12.

Mr J. Beasley.

July 1894.

3764. Put it in days, 250?—250 days.

3765. That would cut out the butterfly drivers, if any remained?—Yes; it would cut out a great many butterflies and others.

3766. Would you refuse the renewal to old and feeble men?—Well, it would be drawing the thing very hard on them.

3768–7. But would you refuse all new licences on cabs until the number was reduced by 2,000?—That is so: yes.

3769. You said, in reply to Mr. Burns, that you would not grant any licence to a man under 21 years of age. Now, I ask you, in the case of a suburban small proprietor, would you license his son under 21?—No, I would not.

3770. Do you know what chair-marking is?—Yes.

3771. What is chair-marking?—Entering a date when a driver starts work for an employer, and when he is discharged, or leaves, in some peculiar manner, which indicates to another proprietor that he has done something wrong, and is not to be employed.

3772. Is chair-marking largely done by the proprietors?—Well, it is done by some proprietors. I am glad to say a great many will not acknowledge it.

3773. I am asking you about the number. Is it done by a large proportion or not?—Oh, not by a large proportion.

3774. What proportion would you think?—Oh, I should think about 20 to 30 masters would be the maximum.

3775. (*Mr Whitmore.*) Out of the whole number?—So far as chair-marking is concerned, yes.

3776. (*Mr. Lough.*) Do you know what the red book is?—Yes.

3777. What is the red book?—That is a system either of the association or associations by which a driver having taken out his cab and paid nothing for it, or a less sum than is a sufficient sum acknowledged by the association to pass him for that day is scheduled in this book, and cannot get a service with another association proprietor in that district, or a member of that association, until he has paid a sum to get his name erased.

3778. It is another system of protecting the masters—the masters protecting themselves?—It is a system of protecting masters themselves. Sometimes it is justifiable; other times it is not.

3779. (*Mr. Whitmore.*) This I should rather like to know: do you, from the cab driver's point of view, object to that last system, the red book?—As it is applied, yes.

3780. (*Mr. Lough.*) Are you in favour of maintaining the privileged system at the railway stations?—I am not.

3781–2. Do you know the privileged 'bus of the railway companies?—Yes.

3783. Do you think the 'bus should be licensed?—No; I think it would be a step in the wrong direction.

3784. What would you do with the 'bus?—As the proprietors have stood by and allowed them to increase so enormously, I think they must put up with them.

3785. And you would not license them?—The only thing is, I would watch that they did not ply for hire the same as an ordinary cab.

3786. That is done now?—No; I think the proprietors and the drivers ought to look after that themselves.

3787. Practically you would make no change in the present condition of the railway 'busses?—I cannot see my way clear. I think that the licensing would be a step that would bring them into competition for smaller fares.

3788. You said it was in Colonel Henderson's time that the greater sympathy, if I may put it so, between the police and the cabmen commenced?—That is so.

3789. Still, does it not go on in Sir Edward Bradford's time?—I see very little difference.

3790. That was all I wanted to make clear. You are of opinion that the cab cases are not fairly heard in the police courts now?—No, they are not.

3791. Is there not a special cab court in the City? A special day for cabs at the Guildhall?—I do not know.

3792. You do not know much about the City perhaps—There are very few summonses in the City, whereas there are 20 in the West End. There are very few cabmen summoned in the City.

3793. Do you know anything about this practice there?—Yes.

3794. Is it not true that cab cases are heard on Saturday morning at the Guildhall?—I do not know whether that is so now; it has not always been so.

3795. Is it not true that there is a special court at the Guildhall for small street cases, or is it true?—I am not certain about that.

3796. Now a question about the stands. Are the present stands close usually to public-houses throughout the suburbs of London?—In many instances in the suburbs.

3797. Now about the shelters. I want to ask you a question or two about that rent you spoke of. What is the usual rent of a shelter?—Well, without binding myself to figures, I think it averages from 3*s.* to 12*s.*

3798. Per week?—Yes; according to the locality.

3799. The man who is in the shelter has to pay that rent?—Yes.

3800. What does he pay it to—the Cabmen's Shelter Fund?—Yes.

3801. What is the Cabmen's Shelter Fund?—A benevolent institution.

3802–3. Well, do these rents enable it to pay expenses?—No; it is subsidised by the subscriptions, you know.

3804. On the question of the weekly wage: the present system is that the proprietor stops his charge for the cab first, and lets the man get what he can afterwards?—That is so.

3805. Would you be in favour of reversing that—to let the man stop his 5*s.* or 6*s.* first, and give the proprietor what remains over?—Oh, yes; I must be in favour of that.

3806. Do you think it would be an improvement, taking all things into consideration?—Well, probably, putting it the way you put it.

3807. Do you want to put it any other way?—Well, his stopping the money and the proprietor paying him a wage is a very different method; it might be the same amount.

3808. Do you know that that is done anywhere?—Oh, yes, in the suburbs it used to be the case in the old days.

3809. It used to be?—It was the custom for the man to have about 4*d.* out of 1*s.*

3810. Do you know that it is done in Berlin now with every cab?—No, I do not.

3811. You say it is done in the suburbs?—Yes.

3812. Where?—Sydenham.

3813. What is the practice at Sydenham?—Some of the proprietors had different terms, but the same system is underlying. Some of them get 10*s.* a week and their luggage money; others get no wages but 4*d.* out of each 1*s.* they earn.

3814–5. Fourpence out of every 1*s.*, is that the practice with some drivers at Sydenham?—With some drivers.

3816. They stop 4*d.* out of every 1*s.* they take?—They are supposed to.

3817. Does that prevail at Putney?—With some of the proprietors, yes.

3818. Does it prevail anywhere else? Richmond?—I do not know much about Richmond; Yes, I believe so.

3819. Does it work fairly?—Yes, oh yes. The men stop in their places there for many years. There is never any change hardly in the suburbs with drivers.

3820. So it does work fairly well?—Oh, yes; of course the conditions, the surroundings, are different, I mean.

3821. Now, just one question on bilking. Is it increasing, the number of cases?—Oh, yes.

3822. Why?—Well, I think, probably—it is no good ignoring the fact—the fact of the agitation against it has opened some unscrupulous persons' eyes as to what they can do, and they have availed themselves of the opportunity. That is one reason.

3823. Mr. Cunynghame asked you, whether, when a cabman finds a bilker who might have got away from him at first, you would like the cabman to hustle him into the cab and take him away, and you said you would not. But I ask you this: would you not allow that cabman to follow this man with his cab, say until they came to a policeman, and then ask the policeman to deal with him?—Oh, yes.

3824. If he paid nothing?—Yes.

3825. Just one question about the number of cabs, do you think there are too many cabs in London?—At present.

3826. How many do you think the cabs might be reduced by?—By a thousand.

3827. Do you know what a taxameter is?—Yes, I have heard something about it.

3828. Would you be in favour of it?—In favour of giving it a trial. I could not speak for or against it until I had seen it practically applied.

3829. (*Mr. Whitmore.*) I just want to ask one question about the privileged cab system. You say that works badly for the public because the supply of privileged cabs in the stations is very often insufficient for the demands of the public?—Very often.

3830. Would it not be possible to increase the number of privileged cabs?—Then it is not profitable to the privileged owner.

3831. Might there not be such an increase in the number as would meet the demands of the public and yet not be unprofitable to the owner?—I do not think so.

3832. So that you think that it is a necessary complement of the privileged cab system that the number of privileged cabs should not be increased upon their present number?—No, it is necessary that they should be limited.

3833. You said the large profits of the cab drivers have diminished of recent years: do you think that in consequence of that there is any less eagerness on the part of men to obtain licences and become drivers?—I should think, taking into consideration the number of the unemployed, there is less eagerness.

3834–5. Is that tendency so apparent that by the operation of the natural causes the number of licence holders may diminish steadily as the years go on?—No, I do not think so.

3836. We have heard from several witnesses that the general character and position of cab drivers have improved during the last 20 years?—Their conduct?

3837. Yes, their conduct and their intelligence?—No doubt about it, side by side with other workmen.

3838. But then, now that the profits are diminishing and the business is becoming a harder one, is the improvement still continued?—I think so. I think that the men are desirous to serve the public as well as they can; they only want almost educating how to serve them.

3839. You see my difficulty. On the one hand it is alleged, and I suppose with truth, that the profits of the cab drivers are diminishing, the business is becoming a less good one; on the other hand it is alleged that the character of the men who go into the business is improving?—Go into the business, not the men in the business.

3840. Well, go into it?—I mean the men in the business; do you mean the applicants?

3841. Yes, the applicants?—I do not know that there is any decided improvement so far as applicants go.

3842. The improvement, you think, takes place after the men have become cab drivers; it is not an improvement in the class of those who seek to become cab drivers, but an improvement which has developed as the cab driver goes on with his business?—No, my answer was that the cab driver had improved side by side with other workmen, that is, the sobriety of the workman himself generally.

3843. (*Mr. Bayley.*) When a cab proprietor has the privilege for a certain number of cabs he has to select the cabs that he will use for the job, has he not?—Yes.

3844. And as a rule does he not select the best of his cabs?—I should not think so.

3845–6. Why should you not think so?—I know it is not so, I could mention instances.

3847. Which companies are you speaking of or which proprietors that do not select the best of their cabs for station work?—Palmer, Birch, Holden, Hibbert.

3848–9. Phillips and Frickland?—No, they are nearly all privileged cabs.

3850. (*Mr. Whitmore.*) Are those large proprietors?—The very large owners have nearly all their cabs in, so that would not be a fair question, that is why I did not mention them; I may mention men now who have nearly as many street cabs, to my knowledge, as they have railway cabs.

3851. (*Mr. Bayley.*) Could you say positively from your own knowledge that these firms do not select the best of their cabs for station work?—That is so, it is only just recently that rubber tyred cabs have been in the railway stations at all; that proves what I say.

3852–3. (*Mr. John Burns.*) Would you allow me at this point to put this to the witness? You said, Mr. Beasley, that where cab proprietors have 40 privileged cabs and 40 street cabs, the privileged cabs are not better than the 40 street cabs?—No, that is my experience.

3854. Let us take another case; suppose there is a cab proprietor with 80 privileged and a cab proprietor with 80 non-privileged street cabs; in your opinion and experience which is the best class of property, the 80 privileged or the 80 non-privileged, generally speaking?—Oh, the non-privileged in appointments generally.

3855. (*Mr. Bayley.*) That does not touch the question of privileged or non-privileged; one proprietor keeps cabs of a certain class, another proprietor keeps cabs all of an inferior class, another one better and so on?—Yes, that is so.

3856. That has got nothing to do with the question of privilege?—The numbers are bound to be limited, I suppose; it is limited by the proprietary interest that the best cabs are outside the railways.

3857. We had a proprietor here the other day, Mr. Scott, the manager of the London Improved Cab Company, who said directly the opposite; is he likely to know a proprietor's business better than yourself?—I know from observation if you want a good lot you have to go away from a railway to get it, generally taking the locality.

3858. Does your remark apply to four-wheelers as well as to hansoms?—No. I should say there is very little difference in the four-wheelers; I should say the four-wheelers are the best in the railway stations because the proprietor can get the most money for them.

3859. For that reason they send the best cabs into the railway stations?—Because it is more remunerative.

3860. Certainly. Do you know what a station brougham is?—Oh, yes.

3861. Are the station broughams which are used at stations not better than the four-wheelers that are used outside the stations?—In some localities.

3862–3. (*Mr. Lough.*) At Euston?—Yes, in that locality; but it would not be fair to take one station; you must go all round.

3864–7. The Great Northern?—No, they are not.

3868. (*Mr. John Burns.*) Victoria?—Very much worse.

3869. (*Mr. Whitmore.*) How do you account for certain stations having a superior class of privileged cab?—I think that lies very much with the station authorities when they grant privileges. Some of the stations are very particular; for instance, the Great Eastern have always had the best privileged cabs in all my experience of any station in London, whereas at Victoria, of recent years, since one station master left there, the cabs have deteriorated very much.

3870. So that if the station authorities use their discretion wisely they might secure a good class of cabs within their stations?—Possibly.

3871. (*Mr. Bayley.*) It rests, in fact, with the discretion of the superintendent at each station what class of cabs come in or not?—Yes; and whether the privilege is remunerative to the proprietor to supply such cabs.

3872. But if the superintendent at each station says he will have none but good cabs he has them?—If the privilege is a bad one he has to take what cabs he can.

Mr. J. Beasley.

9 July 1394.

3873. It depends upon the quality of the station and the character of the privilege?—That is so; yes.

3874. The licence should be the driver's character, should it not, when he goes from one employer to another?—That is what I think.

3875. I quite agree with you; would it not be a good thing to have a column on the licence stating the cause of the man's leaving, carrying out your own idea that the licence should be the man's character?—I see no objection to that myself.

3876. (*Mr. John Burns.*) You said you were in favour of another column on the licence for the man's character. Why not treat them both equally and have a column for the master as to his treatment of the man? Have you anything to say upon that?—Well, I do not see why he should not have the same opportunity.

3877. (*Mr. Hopwood.*) With regard to the privileged cabs, you have given us some interesting evidence by way of criticism, but I do not think the Committee have before them the scheme which you would adopt in substitution?—Oh, I thought perhaps they had. The scheme that I suggest is the open system as adopted and in practice now for many years at the South Western Company's station at Waterloo.

3878. Is it not the fact that the Railway Companies say that the Waterloo system will not apply to a railway station like Victoria from the insufficiency of the yard accommodation?—It may be that they say so.

3879. The suggestion, as I understand it, is that the yard accommodation is insufficient to enable the Company to insure a perpetual supply of cabs?—That may be so in some instances; that may be so at Victoria.

3880. Can you tell us, as you have considered the question, how it is that the South Eastern Railway Company abolished the privilege system and had to revert to it again?—Yes. The question of toll, no doubt, was a very great detriment, because the toll was at variance with the customary 1*d.* to 1½*d.* per cab, and there is no doubt that by making it 1½*d.* per cab for each fare, not per day, it was only the old property that would pay 1½*d.* I think that the difficulty really ought to be lessened by bringing it up to about what would be the revenue, granting that you give them any revenue at all, to about halfpenny per cab, then you would get good property.

3881. Is the Waterloo toll a penny per day or a penny per fare?—A penny per fare.

3882. And you would be in favour of a reduction from the penny?—Yes, either its abolition altogether, or a halfpenny I think would meet it.

3883. I assume the companies impose a toll of a penny per fare that they may first of all assert the right that they have to their private property, and secondly for the purpose of supplying funds for watering the yards and taking care of the shelters and so on?—For the purpose of revenue, I suppose.

3884. But do you think they make any revenue out of it?—Very few. I remember in the South Eastern that they pointed out that it took so many officials to look after the cabs, and they thought that the cabmen or the cab trade ought to pay for those officials, and that is why the toll was collected. Whether that is a just claim or not——

3885. I think we have your mind upon that part of the question. With regard to the omnibus, you put it to Mr. Lough that you are not in favour of licensing the ordinary station omnibus?—No, I am not.

3886. It is a step in the wrong direction?—I think it is.

3887. You fear, as I understand it, that if the ordinary station omnibus were obliged to have a licence the effect would be to drive the railway companies into the cab business?—Well, it would drive them into it. I do not attach much importance to it.

3888. It would admit as a precedent the doing of cab business by railway companies?—That is so.

3889. That is your objection?—That is one of the objections.

3890. Well, can you give us another?—Well, I do not know whether that objection embodies this, that they could be hired for a shilling.

3891. Would you make the railway companies direct competitors with the cabmen?—Yes, they would have to compete by Act of Parliament the same as the cab itself, whereas at present they do not do a fare under a certain amount.

3892. With regard to the sixpenny fares, would a suggestion of this sort commend itself to you, that wherever a cab was crawling along the street, that is, not upon a stand, that fact in itself should be a holding out by the cabman of his desire to take a sixpenny fare for a mile ride?—No, I would not commend that, unless it were universally accepted; you would find that the drivers would try to dodge it.

3893. I suggest to you that it should be universally accepted in this way, and that it should be made the law?—Made the law; oh no, I would not admit that.

3894. It is the law for a shilling?—It is the law for a shilling, but the law does not say that you shall not work for sixpence.

3895. It is not the law for sixpence?—No.

3896. That was altered by the Act of 1871?—Yes, by Bruce's order.

3897. Well, the proposition I make to you is that we should re-enact the sixpenny fare and make it a legal fare for one mile wherever a cab was not called off a stand?—I object, sir; if you ask for my opinion to another regulation by Act of Parliament being made as to sixpenny fares.

3898. Could you make the sixpenny fares merely a question of contract?—I think it ought to be a question that the owners and drivers ought to consider themselves as business men.

3899. That brings you to another point; you talk of the owners and drivers as business men; you have cognisance of the existing arrangements as to the cabmen's union, I suppose?—You mean as to the tariff?

3900. No, as to the powers of the union; there is a trade union, is there not?—Yes.

3901. Has the trade union which at present exists power to appoint a board of cabmen for consultative purposes to co-operate with the masters' association?—They have not arrived at that, that is not a registered rule yet. I would suggest it; that is an old suggestion of mine.

3902. It is clear to you, of course, that unless such a power is taken both on the part of the cabmen and on the part of the masters' association it would be impossible legally to establish such a board of masters and cabmen as you suggest?—Quite so, you mean for the purpose of arranging fares and so forth?

3903. An advisory board?—Oh, yes, I suggest that because I am of opinion that the cab riding, the patronage of cabs, could be very greatly increased if owners and drivers were more enterprising and advertised their fares the same as railway companies do.

3904. I am only following out your own line of thought and making something in the nature of a suggestion to you?—Quite so.

3905. One word as to police courts, and then I have done. First offences; would you be in favour of the issue by the police of a cautionary notice to a cabman in lieu of a summons whenever that cabman was charged or likely to be charged with a first offence?—What would be the nature of the offence you would suggest?

3906. For instance, crawling—I should put it properly plying for hire?—Yes.

3907. Or any purely hackney carriage offence?—No, I would not, because my experience of offences of that character is that there is a great deal of luck about it.

3908. I am not sure that I made my question quite clear to you, Mr. Beasley. The proposition is this, that where a police constable reports a cabman to his superior officer in order that the summons may be taken out against him for a hackney carriage offence, and the superior officer finds from the books in Scotland Yard that the man has not been charged before with any offence under the Cab Acts, the superior officer should have power to issue a written notice to the cabman by way of caution instead of applying to the police court for a summons?—For the first time.

3909. For the first time?—There could be no danger in it, but I am bound to say it is not the worst men that get the most summonses; it is more a matter of luck in these petty offences; four or five men have committed an offence at the same time; it is only the

Mr. J. Beasley

9 July 1894.

one whose number happens to be taken; it is a sort of jumble.

3910. It is obvious to you for what it is worth that a cautionary notice instead of summons would save a man having his licence endorsed, and save his spending time at the police court?—It would save him having his licence endorsed.

3911. You do not think much of the other part of it?—He is bound to go and commit the offence the next day, he cannot do otherwise. If you say plying for hire, he must ply for hire directly; he goes into court and pays a fine, he comes out again, and he has got no alternative but to ply for hire in the same manner almost.

3912. On the ground that there is not sufficient standing accommodation?—Well, of course I am taking things as they are.

3913–4. I have another suggestion to make to you for your approval or condemnation, and that is this, Mr. Beasley, that where a police constable reports a cabman to Scotland Yard he should send a deposition stating the facts upon which the summons is to be applied for?—That the police constable should?

3915 Yes?—Oh, yes, I think that he should.

3916. You are aware that he does not do that at the present time?—No.

3917. He simply makes a note of the number and of the offence, and sends it to the superior officer, who thereupon applies for a summons?—That is so, when the driver does not know really why he has got to appear until he hears the offence against him.

3918. The suggestion is that the constable should send a written deposition which should be furnished to the magistrate when the application is made for the summons?—I see.

3919. Do you think that would be advantageous?—I do think so. I ought to suggest this point, that the summons should be served direct to the driver, not to the proprietor at all, for petty offences.

3920. The summons, I take it, might very well be served together with the written deposition, both on the master and the man?—That could be so, but certainly the driver ought to know. My reason for saying that is, that now, very often, some of the proprietors, I will not say all, although there may be seven days' notice for a man to appear before the court, do not hand the summons to the driver until the very morning perhaps that he has got to appear. One other reason: it gives the proprietor a great deal of trouble, and it is not carried out; he does not trouble whether the driver is there or not; he never sends anyone to see.

3921. In your experience do cabmen often go to prison for nonpayment of fines for hackney carriage offences?—Occasionally.

3922. But it is not a matter of frequent occurrence?—Not of recent years, no.

The witness withdrew.

Mr. Daniel Chambers called in and examined.

Mr. D. Chambers.

3923–4. (*Chairman.*) How long have you been a cabman?—Seven years, sir.

3925. What was your occupation before you drove?—Coffee-stall keeper.

3926. Had you ever had anything to do with horses or driving before you took to cabbing?—No, sir.

3927. When you got your licence for the first time did the Scotland Yard people take any means to find out whether you could drive or not?—No, sir.

3928. (*Mr. Whitmore.*) You had to produce a certificate?—No, sir. Well, I had two householders sign my paper.

3929. Had you not to produce a certificate of competency as a driver?—No, I only got two householders to prove that I had been kind to horses and so forth.

3930. But not that you had driven before?—No.

3931. The first time you drove was when you got on your cab and drove it?—Yes.

3932. (*Mr. Whitmore.*) Were you very cautious?—I took very wide roads to begin with, you may be sure.

3933. (*Chairman.*) Do you come here to represent your trade union or to give your own opinions?—To give my own opinions.

3934. You are not sent here as a delegate to give the opinions of other people?—No, sir, although the opinions that I express are the opinions of a lot of other cab drivers.

3935. But you do not come here with a commission to say such and such things on behalf of the union?—No, sir.

3936. I should like to ask you a question or two before we leave that subject of the qualification: were you a Londoner?—Well, I may say I was, because I came to London when I was about seven years of age.

3937. Then you had been in London for several years before you took to cab driving?—Yes, sir.

3938. You knew your way about?—No, I did not.

3939. You had not even that qualification of knowing your way about?—I had not.

3940. You had never driven before, and you did not know your way about?—No, sir.

3941. Did the Scotland Yard people test you to find out whether you knew your way about?—Yes, they asked me four questions, and I answered two of them wrong; that is all they asked me.

3942. (*Mr. John Burns.*) And they gave you the licence?—Yes.

3943. (*Chairman.*) Then you must have had a most excellent character in other respects to carry you through at once.

3944. (*Mr. John Burns.*) Did a parson give you one of the recommendations?—No, sir.

3945. (*Chairman.*) Have you any opinions about the limitation of licences; in other words, do you think that any of the present evils which are complained of in the cab trade arise from too many men being licensed?—Yes, sir, I do. There are, of course, 15,000 cab drivers, and there are only 11,000 cabs; that means that there are too many cab drivers' licences for the quantity that are put in the streets, making the competition too great for us who have to drive them.

3946. Would you recommend stopping the issue of new licences for a time?—Yes, sir, I should recommend that, and also there should be a good many of the licences taken away from men who are holding two and three licences to compete with us. There is a 'bus driver, he can hold three licences under the present system; he can get a 'bus driver's licence, a conductor's licence, and a cab driver's licence, and, consequently, any time he finds there is more business he can go and deposit one licence at the station and take the other up. If you had one licence for one man it would limit them a great deal.

3947. Are you of opinion that the men are licensed too young?—Yes, sir.

3948. What would be the age you would fix—the lowest age at which a man could take a licence?—Twenty-one, sir.

3949. Are you in favour of having any more stringent examinations than you yourself were subjected to about driving and knowledge of London?—Yes, sir.

3950. You think the Scotland Yard people ought to take some means to find out whether a man could harness a horse and drive a cab?—Yes, sir.

3951. And could know his way about a bit?—Yes.

3952. Have you ever seen, in your own experience, anything in the way of bribery applied to Scotland Yard people to get a cab passed?—Well, sir, there is not the least doubt that by a young fellow taking a letter from a proprietor—it has come to my knowledge that there has been money sent down to Scotland Yard with that letter.

3953. (*Mr. Whitmore.*) Can you bring before us the actual case in which that occurred?—Yes, sir.

3954. You mean you know the names of the applicants?—Not only to a young driver but an old driver too during the present strike that occurred.

Mr. D. Chambers.

9 July 1894.

3955. We ought to get that, ought we not?

3956. (*Chairman.*) Yes, if we can; perhaps the secretary could get the name and address of the drivers and send for them?

3957. (*Mr. John Burns.*) Could you supply the name and address?—I could, sir.

3958. (*Chairman.*) What this gentleman says arises from this: we were told in another case that a man would come here and testify to that kind of practice, and when he came he said nothing of the kind took place, or words to that effect. Should you think the man, if we got him here, would bear out what you say?—I think so.

3959. He would not object to come here and tell us? He admitted it to us and another committeeman during the recent strike; if he stood by that he could not get out of admitting it.

3960. Perhaps you will communicate to the secretary the name and address, and we might get him here.*

3961. (*Mr. John Burns.*) Of course if the man is granted protection. Do you think that if this witness were granted protection by this Committee or the Home Secretary he would be willing to disclose what you have just now hinted at?—I believe he would, sir; I do not think he would otherwise.

3962. (*Chairman.*) Well, now, according to your experience, what occupation and way of living do most cabmen come from; do they come from all sorts, or could you classify them, and say that the bulk of them come from any one or two sorts of ways of living?—I could not say, sir.

3963. They come from all sorts?—From all sorts and all classes.

3964. Do you think that a very considerable number come to it as innocent of driving as you did yourself?—I do, sir.

3965. You do not think that the majority of those who come to it have had any previous acquaintance with horses, harness, and driving?—No, a great number, would be in the same position as I myself, never harnessed a horse, and never drove one.

3966. You do not think we could assume the majority of cabmen never had any experience of horses?—No, sir, I should not say that in the majority.

3967. The last witness said about as many had as had not, about six of one and half-a-dozen of the other; would that be about true?—I could not exactly say; a great number, how many, I could not say.

3968. What you are able to say is that you do not think there is a majority that know anything about horses before they came to the cab-driving business?—That is so.

3969. They must at any rate be half and half, if not less than half?—No.

3970. (*Mr. Cunynghame.*) You have told us that you thought there were too many drivers?—Yes, sir.

3971. In proportion, as I understood, to the number of vehicles?—Yes.

3972. 15,000 drivers, I think you said, and about 11,000 vehicles, taking it roughly?—Yes, sir.

3973. As a fact, is it not true that some of those vehicles are driven by at least two men on the same day?—No, not a great many, very few do that work double.

3974. There are some at all events?—Some.

3975. What class of vehicle is that which is driven through the day by one man and at night by another?—That would be, perhaps, where there was what we call a little mush—that is, a man with one cab who with a friend would have two horses between them.

3976. Is that done in the yards of the large proprietors, for instance?—Not by more than two yards to my knowledge.

3977. There are two yards?—There are two yards; one in the Euston, where there are two horses for one cab, one night and one day; that is about the only yard I know of where it is done. In no respectable yard do they make them night and day cabs.

3978. Again, you told us that some men took out a licence as a 'bus driver and as a hackney carriage driver?—That is so, sir.

3979. What is the objection to a man possessing a double qualification, supposing he can do both things?—The objection is this, sir, that when there is a flourish in the cab trade this man deposits his licence at the nearest police station and takes up his cab licence, and thereby competes with the bonâ fide cab driver who drives all the year through, and depends solely and entirely upon the cab for his living.

3980. But any man is just as bonâ fide, I suppose, as another, as far as being a man of good faith and honourable conduct?—He may be in that respect, but it is not fair to the bonâ fide cab driver, who can only depend on that for his living, to have these men coming to the cab trade and competing with him.

3981. May I put it that by a bonâ fide cabman you mean a man who drives the same cab or the same class of cab day by day through the year?—That is it, sir.

3982–3. But from a general point of view, you seem to be opposed to a man practising more than one trade?—Yes, sir.

3984. On general principles?—On general principles, sir.

3985. You do not think, for instance, a man ought to be able to do both carpentering and blacksmith work, for instance, and be sometimes a carpenter and sometimes a blacksmith, according as times change?—Of course I cannot say anything about it; what I am speaking of is the cab trade; a 'bus driver, if he has a 'bus licence, should use it as such.

3986. Do you not think it is possibly to the advantage of a man himself to be able to do two different things, provided he can do them both well?—Yes, it may be to his advantage.

3987. But may it not be to the advantage of the whole trade, too?—No.

3988–9. If it is to the advantage of the individual man we assume that, supposing all the men in the trade do it, the total trade must be advantaged too; if each individual in the trade is advantaged, why is not the whole lot advantaged?—I cannot say why they would not be.

3990. (*Mr. Whitmore.*) Might I just on that ask you what you call a bonâ fide cabman? What I should call a professional cabman—a man who is a cabman and nothing else—does not want a second licence for another class of business?—No, sir, he does not.

3991. The cab business is sufficient to occupy all his time all the year round?—Yes, sir.

3992. And your suggestion that a man who has a second licence should cease to have that cab licence is because, without admitting men who have more than one licence into the cab trade, you have plenty of people who wish to work in that trade and who would give up the whole of their time to it?—That is so, sir.

3993. (*Mr. John Burns.*) Have you ever been before a magistrate for a cab case?—Yes, sir; several times.

3994. What were they?—Plying and loitering.

3995. Have you formed any opinion as to the method of treating cabmen before a magistrate?—Yes, sir, I think it is a very bad one. I have been before Mr. Newton, and when I have been summoned for plying for hire, and it has been said to me directly I got in front of the magistrate, "Guilty?" if I say "no," and I proceed with the case to the best of my advantage, I am generally charged a bit more than if I had said "guilty." They expect you and look to you to say "guilty"; otherwise, if you do not, you will have to pay for not saying "guilty."

3996. Is there something in the atmosphere of a police court, when cabmen are in the box, that suggests a spontaneous pleading of guilty, or is it suggested by the subordinate official of the court?—It has been suggested by the subordinate official. I have been at the Marlborough Street Court when they have been a bit shoved; I have heard it said, "All those who plead "guilty go and pay the costs."

3997. Who said that to you?—The sergeant.

3998. The sergeant in charge of the court?—The sergeant in charge of the court. He has come out and said, "All those who plead guilty, go and pay the costs." The man who is there with his cab knows that is the best way.

3999. Have you heard that?—I have, sir.

* *See* question 7408.

4000. What is the general effect of that kind of treatment on the cabmen? It does not discourage loitering, does it?—No, sir, not the least.

4001. It rather encourages it by making the punishment not fit the crime?—That is so, sir.

4002. What about the magistrates? Do you think they devote sufficient time and attention to the cab cases?—No, sir; I was at a police court last week——

4003. Which one?—Marlborough Street; and he got rid of about six cases in as many minutes; simply go up, "Guilty," a policeman gabbles over the information what was done and what was not done, and the magistrate says, 6*d.*, 1*s.*, the costs, or whatever it may be.

4004. (*Mr. Whitmore.*) What cases were they—what charges?—Loitering and plying.

4005. (*Mr. John Burns.*) Generally, is there an impression among cabmen that against a policeman he has no chance of being accepted?—Yes, the general idea all round of cab drivers in London is that he has no chance. I have often seen it in police courts where I have been present, where they have witnesses—two witnesses against the police constable—Mr. Hannay has said he believed the constable, he did not think a constable would come there to perjure himself. He believed the police constable and the defence too, and he discharged him.

4006. Do you think that an occasional visit from, say, someone appointed by the Home Secretary, unknown to the police officials, would, in your opinion, be for the improvement of the conditions under which cabmen are tried?—I certainly believe it would, sir.

4007. I come to another point. Have you formed any opinion as to what should be done with privileged cabs at railway stations?—Yes, sir; and it is the wish of the majority of the cab drivers that these stations should be open, for this reason, it causes a great deal of friction between one driver and another, which would be done away with, and they would like to see it done away with, and it would be much better for the horses that are put in the cabs; it would also take a lot of cabs from the streets of London, plying about the main thoroughfares of London, because they could go to these stations the same as any other cab.

4008. I gather from you that the abolition of privilege at railway stations would lead to rest and increased comfort for horses and men?—Yes, sir.

4009. Equalising the conditions of the cab trade for all who went in?—That is so, sir.

4010. And would be responsible for greater cab accommodation for the railway passengers who came in by train?—Certainly, sir.

4011. On what conditions would you have privilege abolished; those that exist at Waterloo Station?—Yes, sir, that would be the best way of doing it.

4012. Have you ever known a day in which, at Waterloo Station, there has not been a sufficiency of cabs for the passengers?—No, sir.

4013. Generally speaking, they are always sufficient?—They are always sufficient.

4014–5. (*Mr. Bayley.*) Were there sufficient cabs this morning at Waterloo Station; were there sufficient hansoms this morning?—I was not there this morning.

4016. (*Mr. John Burns.*) But is not that the case at every railway station between eight and ten o'clock in the morning?—Sometimes on a special occasion, such as Henley, it might be for a few minutes that there was not a cab in sight, but it is not very long before there are some cabs on the spot.

4017. Have you had any cases of bilking?—Yes, sir.

4018. Were they serious cases?—Yes, sir. One I lost my job over. He had me four and a-half hours.

4019. What is this one?—I was walking up and down Regent Street, and eventually two gentlemen called me at the Café Monier. I went there. They took me to two or three places in the Strand, and eventually ordered me to Barnsbury, stopping at different houses at the Strand, and at a café there. They went into a house at Barnsbury, the Offord Arms. There they were asked to sign a petition—a petition on the licensing question and the publican's compensation—and they did not know what name to give, and they asked one another what name they should give. That raised my suspicions that I was going to be done. They then took me up a little higher, and pulled me round to the side of a public-house where there was no thoroughfare, and said, "Are you going to have a drink?" I said, "No, thank you." I thought I would be on the box and keep my eyes open. Anyway, they went into the public-house and called me down. I went into the public-house and had a drink with them. One walked out, and the other one went to the door to look after his pal. When I went out they had both gone.

4020. (*Mr. Whitmore.*) Was that the same door that you came in at?—Both went out. They must have gone into a house quite handy. They could not have got out into the street.

4021–2. (*Mr. John Burns.*) When was that?—That is about three years ago, sir.

4023. When that happened what power would you have liked to have had to recover your fare?—Eventually I saw the same man that I took there at the Horse Shoe public-house.

4024. (*Mr. Whitmore.*) The same day?—No, some weeks after; I might say four months afterwards.

4025. (*Mr. Cunynghame.*) The Horse Shoe in Tottenham Court Road?—The Horse Shoe in Tottenham Court Road. I immediately got down and went after him. He pretended he did not recognise me. When I began to make a bit of a noise about not being paid, he said: "I have not got the money; give me your name "and address and I will send it on to you." Knowing that if I had given him my name and address, I should never have got it, I should have liked to have had the power to call a constable and have given him in charge, because there was not the least doubt he was a professional at the job.

4026. (*Mr. John Burns.*) Then is it your view, and so far as you know, is it the general impression amongst cabmen, that for severe cases of bilking like that a power either to take the name and address, or to lock the man up until he satisfied the police inspector at the station, should be granted?—That is so, because we can discriminate a great deal whether a man is a bonâ fide cab rider, a proper sort of gentleman you might trust. There is often a case you get hold of where you can tell by appearances that the man is all right, therefore you would not take those measures.

4027. Have you formed any opinion as to the insufficiency of ranks and stands being one of the causes of crawling and plying for hire?—Yes, sir, that of course causes a great deal of crawling about by the cabs, for this simple reason, that there are ranks put where it would be no earthly use to put a cab. There is cab accommodation in Russell Square, for instance, for 99 cabs. If a man went there he might stop all day on the rank and never do any good.

4028. Give us another example?—There is another rank in the Euston Road for a number of cabs; there is no possible chance of a job there, as the railways supply all the cabs; if a man were put to put his cab there he never would be wanted.

4029. You are not opposed to these ranks being in these particular places, only you complain that there are not smaller ranks close to districts where cabs are more in demand?—That is so.

4030. I gather from you you have no complaint against existing cab ranks except their inaccessibility from the existing cab area, and you would like small stands for a smaller number of cabs?—That is so. Pall Mall, for instance, that has been a very grand idea, putting cab ranks there for two or three cabs.

4031. And you would like the same at Piccadilly and various other places?—Yes.

4032. Have you formed any opinion with regard to there being one, two, or three classes of property in cabs, or are you only in favour of one class?—Well, I should like to see one class.

4033. The first class?—First class property.

4034. Have you formed any opinion as to the weekly wage instead of the existing system of payment?—No, sir, I have not.

4035. Any views about the radius?—Yes, sir, I think that the radius extends too far at the present time.

4036–7. Why do you say that?—At these radius posts there are what you may call local cabs, and to be taken right out of town for the money one can give you, 2*s.* 6*d.*, puts you in a place where there is no earthly

Mr. D. Chambers.

9 July 1894.

chance of getting a job back at, say, a four-mile radius; but some are 4¾ miles. I reckon that a three-and-a-half-mile radius would be an advantage, because pretty well the whole of our living is got within three and-a-half-miles radius of Charing Cross, but it cripples your day's work when you get put down at these outlandish places; if you are taken to them you should be paid a better price than you are now.

4038. I gather that you, even if the radius were left as it is, would like the cabman to have a power of refusing a fare outside the radius unless he were paid more?—That is so.

4039. (*Mr. Lough.*) Just one or two questions: you said there were a great many too many drivers licensed?—Yes, sir.

4040. You want it cut down to 12,000?—Yes, sir.

4041. Can you give the Committee, from your own experience, any results of this extra competition; for instance, does it make it difficult to earn good wages?—Yes, sir, that was my idea when I spoke about the 'bus drivers.

4042. What I am asking you is, does it make it more difficult for a cab driver to earn a living wage?—I think decidedly, sir.

4043. Could you tell us what wages you earn year by year?—I suppose my wages would average about 25*s.* or 26*s.* a week all the year round.

4044. Is that year after year for the seven years?—Yes, sir, I do not suppose I have averaged any more.

4045. (*Mr John Burns.*) Is it better or worse?—There have been times I have earned more, sometimes I have earned less.

4046. (*Mr. Lough.*) Is there a tendency for it to improve or to go down?—There is a tendency for it to go down now.

4047. What time of the year do you find it hardest to earn your living?—During Lent, sir.

4048. (*Chairman.*) Is that harder than in the autumn, in August or September?—August and September are bad months, they are each about the same as during Lent; they average about the same during those months; August and September, of course, are very bad months.

4049. And October you begin to get a bit better?—No.

4050. (*Mr. John Burns.*) You do not get the hump in the warm weather, in August and September?—You do not feel it so much in the warm weather.

4051. (*Mr. Lough.*) Are the stands chiefly in the suburbs close to public-houses?—Well, pretty well all stands are near public-houses; in the suburbs I could not say exactly.

4052–3. You do not mean the stands in Pall Mall?—No, sir.

4054. These new central stands are not close beside public-houses?—No, sir, they are not.

4055. You think these stands in the outer radius are too large?—Not in the outer radius.

4056. That in Russell Square has room for too many cabs?—They would not go there, because they would not be required.

4057. And too few inside?—That is so, sir.

4058. You would like a large number of small stands?—That is so, sir.

4059. (*Mr. Bayley.*) You were had up, you said, before the magistrate on a few occasions?—Yes, sir.

4060. Those were for innocent sort of offences, like plying for hire—crawling?—Yes, sir.

4061. I suppose most of the other cabmen there were for the same offence?—Yes, sir.

4062. I suppose, as matter of fact, you were guilty; you had been plying for hire?—No, sir.

4063. Do not all cabmen ply for hire?—Yes.

4064. And you would do so the very next day after you came out of court?—On two or three occasions I have been summoned I have not been guilty.

4065. But there were occasions when you have been guilty, of course, and many others, too?—Yes.

4066. Then, as matter of course it might have been an act of kindness on the part of the inspector to suggest you should not waste the time of the court, that you should plead guilty rather than plead not guilty, and so you would get off easier?—A cabmen would always plead guilty to a trifling offence like that if he were guilty, but he does not feel satisfied under the present system, as if he knows he is not guilty, and he tries to prove himself not guilty, he has to pay for it.

4067. But in an offence like plying for hire, which is an innocent sort of thing, it is a wiser thing for the cabman to plead right off guilty, if he is guilty?—If he is guilty.

4068. (*Mr. Hopwood.*) When you paid 6*d.* and costs was your licence endorsed?—Yes sir. In fact, once, unfortunately, I could not pay the money, and I had to go down to do the three days for not paying the 3*s.*

4069. The 3*s.* fine?—The 3*s.* fine, or, in default, three days' imprisonment. I was not in a position to pay the 3*s.*, and I had to go to Millbank and do three days.

4070. Did you ask for time?—If you ask the gaoler for time you will get hustled out of court; you will not see the magistrate again. They will not permit you to ask for time.

4071. Is it not a fact that the gaoler acts as an intermediary, as a go-between, between the prisoner and the magistrate?—Not for a cabman, he would not.

4072–3. But you make your application for time to the magistrate, not to the gaoler?—The fine is no sooner put upon you than you are passed along from one policeman to another, and you are in the cell, if you have not got the money; then, if you ask to go before the magistrate for time they say to you, "Oh, you will "find it; someone will pay." You cannot get before the magistrate again.

4074. (*Mr. Lough.*) So you went to prison?—I went to prison for three days.

4075. What court was that?—At Marlborough Street.

4076. How many hours a day have you to work to earn those wages you spoke of?—I work 16 to 17 hours a day; from the time I get out of bed till I get back again it is 18 hours mostly.

4077. How long were you on your cab?—14 to 15 hours at the very least.

4078. What is the lowest time?—With two horses I have been at it as little as 12 hours; never less than 12 hours.

4079.—Never less than 12 hours, generally it is 14 or 15?—15 hours we put it down at.

4080. (*Mr. Bayley.*) Is yours a first-class cab, rubber-tyred?—It is rubber-tyred, a good business cab.

4081. Is it one of the first-class?—It is not a first class.

4082. (*Mr. Lough.*) Whose cab is it?—Mr. John Fairbox.

4083. A hansom?—A hansom cab, sir.

4084. (*Mr. Cunynhame.*) Have you ever known the cabmen or the Cab Union to have employed a solicitor to protect their interests; for instance, at any of those police courts to look after the men?—Well, we have done so during these last six weeks, but if you go to a solicitor you would not go to him for a trifling offence, like plying for hire; it would be no use to him.

4085. Forgive me, you have not quite understood it; has there been any attempt to secure the services of a solicitor in each court, to look generally after the cabmen, as each case was called on, and see that the truth was brought out?—Oh, no sir, not up to the present sir.

4086. (*Mr. Hopwood.*) How many days do you work as a rule?—Well sir, about five days a week, I suppose, I have averaged.

4087. Is that the average in the trade?—Under the present system, sir, because you would not like to work more for this reason: there are yards, I know, that have got perhaps 32 cabs, and they will keep 10 odd men. One man says to another, "Well you have not "had a day this week, I will stand down for you to-"day, just to let you have a day," not because he wanted a rest, but simply because he knows his fellow driver has not had the opportunity of getting a cab.

4088. So that practically the surplus drivers take the bread out of the other drivers' mouths, by preventing their getting good wages?—Yes, precisely, because they have to take a holiday to allow the odd men to earn a crust.

The witness withdrew.

Mr. Edward Dyke called in and examined.

4089. (*Chairman.*) How long have you been a driver?—20 years more or less, about 21 or 22.

4090. What was your occupation before you were a driver?—Oh, first I was connected with the baking trade, the same business as my father, and then chair-making.

4091. What I wanted to come to was this: had you ever had any experience of driving before you took to driving a cab?—Only driving a baker's cart.

4092–3. And with that, I suppose, some knowledge of London?—Some knowledge of London.

4094. Did the Scotland Yard people examine you at all as to your knowledge of driving or your knowledge of London before they licensed you?—Knowledge of London only.

4095. We have had a good deal of evidence from cab drivers already this morning, so I do not think I will take you over all the ground again, but I will ask you only one or two very simple questions. Are you of opinion that the present number of drivers is too many?—Undoubtedly that is so, sir.

4096. And you feel the consequence of that in making less money, do you?—The hardships are greater all round on account of the extraordinary number of licences above the requirements.

4097. But does it produce, amongst others, the result that you earn less than you did?—Certainly.

4098. Is that gradually going down, or does it go up and down?—Up and down. The difficulty of earning a living certainly is increased daily.

4099. And do you, as matter of fact, find that you are obliged to live more sparingly than you were a few years ago?—Much more so, the scale of living is certainly deteriorating.

4100. What is your remedy for that, if you could have your own way; would you stop the issue of new licences for a time?—That is the most practical way; the men have no chance, under existing circumstances, of acting fairly to their homes or the public.

4101. Would you also, besides stopping the licences for a time, make any alteration in the age of the men licensed; I mean would you require them to be older than they are at present, knock out the young drivers?—I think that the responsibilities of the driver are so great that he should certainly be a man.

4102. (*Mr. John Burns.*) Twenty-one?—Certainly; he may drive a peer of the realm as well as a poorer personage, and that being the case, I think that it is necessary that the driver should be a man; he should attain his majority before being entrusted.

4103. (*Mr. Cunynghame.*) You would be in favour, in order to obtain better wages for the men, to limit the numbers; that is your reason for limiting the numbers?—Certainly.

4104. Does that principle not really amount to asking that a monopoly shall be created in order to raise wages?—It practically comes to that, but I think only in the same way as you can term a licensed victualler a monopolist. He pays for a licence, and those who confer the licence upon him should certainly see that he lives, and that there is not undue opposition.

4105. But I suppose you would hardly say that the payment of 5*s.* a year was a *quid pro quo* for the creation of a monopoly?—That is not the only thing the driver has to fulfil; the energy, the respectability, and he has to bear on his shoulders a lot of responsibility.

4106. You put your demand for a monopoly, then, I suppose, upon a different footing from the demand that carpenters or painters might make for a monopoly. They might say, "Let us have a monopoly of plumbers, "let us have a limited number of plumbers"?—I should put it in the same way as a barrister; he has a monopoly.

4107–9. But I am afraid you would not be content with the rules that govern the barrister, because they allow an unlimited number into the profession; everybody who wishes to be called can be called. If he applies and pays; there is no monopoly for a barrister?—I have no opportunity of becoming a barrister because my leisure is so small.

4110. But they do call to the Bar everybody who desires to be called?—Everybody who can pass certain qualifications.

4111. You would not do that with drivers; you want to have a qualification besides the qualifying qualification?—I should say that no more should be licensed than are required. *Mr. E. Dyke.* 9 July 1894.

4112. (*Chairman.*) Mr. Cunynghame points out that your illustration about the barristers does not hold good, because barristers can be called in any numbers that they choose to come in, whereas you would be for limiting the number of drivers to what you think would be wanted by the community.

4113. (*Mr. Cunynghame.*) You would not, I suppose, advocate the universal creation of monopolies for occupations of all kinds?—Certainly not, sir; I wish to qualify that statement by remarking that there is a certain limit in the carpenter and the painter. They follow a calling for a number of years; as apprentices they are learning that business, and although a driver may have driven a cab for a number of years, and therefore gained an amount of experience that is valuable to the cab proprietor, the cab proprietor finds it to his advantage to employ an inexperienced driver simply because he can wring from the inexperienced driver a greater amount of money for the hire of the property than he can from an experienced driver; that is where the difficulty comes in.

4114. But still, although the painter may take seven years to learn the painting trade, there is no law preventing any person that likes entering the trade of the painter?—None whatever, only the unwritten law of the painter himself. If the painter is, as he should be, a society man, he would refuse to work with a man who was not a practical man, but in our case we have not that power.

4115. What I wanted to come to was, whether you would put the cabman's trade in rather a different position from trades in general, in your desire for improvement?—But the law does that, sir.

4116. I should like to ask you another question. It has been said by some previous witnesses that they would desire some power of arrest of bilkers. There are, I suppose, difficulties about that; for instance, you would not propose, would you, that you should have power of arrest, or power to give a man into custody?—The danger of imprisonment so surrounds a cabman's calling that I do not wonder that he asks for a little of it against the fare.

4117. That may be a very fair answer, but what I am wishing to get at is your opinion. Do you think that if a cabman had power of giving into custody persons who disputed about his fare, they might be frightened to take cabs, for instance?—That would be so, but I think the Small Debtors' Act stands in our way.

4118. I quite agree; you mean the Summary Jurisdiction Act of 1869?—That is so.

4119. And you think it would be fair to go back to the law as it was before that Act, at all events?—I think we should have equal protection to that given to a railway company, or an omnibus, or tramway company.

4120. You think you should have the same protection as an omnibus, tramway, or a railway company. I will not go into the details of that; as a fact an omnibus company has not, but a railway company at least has; now, I should like to ask you one question: the railway company has certain privileges in the shape of arresting people who refuse, for instance, to give their name and address, but are you not aware that when a servant of a railway company does that unjustly an action may be brought against the railway company?—That is so.

4121. And therefore that the public have always a solvent person to look to for damages in case the law is abused; that is so, is it not?—Yes.

4122. Now, what solvent person do you propose should stand the brunt of an action in case of improper action by a cabman, to make your parallel, you see, complete?—I fail to see there would be any person; you imagine that an unscrupulous driver would be found to put the law in operation unjustly?

4123. Well, I think it is not impossible?—It is not impossible, certainly.

4124. There are bad men in every line of life?—But highly improbable, I think.

Mr. E. Dyke.
9 July 1894.

4125. But do you think a power so great as this would never be abused?—My only opinion is we have too much law and too much police court.

4126. You would prefer not to take your badges into court in every case?—That gives summoning policemen an advantage when they have summoned the wrong man. The law makes a man put on his badge and wear it, consequently when a constable has made a mistake he regulates the mistake by putting the wrong man's licence, the innocent man's badge number, in his book. He knows that if he summons a man, and that man proves he was not the individual that the constable complained of, he then gets called over the coals, to use a vulgarism, for summoning the wrong man, or making a mistake in the badge number.

4127. You think that a man might well be required to bring his badge with him, but that he ought to bring it in his pocket?—Certainly.

4128–9. (*Mr. John Burns.*) Are you not in favour of the limitation of licences because that is one of the methods by which wages can be raised to the cabmen?—That is the most practical point.

4130. Another reason is that you think the limitation of licences would remove the obstruction in the streets?—Certainly.

4131. It would reduce extortion?—Yes.

4132. Diminish the abuse that occasionally takes place between a driver and his fare?—Almost remove it entirely.

4133. And restrict accidents?—Yes, undoubtedly.

4134. The rule of no monopoly for other trades does not apply to cabmen?—Not at all.

4135. The reason being they are paid a weekly wage?—That is so.

4136. A cabman is not?—No.

4137. If the owner of a cab incurred, as in other trades, the direct adequate liability of over-supply, would there be as many cabs on the streets as there now are?—Certainly not.

4138. He would check the supply of cabs, would he not?—He is doing so now, at the present moment.

4139. Omnibuses are not disproportionately supplied to demand as cabs are?—Because the proprietors have the sole right to limit us, of course.

4140. And assuming that direct adequate liability could be brought home to the cab proprietor as in the case of ominibuses, and every industry where the men are paid a weekly wage, there would be a considerable diminution of the number of cabs on the streets?—Certainly.

4141. It is for the general convenience of the public as well as for the men you are in favour of the limitation of licences?—Yes.

4142. You would raise the age from what, from 18 to 21?—I think a man should certainly, at least, be 21.

4143. And you consider that masters should not have any privileges for their relatives as they do now?—Privileges for what?

4144. Privileges for sons under 18?—Certainly not.

4145. Would you increase the standard of examination and qualification to which a cab driver is subjected?—If possible, but I think that under existing circumstances that is largely provided for.

4146. Is it your opinion that it is properly enforced?—No, it is loosely done.

4147. Now we will come to the inspection of cabs and horses. We have heard it in an indirect manner that in the passing of cabs and horses at certain places, there have been suggestions of the bribery of the inspectors; do you know anything of that?—If I did I should not be policeman enough to say; I know that it happens; I should not specify any individual myself. I should not take that responsibility unless I was assured that no bad effect would follow; it is only natural that such a thing should take place.

4148. In the event of a man being specified, and the man being guaranteed against the consequences of your disclosing this fact against him, do you think that you could prove cases of attempted bribery and actual bribery?—Cases of money passing from a man who wanted that service done to the man who did that service, certainly.

4149. As to passing a cab?—As to passing a cab. certainly.

4150. You think that could be proved?—It is done every day.

4151. But where—at police stations and at Scotland Yard?—Not Scotland Yard, of course, but at police stations.

4152. What have you to say about privileged cabs, Mr. Dyke?—I think they are a disgrace to civilisation. I may say that I have been a privileged cab driver right off these last four years; and I would be a privileged cab driver to-morrow if I could get one, but that is because I, being a thinking man, and doing a lot of reading, find I can do more in the railway than I could on the street.

4153. Why do you advocate the abolition of privilege?—In the first place, because the worst of the property goes into the railway, and a proprietor as a consequence charges more, take a year through, than can be obtained from first-class property in the street.

4154–5. On an average the privileged cab brings throughout the year more money for a worse class of property to the proprietor than in the street?—That is so.

4156. Do you consider that the privileged cab system of railway stations satisfies the demand which they are supposed to meet, namely, in giving improved accomodation to railway passengers?—I know that if the railways were thrown open, the inconvenience they now experience, would no longer exist.

4157. Then privilege does not meet its supposed object?—If that is the object, no.

4158. Do you think that if all stations in London were placed under a similar system as to the supply of cabs that Waterloo now is, the railway passengers', the horses', the cabmens', and the general comfort of the trade would be improved?—The general comfort of the trade would be improved, and undoubtedly if all railways were thrown open there would be a sufficiency of horses and cabs.

4159. And the streets would be less congested?—The streets certainly would be less congested. Waterloo is not a fair criterion to go by, simply because, that being the only real open station, a number of inferior cabs go there, but if all railways were thrown open, its tendency would be to improve the property all round.

4160. Do you find that outside privileged cab railway stations there is a tendency on the part of non-privileged cab drivers to congregate?—At specified times, certainly.

4161. Does that lead to inconvenience and obstruction of the streets?—Inconvenience to the persons that have to cross from and to that station, yes.

4162. Have you anything to say with regard to railway omnibuses?—The four-wheeled driver is compelled under existing circumstances to put up with the inferior fares, because the railway omnibuses have agents that pick out the best fares. They have agencies not only at the particular terminus where the fare arrives, but even at their stations, and I am sure that arrangement is made very often.

4163. Then, to equalise the conditions of plying, private omnibuses should be licensed, and their drivers should be licensed, subject to the same inspection, regulations, and licensing as other cabmen?—I think that would be a good way out of the difficulty at any rate; under existing circumstances, they have an undue advantage over other drivers.

4164. Both as to plate licence and for facilities given them by the companies to get the plums of the cab riders; is that so?—That is so.

4165. How is that shown?—Well, it is shown in the plainest manner. There is no demonstration more clear, you can see it yourself at any time.

4166. For instance, if there was a very swell party of four or three with luggage come in where railway omnibuses ply, and they bore the general evidence of a good fare, the porter would take them to a railway cab or omnibus, and a less profitable set of fares would be taken probably to a four-wheeler, is not that done?—Yes, but that is done in this way: there is a man at the Northern railway, where I have been driving the last two years, in the omnibus office. Well, the passenger may immediately talk about a cab or refer to an omnibus; then he speaks to the clerk or foreman of the omnibus,

and the omnibus foreman speaks to the passenger, and that is how the arrangement is made.

4167. You think that system should be put under the same conditions as the general cab traffic?—Certainly.

4168. Have you formed any opinion as to the necessity for more ranks for a small number of cabs in crowded districts?—Well, in justice to Scotland Yard, I may say that wherever I have pointed out that a cab rank was to the public advantage, and to the advantage of the driver, it has been, as far as practicable, I believe, adopted; several standings have been done, but there is insufficient rank accommodation; I do not mean by that that there is an insufficient number of ranks for cabs to go on.

4169. But they are in the wrong places?—But they are in the wrong places; for instance, there was a stand accommodation for 100 cabs at Russell Square. Well, that is ridiculous, and the number now is absurd; they would not get off in a week.

4170. But you do not complain of their getting too much accommodation, you complain of other districts being insufficiently supplied?—Inadequate accommodation for cabs where they are needed.

4171. Have you anything to suggest with regard to the bilker; have you any experience of that gentleman?—Yes, I have been rather unfortunate with him.

4172. How do you think he can be limited in his predatory operations?—It is only possible by power being placed in the hands of the driver.

4173. Power of summary arrest where fraudulent bilking is attempted?—No, I do not think that, but if they have anything of value they should deposit that in the keeping of the police inspector at the station, or anything that would be sufficient for my charges, but if they had not anything of value they should be detained until it was proved that they resided where they said they did.

4174. And beyond that depositing of the articles of value they had upon them and their address, you do not ask for any further powers?—That would be sufficient, I think; it is rather difficult now; if you recover against a man, you do not always recover the money.

Mr. E. Dyke.

9 July 1894.

4175. Are you in favour of different classes of property in the streets of London?—With a difference in the fare?

4176. With a difference in the fare?—I think that the first mile should be 1*s.* for the first-class property; the general run of people imagine that it is so. The fare not exceeding two miles is 1*s.*, but I really think that what people imagine is the case should be the case.

4177. With regard to first-class property?—With regard to first-class property.

4178. Do you think that the cabmen and the public generally have much to gain by improving generally the character of horses, cabs, and driving; we all stand to gain by that, is that so?—Well, the horses I have been compelled to drive in a railway cab have broken my heart, if that is what you mean.

4179. Do you think that the general improvement of cab property supplies the convenience all over?—You have improvements, and it would be to the advantage of everybody, I think.

4180. But would that general improvement be possible so long as first, second, third, and fourth-class property prevailed; would not the tendency be the other way, to have different classes of property?—Yes, I think it would.

4181. It would have a downward rather than an upward tendency?—It would have that tendency, certainly.

4182. And an inconvenience and obstruction to the efficient classes of property, and consequent disputes?—I think that the difficulties standing in the way of classifying cabs are so great that the present system ——

4183. Of one single fare?—Should be preferred.

4184. Leaving the dropping out of very bad property to the general education of the public?—Yes, and the driver.

The witness withdrew.

Adjourned till Thursday, at 11 a.m.

EIGHTH DAY.

Thursday, 12th July 1894.

PRESENT:

Mr. George Russell, M.P. (Chairman, presiding)

Mr. F. J. S. Hopwood, C.M.G.
Mr. John Burns, M.P.
Mr. T. Lough, M.P.
Mr. C. A. Whitmore, M.P.

Mr. Malcolm Delevingne, *Secretary.*

(*Chairman.*) I have received the following letter, the contents of which I think I ought to make known to the members of the Committee:—

"The London Improved Cab Company, Limited,
"Pakenham Street, Gray's Inn Road,
"London, W.C.,
"7th July 1894.

"Dear Sir,

"*Re* my evidence before the Departmental Committee in Cab Trade, 6/7/94.

"I very much regret an inaccuracy occurred in my evidence yesterday* relative to the number of licences (drivers') held by this Company. I think I stated the number as being 405, the actual number is 345. Kindly convey to the Committee my apologies for this stupid mistake.

"I am,
"Yours faithfully,
"James Scott,
"Secretary and Manager."

* *See* questions 3270, 3440.

Mr. Edwin Dyke recalled and further examined.

Mr. E. Dyke.

12 July 1894.

4185. (*Chairman.*) I understand that you said before the Labour Commission that the most important point was the codification of the existing law because of the inconsistencies?—That is so, sir.

4186-7. Would you give us some instances of the inconsistencies that you speak of, and the hardships resulting from them?—The greatest grievance is the effete condition of the laws, they are worn out; they

Mr. E. Dyke.
12 July 1894.

were enacted to deal with circumstances of an ancient date. I will give a case that happened to myself as a specimen of a thing we complain of. I was summoned for pulling up alongside another hackney carriage elsewhere than at Old Palace Yard. I was committing no offence in equity, but there is an old law, passed, I think, in the reign of William IV., when the streets were narrow, and, as a consequence, the putting of two cabs alongside each other would have caused an obstruction; that Act still remains on the Statute Book, and I was summoned for pulling up alongside another hackney carriage elsewhere than at Old Palace Yard, being in a very wide thoroughfare at the King's Cross terminus.

4188. Do you say other than at Old Palace Yard?—Other than at Old Palace Yard.

4189. Is that the only place at which this law permits you to draw up alongside?—That is so, sir; but the police themselves have established at various parts of the metropolis standings where there were even four and five hackney carriages allowed to stand, but although I pointed that out to the magistrate, he said that I was summoned under the law, and he only had to deal with the law.

4190. (*Mr. Hopwood.*) Mr. Dyke, is that an offence—?—That is an offence, now.

4191. Let me put my question: is that an offence under a statute itself or under regulations made in pursuance of a statute?—It is in the statute itself; and it is those statutes enacting offences that could have been committed at that time, and, if committed, would have been injurious to the general traffic, which we complain about; that is a specimen of many. In addition to that there is the injustice of several clauses of the Act of Parliament. I am not altogether sure, but I fancy it was in William IV.

4192. You are quite right?—In that case, you see, the metropolitan police, in conjunction with an order issued lately, I think, from the Home Secretary, enabled the police to carry out certain work, and among the portions of work that the police have done have been the appointment of standings. There is a number that I enumerated to the magistrate where they have placed cabs alongside each other, and as a consequence rendered that clause of that particular Act of Parliament effete; and we contend that if the police liked they could summon us all over the metropolis under that existing law, which is rendered effete and obsolete by the action of the police. It is only occasionally when a person does something that they do not like and they cannot summon him equitably that they use this old weapon as a punishment to the driver. Really, the offence on my side was speaking to a constable; that was all, arguing a point. Then we complain of the injustice of a hirer making an agreement with the cab driver to carry him a distance of ground for a less sum than the law allows, which agreement is binding upon the driver, while supposing under exceptional circumstances the snow is deep on the ground, and the difficulty of getting from a given point to another is ten times greater than on ordinary occasions, if the driver makes an agreement with the hirer, that agreement is not binding, and even if the driver takes more than the legal fare, he commits an offence against the law which renders him liable to imprisonment.

4193. Yes, our attention has been drawn to that, but you do not know a case in which the law has been set in force against a driver for making such an agreement, do you?—I cannot point to any particular case, but Mr. Charley wrote and published a book; I have not got it with me, in fact I lent it to a friend, and I am not altogether sure whom I lent it to. That can be obtained, I think; it is called "A Handy Book of the Cab and Omnibus Laws." There he gives many other cases—I am almost certain I am correct—where men have been fined for that particular offence. He cites a number of cases dealing with the hackney carriage and the omnibus law, and I think it is an important little book. There are a number of points that I do not wish to deal with, because I see by your remark just now that I should only be using up your time unnecessarily. I take it that you have got a comparative statement; I have got one here drawn up by an association I was connected with, the Amalgamated Cab Drivers' Society. That deals with the law as it stands, and as we would wish it to be; that points out anomalies and injustices that the Acts contain or have the power of inflicting upon the driver, and although it is a dirty copy—it is aged—if you have not got one I have brought it with me, and it would save you time.

4194. The witness had better put it in?—I think it is a very important little document which gives you the matter that the cab driver to-day and for the last 15 years has complained about. (*Document put in.*)

4195. When was that drawn up?—The date is given there; it is 10 or 12 years ago.

4196. Yes, February 1878, it was drawn up by the Amalgamated Cab Drivers' Society?—That will give you a number of points, but of course there are a number of others. That one I mentioned about pulling up alongside of another hackney carriage elsewhere than in Old Palace Yard is not given there.

4197. Any others?—A number of others I could point to existing in the many Acts that govern the trade, and one thing I complain of, and I am merely voicing the opinions of the whole of our chaps, if I may use such an expression, and that is the apparent desire the Legislature has of making us cab drivers criminals. You will notice that with the growth of the Acts of Parliament fines, entailing imprisonment, on nonpayment of fine, have increased with wonderful rapidity. The first Act of Parliament dealing with the hackney carriage trade, or the coach, which is the same thing under a different name, consisted of two fines only. Now the fines are so many that I should be afraid to say what they tot up to, and there is a fear existing in every cab driver's mind from the time he starts work until the time he arrives home that he might sleep in some different place to that he did the preceding night. He might sleep upon a plank bed instead of the bed he has at home, and I think that that danger, that worrying, harassing feeling that I, as well as other cab drivers experience, should, as far as possible, be removed, and that is why I consider that the Acts are now rendered obsolete; that we should have one simple comprehensive Act of Parliament that, as near as possible—it is asking for a great deal, I know, because lawyers draw up the Acts of Parliament—that as near as possible cab drivers and those interested in the traffic could understand; all those fines for imaginary offences should be removed, and the harassing fear that oppresses every cab driver be as far as possible, as far as it in justice can be done, removed.

4197*a*. Yes, but do you think it well to stereotype all these offences by putting them again into an amending and consolidating Act; is it not better to leave the offences to be defined by regulations under the Act?—I think that the Act of Parliament repeats itself so often in the various Acts that I have enumerated that a comprehensive Bill could swallow up all the good points, and remove the bad ones, the unnecessary ones.

4198. You do not quite take my point, I think, Mr. Dyke. Does it commend itself to you that all these small offences of which you complain should be put upon the face of the Act of Parliament itself; do you not think it is better that they should be made the subject of regulations by the Secretary of State under a power given in the Act of Parliament?—If that were correctly defined, I think possibly that would be a simpler way of doing business, but there is so much laxity given to the person who adjudicates under existing circumstance, and the Home Office does not clearly define offences, as is shown in those few paragraphs there.

4199. But an Act of Parliament, you see, which contains the offences would probably not give a better definition, and when 10 years have gone by, the offences will have become as old as these in the existing Act?—Those we now complain of?

4200. Yes; whereas if you have the offences regulated by a Secretary of State's order, under a general power contained in the Act, the offences can be modified or amplified, or dealt with as circumstances arise during the progress of time?—Undoubtedly that would be a better mode of procedure if that is possible.

4201. It is quite possible; but it is not what is contemplated by this paper which you put in?—That is not a production, of course, of legally trained minds; they are, with the exception of Mr. George Shipton, practical cab drivers, consequently, that is merely a suggestion, they not thinking that they had the power to draft an Act of Parliament, but they put that down as the clear grounds upon which the work might be done.

4202. (*Mr. John Burns.*) But is it not the fact, Mr. Dyke, that in the compilation of this suggested codification—because that is what it amounts to—of the hackney carriage laws, that a lawyer was consulted?—Undoubtedly; legal assistance was procured. A great number of the offences could be removed, because they are unjust; they are only put into operation when some difficulty arises between a constable and a cab driver, in the same way as the special case that I referred to, my own case.

4203. (*Mr. Hopwood.*) Then I put it to you that in the course of a few years you will find that some of the offences which appear in the amending Act which you suggest will have become just as obsolete; on the other hand, it may be necessary to make new regulations, we will say for instance in regard to taxameters, if they were introduced; you could not make any fresh offences without getting another Act of Parliament, and we know how difficult that is?—I think if the taxameter was used, the matter of overcharge, or anything of that kind, could be dealt with by the existing law. You see there is a common law in addition to the special law, governing our trade. There is a common law, and we find ourselves in this difficulty, that often we commit an offence against the common law and against the hackney carriage law at the same time, and both offences are punished concurrently.

4204. (*Mr. John Burns.*) You get the disadvantages of both and the benefit of neither; is that your contention?—That is just our point.

4205. (*Mr. Lough.*) I will just ask you a question or two; first, about the limitation of licences. Without going into it, you know the number of drivers' licences is 15,000 about?—Drivers' licences, certainly.

4206. Do you think that is too many?—Undoubtedly it is too many; but I believe the men's salvation rests more in their own hands than in any help they can get outside, if they were educated up to it; but under existing circumstances 15,000 are certainly too many.

4207-8. How many do you think would be sufficient?—I should say, taking all things into consideration, about 10,000.

4209. Would you reduce them as low as 10,000 within the next two or three years if you could?—I certainly think that that would be advantageous all round.

4210. What steps would you take to reduce them?—By refusing to re-issue from a given date to another new licences.

4211. That would be your first step. You are aware, probably, that that would reduce them very slowly. There are only about 800 new licences a year issued, so that it would take seven years to get them down that way. Would you adopt any other means?—Well, I think if they were a little more particular at Scotland Yard. There is a number of men who do not use a licence only at certain times, and they follow other avocations the greater portion of the year. Those men are neither beneficial, taking the year round, to the cab proprietor or to the driver, to the driver they are a great danger.

4212. Will you tell us, would you refuse the renewal?—Certainly, unless they could show that they used the licence as a means of obtaining a livelihood.

4213. Would you for that purpose demand that a certain number of days should be worked in the year?—With a proviso that a man should state what occupation he followed on any other days. I make that qualification for this reason: supposing a man was following the occupation of a secretary, say to his union, any case of that kind.

4214. Oh, well, that would apply to very few?—That would apply to very few.

4215. You would demand a certain number of days' work?—Certainly.

4216. How many days' work would you demand?—Well, I should think I should say between 250 and 300.

4217. Now you have dealt with, first, new applications; secondly, butterflies. Is there any other class of licence of which you would refuse the renewal?—Well, there is a number of men that follow an illicit business, and they are dealt with now if it is known to the police, but I think the police should know them. We know that there are a great number of men, especially in the South-Western district, who are in communication really with women — you know what I mean by that; I will make myself more definite if you like.

4218. It is much better to get it in few words?—Well, they drive a woman that they are in touch with.

4219. (*Mr. John Burns.*) You need not be afraid to tell us plainly; they are prostitutes' pimps, who vary living with women with driving cabs?—That is the point. They pay more than a bonâ fide cab driver can pay for a cab, and they have a superior article.

4220. (*Mr. Lough.*) You would refuse to renew their licences?—Undoubtedly.

4221. How would you get at them?—I consider it is the duty of the police and the duty of the cab driver to report such men.

4222. The cab driver?—Yes.

4223. They would not report themselves, would they?—Other cab drivers looking after their interest, should report it to their union or to the police officials.

4224. How many of such, do you think, there would be?—It is a very hard thing to say. I should say they number hundreds, according to the statement of the police themselves.

4225. Is there any other class of drivers whose licences you would refuse to renew?—There are a number of men who are greengrocers, but that applies to men in the suburban districts; they are greengrocers and follow that business. They use the horse for the purpose about twice a week of coming up to London to the markets, and then the same horse goes out plying for hire in a cab. They become cab drivers and greengrocers; I think they should be either greengrocers or cab drivers.

4226. Is not that sufficiently covered by what you said before about working a number of days a year?—No, because the man works nearly every night as a cab driver.

4227. How would you get at him?—That would depend upon the police; they know it as well as anybody; they are on the given spot, and they see the man following this double occupation, and I think it would be their duty to know it.

4228. Any other class?—I merely mention that as a specimen; there is a number of men that that would apply to. I say a greengrocer, but there are other businesses followed by men, who, when it pays them, hire a cab and use their own horse.

4229. Yes, is there any other class?—Not that I have in my mind.

4230. The old or feeble, you would not make any suggestion about them?—No, no, I think that there are many men now driving from 65 to 70 years of age just as capable of driving a horse—the horse they drive, mind—they do not drive a spirited one.

4231. They are as capable of driving as any other?—Certainly.

4232. How about the plate revenue; do you think 40*s.* is too much to charge?—Not at all, if the money derived from the 40*s.* was used for the purpose that we all consider to be justifiable.

4233. What purpose would you apply it to; do not give reasons, if you do not mind, but just state the purpose?—For the purpose of benefiting the trade.

4234-5. Benefiting the trade; for example?—Shelters might be established in different places.

4236. Well, give us another?—Shelter for the purpose of keeping the vehicle, the horse, and the man from the inclement weather, and to establish telephonic communication.

4237. Telephonic communication, yes?—To any given point, hotels and other places, the same as they have in Canada and in the States generally.

4238. (*Mr. Lough.*) You would have first, good shelters, and second, telephonic communication with the hotels?—With the people who require the cab.

4239. Have you got another point that you would apply the money to?—In any direction that would be beneficial to the trade or those following the trade. I consider, for instance, that old age pensions might be—but that is a matter for future consideration.

4240. Never mind; you are not afraid to state it—old age pensions?—I look upon the cab driver as a public servant, and other public servants are provided

Mr. E. Dyke.
12 July 1894.

for in that way; and I certainly think if it is right to provide old age pensions for the police, cab drivers following their calling are just as useful as the police, and they should be provided for if possible.

4241. I think so.—I think the 2*l.* is rather insufficient than sufficient; I think it ought to be 5*l.* I think there ought to be an increase in the duty.

4242. Well, I want to ask you another question before we go from the shelters. Do you think that the shelters should belong to the private people who own them now?—Certainly not; it is a mistake.

4243. Whom should they belong to?—Well, to tell you the truth, I should like to see the cab trade municipalised, the same as the tramways are municipalised now, I think, in Edinburgh.

4244. (*Mr. John Burns.*) Glasgow?—Glasgow, and the cabs might be municipalised, and then the shelters would become the property of the municipality.

4245. (*Mr. Lough.*) Do you think 5*s.* is too much for the driver to pay for his licence?—No, I do not; it becomes difficult to pay now on account of the bad way he is treated, but if his life was more worth living, if the grievances he labours under were remedied and his wage increased, then, of course, there would be no difficulty in his increasing the amount he pays to the revenue, provided that the increased amount was expended in a way beneficial to him.

4246. Have you any other suggestions from those you have given for the expenditure of the 5*s.*?—I think that would cover the amount of money derivable from that source even if you doubled the cab driver's 5*s.* and increased the 2*l.* of the proprietors to 5*l.* I think the things that I have mentioned would swallow up any sum derivable in addition to the management; you know there would be a certain amount of management.

4247. Do you, of your own knowledge, know whether cab drivers find it harder to get a living now than, say 20 years ago?—Oh, certainly; the difficulty is, I should think, three times harder now than then.

4248. Are you still driving yourself?—Well, unfortunately, I am not these present two or three weeks.

4249. But you have been?—I have been; with the exception of one day's holiday, barring Sundays, I have worked continuously for four years.

4250. Could you give us your average earnings for any period, either one year or two years?—Well, I am an exceptional man; I look after my business. I am a teetotaler, and, as a consequence, I am able to work an hour to two longer than the general run. I work on an average 15 hours a day; I should say that my earnings would be net 27*s.* or 28*s.*

4251. And that is as much as you can make by working 15 hours a day?—An experienced man.

4252. An experienced man?—An inexperienced man would earn considerably less.

4253. Have you had any long period, say six months, ately during which you averaged 40*s.*?—During the last months my earnings have been considerably less than the average I have given you.

4254. What have they been during the last six months?—They have been so bad—I do not keep a diary—that I have got behind considerably in my rent, and my rent is a thing that I always keep paid.

4255. What sort of a cab do you drive?—A privileged cab.

4256. Is it a four-wheeler?—A hansom.

4257. What station?—The Great Northern.

4258. What have you had to pay for that cab?—When we struck, the money was 14*s.* and the yard—the yardman—3*s.*; that would be 17*s.*

4259. And with that, during the last six months, you have not been able to make the wages you say?—Not been able to make both ends meet; and my wife is very careful, and so am I.

4260–1. Are you a good average?—I consider mine is above the average.

4262. Do you know of much distress amongst the cabmen?—It is chronic; they are in an insolvent condition. I do not suppose that there is 2¼ per cent., if there is that, that has a second suit of clothes and a clear rent-book.

4263. Are you of opinion that the recent strike arose from great destitution, from suffering amongst the cabmen?—Absolute poverty.

4264 Absolute poverty?—The men thought they might just as well starve out of work as starve in work; they were forced into it.

4265–6. Do you attribute this suffering of the men in the first instance to the fact of the great number who are in the trade?—That is the main reason.

4267. You think that there is work for about two-thirds of the present number?—That is it.

4268. And that, owing to the other third, you starve; is that it?—Not only that; in my case, to get that half loaf I have been speaking of—I was compelled to drive horses that had been used in the street cabs. The proprietor has street cabs and privileged cabs.

4269. Your point is that, in addition to starving the men, there is bad cattle used?—That is the point; that is the cause of his being starved.

4270. Bad cabs also?—Bad cabs and bad horses.

4271. And all that is owing to there being too many trying to get a living at the trade; that is your point?—That is the point.

4272–3. Just a word about the police courts. Do you think that there is considerable police tyranny over the men?—I have experienced it myself, and I am very careful to steer clear of them, if possible. I have experienced the tyranny myself, and the injustice; in fact, I cannot use a term less strong or more truthful: perjury is rife there.

4274. Do you know anything about the City courts?—Yes, a little.

4275. Is it as bad in the City as at Marlborough Street?—Not at all.

4276. Not at all?—Not at all so bad in the City as in the Metropolis.

4277. And can you tell me why, in what respect there is a difference in the City?—I consider the men are a better class of men.

4278–9. What men?—The policeman himself, and that, I believe, depends upon his receiving a higher wage.

4280. Is there any difference in the procedure of the courts that you have noticed in the City and in the West End?—Yes, certainly. In the City, the alderman or magistrate trying the cases seems to consider that it is his duty to look at both sides of the question; but in the Metropolis the magistrate seems to think that when he has got one side—the prosecuting—he has got the whole case, and that shows you in a nutshell the difference between the two courts.

4281. At what time are the cases taken in the City?—If I recollect rightly, the times are about the same; they are 10 to 12 and an adjournment.

4282. In the City?—In the City.

4283. But that is not thet ime at Marlborough Street, is it?—No, our cases, as a rule, commence at 2 o'clock; it is supposed to be 2 o'clock.

4284. Is 2 o'clock or after 2 o'clock as convenient an hour for the cabman as 10 or 11 in the morning?—I should think 2 o'clock is the busiest time for the cabman.

4285. It is the most inconvenient hour?—It is the most inconvenient hour.

4286. Do you know, is there any separate court for these street cases in the City?—I think not.

4287. You are not aware that there is?—If there is it is since I have been there.

4288. When were you there last?—I have never had the misfortune to be summoned in the City, but I have been there on other business within the last three years or two-and-a-half years.

4289. Other business, of course, would not give you any special knowledge of any cab court?—I mean cab business; I have been on cab business, but not my own personal business.

4290. Are you prepared to say you were in a special court or the ordinary police court?—The ordinary police court.

4291. Coming to the outer circle again, you say you think there is considerable tyranny. I want you to give me an example or two. For instance, do you think it is a hardship that a fine of 6*d.* should be

marked on a driver's licence?—I think it is a great injustice; the mere fact of the sixpenny fine proves positively that the case was a frivolous one, and that being so, it has no right as an indorsement; it is unjust.

4292. Do you think men are brought there for practically no offence?—No offence in equity, certainly.

4293. Would you suggest any way of dealing with the first offence of a man besides bringing him up to that court?—I think all offences not dealt with by the common law should be dealt with at a private court.

4294. (*Mr. John Burns.*) A separate court, not a private court?—I should say a separate court, a court dealing with the special cases, only cabs and omnibuses.

4295. (*Mr. Lough.*) Such as plying and loitering?—Plying for hire, loitering, and a variety of other offences that really may in some cases come under common law, but should not be dealt with in a criminal court.

4296. Just a question or two on the railway privilege system. Are you in favour of its maintenance?—No; no man that knows both systems can be in favour of it.

4297. You are a privileged driver yourself, are you not?—Yes, I have been so four years; I have driven at the Great Northern and Charing Cross.

4298. You have told us you find it very hard to get a living?—Yes.

4299. So that from the drivers' standpoint you do not think the privilege system is beneficial?—I am certain that the abolition of the privilege system would be beneficial all round.

4300. What reason do you give first?—The reduced wear and tear of vehicle, horse, man, and road.

4301. Why would it reduce the wear and tear of the vehicle, man, and road?—Because men driving privileged cabs, instead of stopping, as I always do, when driving a street cab, as near the point I set down the last fare as possible, go back to the railway station from which they carried that fare.

4302–3. So that there is a great traffic of empty cabs as well as full cabs caused by the privilege system?—That is so.

4304. Therefore you think it would be better for the driver to get his fare at the railway, and then take his turn on the street?—Or at the nearest railway to where he set down his fare.

4305–6. Having to go back to that particular railway station causes this particular nuisance?—Causes a great wear and tear, and a great congestion of traffic also.

4307. Have you any other objection to the privilege system?—A bigger objection than that specified is the fact that horses are worked for a number of years in the street cabs, and when past work in the street cab they are used in the railway cabs, and men who like a little leisure and do not like being harassed by the police prefer to drive an old worn-out horse in a railway cab to working a better horse in the street.

4308. Is it your opinion, then, that the horses are worse in the railways than the general street cab horse?—I never drove such crocks in my life in the street as I have been compelled to drive at the Great Northern Railway.

4309. Do you think the cabs are worse?—Certainly they are much worse, taking them all round.

4310. But men take it up for the sake of the leisure?—The leisure and not being harassed by the police.

4311. (*Mr. Hopwood.*) And there is more certainty, I suppose?—There is a certain certainty; men know that much, if they go to the railway station at eight o'clock in the morning they will do—we say do, that is, get a fare—they do a train at nine, half-past nine, or at the outside ten o'clock, whereas if they come on the street they might walk about or put on a rank, and there is no certainty.

4312. (*Mr. John Burns.*) There is a fixed minimum of earnings which may be more or less than the outside?—That is so.

4313. (*Mr. Lough.*) Have you any other point in your mind against the railway system, from the drivers' standpoint?—I think those are certainly the biggest points, but there is another point, and that is the fact that periodical strife is caused, a good deal of friction is created, not only between driver and driver, but between proprietor and driver. We see that now at the present moment; the street proprietor agrees with Mr. Asquith's award, but we have continual fights between the railway proprietor and railway driver.

4314. So they quarrel with the street men?—That is so, driver and driver, but a bigger friction is created between the railway driver and the railway proprietor. There is constant bickering and strife.

4315. Why do the railway proprietor and driver quarrel?—Well, largely on account of so many men who have not driven railway cabs thinking that a railway cab is a better wage-earning machine than a street cab, and as a consequence they hang round the railway cab yards, and make the difficulty of the man who is on the street greater.

4316. Your point is, too great competition of the drivers for the privileged cab?—That is so.

4317. Does that competition enable the proprietor to get too high a price for his privilege?—Certainly; when I struck the same sort of property in the street would have been paying 15*s.*, I was paying 17*s.*, and that was 2*s.* more.

4318. You told us a moment ago, when you struck you were only paying 14*s.*?—And the yard money 3*s.*

4319. Was the yard money 3*s.*?—Half-a-crown when I went out and 6*d.* when I put up, but the proprietor had 1*s.* 10*d.* put on the board; this 1*s.* 10*d.* was supposed to be the yard dues, but unless we gave the half-crown, which was the unwritten law, among the horsekeepers, the horsekeeper and the washer made it so difficult for a man to retain his seat that he could not live in a yard above three or four days.

4320. (*Chairman.*) What do mean by difficult to retain his seat?—Retain his cab, he would have his licence put into his hand by the proprietor.

4321. You mean that these subordinate men who wipe the yard would influence the proprietor to get rid of the driver?—That is so, sir.

4322–3. (*Mr. Lough.*) Well then you found that a great deal more was levied?—They can do that so easily.

4324. (*Mr. John Burns.*) Before we leave that point suggested by the Chairman, it was made difficult by bogus complaints as to the bad treatment of the horse by the driver?—That is it, and the horsekeeper who fed the horse would deprive the horse of food and water, consequently the horse in a very few days fell away, and the man was called a scorcher, that is the technical term for a person who works the horse unfairly, consequently the man could not possibly live in the yard.

4325. (*Chairman.*) Surely those tricks of the trade must be known to the proprietors?—Yes, but the proprietor as a general rule has a foreman, and the foreman leaves the management largely to the horsekeeper and the washer in any yard of any size.

4326. Then it seems to me if they could work it in that way there was no limit to the extortion that they might practice upon you, except their own discretion?—The limit would be the ability of the man to pay.

4327. But up to the point at which you could pay, it was within the power of these subordinate workers in the yard to tax you as far as they liked?—As far as they liked.

4328. Without any interference on the part of the proprietor?—That is so, sir.

4329. (*Mr. Hopwood.*) That bad system has been abolished since the strike has it not?—It has been abolished, but there is always a danger of it being reverted to.

4330. (*Mr. Lough.*) I was just going to ask you, Mr. Dyke, this one question: are you since the strike able to pay only the actual amount?—Only the actual amount. I cannot tell by practical experience, because I have not been permitted to get on a cab since.

4331. You have heard that that is so?—I have heard that that is so, that the men are loyally abiding by Mr. Asquith's decision as far as the yard money is concerned.

4332. (*Mr. John Burns.*) Does it come within your knowledge, Mr. Dyke, that until the ticket system was introduced on the omnibuses the same preferential treatment was given to horses of different studs in the matter of food and bedding and so forth?—By drivers, certainly.

Mr. E. Dyke.

12 July 1894.

4333. To the horse whose driver tipped them most? That is so.

4334. And since the introduction of the ticket system the uniform treatment of horses which has taken place as a result has led to the general improvement of the studs. Is not that so?—That is so.

4335. (*Mr. Lough.*) Do you think Mr. Asquith's award is also observed with regard to the proprietors charging the men the actual amount paid for the privilege instead of any larger sum?—No; where they can break through it they do it.

4336. Do you know of any case where they break through it?—Yes.

4337. One case?—Yes.

4338. Do you know of any other?—No.

4339. Do you know of a case in which they are now even charging more for a privilege than they pay?—Not at the present moment. Only yesterday I knew of a case, but the men have compelled the masters to be satisfied with the price charged by the railway.

4340. Then you think Mr. Asquith's award is observed?—It is observed; and where it is not observed the men make the masters observe it.

4341. I want to ask you about a privileged 'bus at the railways; you know what that is?—Yes, sir.

4342. Do you think any change should be made with regard to it?—Certainly. I think the railway omnibus should be known as a public carriage, it being used as a public carriage.

4343. Do you mean that it should be licensed?—It should be licensed.

4344. For plying like a cab?—For plying like a cab.

4345. And the driver should have his badge like another driver?—Certainly.

4346. Speaking generally now on the railway question, do you approve of the South Western system?—Yes.

4347. Do you think that if every railway was open in London sufficient cabs would be found for the service of the passengers?—I am sure there would be. There never is a difficulty at any railway. During this strike, for instance, when cabs were scarce, the railways were always well supplied, with one-fourth the number of cabs on the streets; there was no difficulty in getting vehicles for their passengers.

4348. Do you think it fair to demand a penny from the driver on entrance as is done at the South Western?—I have no objection to the penny, but I do not say that it is fair. I fail to see why a rich corporation should tax an impoverished trade when that impoverished trade is supplying a vehicle to carry the rich corporation's passengers.

4349. But if no charge was made, how would the railway companies be able to control the undue crowding in of cabs?—I have no objection to pay the penny, but I think that it is to their convenience, and that they should see that there was no undue crowding.

4350. Your answer about the privilege system is that you do not mind a privilege charge of one penny being paid, if the driver pays it, but you do object to the owners paying for the privilege?—I do object to that.

4351. That is your point, I think; have I correctly put it?—That is so. But if payment must be made, I hould say that instead of charging a man a penny for sach time he enters the railway station the railway companies could establish an office where for 1*s.* per annum every bonâ fide cab driver should be licensed by them, have a little ticket conferring the privilege upon him; then they would have a claim upon that driver. One shilling per annum would tot up, you know.

4352. I want to ask you a question about that system. Would railways sell these shilling tickets to any number of cabs?—Certainly, to all the cabs.

4353–4. To all the cabs that came?—All the cab drivers really.

4355. In a station where they have only 200 privileged cabs now, there might be 2,000 of those privileged tickets sold?—That is so.

4356. Then the railway company would not have any claim upon those 2,000, practically?—Why not?

4357. If the 2,000 came up there would not be room for them?—They could not possibly be there at a given time.

4358. My point is that a railway company could not effectively control a great number like that?—They might never see the same drivers once in a week.

4359. Well then they could not secure that the driver would come into the station?—But they would have 1,000, or 10,000, if you like, cab drivers with that privilege, and they would secure those cab drivers who were nearest the station, whether they had the annual shilling licence, or a penny a day payment, or a penny a fare payment; and in addition to that, if a passenger lost any luggage, if the driver were uncivil to the passenger, or anything of that kind, they would know by the number that that cab driver displayed, his privileged number, who the driver was.

4360. Would they not know that by his plate number now?—They would not altogether, not so well.

4361. Let me ask you briefly, then, would you allow every cab driver in London to buy these shilling tickets at every railway?—No, I said the railway companies themselves could appoint an office.

4362. Well, would you allow every driver to buy at that office the tickets for every railway?—Every bonâ fide cab driver, yes.

4363. What advantage would you have over the drivers who are not registered, who have their licences and cab-plates at present, if you let them all buy the tickets?—Every man would be a privileged driver then. Now, only a small per-centage of them are privileged drivers. Or I do not think there would be any privilege existing.

4364. (*Mr. John Burns.*) Do you not recognise, Mr. Dyke, that your suggestion of this alternative scheme of privilege means that if a driver is to work at 10 or 12 different stations, such man in the ordinary course of his work would have to take out eight or ten different privileges?—I said that the companies themselves could appoint an office.

4365. The whole amalgamate for it?—Certainly.

4366. However well this scheme worked, would it not operate less advantageously and less simply for the driver than if privilege were altogether abolished and the railway station treated as a public place?—In answer to Mr. Burns, I may say that Mr. Lough raised the penny payment per fare, and I say that that is too much. I say that I do not look upon it as just. He said: "Did I think it best?" I said no.

4367. Why not ask for its abolition altogether rather than the institution of a system that is cumbrous, costly, and inconvenient?—That is what I do say. I do not see its costliness.

4368. (*Mr. Hopwood.*) You simply put forward the shilling a year as an alternative to paying a penny a day?—I consider the advantage would be greatly to the driver. In one case he would pay a shilling a day, perhaps 12 jobs out of a station; in another case he would only pay a shilling during the whole 12 months.

4369. (*Chairman.*) Rather than either, you would do away with privileged cabs altogether?—Rather than either I would do away with privileged cabs altogether—absolutely.

4370. If you were to have privilege you would rather have it on the system you have described than the existing system?—Than the penny per fare.

4371. (*Mr. Lough.*) Only one final question on it: Do you propose that that privilege, as you call it, should be open to every licensed driver?—That is so.

4372. If every driver had it, would it be a privilege?—It would abolish the privilege. I am simply covering the case that you referred to.

4373. (*Mr. John Burns.*) Can you tell us, Mr. Dyke, of your own knowledge, with regard to the inspection of cabs, that undue preference and partiality are shown in the examination and the final passing of a cab?—Yes.

4374. In what way?—The person owning a larger number of cabs can get an old cab passed with more facility than what is known as "a little mush."

4375. To what can that exceptional favour be traced?—Squaring.

4376. Squaring by whom?—By the person who wants the favour.

4377. Is that supposed to be generally done?—That is supposed to be generally done.

4378. What form does it take?—The payment of money to the man who affixes the approval mark.

4379. Yes?—And when payment is made the scrutiny is not so severe as it otherwise would be.

4380. Then, can I put it this way: is it a fact that in the inspection of cabs money is conveyed for the passing of questionable and defective cabs?—That is so.

4381. And then in the case of very good cabs, a gratuity is given to preserve the continuity of the custom?—As a rule, certainly.

4382. Is it a practice that, when cab inspectors retire from the police, some of the large masters, and some of the associations, have been in the habit of getting up testimonials for Mr. Brown, Jones, or Robinson, inspectors of such and such districts?—If that inspector has been in the habit of inspecting cabs and omnibuses, a testimonial invariably follows his retirement from office.

4383. Exclusively from cab and vehicular carriage proprietors?—Not absolutely exclusively from them, but in the main from them.

4384. In the main from them?—A prominent proprietor generally acts as president of the fund, and another prominent proprietor as secretary of the fund, and a third as treasurer of the fund.

4385. Then the generosity of the donors of this testimonial to the late cab inspector is due to a lively sense of favours that have come?—And an inducement for the incoming inspector to follow in the footsteps of the old.

4386. That is all I have to say on that point. Now, are cabs used for purposes other than those for which they are licensed under the Hackney Carriage Acts?—I should like you to be more definite, Mr. Burns, in the question.

4387. Well, are cabs used for improper purposes? From the length of the time you take to reply I assume you know they are?—Do you mean as to the sexual intercourse?

4388. I will put it this way. You know of a section of cabs known as "slow riders"?—Oh, certainly; illicit sexual intercourse.

4389. Where do they mostly ply?—I do not think that there are cabs specially provided for that purpose, not in any given number.

4390. But it is done?—It is certainly done.

4391–2. And the Embankment is a well-known rendezvous?—Quite common. I may, in answering, just explain that all-night four-wheel cabs have—when I was night four-wheel cabman I often had customers of that kind.

4393. (*Chairman.*) How does a driver know for what purpose a cab is wanted? Two people get in; do they tell him plainly what it is wanted for?—The general thing is, "The Embankment, cabby; drive very slowly; do not get too near the light."

4394. (*Mr. John Burns.*) And in many cases the cabby says, "Slow ride, sir?"—You can see generally by the appearance; the cabman knows the female by sight, and, of course, he judges.

4395. Do you consider that the present system of privilege prevents the advantages and the disadvantages of the cab trade being equalised for all the cabmen of London?—The abolition of the privilege system, do you mean?

4396. Would the abolition of the privilege system make for the equalisation and the uniformity of treatment of all cabmen?—Undoubtedly; and better the property all round.

4397. Does privilege, in your opinion, secure its supposed object, the convenience of railway travellers?—Not at all.

4398. Does it inconvenience the general public?—Undoubtedly.

4399. How?—By congesting the thoroughfares.

4400. Outside?—Well, inside their inconvenience is so well known to the habitual railway rider that they walk outside the station and get a street cab, knowing that the railway horse is, as a rule, such a bad one.

4401. Is there as much crawling at Waterloo Station, front or back, as there is at other stations where a different privilege system prevails?—Certainly not.

4402. With regard to railway 'busses, large or small, are the drivers and conductors of these mostly countrymen?—Invariably so.

4403. Why are they selected over Londoners?—They are brought up from the country because they are satisfied with a lower wage. They imagine, before coming up, that the purchasing power in London is the same as that in a country town or village; but of course, you know, and I know, that in congested towns like London rents go up—the purchasing power is not so much.

4404. Then as apart from the two points between which they travel, they have no knowledge of London?—None whatever.

4405. You consider, in justice to the cab proprietors and the licensed drivers, these men should be equally licensed?—That is so; and undergo a similar examination as far as possible.

The witness withdrew.

Mr. Robert Jenkins called in and examined.

4406. (*Chairman.*) Are you a cab driver at this moment?—Yes, sir.

4407. Practising the profession now at this moment?—Yes.

4408. How long have you been a driver?—Sixteen years.

4409. Had you any knowledge of horses and driving before you took to it?—Yes, sir; bred and born among horses; my father before me.

4410. In what way?—In the cab-driving, sir.

4411. I understand that you want to give evidence about the classification of cabs, among other things. What is your opinion about that; do you think it would be a good thing to have cabs divided into classes?—Yes; I believe if all cabs were classed first, second, and third, it would be a very good thing for the drivers. Of course, the driver having his cab classed would pay according to what it was classed.

4412. Then, how about the charge to the public?—I do not think that the public ought to be charged any more for a first class than a third class.

4413. Oh, you would not make any difference to the fare?—No, sir; the public would have the privilege then of picking out a best cab, the same as they do now. There are first, second, and third class cabs at the present time; and the public, as a rule, unless they are in a very great hurry, pick out the best cabs to drive in, and they pay the same fare.

4414. Do they, as matter of fact, pay more than the fare for which they are legally liable. Do not gentlemen who take a smart, first-class cab, generally pay something over the fare?—It is a matter of business. Sometimes you may get a better job. A gentleman will say, "You have got a very nice cab and horse, I will keep you." That might occur at times, but it is very seldom.

4415. I mean besides that, in an ordinary way, if it were a short journey, a gentleman gives something over the fare, if the cab is a good one?—No, sir; it is generally the opposite way. The parties who pick out the best cab are the worst payers. That is our experience, sir.

4416. So your scheme of dividing would only be that the driver should pay more or less to the proprietor, according to the sort of cab he got?—They should be classed first, second, and third, and then the proprietor would see that it would be to his interest to make his cab a first-class cab; the driver would earn more money with a first-class cab than with a third class, and so he would be able to pay the proprietor more. So it would be to the interest of the public and the proprietor also to make his cab a first class cab.

4417. But how would the driver earn more with the first-class cab?—Because he would get more fares, sir. The man with a good cab would get more fares than the man with an inferior cab.

Mr. R. Jenkins.
12 July 1894

4418. So that even with the same rate of charge to the public he would make more money by getting more jobs?—He would make more money.

4419. (*Mr. John Burns.*) On this point of his new scheme, I would like to ask Mr. Jenkins—he has stated that riders who select the first class property do not pay more for each individual fare, but that each individual cabman who drives a first-class cab gets more fares in consequence of his property being better than the average in the street; is that so?—That is so, sir.

4420. Will you be clear upon that? First-class property does not bring richer fares, but it brings more fares?—That is right. It brings more fares, but not richer fares; only occasionally, as I say, a gentleman might be going down to Richmond, or anything like that, a long fare, and he might say, "you have got a good cab, I will keep you," Now and then it is, but not sufficient to make any profit much.

4421. (*Chairman.*) I think we get it quite clearly out of you, that as far as your experience goes, ordinary travellers by the most superior cabs do not give anything extra to the fare on account of the cab being a better lot?—Quite so, sir.

4422. Then with regard to the licensing of cabs, have you any opinion about that?—Do you mean in the way of granting the licences at Scotland Yard?

4423. Yes, as to how the licensing is done. For instance, do you believe that any money passes between —— ?—In the proprietor obtaining the licence?

4424. Yes; between the proprietor and Scotland Yard?—I do not think the proprietor has any need to give any money to obtain a licence, not for his cab, because he has only got to go and fill in a form, and he gets a form and takes it to the inspector who passes the cabs, and he passes it. Where the money might pass is when the cab is being passed. I do not think it is when he is getting the licence.

4425. No; but then when it is being passed by the inspector?—It might pay him to give the inspector a trifle to let an inferior cab be passed for a twelvemonth, and save perhaps the cab having to be broken up, and save perhaps that man 20*l.* or more, that without would have to buy a new cab or else not have a cab at all.

4426. Do you think there are too many cabs on the street?—Oh, yes. I have a suggestion here on the limitation of cabs. All cabs should be worked different entirely to the way in which they are being worked at the present time.

4427. But do you think, to answer my question, that there are too many cabs now?—Oh, yes.

4428. And do you think that the existence of the number that there is, is what keeps cab drivers badly off?—Yes, sir. It is through the over-number of cabs that causes men to work so many hours that they have to work.

4429. Do you find that you make less money than you did when you started?—Yes, sir; considerably less money than when I started.

4430. And work quite as hard for it, or harder?—I work harder now. I could work 12 or 13 hours a day when I started, but now I find it is very difficult to get along with 17 hours.

4431. You have got a notion of your own, you say, for the limitation of cabs?—Yes.

4432. Let us hear what it is?—My idea is that two horses to work a cab now is a thing of the past, and that cabs should be worked by two men, and that three horses should be worked in that cab, that is to say, two horses in the cab with two men would be unfair to the horses, because it would be too many hours for those two horses to work with two men, but by putting three horses to the cab that would mean that a horse would work two days and he would rest one. The drivers then would be able to work on an average about 10 hours each, and pay about 4*s.* a day more for their cab than the Home Secretary's award, and they would get just as much wages, and work five or six hours a day less, if they worked on this scheme. By working that scheme out I thought that if we had to limit the number of cabs to 6,000, we could then work the cabs by 14,000 drivers; that would leave equivalent to three men, what we call odd men, to every nine cabs; the 14,000 drivers to the 6,000 cabs. I think 6,000 cabs on the streets of London now, worked by a double shift of men, would be plenty for the supply of the public, considering that during the strike there was something like about 3,000 working in the streets then, and at certain times of the day there were sufficient cabs for the public to get about. Adding another 3,000 more to that, I am sure the public would be able to get about the streets of London without any inconvenience whatever; and it would be a thing that is wanted in the streets of London, because we are a nuisance, we cannot help being a nuisance; we are sent into the streets to get our living: there is not sufficient rank accommodation, and where the ranks are is where we cannot get jobs; we are obliged to get into the busiest thoroughfares to look for them, and we are obliged to keep on the move; and being so we are a nuisance to everybody. If the cabs were reduced to 6,000 we should be able to go on the ranks to get our living. No man wants to go on the streets to get his living if he can get it on the rank. The men working under this system would be able to keep out of the way of the traffic.

4433. (*Chairman.*) Have you ever had anything to do with the police courts?—Yes, sir. I have been summoned to a police court twice for not wearing my badge. I object to wearing my badge on my breast. I think there is another place where it ought to be; and during the 16 years I have been summoned twice for it, and I have still refused to wear my badge. I wear my badge in my pocket. These are the only convictions I have had for 16 years. But I have witnessed many cases in police courts. I made it a study at different times to go and see how cabmen have been treated in these police courts.

4434. Do you think the present practice in the police courts is just and satisfactory, or not?—No, sir. I consider all cases of plying for hire, obstruction, too long taking up and setting down, and all those cases, should be tried in some other than the police court.

4435. That is not quite what I mean. I will come to that in a moment. In the police courts do you think you get fair treatment with the magistrate and the police?—You are brought up there in a batch—sometimes 20 or 25 stand there for an hour or two hours. The inspector will come out and say, "All those drivers "who wish to plead guilty can pay 2*s.* costs and get away "about their business." A lot of men who really are not guilty—some are rather timid in going in front of a magistrate, and when they get there they cannot speak, and others want to get away quick to look after their living—would rather plead guilty than go in front of the magistrate and state their case. That system is a thing that ought to be altered; and not only that, it does not matter what you say in front of a magistrate. If you ask him, "for why?" he will tell you he is bound to believe the constable; therefore, in my idea, it is a mere farce going before the magistrate and saying anything.

4436. Instead of that arrangement, I understand you would have some separate court for cab cases altogether?—That is it, sir; I do not say for cases of drunkenness and furious driving, I think they ought to go before the magistrate; but I think the other cases ought to be tried by a committee of cab drivers, cab proprietors, and impartial persons who would sift them right through.

4437. Do you think you would have any more chance of justice from such a tribunal as that than you would from a magistrate?—I think so; because they would be practical men, understand our trade, understand the cases and the reason for being brought there, and could sift the case more than the magistrate. The magistrate is in a hurry to get away, or in a hurry to get on with another case; the more you say the more you have to pay. It is an honest fact, sir. He does not listen properly to the ins and outs of the case; when you begin to talk, he stops the case as you are speaking and tells what you have got to pay, and in another minute you are pulled down, and you pay the money or else go into the cell—one of the two.

4438. You were examined before the Labour Commission, were you not?—Yes.

4439. And you said something about the question of bilking, of which we have heard a good deal. In the first place, I will ask you yourself, in your experience as a driver have you seen much of bilking?—I do not pay much attention to the bilking cases. I have been, perhaps, one of the fortunate class.

4440. I mean in your own experience?—I do not suppose in the 16 years I have had more than three or

four that have not given me anything for driving them about. It does come under my notice that a great many men have had the misfortune sometimes to have two or three in one week; but it has never been my experience.

4441. I think you told the Labour Commission that your trade's union had done good work in detecting these bilkers and bringing them to justice?—Oh, yes; the Amalgamated Society, in 1882, that I belonged to, looked out very sharply after those men, and took action through the union to try and bring them to justice.

4442. Would you describe, if you can recollect a case, what happened, and how it was done; how it was detected and brought to light?—No, I cannot give you an account of how it was detected, only that a man came to the executive of the union, and gave full particulars of the case, and where he thought it was likely the man might be found, and they took the steps to go and find these men; in no other way.

4443. What do you suppose they did; did they watch about for a man answering to that description?—Yes; sometimes it is known that the man does this thing wilfully. I can just explain how I was done by one. I was engaged at Waterloo Station one evening, and taken to the Gaiety Restaurant, and from the Gaiety Restaurant to the St. James's Restaurant. The gentleman got out, and went through one side of St. James's Restaurant; and after I had stayed waiting about an hour I made inquiries, and the porter at the door just happened to have a slight recollection that he noticed him get out of the cab, and he told me where it was possible I might see him. He told me to go to a certain place in Regent Street and ask for a certain name, and I went and asked for a certain name, and whether a gentleman had been there according to the description. They said "Yes." "Could you tell me where I could find him?" and they said I should find at Hampton Court the next morning. I was not sure if I was going to find the right gentleman or not, but I took the train to Hampton Court next morning, and went to Tagg's Hotel and asked for this gentlemen, and directly the gentleman came downstairs I recognised him to be the same gentleman directly. He found I had caught him in that way. He asked me not to say anything, but keep the matter quiet, and he paid me all that I demanded. That happened to be that the porter at the door just noticed him, or else I do not suppose I should have ever seen him again.

4444. That I understand. But what I wanted to find out was this: how did the union help the cabbies in this matter?—I can only tell you instead of the man having to take all the trouble I had to do, they would have borne the expense, and assisted him to have found the man.

4445. I see; assisted with money?—Assisted with money and their help by their executive.

4446. Yes; but not in the way of looking out for the man—watching about for him in London?—It was always the best for the man to watch for him that has had a sight of him.

4447. That would be. I did not understand how the union could keep a watch for him?—They never worked a system that we could recommend. The only thing that I think might be done with such men as that is, that if they take you and refuse to pay your fare, you should have the opportunity of taking them to the police station, and if there is any doubt about their address, to detain them till they telegraph to see whether it was right or no; but if they gave the address and you felt within yourself that it was right, I believe that would be sufficient. But I believe under the existing law that the inspector has no right to demand the name and address, and if he feels disposed to tell the person that he need not give it, he need not give it, but walk away and leave you.

4448. I believe that the law at present enables you, if you are asked to wait, to demand the money that you have earned already up to the time of waiting, and a deposit for the waiting; is that not so?—I think, sir, they do not allow you more than one hour to wait.

4449. But I mean you can demand the money you have earned already; so I understand? Supposing you had been driving a gentleman about, and he said, "Wait here," you can say, "pay me what you owe "already, and a deposit on the waiting"?—Yes; I believe you have that right, sir. But it would go against you very often if you were to do that to everybody who asked you to wait.

4450. I daresay it would. But, as matter of fact, is it done, do you think?—No, unless you had anybody that you had any very great suspicion about. Then, of course, you would do so. But to ask a gentleman when he got out, and said to the cabman, "Wait a minute; I will not be long"—if the cabman said, "Well, I wish you to pay me now, sir, in case you do "not come back," he would take an insult at it, and you would lose a good fare. You could not do that.

4451. (*Mr. Hopwood.*) If he said he would not pay, you could not make him?—If he said he would not pay, you can then try to get his address, and if he refused to give it you could not have it.

4452. (*Chairman.*) Have you any opinion about sixpenny fares?—Yes, I have been in favour of sixpenny fares for a good many years.

4453. Sixpence for what?—I should be in favour of sixpenny fares from eight o'clock in the morning till 10 o'clock at night.

4454. As to distance, I mean; 6*d.* for what—6*d.* a mile?—Sixpence a mile for any distance. It is 6*d.* a mile now, only it is 1*s.* for the first hiring.

4455. That is what I mean?—After 10 o'clock at night, if men sit up till two, three, or four o'clock in the morning to oblige gentlemen at balls and parties, and at the House of Commons and other places, they should be paid a little extra for taking them home, or they should have 1*s.* a mile after that time of night. That is my opinion, sir; and 6*d.* a mile between those hours.

4456. Then about the radius. Do you think the present radius satisfactory?—I should myself like to see the present radius done away with altogether.

4457. Altogether?—Yes. I do not think it affects us but very little—not the London cab-driver. Of course, the suburban drivers would have a different opinion to that, and no doubt they are right, too. When you get six miles out the roads are very hilly, and, of course, they do deserve a bit more. To us that drive about in London, the radius is a very trifling thing. It is very seldom we get beyond the four-mile radius from Charing Cross; it has, perhaps, happened not two or three times in a week to get much beyond four miles away. Well, the four-mile radius sometimes means four and three-quarters. It is very unfair to the public to start, we will say, from Putney Bridge to Charing Cross, for which the fare, I think, would be about 5*s.* That would be bringing a man in to business. But to go from Charing Cross to Putney Bridge would be half-a-crown. That is the difference; and you take the man out of business going there and you bring the man into business coming here. It shows you how one-sided the radius question is.

4458. I have one more question to ask you. Have you ever given any consideration to the plan of having any machine, a thing called a taxameter, fixing on to the cab to test the distances travelled?—There was a machine of that description, sir, in my father's time, when he drove a cab, but they could not get one to answer. Sometimes they went 200 miles a day with this machine, he tells me, and if they liked to tamper with the machine they might show that it did not go anywhere at all; and they tried various things, and never could they get one to work. I do not know whether they have got men capable of bringing out one yet, but I have never seen one capable yet. It would be rather a dangerous thing with drivers that have the cab under their own control. It is not like a 'bus, where there is always the public going in and out, and two men working it. The man has got the thing to himself, can take it where he likes, and he could try and tamper with this thing in any way he thought fit without anybody knowing what he was doing. I think it is rather a dangerous thing to start on myself.

4459. (*Mr. Lough.*) You said you thought 6,000 cabs would be enough on the streets altogether?—Yes, sir.

4460. How many hours do you think those 6,000 ought to be on the street?—About 10 hours a day on the average. I do not say all come on the streets at one time; they would vary themselves the same as they do now, so that there would always be a sufficient supply on the streets for the public—some out at eight o'clock, some at 10, and others at 12, and at two o'clock in the day.

4461. You think out of 6,000 you could get a sufficient supply in instalments like that?—Yes, sir.

Mr. R. Jenkins.
12 July 1894.

4462-3. (*Mr. Hopwood.*) How many cabs do you think there are now?—According to the last police report for 1892, sir, there were 10,892 cabs—11,000 cabs in round figures. That is reducing the cabs by 5,000.

4464. Within what radius are the 11,000 cabs?—In the area of the metropolis here; that is the radius extending to the Metropolitan Police District right round, sir.

4465. Does that include Richmond?—Yes, Richmond comes into it; it goes as far as Kingston.

4466. (*Mr. Lough.*) You say that each of those 6,000 would be out 10 hours out of the 24?—That is so, sir.

4467. How many hours would you like the men to work?—About 10 hours.

4468. Well, if the cab was only out 10 hours in the 24, and the men worked 10 hours out of the 24, how would you find employment for the 14,000 men you spoke of for these 6,000 cabs?—Of course there would be two men to work the one cab.

4469. If there were two men to work the cab, and the cab was only out 10 hours of the 24, each man would only receive five hours' work; is not that so?—Ten hours' work, sir, 20 hours for the cab, and 10 hours each for the men.

4470. You did not say that before?—I said two men to work one cab with three horses.

4471. Perhaps you did; it may be my mistake. I thought you said you would only have one cab on the street 10 hours out of the 24?—Each cab to be on the street 20 hours.

4472. Which 20 hours?—The same as a man is out 16 or 17 hours now. He chooses his own hours. That supplies the public. If all the cabs came out early in the morning you would have no cabs after 12 or one o'clock. It is left to the yard and the men's own arrangements. Some men like to work late hours, some early hours; and by that the public can be supplied.

4473. Between four and eight there are but few cabs in London?—Between four and eight there are but few cabs. They go home at four; what are left are night cabs. Some men go out at four o'clock in the afternoon; they change at 12 at night, and go home at seven or eight o'clock in the morning. But there it is.

4474. Have you found it harder to make a living lately than when you commenced?—Very hard since the electric railway was opened, and the establishment of the telephonic business.

4475. What are your earnings now on an average?—I suppose my earnings on an average are something like 5*s.* a day.

4476. How many hours do you work for that?—16, 17, 15—very seldom under 14.

4477. (*Mr. John Burns.*) You said you were in favour of first, second, and third-class cabs, all at the same fare to the public; is that so?—That is right.

4478. But different prices from the cabman to the cab master?—That is so, sir.

4479. Are you in favour of the classification of cabs because it would tend generally to improve the first-class cab?—It would bring all drivers on a fair footing with the public. At the present time it is very aggravating sometimes to be driven along and see yourself lose way. Some of the gentlemen will not get into a cab that falls behind a better cab, and perhaps you may be an hour or two hours before you find another fare, because the man happens to be dissatisfied. And in many cases, at the present moment, the proprietors with the inferior property, are charging just the same as the proprietors with the good property.

4480. Then you consider that first, second, and third-class cabs being licensed is a fair handicapping in the race for a day wage?—It is a fair handicapping to the proprietor and the price that the driver should pay to the proprietor for his cab.

4481. With regard to the inspection of cabs, can you tell the Committee of cases where bad cabs have been passed through money being given to the inspector and the man who puts on the plates?—Oh, yes.

4482. Give me an instance?—At Rochester Row. Well, I know a great many cases by hearsay, but I know one particular case of my own. When I was manager for the Hyde Park Cab Company, of Chelsea, about five years ago, it was a frequent occurrence to give money to the inspector that passed the cabs. On one occasion I gave myself as much as half a sovereign to the inspector and the man for putting on the plate, stamp marks behind the cab; it was always a known fact that it was 1*s.* or 2*s.* that had to be paid to him, and, further than that, if you did not want the plate stamp marks put on that cab at a station (if you had a cab furnished and done up, the stamp mark was painted out of it; according to the law another stamp mark had to be put on it for the one that was taken out) he would come to the yard and put it on in the yard for you, and save you the trouble of going to Rochester Row or any other station where the cab might be passed if you gave him a trifle.

4483. Have you given those trifles?—Yes, I have.

4484. What did they consist of?—A shilling and 2*s.*; of course, I did not do it with my own free will; I was only the servant of the company, and I was obliged to do what I was told.

4485. The exigencies of competition and the necessity of pleasing the officials induced you to do that which you thought was morally and publicly bad?—Quite so, sir.

4486. Do you believe that many cabs in what would be their last year by honest inspection are passed through tips being given?—The life of some cabs is much longer than others, but it is according to the way they are looked after.

4488. Do you consider that cabs in their last year, after they have been treacled, to use that term, get passed through tips being given to the inspectors?—Yes, I am sure of it. I could give you an instance that occurred the day before yesterday. I have been trying to get the full facts, but I can get them: it was the case of a cab being taken to Rochester Row, and being refused to be passed there, and then it was taken to the Stonesend, in the Borough, and then passed. I can bring you the number of that cab.

4489. Will you send it to the secretary, the number of that cab?—Yes, I will find it out.*

4490. (*Mr. Lough.*) Was any payment made, do you suggest that?—I cannot say that any payment was made, but the fact of the cab being not passed in one district and then taken to another and passed, shows there must be something in it.

4491. (*Mr. John Burns.*) Is this generally done?—Oh, it is generally done if it is not passed in one place; in fact a cab is generally taken to the neighbourhood where the man is best known to the inspector that passes it.

4492. Have you any other complaint to make of the inspection system?—Oh, yes, I consider that when cabs are passed they should be passed in a fair and proper manner; that a man who does not give anything, his cabs should be treated the same as the men that do; that is to say, with the men that give the money the inspector never gets inside the cab, in fact, hardly looks at the cab, but simply walks round about two yards away from it, and goes in and tells the men to put the plate on it. The man who does not give anything, the little man with one or two cabs, perhaps he does not feel disposed to give anything, the inspector gets inside the cabs, looks all round, and if anything does not happen to suit him, sends him back, to come the next time and have it passed.

4493. (*Mr. Hopwood.*) Is there any appeal?—No, sir, no appeal, only to go and get it remedied, what he says is wrong; but the man who pays, his cab is never looked at.

4494. (*Mr. John Burns.*) Where is the money generally put when an inspection of cabs takes place?—Well, the opinion is that it is placed under the cushion, but it was inside the little office at Rochester Row where my money was given; where you give the papers.

4495. You handed him the money in the office?—In the office.

4496. Have you anything to say as to the relations between the cabmen and policemen?—Policemen in general?

4497. Yes?—Well, I say the cabmen are treated very unfairly by the police; they seem to make a target of

* *See* question 7691.

cabdrivers; they have simply got to pull out their book and put down two numbers, that is all the trouble they have got. You can see daily carriages, broughams, going the wrong side of the obelisk, and all you see the policeman do is to look at them and take no more notice. As sure as a cabman goes anywhere near the wrong side of an obelisk he is summoned. Not that I disagree with that, so far, but we ought all to be treated alike. If a carriage causes a block, or a cart, they do not take any notice of that, but they blame the cabman for it. "Cabman again," they say, and the cabman has to suffer for it; it is a very unfair way that we are treated; a cabman is talked to more like a dog than a man by the police.

4498. Is the attitude towards the cabmen as bad, or better, or worse, than it was?—It is bad, sir.

4499. Is it worse than it was?—Yes, it is worse, sir. I believe the more men try to organise themselves to protect themselves in police courts, the worse the police are against them.

4500. Given a perfect mechanical register of fares, is not that better in your opinion, than the present precarious system of paying for cabs?—I would like to see it come about; if it could be carried out, I would rather be paid a wage.

4501. That is what I mean; would you rather receive a weekly wage, based upon your paying all in to the proprietor, than have the present precarious system of paying and receiving?—I would, sir, and I should only be too pleased to work on those terms.

4502. Are you against the privileged cabs?—Yes, I should like to see all railways thrown open, because it is unfair to certain class of men, although we none of us know we might drive a railway cab, but still it is unfair when you are driving one; it is unfair to your fellow men, because that man might come three or four miles and set down a fare in a station, and he has to take his cab right away from perhaps three or four miles back, where he could have stopped in the station and had another fare. It is a thing that wants to be abolished, and I think the majority of the cab drivers would be in favour of seeing that done away with.

4503. (*Mr. Hopwood.*) What would you put in its place—the Waterloo system?—I do not think that the railway has any right to charge a man anything for coming into the railway station. I think if you pay a penny to take one of their customers from the railway, they have just as much a right to give you a penny when you set one down there. I do not see why you should pay them to take their people away any more than they should pay you to bring them there.

4504. Subject to regulations made by the railway company to admit cabmen into their private yards, would you be in favour of the payment of 1*d.* per fare?—I would be in favour of the Waterloo system. I should like to see all the railway stations thrown open, but I do not approve of the system of paying a penny to take a fare away.

Mr R. Jenkins

12 July 1894.

4505. As to the classification of cabs that you suggest, how would you settle what was a first, second, and third-class cab?—Well, I should like to see the whole of the control of the cabs, first of all, put under the county council, and from the county council I should like to see a committee elected of practical men who know the working of the vehicular traffic, and from that committee there should be a committee for the classification of cabs, with the assistance, perhaps, of a proprietor and driver added to it.

4506. You say that the classification could only effectively be made by a practical board?—That is so, sir.

4507. One question as to the police courts; is it a grievance with cabmen that they may have to come all the way from their homes in the suburbs to attend a police court in the metropolis when they have been summoned?—No, that does not seem to appear to be the grievance so much as the way they are treated when they get there; I do not think they would object to come the distance, as long as they thought they were treated fairly when they got there.

4508. Then you would not object to all the police summonses being issued at Bow Street?—Oh yes, I would object, sir, because I do not think it is right for a man who is there on a frivolous case of plying for hire, looking after his living, to be taken in the morning among a lot of criminals and different people, to stand there for hours amongst them. I think it ought to be tried at some other place.

4509. I was on the point of distance, you know, as to whether you would prefer—assuming that you had police court jurisdiction at all—to have all the summonses issued at one court, or whether you prefer the present system of having the summonses issued at each police court?—I think the whole of the cab drivers would prefer it being tried at some court other than the police court, at some central part of London.

4510. That is not an answer to my question; would you rather that all the summonses were issued at one police court, or do you prefer the present system of having cab jurisdiction in each police court in the metropolis?—I do not think it makes any difference myself, sir.

4511. If you lived in Richmond would you not mind?—The distance is not far.

4512. If you lived in Richmond you would not mind coming into Bow Street?—If I lived in Richmond I should, sir; but I mean within the radius of where the majority of cab summonses are; that is about four miles round. I do not think it matters for the four miles round, myself, whether it is at Bow Street or Rochester Row or anywhere else.

4513. One place would do for you very well?—Yes, one central place would do very well.

The witness withdrew.

Mr. Charles. Knighton called in and examined.

4514. (*Chairman.*) I believe you wish to give evidence upon the question of privileged cabs?—Yes, sir.

4515. Are you a driver now?—Not at the present time.

4516-7. How long is it since you have retired?—I am a driver of a cab, but not of a privileged cab.

4518. How long have you been a driver?—For about 29 years.

4519. For what portion of that time did you drive a privileged cab?—I drove one for Parker 25 years ago for about two years. I drove one for Bronge about 20 years, and the last one I drove was for Gunnham.

4520. (*Mr. John Burns.*) Tell us the stand?—In the Great Northern Railway.

4521. (*Chairman.*) All the Great Northern?—And the Euston.

4522. Now we should like to know your views about the privileged system?—Well, my views are these, that for all cabs to be on the same footing, that is to be all street cabs, would be beneficial both for horse and man, and be a great assistance to a proprietor in regard to the valuation of his property. It would likewise relieve the congested traffic in the streets of London by cabs going in opposite directions back to their various stations; it would be a great ease to the horses and likewise an ease to the man.

Mr. C. Knighton.

4523. Do you think that it would be fair that the companies should charge them a fee for coming in to ply in the stations?—Well, as far as I am concerned, the men have no objection to a toll being charged so long as they are all on one footing.

4524. That is what I mean. You think that there would be no objection to the charge of a small fee as they come in?—No, I am sure there would not, they would willingly do that; where the great objection lies is this: you see a privileged man comes out with his cab into the streets with a job and he is first everywhere in a manner of speaking. Of course you do not understand it like I do, but he takes the road back to his station and he is often crawling through the back streets intercepting a job that would go to a street rank; that only breeds a very bad feeling amongst the men whereby that man will not put on a rank; if he does the consequence is the street men back and front him in such a way that it is impossible for him to get a job, so he must go back to his stand to get another job. Therefore I say that the horse has got to do a double journey for the single fare, and when he gets into the station again in all probability there is a train in and only a few cabs. Out he goes again, and his

Mr. C. Knighton.
12 July 1894.

horse has no chance whatever, and so it is continually all day long, whereas with the street man he gets off we will say from the East to the West and he puts on to the nearest stand that he can possibly get to so as to relieve his horse and to cause the horse to have a rest.

4525. (*Mr. Lough.*) Do you find it more difficult to earn a living now than you used to when you commenced work?—In regard to earning money do you mean?

4526. Yes?—Yes, a great deal.

4527. Your wages are not increasing?—Oh, on the other hand, the other way.

4528. They are diminishing?—Of course they are.

4529. I may just ask your earnings as a cabman?—They are not to be compared with what they were—well, take them back as recently as 10 years ago.

4530. Can you tell us what they amount to for a year on an average?—I reckon I am a very steady man; I work on an average 14 hours a day, and my money I should think comes to 23*s.* or 24*s.* a week taking the year through; that is on the average.

4531. (*Chairman.*) And 10 years ago what would you put it at?—I should earn 30*s.* and 35*s.* a week.

4532. (*Mr. Lough.*) Is this decrease in the earnings owing to there being too many in the cab trade for the work that has to be done?—I do think so—too many cabs.

4533. Too many cabs?—And likewise the other facilities that the railways have put into the streets for the public to avail themselves of; that is, those omnibuses.

4534. And has the underground railway interfered with you?—Well, in a great measure it has.

4535. Have the cheap 'busses interfered?—Yes, that has interfered with us greatly.

4536. So that altogether you think there is less work for the cabs to do?—Yes.

4537. And a great many too many cabs for it?—There are too many cabs.

4538. How many cabs do you think there are too many?—I should think there is quite a third.

4539. Are there more men than are wanted?—Yes, more men.

4540. How many men could be spared do you think?—Well, I should say, if I had my way of working these cabs, each should be worked by two men; each cab should have two men and each cab should have three horses, and by paying a certain amount of money over and above what they would pay now for one horse it would enable the proprietor to keep that third horse going so that a man would have a fair way of living both by night cabs and day cabs. And the way I should arrange it would be this; the morning man to get on the cab at 6 o'clock in the morning and be done with it about 4 or 5 o'clock in the evening, so that the night man should have the cab one or two hours longer; he should get on the cab between 5 and 6 o'clock in the evening and bring it back about 4 or 5 o'clock in the morning; that, I think, would be equally dividing the work up so that the morning man would have all the early work and the night man, on the system of night men who come out in the evening, would have all the night long work.

4541. How many hours a day would you expect a man to work under that system?—I think it a fair system that the morning man should have 10 hours with his cab and the night man 11; the night man should have the preference of one or two hours longer on account of being in the dead of night.

4542. Would you let a man have one week of the cab in the morning and one week of the cab at night?—No, I do not think that would do. Some men are better hands for a night work cab than others are; they would arrange it—the two men would work it easily and better in that way, they would get more into a system of working.

4543. Do you think there are sufficient cab ranks?—No, there are not. There are plenty of cab ranks sufficient to put cabs on but they are not in places fit. For instance, they have made a rank in Lincoln's Inn Fields to put 100 cabs there. They would never get off in a twelvemonth. There is another rank for 40 or 50 cabs at Brunswick Square a place where there are not two cabs called a day. In places like that it is utterly useless to put rests. I do not want you to put them in congested thoroughfares causing obstruction and evil, but they want to be placed in such positions that the public can easily get at them. In the vicinity of Regent Street, Oxford Street, Bond Street, of all places like that where there is plenty of business. It is no use putting a cab half a mile away from a principal thoroughfare where they cannot get at it and cannot see it.

4544. Have you had much experience of police courts?—Well, I have not given them much trouble.

4545. How often have you been in them, could you tell us?—I could not say exactly, my record is at Scotland Yard; I do not suppose I have been summoned a dozen times in the whole 29 years.

4546. Do you think the police are hard with cabmen from your knowledge?—It is all on account of the men; some cabmen give the police mere trouble than others. Of late I have found the police very good; I have no fault to find with the police, none whatever. If you are troublesome to the policemen of course you must expect them to be troublesome to you, as they are like ourselves, men that can, what I call, give and take, and if you are polite with them they would look over little things that they would not if you were saucy with them.

4547. (*Chairman.*) I think you say you find them more agreeable lately than they used to be?—Oh, decidedly; I must say the police are cent. per cent. better than they were 20 years ago.

4548. (*Mr. John Burns.*) Do you attribute that to better education?—Probably that might be and likewise the assistance of some of our influential gentlemen who have interceded for us, I expect.

4549. (*Mr. Lough.*) Shelters; I meant to ask you a question about them when we were talking about the stands; do you find the shelters useful?—Very, yes; they are very good places, but they are not what I thought they were first intended for.

4550. What did you think they were first intended for?—I thought they were intended for men to go in and rest out of the wet and cold, and such like.

4551. What are they for?—I call them men's refreshment houses.

4552. (*Mr. John Burns.*) Coffee shops on wheels?—Coffee shops.

4553. (*Mr. Lough.*) Does that mean that if you are not prepared to spend money you are not expected to go in?—They do not want you in; they want your room in preference to your company.

4554. What change would you make in them; would you have more shelters?—I should like to see more shelters; by having more shelters we should be able to go into them more, because there would be a great number competing one against the other; of course those places would not all be patronised as they are.

4555-6. You would like them to be freely open for all the cabmen on the stand to rest in?—That is what I thought they were intended for.

4557. And to read the papers in?—Yes.

4558. Instead of money-making affairs?—Yes, that is it.

4559. Would you like them to belong to some authority like the municipality?—I should like them to be similar to the County Council, a body to have the whole management of them.

4560. Are your in favour of sixpenny fares?—I am willing for anything that will alter the cab trade for the best, but I cannot see where that is coming in to alter it. For instance, we will just put it in this way: I am standing on St. James's Street one, two, three, four, five hours, and I have stood there all day; I get off, we will say, after standing there four hours, and then I get a sixpence. It is no money at all. And then again, you see, your proprietor will want equally as much money if it were a sixpenny fare as he does now it is a shilling fare, so that actually you will be riding at 50 per cent. less than you are at the present time, and he would demand the same fare.

4561. (*Mr. Hopwood.*) You mean you would be driving?—I should be driving; I would say that the sixpenny fare would be no benefit at all.

4562. (*Mr. John Burns.*) Would you not be carrying 60 per cent. more fares?—No, sir.

4563. Do you not think a cheap fare has a tendency to create cab riders?—No, the omnibus is too cheap; my opinion is that no person has a cab unless he wants it; that is my firm conviction of people riding in cabs. I carry some of the best gentlemen I may say in this land, and they all know me, and I know they do not have a cab unless they want it; I am positive of it.

4564. (*Chairman.*) Do you not think they take it out of friendliness to you?—No.

4565. What sort of a cab are you driving now?—Until I got the sack through this strike job I was driving a four-wheeler cab.

4566. (*Mr. Lough.*) India-rubber tyred?—One of Reckitt's best cabs; I do not think an india-rubber four-wheeler cab is necessary, in fact it is a disadvantage to the horse.

4567. (*Mr. John Burns.*) You had not completed your answers on the privileged system; have you anything to add?—Well, what I have an objection to are these railway omnibuses, they stand alongside the platform with horses in ready to convey the passengers to where they want to go. I think that a great monopoly if they are to stand there and rob these cabs of the best of their fares, which they do, four or five passengers and a lot of luggage which would take two cabs to take away, and stand there and ply for hire nothing more or less; and if they are allowed to do that, I consider they are robbing us of the best and the cream of our work.

4568. Now with regard to supplying these private omnibuses with fares and luggage, is it not a fact that under the private omnibus system that prevails at most railway stations the railway porters employed by the company co-operate with the private bus drivers and conductors to take the cream of the fares to the private omnibuses whilst the cabmen have the worst, which frequently happens?—That is quite right, that is my argument; I want these omnibuses to be empowered the same as we are, that is if a girl or an old woman comes with her box and she wants a 1*s.* ride for 1*s.* 2*d.* I consider that they should be the same as we are, sir, compelled to go with it. Instead of that they do not move under 4*s.* I am perhaps in the railway and take my turn behind 40, 50, or 60 four-wheeled cabs; when it comes to my turn I have perhaps to take an old woman with her box for 1*s.* 2*d.* I think they should be bound to do the same, and when it comes to my turn, if there is five or six good people with three or four pieces of luggage I should have it, but at present that does not come to me, it is the omnibus that has it.

4569. Apart from the inequality of terms which the cabmen receive as compared with the private 'busses at railway stations, there is a preference given by the porters to the railway omnibuses as against the cabmen, and the fares are specially selected by the porters co-operating with the private 'bus driver so as to get the best, whilst the cabmen have the worst that are left behind?—They do do so unless a fare says, "I do not want a 'bus; " I will have a cab."

4570. But there is a tacit understanding between driver and porter?—They do do so; it is not recognised, but it is so.

4571. You consider these men ought to be licensed?—I do, if they are going to ply for hire the same as we do on the side of the platform, I consider they ought to be licensed the same as a cab.

4572. Or a bus?—Yes.

4573. Do you consider that the privileged cab system secures this supposed object, the convenience of the railway traveller?—For the railway traveller, do you mean?

4574. Does the privileged cab system give to the railway traveller who comes into a station greater cab accommodation than he could secure if all cabs went in irrespectively?—Certainly not, sir; for instance, look at Waterloo, why you will find that place lined from morning till night with cabs waiting to get in; did you ever hear such nonsense as that? Go to York Road or any centre like that and you will find cabs there waiting to get in to get a job.

4575. (*Mr. Whitmore.*) Is there anything to prevent the very worst cab in London getting in?—There should be.

4576. No, but at present in London?—The man at the gate would say, "That cab is not fit to come in, you "will have to take it back."

4577. He does do that?—He does it, sir.

4578. (*Mr. John Burns.*) Subject to a man passing all cabs through a gate, or what is better the police inspection preventing bad cabs getting on the street, in your opinion all railway stations should be thrown open to the cabs?—The police inspector standing there?

4579. Subject to their being passed by a man at the gate on going in, all the cabs, street and others, should be admitted into all the railway stations?—On the same footing, yes.

4580. Do you think that the railway passengers and the public would be better served through that means?—Well, they would be on equal terms as they are at the present time.

4581. And you said just now that it would be a rest to the horse, an advantage to the man, a saving to the proprietor; you adhere to that?—Yes, here are two cabs, a Great Western and a Great Eastern, and each have to go to the station of the other. If he were a street cab he would stop there or have a job there or somewhere out that way; at present he has to go to his station, and there are two empty cabs on the road causing an obstruction, plying for hire; the horse gets no chance of a rest, and they require double the time for doing the job, whereas if that man went there he would stop there, get another job back again or further, or the horse would be resting. It would take him three-quarters of an hour to get back here, whereas in the three-quarters of an hour the horse would be rested and the man would be fresh, whereas under the present system the moment the cab gets back again to the station from which it started away it goes again with another fare.

4582. In your opinion are privileged cabs, hansoms and four-wheelers, superior to street cabs?—No, sir, not at all.

4583. Are they better or worse tell me?—The station cabs are a little more shiny in some instances, but the horses are not right, that is my argument, the horses are leg weary, absolutely tired out.

4584. Have you ever noticed anything at the inspection of cabs?—In what respect?

4585. Is it the general impression that a bad cab can be passed if a tip is given?—It is done so, sir.

4586. Have you ever seen it done?—I should be very sorry to say I have seen it done, but it is done.

4587. (*Mr. Whitmore.*) Have you seen it done?—I have not seen it.

4588. That is a perfectly clear question; have you seen it done?—I have never seen it done, but I know it is done. I have never seen the thing done so, I would not belie myself; it is a known fact that they can get a cab passed at some districts where they cannot get it at others.

4589. That you do not speak of from your own knowledge?—No, sir, I would not like to say anything on that point; what I do not know I would not say anything about.

4590. (*Mr. Hopwood.*) A point on the sixpenny fares; you are not in favour of the sixpenny fares, because, as I understand you, it is very hard to be taken off a stand after hours of waiting for sixpence?—Yes, sir.

4591. Do you see any objection to a system by which the public should be empowered to call a cab crawling along the street for a fare of sixpence a mile?—He could do so now under the present system; if a gentleman were to say to the cabman "Will you run me to so and so for sixpence," the cabman might say, "Yes, sir, I "do not mind taking you for sixpence."

4592. Ah, voluntarily?—Voluntarily, yes.

4593. Do you see any objection to making it compulsory?—Well you might do so, but I cannot see how you are going to do; they are two distinct things altogether.

4594. I do not follow you?—Why the consequence is that the preference would be given to the crawling cab instead of the one on the rank. You know there are people about who would use all manner of means to prevent losing money or spending money what they call foolishly; if they could wait five or six minutes to get a cab for sixpence they would not go to the rank to fetch one, so I do not think that would do.

Mr. C. Knighton.

12 July 1894.

4595. As to omnibuses, you think that the station omnibus should be licensed?—I do.

4596. Do you not fear the competition of the railway companies if a system of licensing is allowed to them?—That is just what I should like to see; they would have something to do to compete then with the cabs, those big things want pulling about, sir, they want some horses in them; you send them with an old woman with her box for one and twopence and they will very soon get tired of the job.

4597. The point is this: if you admit the principle of licensing the station omnibuses as hackney carriages, do you not think that the railway companies will ask for licences for station cabs also?—That does not matter, they would have to have men to drive them.

4598. And they might get them from the country as they do the station drivers?—Get them from the country; it would be a very funny countryman that would drive a cab in London.

4599. They have done so for omnibuses?—I am a driver of many years standing. I can safely say that I do not know all parts of London.

4600. (*Chairman.*) I ought to have asked you, in the first instance, what you were before you took to driving a cab?—I was a butcher, sir.

4601. Working in London?—Yes, sir.

4602. You knew something about London before?—I am a London man, born and bred.

4603–4. (*Mr. Lough.*) Have you experience of those cases in which two men work one cab?—Yes, I followed a man myself.

4605. You have done so?—Yes, where a night man has followed me.

4606. In that case how many hours does each man work at present?—The morning man generally has about 10 hours, and the night man about 12; that leaves two hours for the cab to be in the yard to be cleaned.

4607–8. That is the question I wanted to ask you about; how many of such cabs do you think there are in London?—Well, that would be a very hard job to say of the fourwhecled cabs.

4609. (*Mr. John Burns.*) And hansoms?—Four-wheelers and hansoms?

4610. Five or six hundred?—Well, I would put it at that at a guess very roughly.

4611. (*Mr. Lough.*) Are they all employed in the privileged or nearly all in the privileged work?—Not at all, sir.

4612. They are not all employed in railway work?—No, very few.

4613. Generally all work?—Mostly street work.

4614. (*Mr. John Burns.*) Supposing there were two men working one cab on the system you suggest, would not the wages for 10 hours be less and how much less than the net wages of a man working a cab for 15 or 16 hours; may I put it in this way, if a man working a cab for 10 hours on the system you describe earned net wages 5*s*., would a man on a cab for 15 or 16 hours earn 16*s*. or 17*s*.?—I think a man working 10 hours would be better off by a shilling or one and six a day.

4615. (*Mr. Lough.*) Was it one horse?—One horse working the 10 hours.

The witness withdrew.

Mr. Frederick White called in and examined.

Mr. F. White.

4616. (*Chairman.*) Mr. White, you are President of the Cabmen's Union?—Yes, sir.

4617. Are you a driver yourself?—Yes, sir.

4618. At the present time?—I have not driven a cab lately, but have driven a cab continually for 16 years.

4619. Up till when?—About two months ago, sir.

4620. What were you before you drove?—I was brought up with my grandfather; I drove a cart.

4621. In London?—Not in London, at Sevenoaks; but from there I was sent to a West End shop—friends of my own, relations in London.

4622. Then you drove a little in London before you drove a cab?—Yes, I may say Hill's and Carter's, of Hyde Park Square, arranged for me to come to London.

4623. You had some experience of London and driving in London before you took to driving a cab?—Oh, yes; I drove about the West End of London a great deal.

4624. What is your idea of the makings of cabmen at the present day? Do they make less or more than they formerly made?—When I first started driving I could earn 2*l*. a week.

4625. By working how many hours?—By working something like 13 hours a day, and later, or right up to the time of my leaving off driving, I used to work 17 or 18 hours a day, with all my meals at home; on account of living so near the yard I could go in and get my dinner when I changed; and my money, sir, for 13 or 14 weeks previous to this strike was not 1*l*. a week.

4626. I think you said you had been driving 16 years?—Yes, sir.

4627. So that takes us back to 1878?—Yes, sir.

4628. And has that falling off been gradual?—Gradual; yes, sir.

4629. Did it begin very soon after you took to driving?—About five or six years after, sir.

4630. For some time you kept up pretty much on the level you started at?—Yes, sir.

4631. And gone slowly down hill?—Yes.

4632. Does it get worse every year now?—Yes, sir.

4633. What do you attribute that to?—I think it is the increased competition: and I may say, sir, that the city work is largely cut up by the telephone. Of course it used to be a common thing for a cab driver to take a fare into the city, and when he was in the city he would sometimes get seven or eight short shilling runs from, say, Throgmorton Street, that neighbourhood, to Leadenhall Street, perhaps well within a mile; but what we call very easy shillings, sir. But now the gentlemen seem as if it was hardly necessary to leave their offices; they can do the work by telephone or messenger.

4634. (*Mr. Whitmore.*) You used the word competition just now. Did you mean competition between cabs or competition between cabs and omnibuses?—I meant that the 'bus service had increased very much of late in numbers, and they run so quickly now one after the other. Then there is another thing. At one time, we will say after 11 o'clock at night, the cabmen had the privilege of driving everybody home; now the 'buses run to after 1 o'clock in the morning, and that means a great deal, because the people who used to ride late at night would often be a little bit liberal towards the cab driver. Well, now, they can go to Fulham, or any way down that road, sir, by 'bus.

4635. (*Chairman.*) You talk about them being liberal. I want to know what is your experience upon this point. Do you think that a man who drives a very good lot gets, as a rule, more than his fare—a sort of extra gratuity on account of his having a good lot?—That is rarely the case, because there is a class of people who use cabs who will have the utmost they can get for their money. But, at the same time, there are people who are more liberally disposed towards cab drivers, who if they are going, we will say, to Hampton Court, Richmond, and so forth, will have a good lot. I think, sir, that the man who drives a very good lot has to take a great deal of the rough, if I may use such a word, with the smooth. There are people who will wait at the corners of streets for five or six minutes until they see what they consider to be the best, and frequently when they do get in it is two miles for the shilling.

4636. But could you say, on putting the two together, that a man gained an advantage by having a good lot?—Yes, he would be a gainer, sir.

4637. On the whole?—Oh, yes, he would be a gainer, because he would get these fancy jobs at times.

4638. I understand that you attribute the falling off in your trade partly to the increase of other means of communication and partly also to the increase of the number of cabs?—Well, I do not think, sir, that we

can say much about the increase of cabs, because I think the police report will be against us there. I think the cabs are decreasing.

4639. Then as to the number of drivers?—Well, I think that cab riding itself is decreasing, sir,—that there are not so many riders as there used to be. I will give you an instance.

4640. I said drivers; increase of men coming into the profession, that is what I mean?—Oh, there is a great deal too many drivers, sir.

4641. I mean, do you attribute part of the overcrowding to the number of men who take to cab driving?—Well, I think, sir, there are a great many too many drivers, and at the same time it enables the proprietor to get, or has done, considerably more for his cabs than he used to get, because in the cab-yards now you will find a great number of men unemployed, waiting at the top of the yards ready to be called down, and that of course gives the proprietor a certain amount of leverage whereby he can get sometimes what we might say a very unreasonable sum from the drivers who are unemployed. I myself may mention that frequently I have had to part with things for the purpose of making up money that I have never earned. Sometimes I have had a watch three months out of the 12, and the other nine months a pawnbroker has minded it; and that has frequently occurred not only with the watch but with other things.

4642. But what I was trying to get at was this. The general opinion seems to be, so far as we can collect it from our witnesses, that there are too many drivers, too many cabs—the whole thing is overdone, and that the issue of licences should be stopped?—Oh, yes, there are too many drivers, sir. We have something like 15,000 drivers, and at the same time something like 11,000 cabs. We have never got 11,000 cabs running, because a great number of the cabs would have to go in for repairs, and you might perhaps bring that number down, something more like 8,500 or 9,000 cabs. Well, then, you would have something like 6,000 more drivers who would be out of work.

4643. Very good. Then how would you stop that? Would you be in favour of leaving off issuing new licences for a time?—Certainly, sir.

4644. Would you be in favour of knocking out any of the licences in existence now?—No, I would not be in favour of interfering with the men who are licensed.

4645. Would you only stop issuing any more for a time?—For a time, sir.

4646. That would bring it down very very slowly; hardly appreciably till several years had passed?—I think that the black sheep of the trade might be weeded out, if I might go so far.

4647. You mean men who have got into trouble?—I do not mean to say for any trivial offence, but what were considered unfit; and frequently the good men have to suffer for that class of driver.

4648. What are your opinions about youths and boys driving?—I could mention a case where a man by the name of Charles Case, who has some stables, and is a very wealthy man, took one of his sons, who is something like 17 or 18 years of age, down to Scotland Yard a few months ago, and this youth was licensed. Now, if it should be a matter where, say, a man should die and leave a son of the same age, we might say it would be a good thing, if this lad had a thorough knowledge of town and horses generally, that he should be licensed, so that he could support his mother or brothers or sisters; but we think that where the majority of these cases do happen it is generally with the more wealthy, who are anxious to get their sons licensed, and in the majority of cases it has been an unfair competition with the man who has to keep his wife and family.

4649. (*Mr. John Burns.*) Then, on that point, would you abolish the privilege that the proprietors now get from the police of entering their sons a year lower than the legal minimum?—Just so.

4650. But, apart from this, would you be in favour of raising the legal minimum for everybody?—As to age, sir.

4651. Yes; saying no one shall drive till they are 20 or 21?—I should say 21, sir; because, of course, we could not deal with one side without the other, not fairly.

4652. What is your experience about the examination of drivers and of the lads before they are passed; do you think there is an efficient examination of the drivers, to begin with, as to their capacity for driving, and as to their knowledge of London?—I think, as far as the examination of London, of the drivers' knowledge of town, that there is not a great deal to be said about that, for any old driver could so coach anybody up by just giving him a few places that he feels confident that he will be asked on paper, that the man can go and learn, but there is not sufficient guarantee given that a man is qualified to drive. I may tell you that I know of a case where a man went down to Scotland Yard, and got the requisition, and nobody had ever seen this man drive, so he stopped a man with a horse and van, gave this man fourpence to go and get a pot of beer while he drove this horse and van up the street and back, so as to show the man who was going to sign that he was a qualified driver—that he had seen him drive. It is not very satisfactory. I can assure you, sir, many times, in driving along the streets, I have got down and rendered assistance to hackney carriage drivers who have not known what to undo or what to do, when horses have fallen down, so as to free them; they have not really known how to go about their work.

4653. It is true, is it not, that a great many—I think we have had it stated that as many as one-half, of those who come to your business come to it without knowing anything about horse or harness or driving?—That is frequently the case.

4654. Would you put it as high as half—that half the drivers in London are inexperienced before they begin?—Yes, sir, I think you might go that length.

4655. How about the inspection that is necessary before the cab can be passed; do you think that is efficiently conducted?—There is just one little matter.

4656. About the drivers?—About the drivers. It seems that countrymen who come to drive in town go to Scotland Yard, take a letter from one of the suburban owners, and, after they have got their licence, they come and drive in London, and a great many of these men are not qualified. They get their licence through the letter. What we say is that they should have a different colour, the colour of the licence, for the men who drive in the suburbs, so that no man should drive in town without he has a licence to drive in London. Then, so far as the passing of cabs is concerned, that is a little bit unsatisfactory. Of course for seven years I drove my own cab, and I can assure you that two friends of mine—and I would not make an assertion without I could substantiate it, and I will if you desire it to be done—went to a sale and bought two cabs. These cabs were not in bad condition, but they were not fresh in paint or varnish. They took those to Albany Street to be passed by the police inspector, and he told them to go and get a coat of varnish on the cabs. They met a proprietor who had got a number of cabs. "Oh, I can manage that for you"; he took these men with the cabs, and five shillings apiece paid to the inspector, and then plates were put on the cabs.

4657. (*Mr. Whitmore.*) The cabs belonging to the proprietor of the cabs which had been bought?—These were the cabs that had been bought by these two men. They were old drivers, and the proprietor had sold up his stock to go abroad, and they bought two cabs and a couple of horses too; they were not in bad condition but they were not in such a condition as they ought to have been.

4658. (*Chairman.*) Who took them and got them overhauled?—A man named Hollings.

4659. A man who had nothing to do with them, simply all friends?—Previous to becoming a large owner he had been friendly with these people.

4660. He acted from friendliness and got these things passed?—And got these things passed, sir.

4661. Do you think before a man obtains a licence he ought to prove that he intends to drive as his sole occupation?—To drive a cab?

4662. Yes.—Oh, certainly, sir.

4663. You would not be in favour of licensing him at all if he does something else as well as driving?—I think there are some trades where it is necessary to draw a little bit of a line. Now painters can frequently earn very good money during the summer months.

Mr F. White.
12 July 1894.

have known these men to persevere as cab drivers during the wet weather when they cannot do any painting. But where a man, I think, would show that he is a genuine workman, and had got an understanding satisfactorily to everybody, I would not prevent that man doing a bit at his own trade. But we have so many men who now hold licences that the proprietors frequently do not use them only just now and again, and they use them for their own purposes, and these men when their licences go in often bear a better character than a man who is continually driving and runs all risks has, because these men do not care to work above two or three days and fill up any vacancy that a proprietor may want, and they are the men, sir, that I should, and I consider it would be fair to, prevent holding a licence.

4664. Well, but those men you have just been describing, must do something during the remainder of their time when they are not driving. What do they do to fill up their time?—We look upon them as being "street-corner men," who will work only when they are hungry.

4665. You mean they are not working?—No, they stand about.

4666. They are not working at any other occupation?—No, sir.

4667. (*Mr. Whitmore.*) How would you stop that?—We think when a man is employed by a proprietor that when he leaves that employment it should be notified how long he has been in the man's employ, whereas frequently, although the licence is held by this proprietor, the man has not been on a cab for six weeks, and frequently longer than that.

4668. (*Chairman.*) As I understand you, you do not object to a man driving occasionally if he has some *bonâ fide* trade or occupation in which he may fill up the remainder of his time, but you do object to allowing a man to drive if during the remainder of his time he is a mere loafer?—I think a genuine workman ought not to be prevented from filling in his time, but the loafer, I think, is a disgrace to the cab trade.

4669. Do these represent your opinions; you think that a man who is an occasional worker between whiles ought to be allowed, but a loafer altogether ought not to be allowed to drive?—I think so.

4670. Have you ever had anything to do with police courts in your time, I mean as a sufferer?—Well, I have been summoned a few times, sir.

4671. You have seen something of the dealings with other men?—A great deal, sir.

4672. What is your opinion on these three points. In the first place, what do you think of the relations between the police and the cab drivers?—They are very bad indeed, very bad. I assure you that I consider that three parts of the cases as against cab drivers are manufactured. I think that the police necessarily must do something to show that they are needed, and going into a great many of the police courts I think there may be three or four cases that might occur from overcharges and so forth, but I have known as many as 70 and 80 cabmen summoned for looking after what I consider to be their living, that is to say they are summoned for such offences as loitering, causing obstruction; and when we take into consideration that the cab rank accommodation is so very scant, not nearly sufficient for the men to place their cabs upon, it is not surprising the drivers go searching about and sometimes will have a turn round, and that means a visit to the police court, and the worst of it is this, sir, that if they offer any explanation they always have to pay more money than if they go in and plead guilty.

4673. Now you are coming to the practice of the court, which is not what I asked you. I asked you first what were your relations with the police out of doors, friendly or unfriendly?—Very unsatisfactory.

4674. Do you think the relations with the police are better or worse than they were when you began driving?—I am bound to say, sir, that they are better.

4675. (*Mr. Whitmore.*) How do you account for that?—Well, I will tell you, sir. I think we, as cab-drivers, have largely improved during the past years; I think that the police have also improved, and working men generally have improved.

4676. This is a question I had not intended to ask you, but your answer has suggested it to me. Do you think, in spite of the bad times, and the makings and earnings of the profession being less, the quality of the men has improved?—Oh, it has, yes.

4677. You think, in spite of less profits, your fellow-drivers in London are a better set of men than they were when you started at it?—Oh, yes.

4678. (*Chairman.*) The next question about police courts you have partly answered already; I understand you that in the police court the police evidence is in your opinion not genuine?—No, sir; and you see it is very dangerous to contradict the evidence, because it means this. I can tell you that latterly sometimes we have defended as many as 10 cases in one day.

4679. (*Mr. Whitmore.*) You mean your Union has?—Yes. Mr. Hannay got so excited at Marlborough Street the other day when he saw all the different cases being defended, he got his red book in his hand, threw it down on the floor, lost all control of himself, and said, "I shall never get away." Here again, instead of fining the man 6*d.* and the 2*s.* costs that he would have done if the man had pleaded guilty, he fined him 10*s.*

4680. (*Chairman.*) Well, then, is it your experience that men sometimes plead guilty in order to get away and get a job rather than fight it out?—Oh, yes; in fact, sir, some three months ago, myself and a gentleman, he was a gentleman of position, went to Albert Street, and we had been discussing the question, and we counted something like 35 cases disposed of in something like 23 minutes. We timed them. The last man came up, you know, "Guilty, or not guilty?" "Guilty." "2*s.* 6*d.*" So-and-so, 3*s.* There was no evidence.

4681. (*Mr. Whitmore.*) Did they plead guilty?—Well, they pleaded guilty because they had not the means of defending the case, and they knew it was unwise, but the men were ready in a batch, and as they passed through the magistrate said what they were to pay, and they walked out.

4682. (*Chairman.*) But do you feel convinced that they were not guilty?—I feel convinced, sir, that a great many of the men were not guilty, and in fact all the old workers of the trade, when we had no organisation, always used to say to them, "Well, it is no use "you defending yourself, you had better go and plead "guilty and shut the policeman's mouth." I will tell you what I have known. I have known a man who ought to have had a month's imprisonment for striking a policeman with his badge go in and plead guilty, pay 2*s.* and the cost of the summons, and another man who had two gentlemen he called up to speak on his behalf was fined 10*s.* for taking up the time of the court, the man who really thought he had a very good defence.

4683. I was going to ask you this question arising out of what you have said already about the present system. Do you think it would be an improvement having a special court for dealing with cab cases only?—Yes, sir, yes.

4684. Why do you think it would be better than the present system?—Because I think if there was a special court the truth would be able to be arrived at, and I think, however trivial a case may be, that it is necessary that the truth should come out of that case.

4685. Why do you think there would be better means of getting at the truth in a court that is given up to this one subject rather than in the other?—Because under the present system there is no trial at all. He is only walked up to pay. It is only bringing the law into ridicule and contempt.

4686. That is because you always plead guilty; if you did not plead guilty you would have a trial, would you not?—Yes, sir, but it would be more expensive.

4687. (*Mr. Whitmore.*) Why should not the magistrate sitting in court occupied with cab cases become equally weary of charges of loitering as Mr. Hannay was on the occasion to which you allude?—That might be brought about by having younger police magistrates in some of our police courts that would be more painstaking.

4688. Yes, but the younger magistrate would be as vigilant in the court, which would not take only the one class of case?—I think some magistrates, a few, do pay a great attention to the business that is before them.

4689. (*Chairman.*) You might get that special sort of magistrate in your special court. What we have not been able to arrive at from any of the witnesses is why

they should get better terms and more justice from a court that tried only that one class of cases?—You are driving down Whitehall, a policeman states you are loitering about. It is only a trivial case and it is hardly fair to put that man in the dock simply for getting his living, for encouragement for being a persevering man; a man in any other business going about it in the same way would be considered a good worker, a cabman takes his cab, looks about the streets to find a customer, he is made a prisoner for persevering, whereas the other man has the credit of being a persevering man.

4690. That would be an alteration of the law you would desire; granted that the law is as it is, do you think you would have better justice or better chance of getting redress in a court given up to cab cases only, rather than in the police court?—Yes, sir, I think so; I think our magistrates in many instances are too busy.

4691. The magistrate who has to try cases would be extremely busy too?—We could not contract our cases; at the same time we could have different men.

4692. (*Mr. Whitmore.*) Different magistrates you mean?—Yes. There have been a few lately. My experience has been this; the other day at Marlborough Street a case was not finished till half-past 4, there were 59 or 57 cab cases and busmen combined, and they were all rattled through in about three-quarters of an hour.

4693. (*Mr. Lough.*) This is your point, that these courts are too busy with other business to give attention to these small and trivial cases, and you said if there was a small court with a magistrate much less highly paid he would give all his time to it. That is the reform you would ask?—Yes.

4694. (*Mr. Whitmore.*) Supposing the number of the existing magistrates in London was increased and the number of courts was increased and more time was therefore given to each for the disposal of all the different classes of cases which come before it, might that not meet your grievance?—Well, sir, our men have complained for years that they are treated very harshly and made criminals of for what they consider only civil offences.

4695. (*Mr. John Burns.*) You not only object to the criminal association of an ordinary police court where cab cases are tried, you object to the police association and the influences that are generally brought to bear against the cabman by the comrades of the policemen who make the charge against them?—That is so.

4696. (*Mr. Whitmore.*) Precisely those influences would be brought to bear, would they not, in a special court?

4697. (*Mr. John Burns.*) No, certainly not.

4698. (*Mr. Whitmore.*) I want to know.

4699. (*Mr. John Burns.*) The police back one another, I understand, in charges against cabmen?—Yes.

4700. (*Chairman.*) Surely that would be the case in whatever court the cases were heard; the police would always be the witnesses and they would always back one another up; I do not see any escape out of it?—I might mention a case which would throw a little light. Before Mr. Newton there were one or two cases; we always think the magistrates back the policeman from our point of view; it has only been our experience. Mr. Brooks, who is a large fruiterer in Regent Street, went up to give evidence before Mr. Newton one day on behalf of a cab driver, and Mr. Newton told him that he ought to be ashamed of himself to go up there and contradict a policeman. Two days after that Mr. Jay of Regent Street went across to Mr. Newton to support the police. Mr. Newton told him it was very good of him, as a West End tradesman, to go and support the police; those two cases happened.

4701. (*Mr. Whitmore.*) What is to prevent the same thing happening in a court specialised for police court cases as well?—That is so.

4702. (*Chairman.*) I am not trying to drive you away from your position that things are unsatisfactory as they are; but I want to see why a special court given up to that one set of business and no other would give you any better chance; the same unfairness that goes on now might go on there, I should think?—Our line is this, sir: that by having a special court we should be able to take up sufficient time to try and call witnesses, whereas we do look upon it now, sir, as being dangerous to call witnesses. If we had a court which was given up purposely for these cases we should, if we had two or three witnesses, be enabled to call them, and we think we could frequently clear ourselves or make our case good, sir, whereas now we have had people of position go up for us, and the magistrates—if I may use the word—frequently chop them up, sir, for taking up the time.

4703. Then it comes to this, does it—I do not want to put words in your mouth, I understand your view to be this—that if you had a court given up to this kind of business only, there would be more chance of your having a good hearing and a fair trial than there is now, when your cases are heard at the fag end of a day after other business is disposed of, or when the court is tired?—Yes, sir.

4704. I want to ask you a question on quite a different subject now, that is on the privileged system at railway stations; you have had some cause to consider that?—Yes, sir.

4705. Have you ever driven a privileged cab yourself?—I drove one of the London Improved Cab Company's for about 18 months.

4706. What are your views about the privileged system; is it an advantage to the public?—No, sir.

4707. Good for the men?—No, sir.

4708. You would prefer to have it done away with altogether?—Yes, sir.

4709. Free the stations as open places for anyone to go in?—Yes.

4710. Would you see any objection to the drivers being charged some sort of a toll for going in?—That is done now at the South-Western; we have frequently said that we would pay the toll if necessary; but on the other hand we have looked upon the railway companies as being very wealthy people, and thought that we were there for the accommodation of the passengers; although we would pay the money, sir, to get the stations thrown open, we do not think they have any right to charge us.

4711. The first point is to get the stations opened?—Yes, sir.

4712. To get that you would be willing to consent to pay the money, but you would rather have them opened and not pay the money?—Yes, sir.

4713. (*Mr. Lough.*) One question about police courts; you are not insisting that general offenders should escape unpunished?—Oh, no.

4714. You regard it as the interest of every honest driver that all bad characters in the trade who are caught should be punished properly, do you not?—Yes, sir.

4715. But your notion is that the present jurisdiction of the police court tends to create criminals rather than diminish them?—Yes. I mentioned just now that a man who really should have had a month's imprisonment for striking a policeman pleaded guilty and got off by paying the cost of the summons, whereas if that case had been thoroughly gone into that man would have been punished as he deserved to be. And then the man who frequently behaves the worst gets off the lightest under the present system, and the man who really feels that he has a good answer to his case has to pay more for taking up the time.

4716. Well, your point against the present system is that really justice is not done under it?—No, sir; far from it.

4717. The men are classed together and stigmatised as criminals, hardly getting a trial?—That is so.

4718. Instead of any patient inquiry into their difficulties?—That is so, and while we are just mentioning this, sir, there is this matter that I perhaps ought to mention, and that is that we have over 3,000 temperance men, cab-drivers, and a great number of them have been charged with drunkenness; that is to say, that if they have had an argument with the policeman in the small hours of the morning they take them in and charge them with being drunk. Well, we think, although in the majority of these cases the men have been enabled to clear their character, that 7*s.* 6*d.* is a great deal too much for a poor man to have to pay for a doctor.

4719. (*Mr. Whitmore.*) Is that the case at the police court?—At the police station, sir. And we also think that a man should be enabled to have what doctor he

Mr. F. White.
12 July 1894.

thinks fit, providing he is a respectable medical practitioner; that he should not be, as it were, married to any man the police like to send for; but he should be able to have duly qualified registered men.

4720. Tell me about the privileged cab system; I suppose you think it is desirable that the cabs which habitually work from railway stations should be a good class of cab, and that their drivers should be specially respectable men?—Well, I think, sir, that all men who are licensed by the police to drive cabs should have equal rights, and I think that the public could be better served in many instances, because if you would look at the class of cabs in the Chatham and Dover stations they are very rough, and frequently those cabs which are privileged to ply for hire at some of the railway stations would simply starve in the street, only by ranking up inside the station yards the porter goes with the luggage to the man which is first; these cabs could not live at all in the streets.

4721. You yourself, I think, have used the expression "black sheep" as applied to certain cabmen?—Yes.

4722. Do you not think it well that there should be some system by which the worst cabs and the worst cab drivers should be excluded from that special kind of work?—Yes, sir.

4723. How would you suggest that that should be done?—So far as the drivers go, I think that the powers, those who are looking after the licensing of those men, should pay more attention to them.

4724. Originally?—Yes, and the cabs, a great many of them are only just fit, and a large number of those that should be broken up are cabs that ply for hire in railway stations. I will not say anything about the Great Western and the Great Northern, but the Euston have some very bad cabs, so they have some very bad cabs in the Chatham and Dover stations; the South-Eastern have very bad cabs.

4725. If the privileged system were abolished altogether, would any appreciable advantage follow to the cab drivers as a whole?—Yes, I believe, sir, directly that is done the cab drivers will be happy and not until then, because it will make the men friendly, the one with the other, it will be such a great thing as regards thinning the London streets of heavy traffic, because a man, we will say, who plies from Liverpool Street, and goes to the Great Western at Paddington, if he were allowed to enter the station free of charge, or whatever the case might be, would be able to stay there. Now frequently passing such places as the Mansion House you will have to wait several minutes before you can either walk or drive.

4726. But would you object to the railway authorities having the power to exclude a cab or a cab driver they thought was unfit to come into the station?—No, sir, I think they should be allowed; I think that they should have full power to prevent any cabs from going to the stations that they consider to be unfit, and the same with the drivers, sir, if the driver was dilatory in appearance.

4727. Then as to the toll, does not the payment of a toll rather tend to exclude, if there is such a person, the perfectly impecunious cabman?—No, it would only be a penny, sir; I think that would hardly prevent him, because a cabman is very neighbourly, he would go to one of the others and say, "I want to come in "here and I have not got the penny to go in with," and though the cab drivers are a body of men who work against one another, when one is in trouble the trouble of one is the trouble of the whole.

4728. (*Mr. John Burns.*) Is there any special reason why the horses and the cabs and the character of the drivers taking passengers from railway stations should be superior to those which supply the general public?—None whatever, sir, in fact the best property you will always find in the street.

4729. And from the point of view of value of luggage conveyed, the actual cost is against the value of the railway luggage as compared with the value of some things that street cabs convey from point to point?—Yes, that is so.

4730. It is more frequently dirty linen than coupons, bonds, pictures, or jewellery?—Yes, that is so.

4731. And in your opinion from the point of view of value and guarantee for driver's honesty, there is no more need for a privilege for a railway station than elsewhere?—No.

4732. The privilege gives no guarantee as to the man's character?—No.

4733. Does the privilege given to a privileged cab driver guarantee a better class of men or greater honesty?—Worse, and I will prove it, taken as a whole, the privileged drivers are men who have no energy; the energetic men could not go and sit in a railway station for two or three hours, which is frequently the case. He would want to be about; he would be wanting to do something or trying, and all what we call business men, the business men who are cab drivers, sit on their cab and persevere with it, but so far as the privileged drivers go, they will not compare with the street driver in any shape or form.

4734. Then if the railway stations were thrown open to the general street cabs it is almost equivalent to the creation in special districts where there is very little cab accommodation of standing accommodation for something like 2,000 cabs?—That is so.

4735. Does the privilege system inconvenience the outside public by causing congestion outside the stations?—Oh, frequently, and frequently railway stations that are capable of housing hundreds of cabs, at certain times of the day are quite empty, whereas if they were thrown open the cabs that are setting down at these particular stations could go into these various railway stations and take their turn, and it would mean a thinning of the whole of the London street traffic.

4736. Have you considered the question of a weekly wage for cabmen?—Yes.

4737. Are you in favour of it or not?—Yes.

4738. Why?—I think that the last few years, cab drivers have led a life so much of, we might say, a game of chance, because there is no certainty that he is going to reach the proprietor's money let alone getting anything for himself, that it would be far better for the cab driver to know that he was going to receive some wages for the work that he is doing rather than going home day after day with 9*d.* or 1*s.* 3*d.*, as has been the case, and I think that any man who works might be paid for his work.

4739. Assuming a taxameter or mechanical system should be adopted for registering fares, and that the cab driver received a weekly wage, would you favour that instead of the present precarious system?—Yes.

4740. (*Mr. Hopwood.*) What would you call a fair weekly wage?—I have hardly thought that out, sir, but if I were driving a cab again to-morrow—of course I am differently situated, having three children who earn a little money—I would rather take 25*s.* a week for given wages than I would work as I have been going on.

4741. (*Mr. John Burns.*) Would you say 6*d.* a hour, would you call that a fair wage?—Yes, I would accept 6*d.* a hour.

4742. (*Mr. Lough.*) Chair-marking licences, do you know what that is?—Yes.

4743. What is it briefly?—That is that on a man leaving his employer without having perhaps given him a day's money or quite so much as he should have paid, the employer marks the licence in such a way as to convey a meaning to the other owners. Frequently they will spell everything instead of putting it in figures, and if the employer is very spiteful he frequently does it in red ink, and then the man goes from yard to yard and they simply tell him that they have not got anything for him this morning, and I have known men to walk about, good men, respectable men, through that marking, when the licence has had months to go; I have seen these men who have held what you might say a good position among their fellow men walk about until they had become ragged and nobody would employ them, and we think that the proprietors should not have that power of marking a licence so as to ruin a man, but I do not know hardly how we are to get over the difficulty, so far as the law goes, if you go into a shop and do not pay they have a right to summon you, and the same thing applies to the owner with the cab driver, and we think that that should be done, rather than that a man for the sake of two or three shillings should be ruined until he can renew his licence again. There is another system, what is known as the red book—I do not know whether you have had that—that is that the association proprietors send round names of the defaulters each day.

4744. Is that done largely?—Oh, yes.

4745. (*Mr. Whitmore.*) Do you object to that?—Yes, we object to anything like that, sir, because it means ruination to the driver, and at one time a man could get over the difficulty by leaving the Middlesex side of the Thames and going over to the Surrey side now they are amalgamated all round.

4746. (*Mr. Lough.*) You do not mean to say that we should provide an immunity for a driver who owes money?—No, sir, but we think where proprietors have any claims in respect of debts of that kind they should recover them in what we consider a lawful way, by bringing an action for any debt that is owed them.

4747. You would rather they demanded the price of the cab in advance than mark the licence, would you not?—Yes, the marking of the licence is very bad.

4748. It is a small legal point; you want to make it that the owner has really not that right with regard to this document?—No, we do not consider that he should have the right; it has been done for many years, of course, but it is one of the burning questions with cab drivers now. A cab driver may have been in employment for some time, and, the licence having four months to run, they frequently have to walk about for the best part of the four months through not having been able to pay the last day's cab money.

4749. (*Mr. Whitmore.*) But the question of the red book is quite distinct from the marking of the licence?—It shows conspiracy though, sir.

4750. The red book is simply a book kept by employers who register in it a list of drivers who in their judgment have been defaulters?—Yes, only it is sent round to the various proprietors.

4751. Supposing the Cab Drivers' Union had a book, call it a yellow book, in which they kept a list of masters whom they thought were unfair masters, would you have that made an illegal thing?—Well, the Cab Drivers' Union, sir, is not in a position, because they have got so many more cab drivers than what they can really find work for, so that is impossible.

Mr. F. White.

12 July 1894.

4752. No, I am putting it to you as a hypothetical case; I want to know what is really in your mind; is it wrong, in your judgment, that any class of people, whether employers or employed, should keep for the information of the body which they represent information which is of undoubted interest to themselves?—I do not think it is right, sir, that conspiracies on either side should exist.

4753. Well, but do you call the record of material information conspiracy?—Yes, sir.

4754. (*Mr. John Burns.*) You did not object to this red book being used as a means of detecting the defaulters, but as being used for purposes other than that of making known to masters dishonest men?—No, we do not object to the red book if it were carried out with good intentions for the purpose of detecting; but the only thing is it is very hard when a man had proved himself to be a good servant by being in the employ of a proprietor for two or three years, that he should become a defaulter, and then find himself in the red book, whereas if he had worked for any other person for the same length of time he would have finished up with a good character that he would have been proud of, whereas with the proprietor he generally leaves in disgrace.

4755. Does it frequently happen that men are put in this red book through getting into debt for bilking?—Frequently, sir; that is what I meant just now, that if they were to use it for the purpose of striking out the men who were ——

4756. Genuinely bad?—Genuinely bad.

4757. Through their own fault?—But when a man drives somebody about all the day, and gets nothing for his labour, and then finds himself in the red book, it is very hard; they do not draw the line there, they treat every man alike.

The witness withdrew.

Adjourned till to-morrow at 11 a.m.

NINTH DAY.

Friday, 13th July 1894.

PRESENT:

Mr. GEORGE RUSSELL, M.P. (CHAIRMAN, PRESIDING).

Mr. HENRY CUNYNGHAME.
Mr. F. J. S. HOPWOOD, C.M.G.
Mr. E. H. BAYLEY, M.P.
Mr. T. LOUGH, M.P.
Mr. C. A. WHITMORE, M.P.

Mr. MALCOLM DELEVINGNE, *Secretary.*

Mr. HENRY SOMMERS called in and examined.

4758. (*Chairman.*) You are a non-unionist, I believe?—Yes, sir.

4759. How long have you been a driver?—I have been driving coaches and mails, and omnibuses, and cabs all my life time. I never knew anything else.

4760. Were you a Londoner by birth?—Oh, yes, sir; I was born in Wardour Street, Leicester Square.

4761. I suppose you knew London and your way about before you took to cab driving?—Oh, thoroughly.

4762. And you had been used to horses before you drove a cab?—I was 17 years in Chaplin and Horne's service.

4763. Driving their business carts?—When the rails came up.

4764. How many years have you held a licence for a cab?—Seventeen.

4765. Do you think there are too many cabs and cab drivers now on the streets?—There are a great many loafers that obtain a licence; they do not hold it very long, sir.

4766. Do you think it is more difficult to make a living now than it was when you took to cab driving first?—Yes.

Mr. H. Sommers.

13 July 1894.

4767. You make less money?—We make less money.

4768. And have to work longer hours for it?—And do more for it.

4769. And have to work longer hours?—The rule is, the way in which cabmen do it, is, that if they should fall short in their day's work they stop out late to do it; the poor horses suffer. The man who is working only with one number, he is obliged to put in 11 hours, but other yards allow them to stop out till they get the money, in fact.

4770. On the whole, taking one cause with another, you find it is more difficult to make a reasonable living out of cab driving now than it was 10 years ago?—Oh, yes.

4771. And do you think it gradually gets worse?—Gradually gets worse, on account of short traffic being cut up by the omnibus traffic. Omnibus traffic has increased so, and fares being small the people can go

Mr. H. Sommers.

13 July 1894.

here and there, and if they are not perfectly tied for time can do it for one-fourth of the money.

4772. That is one of the principal causes, you think, of bad times?—I think so.

4773. What do you think about there being too many drivers; do you think that contributes to it? I mean, do you think that there are more drivers than there is work for?—Well, there is more work; they are in the way of one another in a manner of speaking. But I would not wholly do away with the supply of cabs.

4774. No; of course you would not be in favour of taking away licences from those who have them already?—Oh, no.

4775. But what do you think about refusing to issue any more?—Well, I think for a time, sir, it might answer.

4776. So as to bring the number down to something more like what there is a demand for?—Yes.

4777. Do you fancy, as things are at present, there are a great many cabmen who really do not get enough work to maintain themselves with?—It is this way. You know, sir, if a man obtains a situation with a cab master, as long as he can pay the money in reason—I do not hold with the fixed scale—I do not hold with a fixed money, because there are thousands of men who, in the winter time, do not earn the money, but their masters make an allowance for them. They say, "Well, you are two shillings or three shillings "short to-day, you must remember and make it up "to-morrow if you have a good day." Well, if they can do that they can keep their places; if a man is always behind, he has his licence given him.

4778. What yard do you drive from?—I have been driving for Mr. Moses Smith for eight years.

4779. Are you driving now?—No.

4780–81. Do you think it would be to the advantage of the public and of the cab-driving profession to limit the drivers in some way—have fewer than we have at present?—Perhaps it would be advantageous if you suspended the issuing of licences for a time.

4782. Of course, it would have to be for a considerably long time, to bring down the number so as to be felt?—It would. There are between 500 and 600 more drivers than can obtain places.

4783. That is what I mean by having too many; and, of course, they all cut one another's throats?—Yes.

4784. What is your experience about the way drivers are examined at Scotland Yard before they are licensed to drive? Do you think that examination is a real test of their power to drive, or is it rather a sham?—Well, they are sent back to study the map, you know, if they cannot answer the questions.

4785. That is about knowledge of London; but I mean about knowledge of driving, of horses, and harness, and all that relates to a horse?—There are some who never saw a horse, in a manner of speaking, before; if you put the harness down and told them to put it together again it would be all wrong.

4786. Exactly; you do not think that the system of examining at Scotland Yard—— ?—Is rigorous enough.

4787. What do you think of the system of bringing that recommendation from people to say they are competent drivers; do you say that is worth anything as a rule? Do those recommendations amount to anything?—It is generally as to character, not as to a professional mode of doing business.

4788. But they are required to bring testimony from two people that they have a competent knowledge of driving; that is what it is supposed to be?—They are required to do it.

4789. But I mean that comes to nothing?—I think that is not often asked, sir.

4790. And if it is asked?—It is as easy to say yes as no.

4791. With regard to the other point you mentioned, about the knowledge of the way about London; is that rigidly carried out?—Oh, I think so, sir, by examination.

4792. I mean, do they ask them any searching questions, or do they let them down very easily indeed?—Well, latterly, sir, I think they have been more rigid than before; but all the questions are asked "from Scotland Yard to so and so"; if, on the other hand, they were asked from the Elephant and Castle to an outlying district, perhaps they would not be able to answer.

4793. Can you give any guess about this: what sort of proportion of drivers in London have had any experience of horses or harness or carriages before they drive? We have asked several witnesses that, and they sometimes say they do not suppose more than half of the whole lot of drivers had anything to do with it?—I think that is an exaggeration.

4794. You do not think one half of them have?—I do not think one half of them have.

4795. Do you think it would be less than half?—Yes; I myself have been asked.

4796. You are now speaking about knowing your way about London?—Yes.

4797–98. No; but I am speaking about having had experience of horses or harness or carriages?—Well, I should not think half of them had, to commence with.

4799. Have you ever, in your experience, had anything to do with police courts?—Very little, sir; very little indeed.

4800. I do not mean only as regards yourself; but have you ever had occasion to be there when cab cases are being tried?—No, I cannot say I have.

4801–2. And you do not know much about the practice in the police courts?—I avoid them as much as possible.

4803. What do you think of the conduct of the police on the streets towards the cabmen; do you think that they behave fairly and well by the cabmen, or make a mark of them?—I can only speak for myself.

4804. What do you say?—I can say they always behave very well to me.

4805. I suppose you have been in the police court; you have had summonses, I suppose, in your time?—When I was driving an omnibus I had two or three. I worked that out on my own account, and the London Conveyance Company was at that time running, and they used to shift the old omnibuses away, you know; we were looked upon as intruders.

4806. Have you ever driven a privileged cab?—Never.

4807. Although you have never driven a privileged cab, you know something of the privileged cabs at the stations?—They generally work back as quickly as they can for the arrival of certain trains. There is a code of trains on the wall—arrival of trains. A man takes a job according to present trade, and he says: "Well, now, I have 25 minutes to get back to "get the other"—he goes and drops the one and scuttles back to attend the other. That is all a disadvantage to the horses; they suffer.

4808. But do you think it affects the public; do you think that the privileged system is a convenience to the public?—No, I do not, sir. I would have that trade thrown open.

4809. You would treat stations as if they were public places, that anyone could pull into?—In return, their threat would be cabs of their own.

4810. But, still, as regards the convenience of the public, you do not see that the public would suffer by having them thrown open?—No, I do not, sir.

4811. What is your opinion about the present radius? Do you think it is too wide or too small?—In certain districts, where buildings are going on immensely—for instance, Hammersmith, I would extend half a mile; St. John's Wood is close enough. There is nothing building beyond that. Kilburn, perhaps, they are getting down as far as Cricklewood there, nearly. It is only at certain points, you know, sir. In the East End there are very few cab riders. You may extend it down to Romford, so to speak. I would not question that.

4812. Instead of keeping it an exact circle, as it is now, you would enlarge it here or there—wherever it is wanted?—Yes, I would.

4813. (*Mr. Cunynghame.*) Can you mention any hardships that you think exist in the law that you would like to see altered with regard to cabs?—I should like a little time to go over that, sir.

4814. Nothing particular occurs to you at this moment?—Not at this moment, sir.

4815. I will suggest one or two things to you?—Yes, sir.

4816. You told us in your examination that you used to pay less money than you do now, and earned more?—And earned more, sir.

4817. Less money you used to pay, used you?—Well, we could get money easier; there was no stipulated price then.

4818. You mean there was no stipulated price to the proprietor in those days?—No fixed price; that I object to—a fixed price.

4819. You think it is better to have it that a man simply pays what he can—represents what he can pay in reason?—Well, if he is short one day he must make it up.

4820. So that it becomes a sort of floating agreement between him and the proprietor?—Exactly.

4821–22. Now, as to the character of the cabmen; is it not the fact that in the cab trade there is a number of men of whom you can say they are not a very good character?—A great many, I should think, sir.

4823. I mean men who get drunk?—Yes.

4824. And men who get into rows and fighting, and assaulting people, and so on?—A great many, sir.

4825. You are not, perhaps, aware that the average of offence charged against the whole body of cabmen is rather large?—It is so. I would not have that man or the proprietor denied calling in of a divisional surgeon or anybody. I think the proprietor ought to see his own man if he has employed him for several years, knows him to be a steady man; if that man is taken in for being drunk, I would allow the proprietor to go and see if he is so or not.

4826. That would be allowed in any case?—No, sir; they are denied.

4827. The proprietor can go to the station the next morning, for instance?—He is not allowed to see his man.

4828. He is allowed to speak to a prisoner, for instance?—Not in his cell, sir.

4829. The prisoner would have a right of seeing anyone who was necessary for his defence before being called before the magistrates?—They are often denied. He is put down as being drunk, and called up accordingly and fined.

4830. And do you think he ought to have somebody to help him out of the thing, as it were?—I think his proprietor ought to be satisfied that he is so; not having had any occasion to find fault with him before, and knowing him to be a sober and steady man, I think he ought to be allowed to see him.

4831. I see. But I want to come to this general question, the character of men. We have had it from you that you think that there are in the ranks of the cabmen a good many men who are not of very good character?—Yes.

4832. Whom it would be desirable to see out of it?—Yes, I do indeed.

4833. Are those men among the butterfly men chiefly, or the regular men?—We only see them about three months in the year.

4834. As a class, would you say the butterfly men are worse or better?—I think they are better.

4835. Better in character?—Better in character a good deal, because they can go back to their trades when the season is over, clearly knowing that they are not lazy men, not hang-abouts as some others.

4836. You complain that there are of regular men who work all the year round many of bad character?—I would not say many; there are some.

4837. (*Chairman.*) You were talking about the butterfly men, and you say that they mostly go back to their regular occupation when they leave off driving?—Yes, sir.

4838. But we have been told in this examination that a good many of the butterfly men have no regular occupation at all, that they are loafers at other times?—There may be some, sir.

4839. But you do not think all?—Oh, no.

4840. Nor even the greater part of them?—I would say a few.

4841. Who are more loafers?—Loose characters.

4842. But you think a good many of the butterfly men are men who have regular occupations at other times?—Yes, sir; and when the season is over they go back to them, both married and single.

4843. (*Mr. Cunynghame.*) Now, have you seen any cruelty to animal cases at all?—I have not seen it, I have heard of it, sir.

4844. I should like to ask you, do the inspectors of the Society for the Prevention of Cruelty to Animals go about in a uniform?—Not always.

4845. But sometimes they do?—I forget what their uniform is just now—a red waistcoat, or something of that sort.

4846. But you know that they have one?—Yes, sir.

4847. Have you ever come across the inspectors for cruelty to animals at all?—No, I have not, never had a case like that.

4848. (*Mr. Lough.*) Do you think there are too many cabs?—There are too many drivers, I think, sir.

4849. Do you know how many there are?—15,000, I think, sir.

4850. How many of them, do you think, could be spared?—Well, perhaps I should be wrong in saying; they all want to try and get a living, I do not think they should be barred from that.

4851. But you know there are new men always coming in?—Constantly, sir; every day.

4852. If we stopped those new men coming in?—The issue?

4853. The numbers would gradually come down?—Yes, sir.

4854. I want to ask you how low you think they might go, what number they might sink down to?—They might have, perhaps, if there were 15,000 there should be—well I can hardly say.

4855. You know there are only 11,000 cabs?—There are 15,000 men.

4856. Fifteen thousand men and 11,000 cabs?—I think 1,000 men could be spared.

4857. How about the cabs. Do you think there are too many cabs?—No, sir; I do not think there are Witness a wet night; all the cabs are at work; you cannot get a cab sometimes in certain districts.

4858. You said you find it harder to get a living now than you did before?—Yes.

4859. Could you give us an idea how much a man can earn now who works hard; how much are your own earnings?—I only work one horse for Mr. Smith; I pay him 8*s.* a day.

4860. What are you able to earn for yourself on an average of six months?—Well, sometimes 1*l.* a week; sometimes much less; and very seldom more. I am satisfied with a little.

4861. Would it average 15*s.*?—About 15*s.* a week, 16*s.* a week, perhaps.

4862. How many hours do you work?—I work about 11, sir; 10 and 11; I only work one horse.

4863. Do you not think 10 hours too much to keep out one horse?—That is the time they allow you, sir.

4864. Ten hours?—Yes, if I earn my money in the fore part of the day the horse has the benefit of it, and I go home an hour or two earlier, perhaps.

4865. And if you do not earn your money he is resting?—He is resting on the rank.

4866. How many days a week do you work?—Six days. None of the cabs in our yard go out on Sunday.

4867. But do you regularly work six days?—Six days, sir.

4868. I suppose all the one-horse men work six days?—Six days, sir.

4869. Were you able to make more than that long ago, 20 years ago?—In the early part of my life, 17 or 18 years ago, I could earn 1*l.* easier than I could earn 10*s.* now.

4870. I suppose you saved some money then?—Well, I have got a little shop, sir. My wife manages a little shop, so I do not work over and above hard at cab work. I am very regularly out and I am regularly home.

Mr. H. Sommers.

13 July 1894.

4871. I suppose you do not go out in all weather?—Oh, yes, I do, sir. I am not a butterfly man; I work all the year round.

4872. (*Mr. Bayley.*) Is yours a hansom or a four-wheeler?—A hansom, sir.

4873. Is it one of the rubber-tyred?—Rubber tyre.

4874. Best quality?—Well, I would not call it the best quality. It is a very good cab; a very decent cab indeed, a cab that nobody would refuse.

4875. Then you have no complaint to make against the police or the magistrate?—No, sir; none whatever.

4876. And your idea is that if a cabman conducts himself well, he is able to keep out of the way of the police?—Perfectly; he can swing clear of all complaints, sir.

4877. (*Mr. Cunynghame.*) Your takings would be something like 11*s.* 6*d.* a day? Is that so?—From 11*s.* to 12*s.*

4878. About 12*s.* a day?—Twelve shillings a day; sometimes very much less; sometimes I have been obliged to put 1*s.* or 2*s.* to it to make my money up.

4879. And sometimes, in better seasons, a little more?—Sometimes a little more.

4880. (*Mr. Hopwood.*) Are you in favour of sixpenny fares?—No, sir, I am not.

4881. (*Mr. Cunynghame.*) What part of London do you drive in mostly, the City?—I do work the City sometimes, sir. The West End in the morning. Our yard is at the West End. I work round at the West End to get a start in, and in whichever direction my fare goes, there I stop till I get another.

4882. Do you think that in the City, say in the morning, at 11 o'clock, it would pay you to hang out a board saying, "I drive people short distances for 6*d.*"?—I would not approve of that.

4883. You would not think it would pay?—No, sir.

4884. Do you pay yard money in addition to the 8*s.*?—I pay 3*d.* to my horsekeeper, and 3*d.* when I put up at night.

4885. Then you really pay 8*s.* 6*d.* a day for your cab?—8*s.* 6*d.* a day at this time of year. In the winter time I am let off.

4886. You pay a little less in winter?—Yes.

4887. What do you pay in winter?—5*s.* and 6*s.* I have paid less than that.

The witness withdrew.

Mr. George Biddle called in and examined

Mr. G. Biddle.

4888. (*Chairman.*) You are a cab driver?—Yes.

4889. A non-unionist?—Yes, sir.

4890. How long have you driven a cab?—26 years, sir.

4891. Were you a Londoner before you started driving?—Yes, sir.

4892. I suppose you knew your way about very well before you began the business?—Yes, sir.

4893. Had you had anything to do with horses before you began?—Yes, sir.

4894. What were you before?—A carman in the greengrocery.

4895. Have you had any experience of bilking?—Yes, sir.

4896. Have you been frequently bilked yourself?—Yes, sir.

4897. Would you just tell us how it happens; give us some instances of it?—The first time I was bilked, sir, I had a job from Cannon Street Station, I had a gentleman up from Hoxton, Kingsland, back into the City; I had him seven hours altogether; he left me in Lombard Street: "I am going up the court, I shall "not be many minutes, I want you to take me back to "Cannon Street Station." I never saw him again from that day to this. I went to Cannon Street Station to see if I could find him, but I could not.

4898. How much were you out of pocket over it?—Seven hours, 17*s.* 6*d.*

4899. Have you had other cases like that?—I had one I picked up in Grosvenor Place; I had him about three hours, took him to sundry places in Regent Street and Bond Street, and he left me in Hobart Place; he said, "I shall not be a minute, I am going in to get change." He went into the public-house there and went out at the back place.

4900. I know that place, there is a thoroughfare through the public-house, a foot passage?—He never came back any more, and I have never seen him since.

4901. Should you say there is more bilking than there was when you began, or about the same?—I should think there is more now, sir; I was done last week, sir, but that was only an hour.

4902. How was that done?—I picked the gentleman up in South Audley Street, and I had him, I think it was, to Bond Street first, and then from there to Vere Street Post Office; then he said, "Go down Oxford Street, "and I will show you where to stop." He stopped me by a toy shop at the corner Gees Court, "Stop here cabby." He went out at the other end and I never saw him any more. That was only last week, sir.

4903. As far as your experience goes, would you say that the bilkers were people who did it habitually, or people who did it just once in a way?—I should think they make a practice of it.

4904. I suppose by degrees they must get to be known by sight by cabmen?—Well, you see, there are so many of us.

4905. That is true, but you do not know anybody who is marked out by the cabmen as a habitual bilker?—No. I do not.

4906. You have never heard any of the cabmen say such and such a man is a bilker?—No, I never heard that; if we really thought he was we should follow him.

4907. Do you think the law ought to be strengthened to enable a cabman to run a bilker in more easily than he can now?—Yes, sir, that is my opinion of it.

4908. What do you think he ought to be able to do?—He ought to be able to lock him up.

4909. Yes, but how is he to get him, I mean?—Well, if he were to find him.

4910. If he were to recognise him again?—If he were to recognise him again.

4911. In the course of the day?—If you were to meet him in the course of the day or afterwards you could go up to him and say, "I had you yesterday, sir, or the day before"; he can give you his name and address, that is all.

4912. (*Mr. Whitmore.*) As matter of fact that never occurs, you never meet him?—We never meet him. We might do such things; he can give you the wrong name and address, and that is all you get from him.

4913. (*Chairman.*) Suppose you had the right to give him in charge of the police at once, and say, "This gentleman bilked me," do you not think it would lead to wrong people being given in charge very often; people being given in charge for somebody else?—I do not think the man would do it without he did know it was the party.

4914. When you talk about bilking, of course you mean men who go away and leave you quite unpaid, but besides that do you have difficulty with people who pay you short sometimes?—Oh, yes, sir.

4915. That leads to a dispute, I suppose?—That leads to a dispute, sir.

4916. Do you generally get your rights after all, or do you have to put up with the short fare?—We often do that instead of summoning them, losing time, especially when you have got your own, sir.

4917. Then, on the other hand, do you not very often get paid more than your fare?—Sometimes, sir, very often.

4918. (*Mr. Whitmore.*) Is yours a four-wheeled cab?—Yes, sir.

4919. A four-wheeler?—Yes, sir. I have got a very nice one, and very often get 6*d.* over my fare; a good horse.

4920. (*Chairman.*) Do you think if a man has a good lot, a smart, attractive-looking lot, that he as a rule gets paid very often more than his fare?—Yes, sir.

4921. Therefore, it is an advantage to the man to have a good lot, is it?—Yes, sir.

4922. We have been told by some of the witnesses that some of the men who are most particular about the look of the lot are also the most near about paying, that they single out the good cabs and then only give them their exact fare?—Yes, that might be right in two or three cases, but where that would be in one case you would have three or four the other way.

4923–24. On the whole, it is an advantage to a man to have a good lot?—If you keep it clean, and have a good lot, it is an advantage to you.

4925. About the cab stands; do you think they are what they should be, or do you think they ought to be altered?—They ought to be altered; we ought to have more.

4926. Not only more, but do you or do you not think, that they ought to be differently placed from where they are now?—Yes, sir.

4927–8. You do not think they are conveniently situated?—No, sir, I do not.

4929. We have been told that they are put sometimes in very out of the way places, where there is no demand for cabs?—That is quite right, sir.

4930. And then about the shelters; do you make use of the shelters at all?—No, sir, they will not serve non-union men.

4931. (*Mr. Whitmore.*) Is that so?—Yes.

4932. But then the union is only just in existence?—It does not matter, they will not serve them; I never used one in my life.

4933. This last union was only created the other day, was it not?—That is so, sir, since the strike.

4934. (*Chairman.*) But before the strike, all these years?—Oh, yes, they would serve you.

4935. Did you use them?—No, I only used one; I have a family; when I change I go home to my dinner.

4936. Where do you live?—Great York Mews, Baker Street.

4937. That is not very much out of the way?—No.

4938. If you lived in the north of London, or the other side of London, you would have to go then?—Oh, yes, I would have to go then.

4939. For a meal?—Yes.

4940. Not having used them you cannot give any opinion about the way they are managed?—No, sir, I cannot.

4941. But do you know that, as a fact, they will not supply a non-union man?—Yes, sir.

4942. Have you tried them yourself?—No, sir, but I have seen people who have; a lot of them have gone over to the Baker Street shelter.

4943. Those are all the questions I have to ask you, but if you have any opinions of your own as to any changes that you think ought to be made in the cab system, we shall be glad to hear them?—There is only one thing; I think we ought to try and get the railways open, that would be a great convenience to us all.

4944. You think the privileged cabs are a nuisance?—Yes, sir.

4945. Do you think the stations ought to be opened like any public place?—Yes, sir.

4946. Do you think, if open, the men should pay a sort of toll?—Pay 1*d.*; I have no objection to that, it would be beneficial to the horses. Suppose you get off from Baker Street to Liverpool Street. I cannot get in there because they have their own cabs, I have perhaps to crawl all the way up to the West End again; whereas we pay 1*d.*, go in, our horses have a bit of a rest, and we could have a bit of refreshment, and there would not be half the things in the street. One of the Liverpool Street cabs gets up to the West End, you will see him racing all the way back to his station again; it is filling the streets full of cabs.

4947. (*Mr. Whitmore.*) Might there not be a great collection of cabs waiting to get into the station?—No, sir, I do not think there would be, because they would not race backwards and forwards.

4948. No, but it would be desirable to get into the station?—Of course if there was anybody waiting, or the place was full, you would not wait and hang about there.

4949. (*Mr. Hopwood.*) You would not be allowed to?—No, sir.

4950. (*Chairman.*) I said I had no more questions to ask, but I have two that I had forgotten. What do you think about the present cab radius; do you think it ought to be extended?—I think it ought to be extended.

4591. All round, or in some directions?—In some directions, such as Balham and Tooting.

4952. Oh, that way, Tooting and Balham?—That way, and half-a-mile say, further along the Harrow Road.

4953. (*Mr. Cunynghame.*) What do you think of the Fulham direction, for instance?—Yes, sir, for half-a-mile in that direction.

4954. (*Chairman.*) Then, taking the cabmen of the present day as a whole body, should you say that the majority of them had ever had anything to do with horses or driving before they came to drive a cab?—A lot of them had never seen a horse, I should think.

4955. We know there is a lot of them, but should you think it would be true to say that the greater part of them never had?—No, I should not think that, sir.

4956. You do not think it would be true to say that the greater part of the cabmen had never seen a horse or had anything to do with it?—No, I should not like to say that.

4957. You would say the greater part of them had had some experience of it, but there was a considerable minority who never had had anything to do with it?—Nothing to do about a horse.

4958. Or harness?—No, sir.

4959. *Mr. Cunynghame.*) Where is the stables where you cab is put up?—51, Great York Mews, Baker Street—close to Baker Street Station.

4960. You ply, then, chiefly in London, in the four-mile circle?—Yes, sir.

4961. How often do you go outside the four-mile circle?—Perhaps not once in a month.

4962. Are you aware that there is a difference of opinion about the four-mile circle, that the inside men like yourself are rather in favour of extending it, but that the outside men do not want it extended?—No, sir.

4963–64. Where is this shelter at which you told us they will not serve non-union men?—Baker Street.

4965. Who manages that shelter?—I think his name is Cunningham; he lives down York Mews or something of that kind.

4966. Is this Mr. Cunningham a cabman?—No, sir.

4967. Has he been a cabman?—He has been.

4968. And does he get leave to contract?—Yes, sir.

4969. Does he pay anything to the shelter company?—I do not know that, sir.

4970. He is chosen by them, is he?—Yes.

4971. How do you know that this Mr. Cunningham will not supply non-union men?—I know it for a fact, sir; I know three or four drivers down the mews.

4972 Has he stopped doing that?—Yes, he has got it written up.

4973. Is his conduct that way although the strike is at an end?—Yes.

4974. (*Mr. Lough.*) Did you work through the strike?—Yes, sir.

4975. Do you think there were enough cabs in London then?—No, sir, I do not believe there was.

4976. Were there nearly enough?—Not above half enough, I should think, sir.

4977. Do you think are there too many now?—Yes, I should think there is, sir, now.

4978. How many too many?—I could not tell you, sir.

Mr. G. Biddle.

13 July 1894.

4979–80. Are there twice too many?—No, sir.

4981. Do you know anything about the system of inspecting cabs?—Yes, sir.

4982. Do you think that is well done?—Yes, sir, I do.

4983. Do you think any bad cabs are passed?—No, sir; I do not.

4984. There are no bad cabs on the street, are there?—Well, you might find two or three night cabs, sir—you will see them going home—that are not fit for public use, but as for the other way, I do not know.

4985. How do you think those get through the inspection?—I have got no idea.

4986. And you only think there are two or three bad ones about at night?—I am always out myself of a morning at seven o'clock, and back at eight o'clock at night; I see a few of those bad cabs that are out when I go out.

4987. You see a good many of those bad cabs?—A good many of them.

4988. But you do not think the inspection is defective?—I do not think so; the only thing is, I fancy, that they get the plates off one and put them on another. A man has got six or seven numbers; he gets a good cab passed, he will get that plate off, and work it into another number.

4989. The proprietors do that, do they?—I believe so, sir; that is the only way I can imagine it.

4990. Is that a general practice among the proprietors?—I do not know, sir, but that is my idea of the way in which it is done. I do not know, I should be sorry to say anything that I do not know.

4991–92. (*Mr. Hopwood.*) You say there is nothing to prevent it?—No, sir.

4993. (*Mr. Lough.*) There are a few bad cabs?—Yes, but you will only find them early in the morning; they are on night work.

4994. Have you had experience of the police courts?—Not much. I have been two or three times, sir, once for loitering.

4995. What court were you brought to?—Marlborough Street.

4996. Mr. Hannay's court?—Mr. Newton was there.

4997. What became of it?—Well, I was summoned for turning round twice in Regent Street.

4998. Were you convicted?—They asked me whether I was guilty or not, and I said guilty.

4999. (*Mr. Whitmore.*) Were you guilty?—Yes, sir, I was.

5000. (*Mr. Lough.*) And how were you fined?—2*s.* and cost 4*s.*

5001. Is that indorsed on the licence?—Yes, sir.

5002. Do you think it is fair to indorse a small thing like that on the licence?—No, I do not.

5003. Why did you plead guilty?—It was all right, sir; I did turn round twice.

5004. Do you think it is fair to be summoned at all for turning round in Regent Street?—No, I do not think it is, sir.

5005. Have you ever been at Marlborough Street?—Only twice, once was I had a job outside "The Dolphin," in Oxford Street; I had a fare inside. The policeman said I had not, and he summoned me. I got off that.

5006. You did not plead guilty then?—No, sir, because I was not guilty. I got off; the gentleman that I had gave me a letter to take to Mr. Newton.

5007. To the magistrate?—Yes, that was Mr. Slade.

5008. Were there many cases there?—Oh yes, sir; a rare lot. They had to stop there, perhaps, all the afternoon, and there would be so many that perhaps they would adjourn it till next week, and you had to go again.

5009. It is rather a troublesome business, when you have to go again?—Yes.

5010. The court is very crowded?—Oh yes, sir.

5011. Do you think it would be better to have some court where they would not be so hurried?—Yes, sir, I think so.

5012. You think at the police court they have too much business, I suppose, for it?—Yes, sir, I think so.

5013. I want to ask you a question about railways?—Yes, sir.

5014. You said you did not believe in the privilege?—Yes, sir.

5015. Can you tell us what is your objection to it?—Simply because it would be a saving for our horses, and there would not be so many cabs in the street.

5016–17. Are you a privileged driver?—No, sir, I never was.

5018. Are you in favour of sixpenny fares?—No, sir.

5019. (*Mr. Whitmore.*) Have you any complaints to make about the conduct of the police towards cabmen as a body?—No, sir, they have always behaved very fairly to me.

5020. You do not think they make frivolous charges?—No, I do not, sir. They never have to me, so I speak as I find.

5021. (*Mr. Hopwood.*) But you complain that sufficient time is not given to the cases in the police court?—Yes, sir.

5022. You do not complain of the law's delay, but of its undue expedition?—Yes, sir.

5023. (*Mr. Whitmore.*) Did you think your two cases that you have mentioned to us were dealt with too hurriedly?—No, only the one.

5024. Which one?—The last one; I took the letter there. Of course, I lost the time.

5025. In that one case, but you could not help that whatever the court was?—No.

5026. But I mean when it came into court?—When it came into the court I was put off for a week the first time, so I had to appear again, so that there was actually two half days.

5027. When the case came on did the magistrate seem impatient in any way?—No, sir, not to me.

The witness withdrew.

Mr. Robert Francis Musk called in and examined.

Mr. R. F. Musk.

5028. (*Chairman.*) Are you a driver at the present time?—Yes, sir.

5029. How long have you driven?—About 16 years, sir.

5030. What were you before you drove?—I was a coachman in private service for several years.

5031–2. You were accustomed to horses before you took to the cab driving?—I was among horses all my life.

5033. You are not a member of the union?—No, sir.

5034. You drive a hansom?—Yes, sir.

5035. Is it your own?—No, sir, one belonging to the London Improved Cab Company.

5036. Do you find it easier or more difficult to get a living now than it was when you started driving 15 years ago?—It is a little more difficult.

5037. You have to work longer hours?—I have to work longer.

5038. And make a little less?—Yes, a trifle less.

5039. Do you find that the trade is getting worse?—Yes, sir, at certain periods of the year.

5040. I suppose it was always better and worse at different periods?—At different periods, what we term the slack period; that is to say, when the aristocracy are out of town or a period of bad weather comes along; at holiday times when the aristocracy are at home but do not move about, are lying quiet, we find slackness then more than we used to.

5041. We should like to know if you have any opinions to give us about any alterations of the law that you think would be desirable. For instance, do you think that the present radius is a good one, or do you think it wants altering?—Well, you see, I live and work inside the radius, and therefore to me it would not make much difference.

5042. You hardly ever go beyond it?—Very seldom; it is, perhaps, not on an average once in three months that I am taken outside the radius, but at the same time I think in that respect for the benefit of those men who are living near the outside of the radius; whether an extension would make it any better for them I am not able to say, sir.

5043. (*Mr. Whitmore.*) You mean the cabmen?—Yes, sir; I could not mention as to that.

5044–5. (*Chairman.*) What do you think about the privileged cabs at the railway stations?—I have not had any experience in driving privileged cabs, sir; but from conversation with cab drivers who drive privileged cabs, as there has been a good deal said about the privilege, I think the privilege system is altogether a public convenience.

5046. You do not think we could gain anything by doing away with privilege, and throwing the stations open?—No, not in my opinion. It does not appear to me that it would increase the work in any way, and the great advantage I can see attached to that is this, there are worse cabs than others, and the worst of the cabs, no doubt, would fall to the railways.

5047. (*Mr. Whitmore.*) Why?—Because they would be sure to get a job there. If a cab takes its stand inside a railway it can work itself up in time. There is a fare there that wants a cab and he must take that cab, whereas out in the streets the people can see for themselves, and particularly in the daylight any lady or gentleman would take the best cab they can see, and the worst cabs and the worst horses would fall to the railways. A few years ago I was connected with the society called "The Amalgamated Cab Drivers' Society," and we then had it under consideration about trying to abolish the privilege system, and our society waited upon the different railway companies in reference to that, and we prevailed upon the South Eastern Railway Company to try the "non-privilege" system, and they agreed to do so for 12 months, and at the expiration of the 12 months they regretted to say that they must go back to the privilege system again, as they found they had a better control upon the men under the privilege system than they had otherwise. The reason of that is, sir, the man who is driving a privileged cab has certain regulations to abide by which are put down by the railway companies; should they offend against them they would disqualify that man from going to the railway station for so many days, perhaps, by way of punishment, and after that time he would be allowed to go to the station. On the other hand, suppose there is no privilege, and there is a good deal of difficulty in controlling cab drivers, I must admit, the railway officials who are appointed for the purpose of regulating the cabs when they go to the different railway stations would be subject to a great amount of annoyance and abuse from the cab driver. If they said anything to him, such as "Take your cab out of the station," he would say, "I "will take it out, and I can do without you and your station."

5048. (*Chairman.*) You said cabmen wanted a good deal of controlling?—Yes, sir.

5049. Are they rougher men than you used to work with in private service?—A very great deal; there is a larger amount of freedom attached to the cab business than in other occupations; men get used to that and they will take advantage of it.

5050. Do you find a good many men who drive cabs come, as you did yourself, from service?—Many of them do, and from various other occupations.

5051. From various other occupations, I know, but do you find a good many from private service?—A good many, sir. A large number of men grow up in private service when young and in the middle of life, and in after life they are not required in private service; they find a difficulty in getting employment there. That was my position myself.

5052. You did not leave private service from choice?—Oh, no, sir, I was out of a situation for some time previous to that. I always thought if anything occurred which made it difficult for me to get private service I should try to get work in cab driving. I found that was the nearest occupation I could turn to that I had any knowledge of, having a good deal of knowledge of town and likewise of horses.

5053. Have you found that a great many men in your present profession come to it without having had any previous knowledge of horses and carriages?—Oh, yes, a large number.

5054. We have had it stated that as many as half of them come to it without any previous knowledge?—I could not say what number, but a very large number.

5055. Do you think that the testing at Scotland Yard is efficient—testing their power of driving I mean; do you think it is thorough?—I do not see that the Scotland Yard people could make any further improvements, not in that respect, because if a man goes down there and makes an application for a licence he has, first of all, to pass an examination as to his knowledge of town. There is many a man, such as errand boys and that sort of thing, would have a knowledge of town, and apart from that, if they have no practical knowledge, they are given an opportunity of studying the map. Well, some people have a good idea of studying the map, whereby they get a theory knowledge of the town, and then they pass the examination in that way, and when they get out into the street on the cab and they have turned round two or three times they do not know where they are. East, west, north, or south, the man is completely lost. Then again, supposing he has passed his examination satisfactorily, he will get the form filled up, signed by two householders, as is required, somehow; we do not know how, it may be right or it may be wrong, that I could not say. Then he returns with a requisition to Scotland Yard, and they make inquiries, and if the inquiries appear to be satisfactory, the man is granted a licence.

5056. Yes, I understand that; we know that is the practice?—Then I am coming to another point presently, sir. After that he has got to go and find an employer, and to all appearances many of those men have previously held a good position in life, and are respectable in character, but I have noticed a great falling in character after that time, with a very large number of men; that is where a very great difficulty comes in.

5057. Yes; but now if you have done your answer I will say that we know about the present system at Scotland Yard, and that it is just what you describe; but then I asked you originally, at the beginning of the examination, whether you did not think some alterations in the present system were desirable. Do you think, for instance, such a system as that is a satisfactory way of testing the man. It seems to me that it is very unsatisfactory that they should not have any test of their driving applied to them?—Well the requisition has to be filled in by some one as to their ability for driving.

5058. I know that.—But suppose they have driven for some tradesman once or twice, something like that, they are not experienced drivers; it is just likely that man would fill in his licence.

5059. Do you not think that the system of bringing a declaration from two householders that the man can drive is rather a farce; is it not very often given out of friendliness, when the man cannot drive at all?—A very great deal it is, sir.

5060. Do you think the system is satisfactory then; do you not think it would be more satsfactory that the Scotland Yard people should try to test the man's driving, see him on the box, and see him handle the reins?—Yes, a thing like that might be introduced, but if the man has had one or two trials in driving he might pass those men satisfactorily; it must be tested by some experienced person, that is to say, to drive round town in and amongst the traffic, and that sort of thing; something like that introduced might be of importance, sir.

5061. Do you think that the present rules about fares are satisfactory, or do you think that a sixpenny fare would be an improvement?—For four or five years past I have advocated the sixpenny hiring for short distances, sir.

5062. You think you would get more jobs?—I am certain, in my own mind, that a larger amount of money would be circulated in cabs than what is now circulated.

Mr. R. F. Musk.
13 July 1894.

5063. (*Mr. Whitmore.*) Do you think that is true of four-wheelers as well as hansoms?—Well, I do not think you could make much distinction between the two vehicles.

5064. Do you think it would be as profitable—a sixpenny fare—for four-wheelers as for hansoms?—Yes, I do not think that would make much difference, sir.

5065. (*Mr. Bayley.*) Is yours a four-wheeled cab or a hansom?—It is a hansom cab, sir. Four-wheel men might object to the sixpenny hiring.

5066. (*Mr. Whitmore.*) I only wanted to know whether you were in favour of it?—There are a good many four-wheel men I have spoken to in regard to it, and they are as much in favour of sixpenny hiring as the hansom men. A good many will oppose it, so will a good many of the hansom men.

5067. (*Chairman.*) I think you told us just now that you had been a member of a trade union at one time?—Not a trade union, a society.

5068. Was not that a trade union?—No, sir; it was different from a trade union, it was a sick fund.

5069. Have you found any inconvenience from not belonging to a trade union?—Lately I have, sir. Three years ago, in 1891 there were disputes in the cab trade; I would not attach myself to the union, I did not agree with the principles of it. I found a good deal of opposition then; I was obliged to leave a situation at the time of that dispute because I would not take any part in it. I gave up my situation there and went to the London Improved Cab Company, where I have remained ever since. Now since this dispute took place, with the exception of the first three or four days the dispute was on, I have been driving my cab through the dispute, and the amount of abuse and annoyance we have had to put up with has been something terrific.

5070. Were you in the habit of making use of the shelters for your meals?—Very little, sir; I only use a shelter late at night or on Sundays when I am out and other eating-houses are shut up. There is no comfort or economy attached to the cab shelter, although they are convenient at times, but, apart from that, it suits the convenience of a large number of drivers.

5071. What I was going to ask you about was this. We have heard that they do not serve non-union men?—I have not been into one since that time for that reason, because there would be a very large number of union men, sure to be, and we would be subject to a very great amount of annoyance. We have a man driving in our yard who was a non-union man, and who drove through the dispute, and I have heard him speak of having been subject to annoyance at these shelters.

5072. But you have not heard him speak of being actually refused accommodation by the manager?—No, sir.

5073. (*Mr. Cunynghame.*) By annoyance you mean abuse, I suppose?—Yes, sir; and they would try to foul you in driving and all that sort of thing, that is, of impeding you.

5074. Try to foul you?—Oh, yes, impede you in driving in every possible way.

5075. Where do you generally ply for hire with your hansom?—I have nowhere in particular; I am what they term an all-round one. Suppose I take up a fare here and it took me over to Bayswater or anything like that.

5076. But where do you do your work; in the City, for instance?—Mostly in the West End.

5077. You have told us that you are in favour of a power being given to a cabman to charge a sixpenny fare if he likes?—Yes, sir.

5078. Are you aware you have got that power; you can charge a sixpenny fare if you choose?—Yes, but the public are not aware of it.

5079. Why do you not hang out a placard over your cab saying "Sixpenny fare"?—By doing that we should become conspicuous, sir, and we should be subject to a very large amount of abuse and annoyance for that thing the same as for the other thing. If a thing like that is to be done I think it must be done generally.

5080. (*Mr. Lough.*) Do you remember the time that the South Eastern Railway Company tried the non-privilege system?—Yes, sir, I was driving at that period, but did not use the railway very much.

5081. Did they raise the price of the privilege?—They charged a penny for going into the station, but there was some period of time when they charged 1½*d.*

5082. They did raise it to 1½*d.*?—Yes, sir.

5083. And after that they found it did not answer?—Yes, sir.

5084. Do you know the Waterloo system?—Yes, sir; they pay a penny to go in there to ply for hire.

5085. Well, what do you think of that system?—Well, that will be a very similar system, because if you opened all railways free there must be someone to control them, and that would cause a great expense, and the railway companies will have to make a charge in some manner to defray those expenses.

5086–7. Then you approve of the Waterloo people charging a penny to the drivers?—Oh, yes, sir.

5088. Quite so, and if a penny were charged like that at all the other stations, would you think that an improvement on the present system?—No, sir; I think not so good as the present system, for the public convenience. The railway companies with the present system have the opportunity of keeping up the reputation of cab, horse and man.

5089. The principle of the Waterloo system is that the driver pays the privilege; is not that it?—Yes.

5090. The principle of the other stations is that the owner pays for the privilege?—To the company he does sir, but then they charge the driver a little extra for the privilege.

5091. I want to ask you which you think is better for the driver to pay the railway or for the owner?—Well, if the driver has the privilege of going there, which is an advantage to him, he decidedly ought to pay for the advantage that he receives.

5092. Yes, but my point is, do you think it would answer your objections quite as well with regard to the railways if the drivers paid whatever was necessary for going in themselves?—To pay that to the railway companies?

5093–4. Yes, as they do at Waterloo?—I would rather the owner, sir.

5095. Before the strike, did not the owners charge for the privileged cab more than they paid?—Yes, sir; because they consider that the driver of a privileged cab has an advantage over and above the street cab, more particularly at certain periods of the year, that he can earn more money with the cab, and that there is more wear and tear attached to the cab.

5096. But the owners did charge more than they paid?—The owners did charge more than they actually paid to the railway companies, sir.

5097–8. Do you know what they charge now?—Only what I have seen in print, that they charge what is the actual cost for the privilege.

5099. Can you tell us about your own earnings now, are they as good as they used to be long ago?—No, sir.

5100. Have you had experience of the police courts?—Very little indeed, sir. During my experience of outside driving I have only been summoned on three occasions and convicted once.

5101. What was the occasion on which you were convicted; what were you summoned for?—Plying for hire in Coventry Street, up in the Haymarket here, that was during the first year I was driving.

5102. What was the sentence?—Fined 2*s.* and costs, if my memory serves me; that is 4*s.* in all.

5103. Was that marked on your licence?—Yes.

5104. Do you think it is fair to mark a small thing on your licence?—Yes, I think so. I do not see any objection to that; there are occasions when men are summoned for trifling offences, and perhaps they get off by paying the costs, that is 2*s.*, and those cases they do not mark on the licence.

5105. But if they fine you 6*d.*?—I could not answer your question; I have never been fined like that.

5106. But you do not object to small fines being marked?—Oh, no, sir; there must be some means.

5107. What court were you brought to?—The Marlborough Street Police Court, sir.

5108. Were there many cabmen there that day?—As near as I could remember, about eight or ten; something of that sort.

5109. You were not kept long?—No, sir.

5110. And generally, you think cabmen do not suffer inconvenience from the police courts?—No, sir; I cannot see that they do, sir. On the other two occasions when I was summoned, the second time it was for what they term wanton driving in Bartholomew's Lane, in the City, but no one spoke to me, and whether I was there at the time spoken of or not I do not know. I had no knowledge of it until the summons was handed to me a few days after the offence which was alleged to have been committed. I saw, according to the summons, they had the same number of the cab I was driving, but they had got an incorrect number of the badge, and it was before Sir Thomas White that I went then.

5111. (*Mr. Whitmore.*) In the City?—Yes, sir, in the Guildhall; and after the case was heard I was dismissed, and given 2*s.* 6*d.* for my expenses.

5112. (*Mr. Lough.*) Did you work through the strike?—Yes, sir.

5113. Did you earn much money then?—Yes, we did well then; we did not work many hours and stop out late at night in consequence of danger, you know, sir.

5114–5. (*Mr. Whitmore.*) You mean from the strike men?—From the strike men, yes.

5116. (*Mr. Lough.*) You made a great deal more than you are making now, I suppose?—Yes, sir.

5117. I suppose if you had made a good day's pay you did not want to stop out?—We had no desire to stop out; when we went out early in the morning and worked till we had done pretty well with the one horse, we went home and had our dinner, and we went out for a few hours in the afternoon with another horse, merely to keep the thing working; our endeavours were to show that we were satisfied with our employers, and to induce the other men to come back and resume work again.

5118. Do you think there were enough cabs out during the strike?—Not nearly enough, sir.

5119. How many more would be wanted?—I stand at the Chelsea yard, and coming out into Kensington in the morning you could hear whistling in all directions, and dozens of cabs had fares up into town. In the evening time when the people were wanting to move about quickly they could not get cabs.

5120. Do you think there are too many cabs now?—Well, there are more than are required at certain times of the day and at certain periods of the year; for instance, of a morning during the past few weeks, even since the strike is finished and the cabs have resumde work you get into Kensington in the morning about 10 or 11 o'clock, and sometimes you could not get a cab in those neighbourhoods. Then the meaning of that would be that what cabs had been standing round had taken fares into the City, and the empty cabs had not had sufficient time to get back there again, and the same again at night, when all the theatres are all pretty well bursting about the same time, there is a great demand for cabs, and then there comes the scarcity of cabs again at times.

5121. Do you think there are enough cab stands?—There are enough principal cab stands; there might be some places perhaps which I could not mention personally, for instance, where there is a hotel or a square such as a large block of dwellings where there is a large number of people, and there is not a cab stand appointed just close by, there, if the neighbourhood would admit of it, there might perhaps be a stand made for one or two cabs.

5122. What do you mean by principal cab stands?—Large cab stands, sir.

5123. Tell me one; you said there were enough principal cab stands?—Yes, sir, such as St. James's Street and the Haymarket, and all those kind of places, and Knightsbrige.

5124–5. The Strand; are there enough in the Strand?—Oh, yes, plenty of places.

5126. Can you tell me where in the Strand?—I do not see where you make any more in it, sir.

5127. I was not asking that; you say there are plenty in it?—Of course, there are not many there, but I fail to see ——

5128. (*Chairman.*) That is not the question; you told Mr. Lough that there were plenty of cab stands in the Strand, and he asks you now where they are?—There is one just this side of Wellington Street; for the moment I forget the name of the street—Lloyd Street, I think it is.

5129. (*Mr Lough.*) You think there are plenty in the Strand?—In or near the Strand, but not actually in the Strand, you know.

5130. Do you think there are any more wanted in the Strand?—No, sir; because, you see, there are always passing cabs, and there must be passing cabs, cabs that have been in the City with fares, and that sort of thing: they are working their way back, and not many men want to trot their horses, to race their cab.

5131. Do you ever go on a stand yourself?—Yes, sir; a good deal at times.

5132. What stand do you go on?—St. James's Street, Haymarket, one at Knightsbridge, Cromwell Road, Kensington, and Devonshire Terrace, Paddington, or the other one at the top end of Gloucester Terrace, if I get over in this neighbourhood.

5133. (*Mr. Whitmore.*) If there were more small stands in by-streets or squares, do you think you would use them instead of plying up and down the streets?—Not very much, sir; cabmen will go where they think they are likely to get a good fare, and in many of those squares, if it is what we would call a good point likely to get a good fare, if you made a stand for two, three would want to be there; you would have as much difficulty to regulate the cabs with the stand as you would without the stand.

5134. (*Mr. Hopwood.*) You say that your earnings are less than they used to be?—Yes, sir.

5135. Although that is the case, you are fairly well satisfied with the condition of the cab trade?—Oh yes; I fail to see where we could improve it, except with adopting the sixpenny fare. I believe we could earn more money that way; whether it would leave the cab driver better off is another question.

5136. The only suggestion you can make to us for the betterment of the cab trade is the return to the sixpenny fare?—Yes, sir. I have often said that in my advocacy, and that is the only point that I see that should be likely to improve our position.

5137. With regard to the privileged cabs, do you say that the station cabs are better than the outside cabs?—They are not better, sir.

5138. Are they as good?—No; the best class of cabs altogether are in the streets, sir.

5139. Is it not wearing work for the privilege cabs to travel from station to station, backwards and forwards?—Yes, sir.

5140. They get no rest?—I think, as I just now remarked, there is more tear and wear attached to a privileged cab than there is to a street cab.

5141. And more wear and tear to the horse?—Oh, yes, sir.

5142. More wear and tear to the man?—Not so much, because you, see, he has his rest when he gets into the station.

5143. But does he; he goes from Euston to Paddington with a fare, and he has to hurry back to Euston?—Yes, sir.

5144. When he gets there he may find a train just in, and off he has to go again?—Yes, sir.

5145. Then back again to Euston?—Yes, sir. They usually work a few hours shorter. Then they are quicker in motion, you understand, than a street cab, as they do their day in a little less time than a street cab does.

5146. Does it not strike you that there is a great loss of power in the case of a privileged cab in travelling backwards and forwards to take up fares?—I do not quite understand you.

5147. Is there not a great loss of time and loss of power to the horse and great wear and tear to the cab and the cabman in going backwards and forwards with an empty cab to take up fares from stations?—Yes sir, there is a loss that way, sir.

5148. And does it not also strike you that there is the same waste of power with regard to the non-privileged cab in having to return empty from the station when it might bring back a fare?—No, sir, because the difference of that would be if a man is privileged to work in a station, no matter where he takes his fare to from the station, he turns himself round and jogs back again in that direction, and there

Mr. R. F. Musk.

13 July 1894.

is a loss of power in that respect, but the non-privileged man when he set his fare down will come out and will walk quietly along.

5149. If you took a fare down to Liverpool Street, is it not to your interest to bring a fare back from Liverpool Street rather than to walk along through the City and back to the West End without one, or merely with the chance of getting one?—Yes, sir, but the difficulty that comes in there would be when I get there with my cab there is already a lot of cabs, and I should consider perhaps that I should have to wait too long a time.

5150. That is under the present system?—No, even supposing that the stations were open free, and I had the option of putting my street cab into Liverpool Street Station when I got there with my fare, perhaps there is already a lot of cabs waiting there.

5151–52. There may be or there may not?—Just so, I calculate I will have to wait here too long a time; I shall not wait here, I will work my way back again. And a large number of men would not use the station even then; it would only be a section of men who use the station.

5153. (*Mr. Whitmore.*) Might I just ask one question in continuation of that. In fact, you do not think that the present system of privileged cabs does work very well I mean, you see many objections to the present system?—No, very little.

5154. You have admitted it leads to a considerable amount of waste of power?—Oh, there is considerable disadvantage in that way.

5155. You say the best class of cabs are on the streets, not amongst the privileged cabs in stations?—Yes, sir.

5156. And before you said if the privileged system were done away with the worst cabs of all would get into the stations?—Yes, sir.

5157. Worse, I dare say, than those that are now in the station?—Oh, yes, sir.

5158. That is really the main ground why you are in favour of retaining the present system?—Yes, sir.

5159. In the interests of the public?—Yes, sir. The man with the best class cab would not take it into the station, getting luggage on it, and knocking it about, so that you would not get many best class cabs to ply for hire in the railway stations.

5160. (*Mr. Lough.*) But that difficulty would be removed if we had no bad cabs at all?—Yes, sir. I do not think there are many now, not what you would term bad cabs. I think if you were to collect the first ten cabs you see coming along the street now they would be all quite good enough for public use.

5161. I only said it because you said it; you said bad ones would come into the station. If there were no bad ones they could not?—That is so. Competition keeps up the cabs now in the streets, sir, and the railway keeps them up in the station, sir.

5162. (*Mr. Bayley.*) When you were referring to the best class of cabs being out in the streets, you were referring, I suppose, to the swell class of cab?—Yes, sir.

5163. The class of cabman who rather looks down upon the station cabman?—Oh, yes, sir.

5164. You have given a good deal of attention to this question of the privileged system. You said, years ago you have been connected with a society?—It has been discussed amongst ourselves as to abolishing this privileged system a good deal, sir.

5165. You say you have come to the conclusion that it would not increase the work for the cabman if the privileged system were abolished?—I cannot see that it would.

5166. I suppose if the railway companies took to providing their own cabs it would reduce the work?—Yes, sir.

5167. It would throw 1,500 or 2,000 privileged cabmen out of employment?—Yes, sir.

5168. So it would reduce the trade?—Yes, sir.

5169. With regard to your earnings, would you have any objection to telling us what you earn yourself, on an average?—Well, that would have to depend. You see if it became known to other cabmen that I supplied you gentlemen with the information, I should have a very terrible life about it.

5170. Do not then; the same question has been asked of other cabmen, and they have told us. I think they volunteered, however; but you did well during the strike, I suppose?—Oh, yes; the earnings with a cab are very precarious.

5171. Do not the earnings of a cabman depend very much upon the quality of his cab and the smartness of his own appearance?—Oh, yes, sir; and the attention that he would give to it.

5172. So a poor broken-down-looking fellow with an inferior cab will earn very little money?—Very little.

5173. But a smart fellow with a well-appointed cab does well at the trade?—Yes.

5174. (*Mr. Whitmore.*) Still, I mean now in bad days?—Oh, yes, sir, that is so. Of course I myself have never craved for what I call a swell cab, I am satisfied with a medium article, what I call a good business cab, that is to say, a cab and two horses that I can offer to any lady or gentleman, and fit to drive up to their residence, and they will not feel degraded to be getting in or out of the cab. By keeping that clean and being civil to the public and giving attention to the business, to take one time with the other a man can realise a very fair wage, 30*s.* a week, taking the average the year round, who attends to his business, doing six days a week.

5175. (*Mr. Bayley.*) Even more, I suppose, than the men you have named sometimes?—Yes, sir.

5176–77. Is it your impression that those are the average wages of cabmen generally who have your class of cab?—Yes, with what you may call a steady, persevering cab driver.

5178. The driver's licence is his character, is it not?—Yes sir.

5179. Should you see any objection, from a cabman's point of view, to the licence giving reasons for a man's leaving?—I think something like that ought to be introduced.

5180. Well, I think so too. For this reason; I said a little time ago that there is many a man falls in character after he becomes a cab driver. Now when he comes to the cab there is an amount of freedom, temptation, and exposure, to which that man has not previously been accustomed, and it is wonderful how many men fall in character; they become intemperate, they become careless, and they become what we call crafty and tricky, and by the time a man has held a licence perhaps twelve months or two years he is become quite unmanageable to the cab proprietor, and the cab proprietor obliged to dismiss him, he has borne with him for one offence and another offence and as long as he can until he can bear with him no longer. Although that man has been very troublesome to the proprietor and perhaps very unprofitable through his intemperate and careless habits, and though he has discharged him he must sign his licence exactly the same as he would do to the best man he has got in his yard when he is going away.

5181. Do you think the respectable class of drivers would not object to that?—No, sir.

5182. What do you consider yourself fair earnings?—I am satisfied as long as I can average during the year 30*s.* a week, sir.

5183. (*Mr. Whitmore.*) And you think that at the present time that a decently conducted cabman with a decent cab and horse can on an average earn that?—Yes, sir.

5184. (*Chairman.*) I understood you to say that you did not want to have the figures that you made put on the notes?—I did say that at first. I did not know that you had got any previous figures, and if I were the only individual who had given you gentlemen that information it would, perhaps, be disapproved of by the cab drivers in general, and they would subject me to a good deal of annoyance that way.

5185. The cab drivers?—But if other cab drivers have been examined and have given a statement, I have no objection to my statement being made.

5186. Very good, we have no objection to hearing you, only I wanted to protect you from what you said was an annoyance. If you have no objection to its standing on the notes it would be all right?—I have no objection.

5187. (*Mr. Lough.*) Do you keep a book of your earnings?—Yes, sir.

5188. You know that the average is 30*s.* all the year round?—Yes, sir.

5189. Used you to earn more long ago?—Yes, I have earned more.

5190. How much have you earned?—I have earned as much as very near 2*l.* all the year round.

5191. So the thing is not nearly so good as it was?—No, and I work longer hours than I used to.

5192. How many hours do you work a day?—Usually, from the time of leaving the yard till I return to the yard again I work 13 hours, and I work 13 days in the fortnight—that is, I get every other Sunday.

Mr. R. F. Musk.

13 July 1894.

5193. And you have to do that to make your 30*s.*?—Yes, sir.

5194. How many hours are you away from your home per day, do you think?—From the time I leave home in the morning to get to the yard, get the cab ready, to the time I get back home, after I have deposited the cab at the yard at night, it would be about 16 hours.

The witness withdrew.

[Mr. Cunynghame here took the Chair.]

Mr. Charles Hale called in and examined.

Mr. C. Hale.

5195. (*Chairman.*) You are a non-union driver, I think?—Yes. I have been driving personally, sir, about 12 or 14 years, but I have been connected with the cab trade from a boy almost.

5196. Will you tell us very shortly about the cab driver's licence; do you think the examination sufficient?—Well, I think if the examination were more stringent they could check the supply. The supply is now greatly in excess of the demand.

5197. Then you are in favour of what one may term screwing up?—Or the limitation of the licences by some means.

5198. Screwing up the standard of efficiency?—Quite so.

5199. And thereby weeding out the bad men gradually?—Quite so, because the cab trade is the receptacle of all men out of work. If a man cannot find employment in his own trade he will drive a cab; if he is of good character he easily passes the examination. That fills up the cab drivers.

5200. In raising the standard of efficiency in this way, and limiting the number of men, you would do it gradually, I suppose, so as to spare existing interests?—Just so, sir.

5201. What do you think of the privilege system in railways?—I am strongly against it.

5202. You are not a privileged man?—No, sir; I have driven a privileged cab, but strongly objected to it in that case.

5203. Why did you give up driving the privileged cab?—I found I could earn more money in the street.

5204. What class of cab do you drive?—Four-wheeler, sir.

5205. Now, about the police courts; have you ever been up before the police court?—I have, for not wearing my badge, causing obstruction.

5206. For not wearing your badge?—I had got it on my under coat, buttoned over; but it could not be seen conspicuously.

5207. Did they fine you for that?—Yes. Sixpence and costs.

5208. How much costs?—Two shillings. It was 2*s.* 6*d.* We do not object to that, but the thing that comes afterwards. Under ordinary circumstances, if you are not summoned, when your licence becomes due you have a form sent you to fill up, an application for the renewal of the licence, and you can apply for the licence and have it returned to you; but under the circumstances of having been summoned, as this might be, for it is only a trivial offence, 6*d.* and costs, you have the old requisition sent to you, that you have to get two householders to sign, and your last employer, and the police sergeant would come round and make inquiries to see whether it is all right.

5209. When you have been summoned and convicted, do you mean, you have to take a fresh licence out?—Not a fresh licence, but another form; double punishment.

5210. Whereas if it were a clean licence, without any conviction, you would get it as a matter of course?—Merely applying for it as a matter of course; fill up the form sent you.

5211. Are you in favour of marking the licence for a small offence, or not?—Certainly, sir, I am in favour of that; but I think this sort of double punishment might be avoided.

5212. It is the requisition afresh?—The old requisition comes; I contend it is a double punishment.

5213. It takes time?—It is ineffectual. It is a matter of form in this way.

5214–5. Apparently you have no objection to the licence being marked. Would you have any objection to there being a column in the licence where the proprietor could put a cause of leaving?—Well, I think that would have a very good effect, sir.

5216. Would you not be afraid that a proprietor might mark you unfairly, might put something there which you did not think was a fair account of the cause of leaving?—Well, they might do that, some of them, but I think the general run of proprietors will treat you fairly.

5217. At all events, you think that might perhaps be prevented if there were some sort of appeal open to you to Scotland Yard if necessary, if something was put on that you thought unjust, that they should inquire it?—Yes, sir, I think it would do.

5218. About stands; do you think there are enough or not enough?—Well, there are plenty of stands, sir, but unfortunately they are not where they are wanted.

5219. Give me an instance of a stand in a place where it is not wanted?—I do not know how many there are now, but there was a stand for 40 cabs in Russell Square.

5220. Give me another instance?—There are several in the other squares. I could not mention one in particular, but there are five or six at each corner.

5221. Now give me the name of a place in which you would put a stand in which there is not one at present?—That is a matter I have hardly thought of. I must reflect a moment on that.

5222. Nothing occurs to you at present about that?—Not for the moment. There are plenty of places I have no doubt.

5223. You think you could find such places if you had he choice of it, that would be useful and yet not an inconvenience?—I think so. Undoubtedly there is an instance of it with those ranks they have made in Pall Mall. They are very useful; it saves a lot of cabs crawling about, and so would the abolition of this privilege system save a lot of cabs crawling about.

5224. Have you ever seen cabs inspected by any chance by the inspector in the yards?—Yes, sir, on the ranks; I have seen them on the ranks, walk up a rank and inspect it.

5225–6. Have you anything to say about their inspection; do you think they are too easy or too hard, too strict or not strict enough?—They certainly are not too strict, sir.

5227. And you think very often if you had your way you would have rather stricter an inspection?—There are many cabs at present passed which I would have stopped if I had been in the position.

5228. And do you think there are many horses in cabs that ought not to be driven?—I do not think there are many, sir; they are so well looked after; the police look after them; now and again you may find one.

5229. Have you ever come across the Society for the Prevention of Cruelty to Animals, or their officers?—Yes, I have seen them about.

Mr. C. Hale.

13 July 1894.

5230. In uniform or not?—In uniform, some in plain clothes.

5231. Are they rather dressed up like the police?—Describe their uniform?—Their uniform is a sort of semi-official uniform, with just a mark on the collar.

5232. Would you know them from policemen?—There are many of them I know by sight; however they were dressed I should know them.

5233. Would a cabman take them for policemen?—Not at all; nothing like a policeman.

5234. Nor an inspector of police?—Oh, no, sir; it is something after an inspector of police's uniform, but they have a small mark on the collar.

5235-6. Bilking; have you ever been bilked?—Yes. That is a question I should like to speak about. I have been bilked more than once.

5237-8. When were you last bilked?—It is two years ago now. I have been very careful about it.

5239. Tell us what happened?—To the best of my recollection I drove a gentleman for two hours, and then applied for my fare; he would not give me the fare, but gave me an address, which proved to be false.

5240. And you never saw him again?—No, sir.

5241. When were you bilked before that?—Twelve months before that, I daresay.

5242. The same sort of case?—Just a similar case.

5243. Do you think bilking is on the increase or not?—I do not think it is on the increase; it is only seldom you hear of such a case occurring.

5244. Have you known any case of another man being bilked?—There was one one day last week, the man told me.

5245. What did he tell you?—He was engaged for four or five hours; the fare left him and said, "Wait here," and he did not come back. That is how he was served.

5246. Would you be in favour of 6*d.* fares?—No, sir.

5247. You think the cabmen would lose by them?—I do, sir.

5248. (*Mr. Whitmore.*) What cab do you drive, a four-wheeler?—A four-wheeler, sir. Inasmuch as you made 6*d.* the first hiring, I think the only way that would be workable would be to make each person above one pay 6*d.* extra.

5249. (*Chairman.*) I will take this; would you be in favour of a rule being laid down that a cab should have attached to it a sort of red label which the driver could put out, meaning "6*d.*," so that when he chose to put that label out it would indicate to the world that he would take people for 6*d.* Then he could put it in if he did not like. Leave it optional to him to do it if he chose? I want to know if that would work or not?—I do not think that would be of any use, sir.

5250. Why not?—There are so many of them would not use it.

5251. Would a sufficient number use it to make it a benefit to them?—I think not, sir.

5252. They could do it, you see, if they liked?—Yes.

5253. You do not think it would be a benefit?—Do I understand you to make it optional?

5254. Optional? A sixpenny flag, if you please, to hang out when he pleased?—That would be good.

5255. And the question is, would the men use it?—I do not think many would, sir.

5256. (*Mr. Whitmore.*) Do you think that the men who did not practice that would object to the men who did?—I do not think that would have the slightest effect amongst ourselves. What I mean is this, if you object to my using it, that would not prevent my using it if I thought proper.

5257. (*Chairman.*) You do not think there would be a set made against the man?—Oh, I do not think so, sir.

5258. (*Mr. Lough.*) Do you think there are too many cabs on the street?—Yes; the supply greatly exceeds the demand at present.

5259. Do you know how many there are?—Well, I have not been through the figures. I had got them some little time back.

5260. I will tell you; there are 11,000 licences?—Eleven thousand cabs; yes, sir.

5261. Now, how many of them could be spared?—I should think 1,000 could be spared very well indeed.

5262. Do you think there are too many drivers?—Oh, yes, there are a great deal too many drivers for the reason I have just mentioned. A great many men, when trade is bad, their own trade, if they have a good character will apply for a cab licence.

5263. How would you reduce the number of men?—The only way that I see to reduce that, sir, is when they apply for the renewal of their licence, those that have only been driving two or three months, playing the shuttlecock business, a day or two for this man and a day or two for that man——

5264. You would not renew their licence?—No, only those who used it.

5265. Would you stop the issue of new licences?—For some time, I think, it would be advisable, sir.

5266. Have you ever thought how many men you could do without?—I have not gone into figures entirely; I would have done so had I known you were going to ask me.

5267. Do you think it is a hardship having to pay the 5*s.* for the driver's licence?—No, sir; I do not think it is any particular hardship. I think that would be a sort of means of keeping them more select.

5268. You said you were in the police court once or twice?—Yes, sir.

5269. What was the charge against you?—I have had three summonses since I have been driving. The first was for obstruction in York Road. I was going the back way into Waterloo Station, and I was summoned for causing obstruction.

5270. Were you convicted?—Yes, sir.

5271. What were you sentenced?—I think 2*s.* and costs, or 2*s.* 6*d.* and costs, that was 4*s.* 6*d.*; that was at Stone's End, Southwark.

5272. Were there many cases in the court the day you were there?—Two or three for the same offence at the same place.

5273. (*Mr. Hopwood.*) Were you guilty?—Well, I was guilty, as far as this, I turned round certainly. I was there.

5274. (*Mr. Whitmore.*) Did you plead guilty?—Yes, I pleaded guilty. I was there; the policeman had taken my number.

5275. You thought it was a fair charge?—I was guilty; I was there.

5276. (*Mr. Lough.*) Did anybody tell you to plead guilty?—No, sir; it is no use going against the fact of the matter; I was there; it was no use my pleading not guilty if I am there.

5277. But do you think that is a fair sort of charge to bring against a man?—I do not think it was hardly fair, for the obstruction I caused was so trifling that I thought it was unnoticeable.

5278. It was rather tyrannous bringing you there?—I thought it was rather sharp practice, but still as I was there I might have caused obstruction; I did not mean to.

5279. You did not mean to give offence?—Certainly not; I turned round to go into the station the back way; there was a number of cabs there going about; I suppose I happened to be the unfortunate which caused the obstruction.

5280. The police were down on you?—That is it, exactly.

5281. Do you think there is much of that sort of thing?—There is no question about that.

5282. The police bring up a lot of men for small things?—Oh, yes, they are only mortal men; at this particular point they have a lot of trouble; a policeman may have just turned away several cabs, and some poor fellow just coming along, walking up the street, his number is taken; he is the unfortunate one to get summoned: "Here, I have had enough of this, what is your number?"

5283. You think there is a great deal of that?—A great deal of it.

5284. (*Chairman.*) Do I understand you to make any complaint against the police as being vindictive or unfair?—No, sir; I do not think so.

5285. (*Mr. Lough.*) But your point is that these little things should not be crimes?—They should not be crimes; I do not object to a man being summoned or fined if he commits an offence.

5286. But you do not think these are offences? is that your point?—Yes, they are offences in a measure, but not to have a double punishment afterwards.

5287. (*Chairman.*) Is it the double punishment you object to?—That is what I object to. I do not object to a man being fined for any offence that he commits, whether it is trivial or anything of the kind, but I object to the double punishment after the sentence.

5288. (*Mr. Lough.*) You do not object to a man being fined for a trivial offence?—I will not say that exactly. I say I do not object to a man being fined for any offence that he has committed.

5289. Do you often go into the cab shelters?—I never go into a cab shelter.

5290. Why not?—I object to a shelter in this respect. As a rule it is these youngsters in the shelter, and it is nothing but cab work, cab work, all the time you are taking your meals.

5291. (*Mr. Whitmore.*) What cab work?—Oh, what they have done.

5292. (*Mr. Lough.*) Talking shop?—Talking shop. Just let that drop; I have done with it when I get off the box. I find that I get treated as well in a coffee eating-house as I do at a shelter.

5293. (*Mr. Whitmore.*) Have you thought at all about the cab radius?—I do not think it is advisable to have that altered.

5294. Where do you say yo stables are?—Lambeth.

5295. And you ply about the centre of London generally?—Generally crawl away towards the West when I go out of a morning, but I have several regular jobs.

5296. And you think the present radius is satisfactory?—I think so, sir.

5297. (*Mr. Bayley.*) You say you object to the present privilege system?—Yes, sir.

5298. And your objection was, you said, that you earned more money on the streets?—That is the reason I left the privileged system. I consider the privileged system is totally unfair.

5299. But I suppose most of the privileged drivers like the system?—No; they do not. I think, as a rule, they object to it. Most of them would rather see it all thrown open.

5300. (*Mr. Whitmore.*) That is because they would be making more money in the streets?—No, it is not that, sir; it would save them a lot of running about.

5301. Waste of time?—Waste of time, backwards and forwards. For instance, one cab goes from Paddington to the Great Eastern, and another cab goes from the Great Eastern to Paddington; each of them goes back to their respective stations, whereas the Great Eastern cab could ply at Paddington and the Paddington cab at the Great Eastern for a new fare.

5302. (*Mr. Hopwood.*) Not only waste of time, but waste of power to the cabman?—And the cab not plying the thoroughfare.

The witness withdrew.

Mr. William Tackley called in and examined.

5303. (*Chairman.*) You are a driver of a station four-wheeled cab?—Yes, sir.

5304. And I believe you belong to the Union?—Yes.

5305. Will you give us your view, please, shortly, of the privileged system?—Well, my opinion is this,—unless we can get a guarantee from the railway companies that they are not going to have their own cabs, I think we had better stay as we are, because you must understand this, sir, if the railway companies have their own cabs it will throw 2,000 more men on the street.

5306. The railway cabs must be driven by somebody?—Yes, sir.

5307. I am just putting it to you; you said it would throw some men on the street, but then the railway companies would employ some men, would they not, to drive their cabs?—Yes; but I am informed that they have got the carmen who know London; they are willing to take licences out.

5308. Let us go into this question. Have you any objection to make to the privileged sytem?—No, sir; provided the railway companies do not have their own cabs.

5309. Would you be in favour of a free system in which everybody was admitted to railway stations without payment?—Yes, sir.

5310. Do you think that a free system would work well?—Well, sir, according to my knowledge of Waterloo Station, and the class of property, and all that, that goes into that station, if it is not better than that, I should say no.

5311. But do you consider that the class of property which goes into Waterloo Station is worse or better?—Inferior, sir.

5312. Inferior to Euston Square, for instance, or inferior to the others?—Yes, sir.

5313. (*Mr Whitmore.*) At which station is your cab?—The Great Northern, sir, London Improved Cab Company. I have been with them six years now, sir.

5314. (*Chairman.*) Have you anything to say about cab stands?—Well, I should like a better state of things in the Strand for the benefit of the public that go to the theatres. I think it could be worked so that they could have a continuous rank.

5315. (*Mr. Whitmore.*) Along the Strand?—No, say, for instance, they are allowed to rank along St. James' Street; there people wait under the portico at the Opera at Covent Garden, and there are plenty of cabs in Long Acre, but they cannot get to them.

5316. (*Chairman.*) You are not allowed access to the theatres where you wish to ply?—No, sir.

5317. That is a bad arrangement; it could be better done?—That is a bad arrangement of the police. Say, for instance, you are coming from the city, you cannot get any higher for the theatres than Norfolk Street, Strand; you are turned down the Embankment. Then they are waiting for cabs at the Gaiety and all those theatres up the Strand.

5318. Then, to carry out your views, I suppose it would be necessary to divert some of the non-theatre traffic at night down the Embankment, so leaving the place clear for the theatre traffic?—No, sir, the way I think it could be managed would be this: Say you are on the other side of Norfolk Street in the Strand when there is no business being carried on by shopkeepers, there might be a larger standing round there from which they could keep the rank supplied, from those cabs that would rank there for it.

5319. (*Mr. Bayley.*) What you call a continuous cab stand?—So that we could put on and follow up.

5320. (*Mr. Whitmore.*) A short stand would do?—Yes, sir, so as to keep the rank supplied.

5321. (*Mr. Lough.*) A running succession of cabs?—Yes, sir; same as Long Acre, right down James Street into Covent Garden Market; that cab rank could be filled up, and leave the cabs to follow round. They might start round Covent Garden through Russell Street to keep the rank regularly filled up.

5322. (*Chairman.*) At present you are called up by all sorts of men from the theatres, mere loungers about in the street?—There is a rare lot of those.

5323 Does that cause any unfairness or inconvenience?—If the policeman sees any of those on your cab he will not allow you to come up with them.

5324. Not on the cab. But could a better system be invented for calling up cabs in a regular order, more rapidly?—Of course, if the theatre people had men, we would know them; say, men authorised by the theatre people. We could get on better that way, sir.

5325. (*Mr. Lough.*) Do you think there are too many cabs in London?—Well, I think so. There are too many licences, sir.

5326. Too many licences? How many too many do you think? Have you ever gone into the figure?—Well, sir, no, I am not a very good hand at figures. But my

Mr. W. Tackley.

13 July 1894.

opinion—of course I have been over 20 years a driver—is that the licences are granted too easily; I could give you a case in point.

5327. Never mind the case in point. You mean cab licences?—Yes, sir.

5328. How many could you spare? Could you spare one out of four, for instance?—I think so, sir.

5329. Are there too many drivers?—Yes, sir, there is such a lot that they are not able to get employment.

5330. Starving?—In the yard I am in 10 or 12 have to go away without getting jobs.

5331. The London Improved?—Yes, sir.

5332. They have their licences deposited?—They have odd men; they only take the licences of the odd men they employ. These others are men waiting for situations. They do not take their licences.

5333. And you think there are a great many who cannot get work now?—Yes, sir, I do; I know it for a fact.

5334. How many men too many? Could you spare one man out of four?—Well, I should think so.

5335. How would you get rid of these men? Have you ever thought of that?—Well, there is a lot of men, you know, that do not keep a job; a lot of shaky ones that I think would be very well dispensed with.

5336. Would you be in favour of stopping new men coming in?—Oh, yes, sir; unless they were duly qualified men, for instance, they should know how to handle the reins and all that before the licence was granted to them.

5337. Do you think many men are let in now who do not know how to handle the reins?—I do.

5338-9. The majority would you say?—No, sir, I would not say the majority, but a considerable number.

5340. Have you been in the police courts much?—No, sir; very rarely.

5341. Are you in favour of sixpenny fares?—Well, sir, I think that would be beneficial; but, of course, if you were at a theatre two or three hours waiting for a job, you would not want to get off for sixpence. That is where the evil comes in, when an old lady comes out of the theatre under those circumstances and takes you off to Charing Cross for sixpence.

5342. Would you like sixpenny fares from 10 in the morning to 6 in the evening?—Yes, I would not mind that, sir.

5343. For a mile?—Yes.

5344-5. Would you like that optional or compulsory?—Optional; I should not like it to be compulsory.

5346. Do you think that cabs that were willing to do that should show an advertisement that they were willing to do it?—I think so, they would show it in some way.

5347. They would have to show an advertisement?—Sometimes it would be a benefit to us, and sometimes it would be an injury. It would be an injury in the case of the theatres.

5348. From 10 in the morning to 6 in the evening, would you object to its being compulsory?—No.

5349. (*Mr. Whitmore.*) In certain places?—Take it generally, sir.

5350. (*Mr. Lough.*) Do you ever go into the cab shelters?—Very rarely; I live close to the yard. I go home principally to my meals; if not, I get into a coffee-house.

5351. You do not know much about the shelters?—No, I do not.

5352. How many hours a day have you to work?—On an average 14 or 15.

5352*a*. Are you able to make a good living now?—No, sir; not like what it was when I first started. When I first started I could get a living out of it; but I have a tight job now.

5353. What are you able to make now?—I suppose on an average, sir, I might earn 25*s*. a week.

5354. Do you earn as much as 25*s*. a week the year round?—Not to take home to the wife.

5355. How much do you take home to the wife?—Well, I think I should average it about 1*l*. a week—1*l*. to 22*s*. a week.

5356. How much were you able to take home when you commenced to work?—Well, I should have 35*s*. or 2*l*.

5357. So it is much worse now?—Yes, a great deal.

5358. And you have to work 15 or 16 hours a day for this?—Quite that, sir.

5359. What do you attribute that to—to the competition?—Well, it is like this, you have 'busses now on all kinds of cross roads; for instance, being a King's Cross man, at one time I could come into Russell Square or Bedford Square and be sure of a fare, now the people go down and get into the omnibus, because they go right across the roads and across country.

5360. (*Chairman.*) May I ask is it usual when cabmen count how much they make a week to deduct what they have spent for eating and drinking during the day?—I do not drink anything out; I am a total abstainer.

5361. I mean the eating something out during the day?—I go home to my meals; the wife provides them out of what I give her.

5362. The money you gave us was the total you earned?—Yes, sir.

5363. (*Mr. Whitmore.*) Have you thought about the cab radius at all?—Of course, the cab radius in some places is a great deal too far. That is what always puzzles me. As regards the cab radius here, for instance, from Charing Cross you have to go to Finsbury Park before you get to the radius.

5364. And you think the present circle in some places is too far?—Yes, sir.

5365. Do you think in other places it is not far enough?—I do not know any that are under the 4 miles.

5366. No. But do you think there are some parts of London in the suburbs where the radius ought to be extended?—Further out, sir?

5367. Further out?—No, sir; I do not think so. I think they are quite far enough out now.

5368. Then the only change you would suggest is one bringing it nearer in?—To make it 4 miles from Charing Cross.

5369. You are in favour of a perfect circle of 4 miles?—Yes, sir.

5370. (*Mr. Hopwood.*) Is not that the law now?—What do you mean, "the law now," sir.

5371. Is not the radius at present a 4 mile circuit?—No, sir. If you measure from Charing Cross you cannot get to some of those radius posts in 4 miles. It is a matter of measurement; some are over 5.

5372. By the road?—By the road, sir.

5373. (*Mr. Bayley.*) You mean there is a difference between the measured distance and the way the cab could go? It has to zigzag about to get to the place?—I am given to understand that this radius is taken across the tops of houses, as it were; we cannot get at it as a 4 mile radius by road.

5374. You think it would be better if the radius were made the measured distance?—Yes.

5375. You say you live close at hand yourself?—Yes.

5376. But as a rule when a cabman says how much he earns he takes into account what he has paid for food in the day?—There is a lot of cabmen do not average what they spend out but what they spend home.

5377. You do, because you live close handy?—I do.

5378. (*Mr. Hopwood.*) As to the Waterloo system, do you tell us that the worst cabs, the bad lots, go to Waterloo because they cannot compete with the good lots on the street?—No, it is not for that. Say, I have got a shabby cab, or a horse a bit out of date, a bit used, if I were to put it on a street standing very likely the police when they came round the stand would make a report of it, whereas I can take a cab of that description to Waterloo and hide it.

5379. That is very much what I put to you, that the bad cabs go off to Waterloo because they feel they will not do so well on the streets?—Yes, sir; a lot of them.

5380. Then you tell us that the better the cab the better chance the driver has of making a profit?—That is just it, sir. I have myself, because I have got a decent four-wheeled cab, been kept—only last night I was told, "Well, you have got a decent cab, cabby, "you can wait for me."

5381. And you can make a better wage with a good four-wheeler working on the streets than driving from a station?—I can make as good, sir.

5382. (*Mr. Whitmore.*) Provided you had got a fairly good cab?—Yes; provided I had got the article to get the living with.

Mr. W. Tackley.

13 July 1894.

The witness withdrew.

Mr. JOHN LOWERY called in and examined.

5383. (*Chairman.*) You are a Union driver of a station hansom?—Yes, sir.

5384. What station, please?—Midland—St. Pancras.

5385–6. What have you to say as to the privilege system of cabs?—Well, considering the way they have worked it for so many years past I really do not think it would be any benefit to the drivers at large if the railways were thrown open.

5387. Do you think the present system procures a better cab at the railway station than would be there if it were abolished?—If the railway system were abolished we would have all the riff-raffs of London in it, but now at the present moment they have got a good class of cabs, which will bear inspection, and provided that they were to be disqualified, of course, they would have the same as they had previously when we were on strike in 1891; they had all the riff-raffs of London in there; in fact, some of the passengers would not ride in them; they walked outside to select a better one.

5388. Now about the number of cabs and the number of drivers there are; is it your opinion that there are too many or too few, or how?—Too many, sir.

5389–90. Too many cabs?—Too many cabs and too many drivers.

5391. And not such a good business as it was years ago?—No, sir.

5392. You would be in favour then of some limitation if it could be brought about?—Yes, sir.

5393. Do you think there are in the cab-driving trade a number of men whom it would be desirable from their general character to have weeded out, if possible?—Most decidedly, sir. Being on the committee a few days—the unionist committee of cabmen—I had the paying out of some of the fraternity, and I can assure you that I was almost ashamed to think that I belonged to the cab trade at all; after we paid our own class of men and we came upon the rougher element I really was almost ashamed.

5394. Well, I am wishing you to answer these questions quite apart from being unionist or non-unionist, fairly all round, whether there are in the trade—perhaps some unionists, for all I know—but some men who are not very desirable?—Yes, sir, I am perfectly agreed to answer that question. There is, I am sorry to say, a class who are very undesirable; they really do not drive a cab for three months in the year.

5395. Do you think the undesirable men are mostly among the men who do not drive a cab constantly or not?—Yes, sir; they are the undesirable men.

5396. Ah, they may be undesirable from several points of view; I meant undesirable from being men who get drunk and get into difficulties; the worst characters?—Oh, yes, that is what they are, the worst class, sir.

5397. We have other evidence that they are not the worst class?—I beg to differ, because a man that bears a character can get a place anywhere.

5398. You think the better class of men quite apart from unionism——?—Oh, leaving unionism out, because once a man loses his licence through some fault or other they get them renewed, they start again. They are not in business but a very short time before they are out again, and before their licence has been in vogue for three months they have been pretty nearly all round the fleet, and the remaining part of the year they do not drive at all until their licence expires, and then they get a renewal and start again.

5399. Do you think that among some cabmen in the trade there is a good deal of rudeness to passengers which possibly damages the prospects of the trade as a whole?—Oh, yes, I acknowledge that, sir. On the other hand, of course, there is a great deal of rudeness attached to some of the riders.

5400. Perfectly true, but the one would be the more difficult to cure than the other, I suppose?—I have a case pending now at the police court. It comes off next Tuesday.

Mr. J. Lowery.

5401. Against whom?—A lady that I carried last Friday. She has been in the habit of riding by the Midland for some considerable time, and there has always been a dispute about the fares that she has paid to the drivers; in fact, the last time I had her I had a dispute, but I managed to get the fare at the finish. But this time, I had her last Friday by the 20 minutes past 1 train. I set her down at the Midland again at 20 minutes past 6, making a total of five hours, 12*s.* 6*d.*, and her ladyship wanted to go into the routine of how I made it. I told her I did not make it at all, it was according to the Act. I had worked five hours for 12*s.* 6*d.* After fumbling about her dress for some time, she came to the conclusion that all she had was 8*s.* 6*d.*, and she said I must be satisfied with that.

5402. She had not any more?—No; but that was her general tale at the finish. She generally finds she has no more.

5403. You think you will get the balance if you go to the court?—There is no doubt; if she does not pay it she will be made to pay it; that is some of the rudeness that we have to put up with from passengers.

5404. She did not abuse you?—Oh, no; she was very civil.

5405. It was rudeness of another character I was speaking of?—Yes.

5406. Now, the bilking; have you been bilked before this?—Oh, yes.

5407. How many times in the last three years, we will say?—I have driven a cab now 24 years, and I think I have only been bilked once.

5408. Once in the whole time?—In the whole time, and that was from the Midland to Victoria Station; but I do not consider that as bilking, because sometimes people have got a matter of business, and they are so interested in the business that they jump out of the cab and run away and forget about the cab altogether.

5409. You think it is a matter of forgetfulness really?—I think it is more forgetfulness than wilfulness.

5410. With regard to the others, do you think there is a great deal of bilking going on?—Oh, yes, sir.

5411. You have been rather fortunate?—I have been rather fortunate, but there is a lot of people get into cabs, and they will ride about the whole of the day, and then they will tell you at the finish, "Well, I have "got no money; you know what you can do, you must "summon me." Then they can give you what vague address they like; you call the police to your assistance, and the police say, "We are powerless on "the subject; all you can do is to take the name and "address and summon him." Well, they can give you what address they like. If you get the correct address, so much to your benefit.

5412. How many of those cases do you think occur to each cabman on the average in the course of the year. You have had one in 24 years; how many have the others had?—Some are perhaps more fortunate than the others; they may have had a few more.

5413. Are they much more unfortunate than you?—I have heard a great many men—the trade is very large ——; "Well, I was done at so-and-so." "Well, "that is where I was done."

5414. I presume you think it might be a dangerous power to give to cabmen to hand people into custody wherever there was a disputed fare?—I do not think so, sir.

Mr. J. Lowery.
13 July 1894.

5415. I am interested; do you think it is possible that some cabmen might abuse that power very much?—Some might, sir.

5416. And do you not think that the possibility of having that power abused might rather make people unwilling to take cabs; they might be alarmed at it?—Well, they might be so, sir, but not those that are genuine.

5417. Can you point me out any similar circumstances under which people are allowed to arrest for non-payment?—Well, in railway companies if they think your address is not correct they will detain you while they send and inquire.

5418. Is that legal? You are not able to answer that question?—I am not able to answer that question.

5419. The tramways are a better instance, they have the power?—The tramways have it by law.

5420. I will give you another instance: you sometimes go into an eating-house. Supposing you were to go in and order some food and then find at the end that you had not the money to pay for what you have ordered, would you give the eating-house keeper the power to order your arrest?—Yes, I would.

5421. He has not got it at present?—I would give it him, because you go in with the knowledge that you have not got the money to pay.

5422. As regards the radius, what do you think of the extension of it?—I think the extension is quite far enough, sir.

5423. Where do you generally ply?—The Midland Railway.

5424. You keep to that entirely?—Yes, sir.

5425. And you would not be for extending the radius?—No, sir.

5426. Now, as to sixpenny fares, what do you think of that?—I should not think that would answer at all.

5427. Of course it would not answer for you at a railway station?—No, nor out on the street.

5428. Is it possible that it might answer as a general thing for cabmen in crowded parts of the city?—No, sir.

5429. For very short distances?—I do not think it would do. I can recollect for many years back, when my father drove a cab, when sixpenny fares were in vogue, and his rank used to be Holborn Hill. There used to be a gentleman—you no doubt will know him—Mr. Lewis, of Ely Place; he would walk out of Ely Place into Holborn and take the first cab, that probably had been there for two or three hours, and give him 6*d*. Well, that would not come very acceptable. That is what I am speaking about; that is 40 odd years ago.

5430. You would not be in favour of the sixpenny fare?—No, sir, because the shilling fare is what a gentleman gives you when he gets into his cab. He has got business, and he wants to get to his destination as quickly as possible, and he jumps into a cab to get to his destination as quickly as possible.

5431. I am speaking of the interests of the drivers to earn as much as they can?—I do not think it would be in the interests of the driver.

5432. (*Mr. Lough.*) You said if the railways were opened all the riff-raff of London in the shape of cabs would go in?—Most decidedly, sir.

5433. Is there much riff-raff among the cabs?—I am sorry to say, if the cabs were thoroughly inspected, I do not think half the cabs in London would be allowed to run at the present time.

5434. You think half the cabs would be swept off the street if they were inspected?—Yes, if they were well inspected.

5435. Then you think they are badly inspected at the present time?—I think so; in fact, I do not think, I am sure of it.

5436. What fault do you find in the system of inspection?—Well, the fault I find is that some people can take the cabs down to the police court to pass them, and there is no notice taken whatsoever of them; they merely just walk round, and the man goes and puts the number on the July pass or the August pass, the monthly pass, and there is no further notice taken. Some are more particular; I do not know why; that, of course, I leave you to best judge. I went to pass my cab for the London Improved Cab Company last July, I think it was, for my cab runs out this month. I saw a man bring in a cab not worth anything, the rubbers half worn out; I saw the monarch put on behind his cab. My cab was thoroughly inspected, and it stood the inspection. The Company, of course, turned it out properly; but I am sorry to say the other one was not; but still, the same monarch was put on that—the July monarch—as was put on mine. That cab was supposed to run for another 12 months.

5437. And you do not think that is all fair and square?—No, sir, I do not; I think we ought to make a special point not to have the cabs in districts; they ought to bring them to the main point and have them examined by disinterested persons altogether.

5438. (*Mr. Whitmore.*) You mean Scotland Yard?—Yes, Scotland Yard.

5439. (*Mr. Lough.*) Do you think the people who do examine them now are interested?—I would not like to say.

5440. You do not want to say anything more about it, perhaps?—I should not like to say anything beyond what I could prove. I know one case, when I had my own cab; that is some 20 years past. I took it to the Stone's End, in the Borough, to pass; it was painted very well and I thought it looked very nice. The inspector looked round it, and there happened to be one place where the paint was not altogether dry: "Take it back again." I took it back again next passing day. The inspector tapped it all round in the windows and said the windows were loose. "Take it "back again." Then I took it back again and had the windows fastened, and brought it on again; then the fault was that it looked very naked inside, there was no falls to the cushions. Well, what was I to do then; I could not afford to go and buy cushions for it. I naturally borrowed a pair of cushions with falls to them from another man, took it to the inspector, and had it passed all right. When I moved from over the water to Clerkenwell I passed it at Clerkenwell, and there was not a murmur about it.

5441. (*Mr. Whitmore.*) But in neither case was there any attempt to extract money from you?—Oh, no, sir.

5442. And you have never known of any such attempt?—Oh, no, sir, I would not say anything.

5443. (*Mr. Lough.*) You do not suggest that?—There might be.

5444. (*Mr. Whitmore.*) Not to your knowledge?—Not to my knowledge; I have heard of cases where there was a little bit under the cushion.

5445. (*Mr. Lough.*) You did not in your case?—I did not in my case.

5446. You did not put anything under the cushion?—I think that was the condition that I did not come off so well as others.

5447–8. You spoke of distributing pay at the union office—you are a member of the committee?—Yes.

5449. Did you continue to distribute the pay all through the strike?—No, sir.

5450. (*Mr. Hopwood.*) I want to ask you one or two questions about the privileged cabs. I understand you to express the opinion that throwing open the railway station would not benefit the cabmen?—No, sir.

5451. And you are a privileged cab driver yourself?—I am, sir; I have driven both; I have driven privilege and street.

5452. Do you not waste a great deal of valuable time driving backwards and forwards along the streets from station to station?—I think by coming along the streets back home I am more likely to find a job.

5453. Do you take a job?—Oh, yes, sir.

5454. Have you not to go back to the station as fast as you can?—Oh, yes.

5455. May you go off to any place?—Yes, sir.

5456. How is the station supplied with cabs during your absence?—Providing that they have not got enough of their own cabs they call in the street cabs.

5457. Then, as matter of fact, you would say that the privilege system is no good to the railway company and is no good to the driver?—Oh, I do not say it is no good to the railway company, simply because while you are in their station you are under their

control—you are like their servants. If there should be any incivility on the part of any of the drivers, or anything lost, or a case—I have had a case—of taking another gentleman's portmanteau in mistake for yours. Perhaps you think it looks similar to yours. "Yes, that is mine." It is put up on the cab. I have taken it to the destination, and the gentleman has said: "That is not my portmanteau"; what am I to do? I have taken it back to the station again, but his portmanteau is forwarded on, so the company have us like as their servants.

5458. But is not the same control exercised by the railway people of the South-Western?—The same control, but they have not got the men under their control as a railway company has that has its own cabs in.

5459. They have not the same control?—It would take them too long to go round; I might go into Waterloo Station to-day, and I might not go there again till weeks have passed. They would have to go to Scotland Yard to get my number and the yards to find out who I was.

5460. It is quite clear to your mind that the privileged system is valuable to the railway company?—The railway company has more security to their passengers.

5461. Then it is valuable to the companies on that account?—For instance, they threw the South-Eastern open to the street property. Well, they had such a cantankerous lot to deal with they did not keep it open but a very short while; they had to charge a penny, and they got to three-halfpence. They had to increase their staff to regulate their cabs, and at Cannon Street and London Bridge they had such a job to get empty cabs that they were very glad to get their railways open to the privileged system again.

5462. They returned to the privileged system?—They returned to the privileged system. They found it did not pay.

5463. Do you know the station omnibuses?—Yes, sir.

5464. Have you anything to say about that?—No, I have nothing to say about the station omnibuses.

5465. Do these station omnibuses ply for hire?—No, I have never seen them do it.

5466. You have no objection to the station omnibuses?—I think the station omnibuses are more a detriment to the jobmasters than to the cabs.

5467. You have no desire to see the station omnibuses licensed?—Well I have no objection to see them licensed; in fact I would have everybody licensed if it was my will.

5468. But you have no desire to have the station omnibus licensed as a hackney carriage?—No, sir; that would make it bad for us, I consider, because they would be able to take a job coming back to the railway; that would be more a detriment to the cab trade.

5469. Do you admit the principle of allowing the railway companies to do cab business?—Yes, sir.

5470. And that you would object to?—That I would object to, and then there is another thing. I have heard, providing the railways were thrown open, that the railway companies would have their own cabs and work them privately. We have got a specimen of them at Mr. Harrod's, the Harrod Stores at the Brompton Road. You see he has started working private cabs for his customers on account of the strike; they have got their own cabs.

5471. (*Chairman.*) And have they got them now?—Yes, sir, they have got Harrod's Stores on the side of the cab.

5472. Tell us how the system is worked?—Why it is worked simply the same as the 'bus system on the railways. The public send to them and say they require a hansom sent to such-and-such a place. A hansom is sent to them to take them to the stores, and they can keep them the whole of the day.

5473. As a jobmaster would?—As a jobmaster would.

5474. (*Mr. Hopwood.*) They are not licensed?—They are not licensed. It would be the same if the railways had their own property. It would be the greatest blow the cab trade would receive. If you drove a street cab you would have to drive something superior to work the streets with. Of course there is a great detriment to railway cabs, because, of course, the porter comes with a great trunk or anything and he chucks it on to a good cab; he does not care whether he breaks the sides or shatters the tops; that disfigures it for the streets. If a man has a good street cab he would not think of coming into a railway with it.

5475. (*Mr. Bayley.*) Roughly, the effect would be the same as in Harrod's Stores, that all the privileged cabmen would be thrown out of employment?—They would be thrown out of the railway, sir.

5476. The streets are full already?—Already, sir. If they were thrown out of the railways they would have to work the streets, so that it would make no fewer cabs in the streets than there are at the present time. There would be the same number.

5477. The street traffic is provided for now; you have told us already that there are too many cabs in the streets?—Yes, there are too many cabs in the streets.

5478. If you throw 1,500 or 2,000 more in the streets there would be far more, of course?—Yes.

5479. That amounts to the same thing; the effect would be to throw all the privileged cabmen out of employment, unless they could get jobs elsewhere?—Unless they could get jobs elsewhere.

5480. (*Mr. Hopwood.*) Or drive the station cabs?—Or drive the station cabs.

5481. (*Mr. Bayley.*) The railway company would not employ those men; they have their own carmen?—The same as they have their own 'busmen—the carmen; they are not of the cabmen's class that come from the carmen.

5482. Brought up from the country, most of them, I think?—Yes, sir.

5483. Then the privileged cabmen as a rule are in favour of maintaining the privilege system?—The majority of them.

5484. (*Mr. Lough.*) You do not know that; you are not authorised by anybody except yourself?—Only by the talking of it in the station with the men, sir; of course the outside men I do not suppose are in favour of it.

The witness withdrew.

Adjourned till Tuesday at 11 a.m.

TENTH DAY.

Tuesday, 17th July 1894.

PRESENT:

MR. HENRY CUNYNGHAME (IN THE CHAIR).

Mr. F. J. S. HOPWOOD, C.M.G.
Mr. JOHN BURNS, M.P.
Mr. T. LOUGH, M.P.
Mr. C. A. WHITMORE, M.P.

MR. MALCOLM DELEVINGNE, *Secretary.*

Colonel HENRY SMITH, Commissioner of the City Police, called in and examined.

Col. H. Smith.

17 July 1894.

5485. (*Chairman.*) You are the Commissioner of the City Police?—I am.

5486. And in that position you have the supervision of the cabs and horses, in so far as they carry on their trade, or are in the City of London?—I have.

5487. You do not, I believe, license the cabs at all for the City?—No.

5488. But only supervise cabs, horses, and drivers?—Certainly.

5489. Do you issue any instructions to your City Police with regard to these matters of inspection, verbal or written?—No written instructions, only verbal, to look after the cabs and cabmen, and attend to any complaints, of course, in the general routine of their duties.

5490. I suppose that in your supervision you are guided to a certain extent in your requirements by the requirements that you see have been made in the case of original licences; I mean that where a cab has been originally licensed you do not immediately condemn it as bad, though it might not come up to what you thought was a good standard?—Oh, certainly not; but, really, I refer all these matters to Scotland Yard.

5491. Yes, but if you saw a cab that you thought really very disgraceful, what would you do; you say you refer all these matters to Scotland Yard?—Communicate with Scotland Yard.

5492. Still, the standard of original licensing, I suppose, operates a good deal upon the standard of supervision?—It does.

5493. What I wanted to ask you was this: do you think that a number of the cabs are up to the standard that might be expected to-day, looking to the improvements that have taken place in manufacture, and so on, generally or not?—I should say scarcely so.

5494. You think, then, with advantage, the standard of requirements, both in licensing and in inspection, might be rather higher?—Looking especially at four-wheeled cabs, I do not think they are exactly what one would expect, as regards their general turn-out, and in comparison with other towns.

5495. Now, then, for another point; are you of opinion that there are too many cabs plying in London, or too few, or enough?—I think there are quite enough.

5496. Too many, perhaps?—Well, yes, I think there are too many.

5497. Would you put that on the ground of the traffic being impeded; too many for what?—Oh, principally because of the numbers in the street, which do, as you say, impede the traffic.

5498. That would be the reason I mean?—Or the principal reason; that cabmen do not, as a general rule, care to go upon the stands, except at certain hours, and prefer loitering about to try and pick up fares.

5499. So long, perhaps, as they do not obstruct the traffic, if that could be done, that might be possibly advantageous for the city man, or do you prefer the stands?—I prefer the stands, but it is really a matter of impossibility to make them go on the stands. For instance, in the City enormous numbers of cabs come in in the morning, and they do not belong to the City at all; they loiter about with a view to getting a fare to bring them out again, and it is a very difficult thing indeed to interfere with them; and, moreover, I do not think I have got the power to interfere with them unless they create an obstruction.

5500. Not so long as they are going quietly along?—That is it, yes.

5501. Do you think there would be an advantage in compelling them to go more to stands—an advantage to the public and themselves and to everybody, or do you not; or do you think it would be impossible?—It would certainly not be an advantage to the public, taking the last part of your question first, because it would result in inconvenience to the public; the public would cry out very much if they could not get those cabs when they want them.

5502. You mean in the street?—In the street.

5503. Do you think that could be met by very small cab stands, judiciously placed in corners, for instance?—Not as far as the City is concerned.

5504. Have you any opinion—it is a very general matter, upon which you have not possibly a very special knowledge—as to whether it would be an advantage, in the first place to the cabmen and in the second place to the public, if some form of sixpenny fare was introduced, making it either voluntary to the cabman or compulsory upon him during certain hours; one must consider the question from both points of view?—Do I understand you to mean that a cabman and his fare might make an agreement to be taken for 6*d.*?

5505. Well, they may do that in law now, but whether, for instance, a cabman should have power to mark up on his cab, when he chose, a red sign saying he was willing to take a sixpenny fare—that is one view, or whether during certain hours it might be compulsory to charge 6*d.* for the first mile; have you any views on that, whether any advantage would accrue?—I cannot say; it is a difficult question, and requires consideration. I would prefer not to give a definite answer on such a question.

5506. It is alleged that the cabmen are not earning as much as they used to in old days, and that they have a hard time to live; have you any experience upon that point?—Well, I have; I think there is no hard or fast assertion to be made, but I think that I have seen many cabmen who are—well, improvident to begin with, and others who ought to live better than they do.

5507. Yes, but apart from that, in your opinion, if a man is thoroughly diligent, can he make a good living there or not—reasonably diligent, but still, perhaps not quite so fortunate as others?—Only in some cases; there is to my mind a deal of chance about it, some make a good living, others do not.

5508. Would you tell us what is the practice of the police under your orders with regard to summoning drivers for offences. May we take it that it is the same as in the Metropolitan Police over the whole area?—Identically the same.

5509. I put it more particularly to you, have you any system of cautioning first or not?—Oh, yes, certainly we have; we caution cab drivers, and we caution everyone.

5510. First of all, before bringing them up?—Oh, certainly; it would depend entirely on the offence, of course. If the offence had gone beyond really the point at a caution would be of effect; if a man persistently obstructed, or anything of that sort, his name and number would be taken, and he would be immediately summoned.

5511. But for slight offences, such as obstruction, the police caution them first?—They always give them a chance.

5512. When the cabmen are summoned, before what courts do they generally appear?—In the Summons Court, before an alderman.

5513. Where will that be, at the Mansion House?—At the Guildhall.

5514. Does that alderman sit specially for cab cases, or does he take them in the course of his regular duties?—He takes them in the course of his regular duties.

5515. In the afternoon, perhaps, or at a special time of the day?—No; that court is independent of the Justice Rooms at the Mansion House and the Guildhall.

5516. When you say "that court," what do you mean?—The Summons Court.

5517. The Summons Court for all offences?—No, it is for slight offences; obstruction, costermongers.

5518. (*Mr. Lough.*) Street offences?—Street offences.

5519. (*Chairman.*) It cannot be called a special tribunal, but a special sitting?—That is it.

5520. A special sitting of the tribunal to deal specially with street offences?—Yes.

5521. In the first place, it is not, I suppose—you will correct me if I am wrong—a special magistrate who does that and nothing else?—Oh, no.

5522. They take their turn?—Yes.

5523. Secondly, I suppose that the powers of that particular session—I will call it for a moment—are really only derived from the general powers of the magistrates in the City?—That is all.

5524–5. But on the other hand, it is distinctly a special sitting, as it were, just as much, so to speak, as the sittings at the Central Criminal Court are for criminal cases?—It is entirely a special sitting.

5526. (*Mr Lough.*) The Chairman asked you, was it a special magistrate? Of course, you have no magistates in the City who are paid?—No, certainly not.

5527. Therefore, what the Chairman might call the special magistrate is simply a voluntary citizen magistrate in the City?—Exactly, an alderman in all cases.

5528. (*Mr. John Burns.*) On the rota?—On the rota.

5529. (*Mr. Lough.*) Who is not paid, but takes those special cab cases on his day?—Yes.

5530. (*Chairman.*) Cab cases are taken all through the day, are they, in that court?—Yes, until they are disposed of.

5531. They do not come at two o'clock, for instance, or at a special hour?—The court generally sits early, because they cannot get through the business.

5532. But the summonses of that court are not arranged in groups, are they, so as to take any particular group or class of offences at a particular time of the day?—No.

5533. They are put on a roster and just taken as they come?—As they come.

5534. How long a time generally occurs, so far as you know, between the offence committed and the time of hearing in that court?—Well, you get summonses returnable, say, on an average within six days.

5535–6. And then they are disposed of?—Yes.

5537. (*Mr. Hopwood.*) Let me understand with regard to what is called the Summons Court; in the course of the business are only summons case taken; and no criminal cases upon which persons are charged on warrant?—No, certainly not.

5538. That is why it is called the Summons Court?—Yes.

5539. There are no criminal cases proper taken at that court at the same time as the street cases?—No, they are not.

5540. (*Chairman.*) Except what would be called very petty criminal cases that are intended to be dealt with only on summons, I suppose?—Very petty indeed.

5541. Would drunkenness, for instance, be taken before the Summons Court?—No, drunkenness would not.

5542. I understand you thoroughly; a man would be summoned for drunkenness, but that would be considered too serious, and dealt with by another court?—But, of course, that enlarges the subject rather, because in the City we do not deal with them for drunkenness; we take charge of them. If they are drunk and disorderly, or anything of that sort, we deal with them, but when they get drunk they are simply locked up, and discharged when they are sober.

5543. (*Mr. Whitmore.*) They are never fined?—Never fined.

5544. (*Mr. Hopwood.*) Can you give us an example of a criminal case that is dealt with by the Summons Court?—It is not what I would call a criminal case at all that is dealt with by the Summons Court.

5545. (*Mr. Lough.*) It is a civil court essentially?—Yes, essentially.

5546–7. (*Chairman.*) If a man were drunk and disorderly, would you then lock him up till he was sober as well?—Yes, and then take him before a magistrate at the Guildhall or Mansion House.

5548. Not when he is drunk?—Or assaulting a member of the public, or a policeman, we should not take him to the Summons Court then.

5549. Has your experience been sufficient in the courts to give us an idea of the ordinary average punishment that would be inflicted upon a man, say, for simply obstructing?—Generally it depends, of course, upon how often he has been there before. If he produces his licence without endorsement, or anything of that sort, and if he is a man of good character, he gets off very cheaply indeed.

5550. What would you call very cheaply; will you give us an idea?—Oh, 1*s.* and costs, something of that kind.

5551. Sometimes he would get off with nothing and costs?—Yes, with costs only.

5552. (*Mr. Whitmore.*) What are the costs, about 2*s.* 6*d.*?—They amount generally to about 2*s.* 6*d.*

5553. (*Mr. Lough.*) For the first offence, a small offence, say the first time a man is up for obstruction, what would the punishment be?—Oh, he would get off altogether.

5554. He would get off free the first time?—Oh, yes.

5555. Then the second time the same man committed another very slight offence, in a year, what would it be then?—That would depend upon the magistrate, what humour he was in. I should not like to say exactly what would happen to him.

5556. Would he get off with costs?—He might.

5557. And of course neither of these two that you have described would be indorsed on his licence?—Not an offence of that sort, I should imagine, but I should not like to be positive.

5558. Where you said he gets off altogether, do you mean that he would get off without being even charged costs in the case of a first offence of a slight nature?—No, he would have to pay costs generally.

5559. (*Mr. Hopwood.*) But the licence would not be endorsed when costs only were paid?—I do not think it would.

5560. Only where a penalty is imposed?—I do not think it would, but I would rather that time were given me to amend my evidence as far as that goes.

5561. (*Chairman.*) Have you heard, during the time you have been there, any complaints by drivers to the effect that their cases were too hurriedly considered, or that they did not get the consideration that they thought they ought to have?—No; I have had, of course, complaints from drivers regarding the conduct of constables that they thought were too hard upon them

5562. I was rather speaking with regard to the time that was given to the cases by the alderman who sits to try them?—Well, that complaint would not be made to me.

5563. It might not be made to you, but have you any reason to think there would be any justice in it?—I have not.

5564. Do you know anything upon this point; it is said that sometimes men are induced to plead guilty who are not guilty, in order to get off easily, or to get away soon; is there anything in that?—I never heard of such a case.

5565. With regard to the men's complaints of the police; I suppose a man who is being summoned by the police will often complain of the man who has to summon him—but I should ask you this: have you

Col. H. Smith.

17 July 1894.

had any reason to think that the police have been, say, in past years, too strict; have you ever had to caution them about that, to render them a little more lenient?—Not with regard to cabmen, as far as I can recollect.

5566. Generally, from time to time, no doubt you have seen fit sometimes to say that they must be more strict, sometimes more lenient?—That is exactly so.

5567. (*Mr. Hopwood.*) Do the City constables make any special report to their superior officer before taking out a summons against a cabman?—Always.

5568. A sort of deposition as to the facts?—That is exactly what they do.

5569. And that deposition is filed, I suppose, with you at your office?—Yes.

5570. Would that information be open to the magistrate if he wished to see it, to enable him to put questions to the constable?—No; anything that is filed in my office would not be exhibited to the magistrate.

5571. Not as a matter of course?—No; any information he wants I should be most ready to give him.

5572. No doubt you would give him the deposition upon which the summons was issued if he asked for it?—Oh, yes, I would give him full particulars; that is needless to say.

5573. (*Mr. John Burns.*) I gathered from you that you did not pay particular attention to the inspection of cabs and cab horses in the City, that you rather left it to Scotland Yard?—Exactly.

5574. Then in the event of your constables finding either a cab or a horse in bad condition, and not coming up to what we term the City and the Scotland Yard standard, what would you do—communicate with Scotland Yard?—In regard to the cab, I would communicate with Scotland Yard; in regard to the horse say in the case of cruelty, such as plying for hire——

5575. If you would allow me, I will deal with the question of cruelty, but I am talking of the general shabby condition of the horse and the cab?—I would represent them to Scotland Yard.

5576. In the event of your constables being told by an inspector of the Royal Society for the Prevention of Cruelty to Animals that a cab horse was suffering from sores, or farcy, or glanders, what is the usual practice in the City?—The horse would be taken to the police station and he would be thoroughly looked over there; and if there was what you may call a *prima facie* case of cruelty made out to the satisfaction of the inspector who would be called in, in consultation, the man would be charged forthwith, but admitted to bail.

5577. Has it come within your knowledge as chief of the police in the City, that cabmen and cabmasters object to the inspection of horses by the officers of a voluntary society?—I should not say that it has come within my knowledge.

5578. But would you not prefer to see the inspection of cab horses suffering from any complaint left either to the local sanitary authority for contagious diseases purposes and to the police, or police inspectors under the local authority, as the City Police are?—Yes.

5579. To do those duties now discharged by a benevolent society?—I think it would answer equally well, as you say.

5580. But is there not every reason to believe that a police officer or an officer specially told off either by the Watch Committee of the City Corporation or by you yourself, would more judiciously exercise his supervisory powers?—Oh, I think he would.

5581. He would be less liable to caprice or prejudice?—I think that a constable that has experience, knowing that if he overlooks any case of cruelty which an inspector might see he would get into trouble, would more probably do his duty satisfactorily.

5582. Then you would have no objection to see those powers of inspection of horses transferred to the police?—I do not quite know what you mean by the inspection of horses.

5583. For instance, supposing the Royal Society for the Prevention of Cruelty to Animals has, walking about the streets of the City, four inspectors paid by that society, would you not prefer to see those inspectors, if qualified, the directly paid officers either of the police or of the Corporation?—Of the Corporation, I think I should.

5584. Many of your policemen have been specially prominent, notably at Blackfriars and Ludgate Hill, in the detection of cases of cruelty and of horses suffering from sore shoulders, farcy, and glanders?—They have.

5585. One man in particular, at Blackfriars, has stopped over 200 cases; is not that so?—There was one man did that, yes.

5586. Do you know anything of what is described and known in the City as the Commercial Road hansom?—I do not.

5587. Do you find that the cabs that ply east of Aldgate, both as to condition of the horses, appearance of the driver, and character of the vehicle, are worse than those that, in the opinion of your men, come from the westward?—Yes, I do.

5588. Do you particularly find that with regard to the four-wheelers?—Yes, I do.

5589. And in your opinion and experience, there are many East End cabs, both hansoms and four-wheelers, that do not come up to what you would contend is a proper public standard for cabs?—I am quite of that opinion.

5590. Is that noticeably so in the early morning or very late at night?—I have noticed it myself, of course, in the early morning and late at night.

5591. There are practically few cab yards in the City?—There are none.

5592. There are very few cabmen living in the City proper?—Very few.

5593. And most of the cabs come from the west, whilst a few come from the east?—Yes.

5594. And, generally speaking, the west cabs are the best?—I should say distinctly so.

5595. Before we leave that, have you any remedy to suggest for the inferior character of the East End cab as compared with the west?—I have not.

5596. (*Mr. Whitmore.*) To what do you attribute the inferiority of the East End cab?—Well, they have an inferior class of drivers, generally speaking. It is an inferior turn-out altogether; the men have, probably, less capital, or for some reason of that sort the proprietors——

5597. I mean, is the cause of that general inferiority that the earnings are less?—That is the only conclusion you can arrive at.

5598. (*Mr. John Burns.*) Do you think, Colonel Smith, if there were cab yards in the City, and you were vested with the power of inspection that you would have under the Hackney Carriage Act as the police authority, that you would take steps to improve the character of both horse and cab and driver by enforcing the regulations?—Well, I scarcely think that it would be an improvement upon the present system of Scotland Yard; I think they do admirably well.

5599. But given the power of inspection, which you cannot exercise because you have no cab yards?—Yes.

5600. Given jurisdiction outside your City over cabs that ply inside your City, you would not refuse to exercise those powers in the right direction?—I think as long as the forces remain as they are that the authority should not be divided in regard to cabs.

5601. Well, then, how do you account for such a marked difference between cabs that border on the East End of the City and the cabs that ply in the West End of the City; is it due to less earning capacity on the part of the East End cab, or is it due to the fact that in the East End quarter of the metropolis inspection is not so efficiently enforced?—I should not say it was due to the latter cause; I should say that the East End people are content with the cabs they get.

5602. (*Mr. Whitmore.*) Do you not think, really, that it comes to this, that the cabs plying westward from the City as a rule obtain more than their strictly legal fare, whereas with cabs plying eastwards, naturally the people who use them give the strict legal fare?—Naturally money is looked more carefully at there.

5603. (*Mr. John Burns.*) But is not that rather counteracted by the fact that the river-side population, and particularly the cab-riders connected with the mercantile marine, or going down to the sea in ships, are proverbially generous in their treatment, not only of the cabs, but of everyone?—Well, they may be so; I would not like to give an opinion, Mr. Burns.

5604. It is a theory in the East End of London that the cabman gets twice the fare from the sailor either going or coming home?—That may be so.

5605. Now we will go from that to the question of privilege. You have within your police jurisdiction several privileged railway station cab yards?—Yes.

5606. One of those is Liverpool Street?—It is.

5607. Another is Cannon Street?—Yes.

5608. And Fenchurch Street?—Fenchurch Street.

5609. And what others?—There is Broad Street.

5610. Broad Street, yes?—In fact, there are all the railway stations.

5611. All the railway termini in the City under your jurisdiction are privileged cab yards?—But with that I have myself nothing to do, except knowing the fact.

5612-3. Do your men complain frequently of the congestion of cab traffic outside Liverpool Street, Cannon Street, and Fenchurch Street?—Generally speaking, in the City they do complain of the congestion of traffic caused by cabs.

5614. Have you frequently seen, or have you had reported to you that simultaneously with the congestion of cab traffic outside, there has been plenty of cab accommodation inside the railway station?—It has not been reported to me.

5615. But have you observed it?—No, I have not.

5616. But, in the event of it being proved to you that concurrently with congestion of cab traffic outside the station, there was sufficient cab accommodation inside, do you consider it would be to the public advantage that those two conditions should be equalised, and that the outside cabs should have the right of entry to a railway station?—I imagine that that would be better dealt with by the railway directors themselves. I would not be quite positive on such a head.

5617. Let us put it in this way: assuming that the railway companies were disposed to open their railway cab yards to all cabs, privileged and non-privileged, would not that tend to the diminution of the congestion of cab traffic outside the stations?—It might at some places; I fancy it might have another tendency at others, that is to say, that men who could not take up a fare at certain hours, would force their way or endeavour to get into the railway stations.

5618. Could not that be overcome, to some extent, by you more rigidly enforcing, particularly outside railway stations, your regulation as to crawling and obstruction?—Well, that would make us regulate the number, of course, that would be admitted inside the station; you would come back to where we started from, I think.

5619. We differ about that, but as a matter of fact, have you observed that, when trains come into the City termini, that outside cabmen, on the chance of picking up a fare after all the privileged cabs have been exhausted, do hang about the stations?—They will hang about the stations.

5620. With regard to first offenders, do I understand that, not only in connexion with cab cases and vehicular traffic cases but generally, you attach great importance in the City to giving the first offender a strict caution, instead of taking him up?—Certainly.

5621. Do you find that that operates in the diminution of offences, and generally for public convenience?—I would not like to say so in many cases; in the case, for instance, of the greatest obstructionists of the day—costermongers.

5622. I will come to those directly; but, upon the principle that a soft answer turneth away wrath, the first offender ought to be leniently treated?—Certainly.

5623. And you think that does not lead to a repetition of the first offence for which he got cautioned?—I should say not.

5624. You told us that you had in the City a court which you described as the Summons Court?—Yes.

5925. That court is presided over not by a stipendiary magistrate, but magistrates who are aldermen?—Who are aldermen, yes.

5626. Have those aldermen magistrates generally been members of the Watch Committee?—They all are.

5627. They all are members of the Watch Committee?—An alderman is by virtue of his office a member of what we call the Police Committee.

5628. As members of the Police Committee their contact with the officers gives them special experience and facilities for sitting in judgment on these street cases?—Yes, I think it does, certainly.

5629. That court deals with cab cases, costers, carmen, hawkers, and bill distributors if they attempt to distribute bills?—It does.

5630. Street offences generally?—Street offences generally.

5631. You do not allow bill distributing or sandwich men in the City of London?—No.

5632. What are the reasons for that?—The primary reason is the risk of obstruction.

5633. (*Mr. Whitmore.*) Is that under some special powers?—Yes, under the Metropolitan Street Acts.

5634. (*Mr. John Burns.*) You refuse them permission to distribute bills and to walk about the streets with sandwich boards, as in your opinion the congested condition of the streets would not permit of that being done with advantage to all?—It would not permit of that being done.

5635-6. Do you apply that prohibition to vehicular advertisements such as those that one frequently sees in the metropolitan streets with two negroes behind?—Yes, we do.

5637. On the ground that it tends to undue congestion for no definite public object?—Exactly. Would you allow me, Mr. Burns——

5638. With pleasure. It is a difficult question from this point of view, omnibuses carry advertisements, as you well know.

5639. And they carry passengers?—And they carry passengers; but anything in the shape of an advertisement, what you led me to believe you meant, would be prohibited in the City, vehicular or pedestrian.

5640. Advertisements are allowed that are subordinate to a public vehicular purpose?—Exactly.

5641. But no vehicular advertisement is allowed for advertisement purposes alone?—No.

5642. There are no criminal or warrant cases tried at the Summons Court, are there?—No.

5643. Supposing there was a case of loitering for suspected theft, that would not be taken to the Summons Court?—No.

5644. The case of a drunken cabman; what would happen with him. Would his cab and horse be impounded, and would he be locked up for the night?—Yes; and his master would be communicated with at once; the cab would be taken to what we call the green yard.

5645. Then drunken persons, irrespective of whether they are cabmen or busmen or the public, in the City, are generally locked up and discharged the next morning?—They are locked up and allowed to go when sober and able to take care of themselves.

5646. And in the case of a cab or an omnibus or vehicle of any kind, if the driver was drunk, his vehicle would be impounded, his owner communicated with, and he be dismissed next morning?—The cabman, of course, if drunk during his employment is always charged, but admitted to bail when sober.

5647. Have you any views as to raising the age at which cab drivers should be allowed to ply; you of course know that the present age is 16?—Yes.

5648. Are you in favour of it remaining as it is or raising it to 21, say?—So much depends on the individual; some are older at 18 than others at 21.

5649. Generally speaking you have no particular view?—I have no particular view on that subject.

5650. Have you considered from the point of view of the City requirements, the question of limiting licences?—Limiting the number of licences?

5651. Yes.—I have.

5652. What are your opinions about it?—I think it would be a difficult thing to carry out in this country.

5653. You think that a limitation of licences is not practicable?—Yes; I think it would be difficult to carry out.

5654. But you admit that in the City, particularly at certain times of the day, there is an unnecessarily large number of cabs plying for hire?—Yes, I think so.

Col. H. Smith.

17 July 1894.

5655. And you have great difficulty in diminishing that number?—Great difficulty.

5656. Mainly because the streets of the City and the traffic will not permit of small rank accommodation?—That is quite true; and there is also a great difficulty in dealing with loitering cabs, for this reason, that you really require a policeman for every cab. They come in the afternoon, say, in the vicinity of the Stock Exchange; they know if they can get a fare there it will probably be a good one, they go down one street and they will come back again up the other; if the police move them on they will still be about the place.

5657. You have not any experience, have you, of private railway omnibuses at the City termini?—I have not.

5658. Generally speaking, do you consider that the cabman has improved in recent years; is he more civil, more amenable to regulations and orders than he was?—I should say they were amenable to orders, and, generally speaking, I find them civil.

5659. Have you formed any opinion as to their increasing sobriety?—I have not.

5660. Are there many complaints from the cabmen as to their treatment by your constables?—There are not; very few.

5661. Have the cabmen specially complained of the police at congested districts in the City, such as the Mansion House, Cheapside, and the Bank?—No, they have not.

5662. Then you have not had many complaints direct from the cabmen or their association?—Very few indeed.

5663. Generally speaking, may I take it that the cabmen and the City Police are on fairly cordial terms?—I should say so.

5664. Do you encourage your constables in the street traffic to annihilate a cabman with a joke rather than run him in; if the joke would be more successful than running him in?—If a joke were the more successful; we would put it in the way of a caution; he would certainly get the caution always.

5665. (*Mr. Lough.*) Colonel Smith, you have given us a lot of interesting information about the courts and the treatment by the police; I want to ask you just to put it all together for us, if I may. You have told us that a cabman is always cautioned first before he is summoned?—Certainly.

5666. And then you add these words, "The police always give him a chance"?—They do.

5667. That means, I suppose, that the police caution him a second time?—They treat them, as far as I understand, with absolute fairness: if they think they can attain their end by cautioning they will do so.

5668. After this cautioning you told us that the police constable always reports his case to his superior before he takes out a summons?—He does.

5669. So practically there is a discussion with the superior before the summons may go out?—It is not only that, but it comes to me or my assistant afterwards. All the summonses applied for are submitted to the Assistant Commissioner.

5670. For your approval before they are issued?—If there is any doubt he brings them to me, but every one about which there is no doubt and he is satisfied he approves.

5671. Your assistant?—My assistant, yes.

5672–3. When, after these ordeals, they do get into the court, invariably the first offence is let off, you say?—I do not like to say that absolutely, positively; but I say he is treated generally with great leniency for the first offence.

5674. If it is a moderate first offence he is let off?—Exactly. And you said that even if the second offence did not occur for a great while afterwards, and did not appear as a second offence, he would be treated easily for that?—He would be treated easily.

5675. That brings us up to the courts; it is a special court for these street cases?—Street offences, yes.

5676. At what hour does that court meet?—Generally at 11, I think; but, to tell you the truth, I have not been in that court for years myself.

5677. Are the cab cases taken first?—Not generally.

5678. Have you got a schedule of the number of cases with you—of the number of summonses that are taken out by your police?—Not of the number of summonses; I have got a list of offences by drivers of hackney carriages in the City during the year 1893, charges against them, summonses. I should be very glad to leave it with you—

"*Public Carriage Act.*

" Offences by drivers of Hackney Carriages in the City during the year 1893.

" *Charges.*—Drunkenness	-	57
" Cruelty	-	39
" Obstruction, &c.	-	1
" Assaulting police	-	2
" Total	-	99

" Convicted, 67. Discharged, 32.

" *Summonses.*—Obstruction	-	59
" Wanton driving	-	45
" Unattended	-	15
" Plying off stand	-	21
" Wilful misbehaviour	-	10
" Not wearing badge	-	12
" Total	-	162

" Convicted, 128. Discharged, 34.

" There are 29 cab ranks in the City, with standing " accommodation for 294 cabs.

" There are six railway stations with accommodation " for cabs, to what number not known.

" There are no cab yards in the City."

5679. This is divided, I see, into two parts; the first is charges, and the second is summonses?—Yes.

5680. I assume the summonses only come into that special court of which we have been speaking?—Into that special court.

5681. And the charges go into the superior court?—Exactly.

5682. Does this include both your courts at the City; both the Guildhall and the Mansion House?—Yes; both the Guildhall and the Mansion House.

5683. I see you had only 162 cases altogether in that small court for summonses in the year 1893?—Yes.

5684. And that included the whole area of the City?—The whole area of the City.

5685. An average of three a week about?—Yes.

5686. And of those 128 were convicted and 34 dismissed?—Yes, that information, I think, you may rely on as correct. I thought those latter clauses might be of use.

5687. They are very useful; I see it states there are 29 cab ranks in the City?—Yes.

5688. When you were answering questions about that I understood you to say that there were very few stands?—That is what I call few.

5689. You know, of course, the localities of the City yourself?—Oh, yes, very well.

5690. I wanted to ask you a question or two about those cab stands; the Chairman put it to you whether small stands for three cabs or four might be useful; you said you did not think they would be very useful. Now I want to ask you as to one or two localities—take Aldgate Pump; do you think that three cabs there might be useful?—Three cabs there? it is a terribly busy place. I was trying to recollect where the nearest cab stand is there.

5691. The nearest is Fenchurch Street Station?—No, it cannot be.

5692. Do you think they would be useful there; we need not pause too long over one place?—As far as I can remember it is scarcely a place for cabs.

5693. Do you know the broad part of Eastcheap?—Very well.

5694. Do you not think it would be well to have three cabs there? Might they not have three cabs there?—It might; but still at certain hours of the day there is a terrible congestion of all sorts of traffic, and I should prefer that you communicated with me in writing and gave me time to think.

5695. To think where they might be put?—To think that matter over.

5696. Do you not think there is a great nuisance of crawling cabs in the City?—Certainly.

5697. And might it not be better to have a severe rule against crawling cabs, on the one hand, and provide a number of short stands on the other?—I do not see how a severe rule, in the present state of the law, can be enforced; there is no method of dealing with crawling cabs.

5698. In answer to Mr. Burns, you said that moving advertisements were not allowed in the City?—Yes.

5699. You have noticed a coach used as an advertisement?—Yes, I have seen it; I know it very well.

5700. Is that vehicle stopped in the City?—That I cannot answer; I suspect it would be warned instantly to get out of the City, if it appeared.

5701. Have you noticed a fire engine used as an advertisement?—Yes.

5702. Would that be stopped in the City?—Yes, and that has never been so far as I know within the City boundary.

5703–4. I think I have seen it; but still I wanted to get particulars, if it is against the rule. Do you know the number of street shelters that you have got in the City—cab shelters?—I could not say the number.

5705. Have the Corporation anything to say to those shelters?—No, they have not; that is, the Commissioners of Sewers would have a say in the matter.

5706. But they do not exercise any direct control over them; for example, the shelters do not belong to the Court of Common Council?—Oh, certainly not; that would be a matter entirely for the body called the Commissioners of Sewers to deal with.

5707. But, as a matter of fact, they do not take any active part with regard to cab shelters?—Oh, no, except for the position of them; that would be a matter for the Commissioners of Sewers, who would probably consult me as to whether it was an appropriate place for a shelter.

5708. But they have no shelters of their own?—No.

5709. I want to ask you a question about Fenchurch Street Railway Station, in connexion with the privileged system: do you know Fenchurch Street Railway Station?—Tolerably well, yes.

5710. Is there room on the land belonging to the railway itself for a single cab?—Very little indeed; I was there the other day; the general traffic would prevent many cabs standing there at any rate.

5711. The station is upstairs?—Yes.

5712. Cabs cannot go upstairs?—Not generally speaking.

5713. So that really, on their own ground, there is no room for cabs?—I think that is so.

5714. Instead of that they stand in a little street called London Street?—Exactly.

5715. Are you aware that the company charges 4*s.* a week privilege for the right of cabs attending the station?—I was not aware of that.

5716. (*Mr. Hopwood.*) Is London Street a private street?—No.

5717. (*Mr. Lough.*) You were not aware that this privilege was charged?—No; I have nothing to do with that.

5718. Is London Street a street under your control or the private property of the railway company?—Under my control.

5719. And you generally notice it full of cabs?—It is pretty generally.

5720. Do you think it right, that in a street under your control, the traffic should be blocked with cabs which the railway company charges a privilege of 4*s.* per week to for standing there?—Well, it is a difficult question to answer. If it were for the convenience of the public, of course that is the first thing to be taken into account. Passengers by railway would complain very much if they could not get a cab at once.

5721. That is not exactly my point. Would you allow me, for instance, to let out a cab stand in Eastcheap, and have 40 cabs standing in Eastcheap, if they agreed to give me 4*s.* a week for each cab?—No.

5722. If you would not allow me to do that in Eastcheap, is it right to do that for a railway company in London Street?—I should like to make inquiries how it originated first, and what powers the railway company has.

5723. But they have no powers over your street?—No; they have no power over our street.

5724. I am not objecting to the cab stand being there; I think it is right the cab stand should be there if it is wanted?—You are objecting to the charges?

5725. I object to the railway company reaping a profit out of your street?—I see very well what Mr. Lough's point is, and perhaps it is capable of explanation when you make inquiries,* but I cannot quite explain it myself.

5726. (*Mr. Hopwood.*) You are no party to the payment of the 4*s.* in any way?—We are no party to the payment of the 4*s.* in any way.

5727. (*Mr. Lough.*) Not knowingly?—Not knowingly. But many things are capable of explanation when you make inquiry, and this is a sort of question that I should have said, if possible, give me notice of, and I should be prepared for it.

5728. You were asked about the limitation of the number of cabs. I want to put that question in another way. Do you think there is a great nuisance in the City of empty cabs?—I know there is.

5729. And if a wise system could be devised for limiting that nuisance, you think it would be a great improvement to traffic in the City?—I should be delighted if anything could be struck out to ameliorate what is decidedly a nuisance.

5730. You find it everywhere a nuisance, at Cheapside and at the Mansion House?—Oh, it is everywhere a nuisance.

5731. And generally it is the crawling cab that is a nuisance?—It is, of course, the crawling cab.

5732. (*Chairman.*) On the other hand, though a nuisance to the traffic, might it be a certain convenience to persons wanting cabs?—I think I said so before.

5733. But subject to that it is a nuisance?—No doubt. But the public would complain very much—you see a man come out, I do not care where it is from, on a rainy day; the first thing he wants is a hansom instantly to hand, and even if there is a cab stand a hundred yards away, he is most indignant if he cannot get a cab at once.

5734. (*Mr. Lough.*) Do you not think there is rather more accommodation for this man who comes to his door on a rainy day in the City than is necessary. All he wants is one cab, is not that all?—Certainly.

5735. Generally speaking will he not see three or four if he waits a minute, and he can have his pick or choice?—In the City he will.

5736. So that really to accommodate this impatient man who comes to his door you think there are more than are necessary?—I think in the City.

5737. (*Chairman.*) Perhaps you will allow me to put it generally, and this will be the best way, I think. Taking the whole convenience of the public into account—those who walk and those who drive, those who want cabs and those who do not—would it be of advantage if in some way the number of cabs plying in the City for hire could be made smaller?—It would.

5738. We have noticed, Colonel Smith, that the amount of yearly crime amongst cabmen in the metropolis other than the City is larger than that in the City *pro rata*, so far as we can tell, to the number of cabs that ply for hire?—I see what you mean.

5739. Could you give us any explanation of that?—I think that the two places, the City and the metropolitan district, are so different in many respects that one has not far to look for a reason for that.

5740. Would you indicate to us for our guidance some of the differences that strike you as accounting for that?—Well, the City cab day, you may say, talking loosely, is from nine o'clock in the morning till six or thereabouts. I mean where the traffic is very, very heavy, and the cabs are plying; after that we have got an easy time of it; and in the evening, late in the evening, we will say from ten to eleven

* *See* question 6241.

Col. H. Smith.
17 July 1894.

if you like, or later, you have got, comparatively speaking, very few cabs in the City; they are merely going to the railway stations or something of that sort, and they get along as easily as they do in the country. But in the metropolitan district the whole reverse is the case—at night one could see in the Strand, or in any busy place, almost the congestion of the City both by day and night, in fact. I think that is how I would put it.

5741. You might put it that the City is, in respect of crime, a quieter going place in that there is less crime in the City all round than there is in the metropolis?—Oh, certainly; there is an excellent reason for that also, that the City is uninhabited except by day.

5742. Still on the other hand, even by day, though there is a large number of people in the City, do you have *pro rata* as many rows and brawls, and drunken affrays, and different things, as they do generally in the metropolis?—I should say certainly not.

5743. (*Mr. Lough.*) Why not?—The population is very different, to begin with. Almost all men who go into the City are business men; certainly, I do not mean to draw comparisons, but more respectable than the ordinary run of people you see in the Strand or anywhere in those busy districts of the metropolis. I mean, if you polled them, or if you went round, you would find they were all employed in business, bank clerks, men in warehouses, and so on; there is certainly a large number of carmen, &c., but generally the class of people is different.

5744. You have sightseers in the City, coming to the Tower and to the Guildhall?—Very few. The Tower is out of the City.

5745. They have to pass through to get to it?—They have, yes.

5746. On that point of the Chairman, about hours, do you not think that your hours of traffic are on the whole as long in the City, and the pressure as severe in the City, as in any other part of the metropolis?—More severe during certain hours, but the hours are very short.

5747. During longer hours?—Oh, no, I should say not For instance, the Strand—that goes on 16 hours instead of eight.

5748. Excepting in the Strand, can you mention any locality in the metropolis that is crowded for a longer number of hours than the City is crowded?—Yes, in the neighbourhood of the Haymarket, at night, and Piccadilly Circus, occasionally at Hyde Park Corner and so on, there is a tremendous congestion of traffic.

5749. (*Mr. Whitmore.*) Piccadilly is just as full of vehicles up to a certain hour at night as it is in the day time?—It is indeed.

5750. (*Mr. Lough.*) But Piccadilly does not commence so early as you do in the City?—Not quite so early, no.

5751. In short, then, there are hours of crowds in other places just as in the City?—No doubt there are.

5752. Do you think we can account at all for the smaller number of crimes in the City, and all offences, by the fact that you have got a different police system in the City from what there is outside?—No, I would not admit that. I think that the system of the metropolitan force is as good a system as we have got. Well, comparisons are at all times odious, but I think that the metropolitan force is most admirably managed, and does its work quite as well as the City force.

5753. It is hardly a fair question to ask you?—Hardly, I think.

The witness withdrew.

Mr. A. R. Pennefather.

Mr. Alfred Richard Pennefather called in and examined.

5754. (*Chairman.*) You are the Receiver of the Metropolitan Police?—Yes.

5755. We wish to ask you some questions about the revenue derived from the cabs and cabmen that are licensed in the metropolis, and the way in which that revenue is expended in carrying out the inspection and licensing of cabs?—Yes.

5756. In the first place, can you tell us what is the revenue of the Public Carriage Department from fees?—The fees are fixed in the Order of the Secretary of State, dated 1st March 1871. We have 2*l.* for a hackney or stage carriage licence, 5*s.* for a conductor and driver's licence; in addition to that, there is a licence duty of 15*s.* paid to the Inland Revenue, which under the Local Government Act now forms part of the Local Taxation account, and goes to the London County Council.

5757. (*Mr. Whitmore.*) Was that a change made by the Local Government Act?—Yes, the appropriation, the money was a charge which was formerly Imperial revenue, and now is local revenue.

5758–9. (*Chairman.*) Can you give us those three totals; the fees for the hackney carriage licence, the driver's licence, and the new badge account—that is not a very important one; but the other two at all events?—The total fees which I have received during the last five years have been—in the year 1890, 35,991*l.* In the year 1891, 36,133*l.*

5760. That is for each year?—Yes. In the year 1892, 36,252*l.*; in the year 1893, 35,603*l.*; in the year 1894, 35,324*l.* Those are the gross receipts.

5761–2. (*Mr. Whitmore.*) Was the year of 36,252*l.* income the highest figure they reached—at least, in your recollection?—Yes, this is the highest amount ever received.

5763. (*Chairman.*) You are not including metropolitan stage carriages and omnibuses?—Oh, yes, I was.

5764. Then we are to take it that these sums include all the licences?—Those sums include all the receipts both for stage carriages, hackney carriages, and for drivers.

5765. It would be a work of calculation, but you could separate it, I suppose?—So far as I am concerned, I make no distinction in our accounts, but treat it all as one revenue; but with the view of helping this Committee I have taken the figures from the Commissioner's annual reports; there are given the number of hackney carriages licensed, and the number of stage carriages licensed, and the number of drivers and conductors licensed, and taking those figures, I have made an estimate of the income which we receive.

5766. From hackney carriages and drivers?—Yes.

5767. If you please?—Perhaps I ought to explain that the figures which I have just given you were for the financial year ending 31st March. The Commissioner's report is made up to the 31st December, and so the figures do not necessarily exactly agree, but they are approximately right. For the year ending 31st December 1889, we should have received 22,750*l.* from proprietors and 3,878*l.* from drivers, which gives a total of 26,628*l.*; in the year 1890 we got 22,594*l.* from proprietors and 3,834*l.* from drivers, which makes 26,428*l.*; in the year 1891, 22,258*l.* from proprietors, and 3,804*l.* from drivers, making a total of 26,062*l.*; in 1892, from proprietors 21,624*l.*, and from drivers 3,752*l.*, making a total of 25,376*l.*; in the year 1893, 21,612*l.* from proprietors, and from drivers 3,746*l.*, making a total of 25,358*l.* The Committee will see that the figures are slightly decreasing; there is a decrease each year—not very large, but still it is a decreasing sum.

5768. The 15*s.** fee sums up, I believe, to the 31st December in each year, does it not, no matter at what time the licence is taken out?—Yes, that is so.

5769. So that it is possible, by means of the overlapping of the dates at which the licence is taken out and the 15*s.* fee is payable, that a man might pay rather more than 2*l.* 15*s.* a year; is that so?—The police licence runs from the dete at which it is issued for 12 months; the Governmtnt licence runs for the year; therefore a man migh have to pay two Government licences.

5770. Can you give us figures showing what is the expenditure corresponding to the figures you have given us on the issue of these licences, and the superintending, and so on?—Shall I state the gross expenses first?

5771. Well, I think that would be almost better—the gross expenses, including both stage carriages and cabs, and then one might give an estimate of the others?—I estimate the gross expenses for the last five

* After October 31 a half fee only is charged.

years have been as follows:—For the year ending 31st March 1890, 32,635*l.*; for the year ending 31st March 1891, 33,529*l.*; for the year ending 31st March 1892, 33,684*l.*; for the year ending 31st March 1893, 37,589*l.*; for the year ending 31st March 1894, 38,631*l.*

5772. (*Mr. John Burns.*) Then your expenses exceed your income?—Yes. Perhaps I may add that during these five years I have found that in the year 1890 we had a profit of 3,356*l.*; in the year 1891 we had a profit of 2,604*l.*; in the year 1892 we had a profit of 2,568*l.*; in the year 1893 we had a loss of 1,986*l.*, and in the year 1894 we had a loss of 3,307*l.*; that is on the gross.

5773. (*Chairman.*) Can you give us figures showing how much of the figures that you have just given us of the gross expenditure is attributable to the expenditure upon hackney carriages of all kinds?—Perhaps I had better explain here that there are certain expenses of which I can definitely tell you the amount—actual expenditure, for instance, the cost of the water posts, the standings, and the water rates. I can also definitely tell you what we paid for the cost of books, and tables of distances. Then there is a second class of expenditure which is absolute so far as the police are concerned, but which we have to divide in an arbitrary manner between hackney carriages and stage carriages; and then there is a third class of expenditure, in regard to which we have to estimate what it is, and then have to divide our estimated sum between the two.

5774. That is all very natural. It is just like taking out a business account?—If we take the first of those items,—the actual expenditure which belongs solely to hackney carriages, there are two items—the cost of water posts, standings, and the water rates, which we find for the five years amounted to: In the first year, 1890, 1,099*l.*; in the second year, 1891, 968*l.*; in the third year, 1892, 1,078*l.*; in the fourth year, 1893, 1,335*l.*; in the fifth year, 1894, 1,308*l.* There is an increase during the last two years, on account of the Commissioner having largely increased the number of standings at which posts have been put up.

5775-6. What do you mean by standings?—The number of water posts at standings. The other item which I can give you absolutely is the cost of the books and tables of distances. In the year 1890 they cost 220*l.*; in the year 1891, 531*l.*; in the year 1892, 874*l.*; in the year 1893, 819*l.*; in the year 1894, 1,633*l.*

5777. (*Mr. John Burns.*) What is the reason for the great increase?—There are two or three reasons which I can give which explain these variations if the Committee wish it. First of all, in the year 1890, a very small account of 220*l.* In that year we did not charge the stationery to the hackney carriage account, but we ept it as part of our office expenditure, so it is hardly a correct figure, and at this distance of date I am not able to tell you what additional amount ought to be entered under that heading. Then, when we come to the year 1892 and 1893, it was necessary for the Commissioner to have a very large number of the routes re-measured on account of the opening of Constitution Hill to cab traffic, which greatly reduced the distance from the West End to Waterloo and the Houses of Parliament and other places; also the opening of Charing Cross Road and Rosebery Avenue and other streets, which greatly reduced the distances.

5778. (*Chairman.*) That re-measurement is not done every year; then that is a period at which you brought the book up to date?—There is no necessity to do it every year unless there is some new street opened, or some cause to necessitate it. Of course, we not only have to pay for the re-measuring of the distance, but we then have to re-print the tables and re-post them. Then when you come to the year 1894, there is a large increase, from 800*l.* to 1,600*l.* That is due to the fact that we had revised so many of these tables of distances that it was necessary for us to re-print a new edition of the book which we give to the hackney carriage drivers. We printed an edition, I think, of 20,000 copies. That expense, of course, will not recur for some years.

5779-80. What book is that?—The Red Book. I will send for it—a copy of the Tables of Distances; it is a 3*s.* book.

5781. You have gone with remarks through that column; and I should like to ask you about the cab plates; where do they come in? That is an expense that would not be for cabs?—I will take that under my second heading of known expenditure, which we have to divide arbitrarily.

5782. Very well; now we have come to the second heading, have we? Would you be kind enough to let us have that?

5783. (*Mr. Lough.*) Is this the end of the expense which you know, and can place under hackney carriages definitely?—The only definite items which are entirely spent upon hackney carriages, no portion of them spent on stage carriages. In answering the Chairman's question, the second item which I bring in is actual expenditure which we incur, but which we have to divide, for the purpose of the Committee, between hackney carriages and stage carriages, and in dividing them, Mr. Chairman, I have divided them according to the number of proprietors' licences issued in each case.

5784. (*Chairman.*) Let me just understand. Would that be that you put down the same proportion of expense for the licence of an omnibus that you would for the licence of a single hackney carriage?—Yes; and if there were the same number of omnibuses and the same number of hackney carriages licensed I should divide the expenses in half.

5785. (*Mr. Lough.*) But as there are not, do you divide them according to the number?—Yes, according to the number *pro rata*. Each year I have taken it. according to true arithmetical rates. The first item, sir, is the cost of the staff who are employed in the public carriage office. I put those down for the year 1890, 2,660*l.*; for the year 1891, 2,570*l.*; for the year 1892, 2,476*l.*; for the year 1893, 2,969*l.*; for the year 1894, 2,969*l.*

5786. That is the hackney carriage share of the total expenses?—That is the total cost of the public carriage office.

5787-8. (*Chairman.*) The next item?—The next item is the cost of clerks employed in the Lost Property Office. I estimate those for the year ending 31st March 1890, 1,390*l.*; in the yearending 31st March 1891, 1,411*l.*; in the year ending 31st March 1892, 1,411*l.*; in the year ending 31st March 1893, 1,772*l.*; and in the year ending 31st March 1894, 1,803*l.*

5789. Were there any sums received as against those sums—I mean, do you take any portion of the sum that the public pays for getting back its property?—No.

5790. That all goes to the driver, does it?—We receive nothing out of the rewards.

5791. The rewards?—The rewards. Those go to the drivers; and if they are unclaimed they go to the Inland Revenue.

5792. So that the Inland Revenue gets a certain amount as against these amounts that you put down here as expenditure for the lost property?—I cannot tell you off-hand, but the Inland Revenue would get about 120*l.* a year, I think.

5793. (*Mr. John Burns.*) Then the Inland Revenue gets for Imperial purposes what is certainly a local property contribution?—The Inland Revenue, under an Act of Parliament, get certain of these small pickings—they always had them—they had them from the earliest day, and they have kept them; the law did not make any change in the matter. Unclaimed rewards, unclaimed property, and several other things, they get still.

5794. (*Chairman.*) Have you any observation to offer upon the last figures you have given?—I should like to explain to the Committee as regards the cost of the clerks employed both in the Public Carriage Office and in the Lost Property Office, that they are police officers, they are not civil service clerks; in putting down these sums, therefore, I have put down the sum which represents their pay—the policeman's pay—and also the sum which we have to charge for their pensions when they become pensionable. The increase which, as the Committee will observe, takes place in the years 1893 and 1894, as compared with the previous years, arises from the fact that in the year 1892 a considerable addition was made to the pay of the Metropolitan Police, and also the Police, Act passed in the year 1890, gave them very much better conditions of pension, and that necessitated a higher charge being made for their services. There was no real increase in the staff, but higher charges had to be made for their services.

5795. (*Mr. Whitmore.*) I did not quite understand that why, because a policeman receives a higher rate of pay, and will become entitled to a higher pension, is it necessary to pay him an increased salary for

Mr. A. R. Pennefather.

17 July 1894.

clerical work?—We do not pay him increased salary for clerical work; but I charge an increased sum in order to cover the increased pension which eventually will become payable to the men.

5796. (*Mr John Burns.*) So that if he does not get it in the meal of salary he gets it in the malt of pension?—Yes.

5797. (*Chairman.*) I put it in this way: there was an increase of the pay about that time, was there not?—There was an increase in their pay about that time.

5798. And their pensions?—By which an ordinary constable, instead of getting 52*l.* a year pension, would get now 55*l.* 9*s.* 4*d.* pension; he would get 3*l.* 9*s.* 4*d.* more pension than he did, and his pay was increased from 30*s.* a week to 32*s.* a week.

5799. (*Mr. John Burns.*) So, as a matter of fact, the rise was capitalised; he did not get it in wages. but he got it in higher pension?—He got 2*s.* a week in wages.

5800. The total rise was not given, but a certain sum of it was capitalised, and he gets it in a higher pension?—That is so.

5801 (*Chairman.*) Now, for your next head?—The next item we can definitely tell you is the cost of divisional inspection of cabs.

5802. (*Mr. Lough.*) There is an equal increase in the item above as in the cost of clerks in the public carriage department?—It is; in both cases a staff of inspectors, sergeants, and constables are employed. The cost of the divisional inspection was, in the year 1890, 1,780*l.*; in 1891, 1,780*l.*; in 1892, the same—1,780*l.*; in 1893, 2,025*l.*; in 1894, the same —2.025*l.* That increase is also explained in the same way, by the improved pay which was granted to the police and by the slightly improved pensions which were granted to them.

5803. (*Chairman.*) Next, if you please?—The next item is the cost of the plates, badges, and one or two little things—stamps. The plates and badges have cost in the year 1890, 520*l.*; in the year 1891, 330*l.*; in the year 1892, 648*l.*; in the year 1893, 461*l.*; in the year 1894, 463*l.*. If I may now take the total of these four items which I have just given you, you will find that the total for the year ending 31st March 1890 was 6,350*l.*; of that I have placed to hackney carriages 5,003*l* and to stage carriages 1,347*l.*

5804. (*Mr. Lough.*) The figures you have been giving us, then, are not a division; you are going to divide now?—I am going to divide, yes.

5805. (*Chairman.*) Which is it with these clerks?—These are the gross amounts I have just been giving you.

5806. For the two—for the whole?—Yes.

5807. (*Mr. John Burns.*) There is a sum for divisional inspection, 2,025*l.*; is that the cost of the divisional inspection of hackney carriages and omnibuses as well?—It is.

5808. (*Mr. Whitmore.*) We have not yet had any figure from you of the separate expenditure on hackney carriages for that?—No.

5809. (*Chairman.*) Now, you have done with the four columns which belong to what may be called the joint expenditure—stage carriage and hackney carriage?—I give you the totals of those four columns, for the first year, 1890, 6,350*l.*; for the year 1891, 6,091*l.*; for the year 1892, 6,351*l.*; for the year 1893, 7,227*l.*; for the year 1894, 7,260*l.*

5810. Will you now proceed, if you please, to divide those figures between stage carriages and hackney carriages?—I have explained to the Committee, already, that one is obliged to take an arbitrary basis; the basis which I have taken in dividing the figures which I have put before the Committee is the number of vehicles licensed.

5811. (*Mr. John Burns.*) For what purpose is the 7,260*l.* expended?—The 7,260*l.* is the total of the clerks employed in the Public Carriage Office, which I think I have given as 2,969*l.*; the clerks employed in the Lost Property Office, 1,803*l.*; the cost of divisional inspection, 2,025*l.*; plates, badges, and stamps, 463*l.*; the total coming to 7,260*l.* Dividing, for the five years, these expenses, I have placed, for the year 1890, 5,603*l.* to hackney carriages and 1,347*l.* to stage carriages; for the year 1891, I have placed 4,736*l.* to hackney carriages and 1,355*l.* to stage carriages; for the year 1892 I have placed to hackney carriages 4,791*l.*, and to stage carriages 1,524*l.*; for the year 1893 I have placed to hackney carriages 5,509*l.*, and to stage carriages 1,718*l.*; for the year 1894 I have placed to hackney carriages 5,508*l.*, and to stage carriages 1,752*l.*

5812. Now, you said you had some further figures of expenses?—Yes; there is further expenditure that is absolutely estimated. There is the cost of the office accommodation and the expenses of the civil staff.

5813. (*Mr. John Burns.*) Are these central office expenses or local?—Central. The cost of the central office accommodation and the yard space, I estimated for the year 1889, when we were in the old offices, as 819*l.* 3*s.* 1*d.*; for the year 1890, when we moved into the new offices, 1,792*l.* 2*s.* 5*d.*; for the year 1891, 1,269*l.* 14*s.*; for the year 1892, 1,038*l.* 8*s.* 4*d.*; and for the year 1893, 1,259*l.* 16*s.* 8*d.* In each of these years I also put down 500*l.* as representing the cost of the civil service staff in the Commissioner's office, and my own office, the expense of the surveyor, and the expense of the Bank of England.

5814. (*Mr. Whitmore.*) To be quite clear, does that allowance include, for instance, a portion of the salary of Mr. Bruce?—No, sir; nor of my own salary. Perhaps, Mr. Chairman, the Committee would like me to explain how I have arrived at this estimate of the office accommodation and the yard space. I have had the office measured, and taken out the total cubical capacity of the hackney carriage department of the new offices, and I find it occupies 75,651 cubic feet, whilst the cubical capacity of the rest of the building, omitting all staircases and passages, is 1,480,781 cubic feet. I have, therefore, taken one-twentieth of the annual expenditure on the building, including interest on the loans, and the repayment of the capital, as a fair sum to charge against the hackney carriage department. I may add, sir, that this charge will be a constantly diminishing one. The sum spent in building will be all repaid by the 1st July 1920; the sum spent in purchase of the land will be paid by 1940.

5815. (*Chairman.*) It is partly a sinking fund that this covers?—Yes.

5816. Have you any other figures to add on the expenditure side?—Dividing the items I have just given you, the office accommodation and the 500*l.* which I have put down for the Civil Service staff, between the two services, as I have just previously done, I have put to the hackney carriages, in the year 1890, 1,040*l.*, and to the stage carriages 279*l.*; in the year 1891 I put to the hackney carriages 1,782*l.*, and to the stage carriages 510*l.*; in the year 1892 I put to the hackney carriages 1343*l.*, and to the stage carriages 427*l.*; in the year 1893 I put to the hackney carriages 1,172*l.*, and to the stage carriages 366*l.*, and in the year 1894 to the hackney carriages 1,335*l.*, and to the stage carriages 425*l.*

5817. (*Mr. John Burns.*) So, roughly, we have 1,500*l.* for both?—The total figures for both are, for 1894, 1,760*l.*

5818-9. And that is divided between the two?—The 1760*l.* is divided between the two, 1,335*l.* to hackney carriages and 425*l.* to stage carriages. (*The witness here handed in a book of the hackney carriage distances. See* 5778.) A copy of this book we give to every cabman when he gets his licence.

5820-1. (*Chairman.*) Is he bound to take it about with him, with his licence?—Yes, strictly speaking.

5822. (*Mr. John Burns.*) Can this be bought by the public, Mr. Receiver?—Yes; they can be bought by the public at Messrs. Eyre and Spottiswoode's. Anybody can buy them. We sell a considerable number, and I credit the fund with the proceeds.

5823. (*Chairman.*) Will you finish the accounts?—There is only one more item, Mr. Chairman, that I have not mentioned, and it is the largest item in our bill, that is the cost of the police employed in the hackney carriage standings.

5824. (*Mr. Whitmore.*) That is an item exclusively for cabs?—Yes; it is the estimated cost of the police employed at hackney carriage standings.

5825. (*Chairman.*) Well, now let us have the figures?—The Commissioner has kindly informed me that he has 378 police officers who are engaged either wholly or partially at hackney carriage standings, keeping good order at the standings and at the places at which stage carriages or hackney carriages resort, and he considers that the following figures are the proper

proportion of the cost of these officers chargeable against the hackney carriage receipts:—For the year 1890, 23,647*l.*; for the year 1891, 23,647*l.*; for the year 1892, 23,647*l.*; for the year 1893 it increased to 26,670*l.*; and it is the same sum for the year 1894, 26,670*l.*

5826. (*Mr. John Burns.*) Is that due to increased wages only?—Yes, it is simply due to the increased wages and the increased charge for superannuation. I would just like to explain to the Committee that in these figures there is the provision made for the pensions of the men—the deferred pay.

5827. (*Chairman.*) I would like to ask you—let us take the last of those years—of how many men does it include the partial service, and what proportion of that total service has been allotted. That is the first thing we want to know, if you can give it?—The Commissioner will answer that question, sir.

5828. (*Mr. Lough.*) Is this the total of the cost of the 378 police constables whom you mentioned?—No; it is the proportion only. Each constable costs rather over 100*l.*, and therefore you see the 378 men would cost something like 37,000*l.* or 38,000*l.*, probably 40,000*l.*, when you take the different ranks.

5829. (*Chairman.*) Are there any other items of expenditure?—There are no other items.

5830. Have you got a summing-up for the five years of all the items attributable to the cost of the hackney carriages?—The total cost of the hackney carriages, leaving out everything belonging to stage carriages, was: In the year 1890, 31,009*l.*; for 1891, 31,6€4*l.*; for 1892, 31,733*l.*; in 1893 it was 35,505*l.*; in 1894 it was 36,454*l.*

5831. (*Mr. Whitmore.*) You have given us figures showing the income from hackney carriages?—The income in the year 1890 from hackney carriages was 26,628*l.*, in the year 1891 it was 26,428*l.*, in the year 1892 it was 26,062*l.*, in the year 1893 it was 25,376*l.*, and in the year 1894 it was 25,358*l.* It is continually diminishing.

5832. So that in the last year there was a deficit of something like 11,000*l.*?—Yes, there was a considerable deficit.

5833. (*Chairman.*) A deficit of 11,000*l.*, assuming that those estimates represent the real fact?—Yes. I have been anxious to divide the expenditure in a way that would bear criticism.

5834–7. (*Mr. John Burns.*) You mean meet criticism?—Meet criticism is a better way of putting it, Mr. Burns.

5838. (*Chairman.*) A proposal has been made that shelters should be taken over by a public authority. Have you any view upon that?—I should think it would be a very legitimate way of helping the cabmen.

5839. What about the expense of it; would it be large?—I do not know what the expense of these shelters is at the present moment, but I should think that, assuming the Committee were in favour of such a proposal, it would be a very legitimate expenditure out of the licence money to pay the initial cost of the shelters.

5840. Have you any suggestion to make, or observation to make, about the charges for water?—If any legislation is contemplated, we should be glad if the Committee could suggest that there should be some defined scale of charge for these posts.

5841. Charge to whom?—Charge to the police. The water companies at the present moment say it is not a domestic supply.

5842. That the police are not?—Yes. The water companies at the present moment say it is not a domestic supply, and that they are not bound to supply us by meter; and in fact, they fix any charge they choose and we are practically helpless in the matter. I, perhaps, might mention one thing, which is one of our greater difficulties, and that is that we have got no legal right to put up a water post, and we can only do so by permission of the vestry, and in a few cases they are not friendly; in some cases they have refused to give us permission.

5843. (*Mr. Whitmore.*) Is that when they think the standing is at an inconvenient place?—The vestries usually do not give reasons for their refusals.

5844. (*Mr. John Burns.*) They are not the only body who do not do that; but is not their objection mainly due to misrepresentations made by what are locally known as official people who object to standings of cabs close to their premises, or close to the square in which they live?—I think official people object very frequently to the putting down of the buckets on the pavement; it does cause a certain amount of noise, a cabman putting down a bucket after he has watered his horse. The residents raise an objection to it; there is no doubt about that.

5845. (*Chairman.*) There was a question, I think, asked by Mr. Bayley about the presence of a practical carriage builder in the Receiver's office; is there any observation at all upon that?—I have a qualified surveyor, and under him we have a technical man who served his apprenticeship as a coach-builder.

5846. He inspects the police vans, is not that it; he prepares the specifications, and inspects the police vans?—He prepares the specifications and inspects the police vans and carts, he has the supervision of all the vans and carts in the police service.

5847. (*Mr. Whitmore.*) He has nothing to do with the police then?—He has nothing to say to the hackney carriages.

5848. But I mean he is not an enrolled constable?—He is not an enrolled constable.

5849. (*Mr. John Burns.*) The point with Mr. Bayley was this, that for police inspection purposes the Receiver employed a technical or practical civil servant, but for purposes of inspecting the cabs there were policemen?—That is so.

5850. (*Mr. Whitmore.*) Therefore if the Receiver could employ a technical person in the higher capacity, it was possible to employ a technical person in the subordinate.

5851. (*Mr. Lough.*) You told us at first, when you were giving us your summaries, that you had a profit, a small profit of 2,604*l.* in 1891, and 2,568*l.* in 1892, which became a loss of 1,986*l.* in 1893, and of 3,000*l.* odd in 1894?—Yes.

5852. Well, now, at the end you showed us that the loss was 11,000*l.*?—Yes.

5853. How do you reconcile those two statements?—In the first instance I was dealing with hackney and stage carriages together; in the last instance I was dealing with only hackney carriages, and by far the larger portion of the expense which we incur at Scotland Yard is due to hackney carriages.

5854. You told us that in 1894 the total expenditure—this was at the beginning of your evidence—was 38,631*l.*, while at the end you told us that the total expenditure for hackney carriages was 36,454*l.* Am I to take it, then, that the total expenditure connected with stage carriages is only that difference, about 2,000*l.*?—Yes. The total expenditure for stage carriages I have already given you as 1,752*l.* for four items under my Class 2, and 425*l.* under the third division of expenditure. There is very little expenditure in connexion with an omnibus.

5855. So that, practically, nineteen-twentieths of the expense is hackney carriages according to that calculation, and about one-twentieth is for the stage carriages?—Yes, because nearly the whole of the expenditure for hackney carriages arises in connexion with the police at standings.

5856. Well, now we will come to your first head of separate expenditure, and I want to ask you a question about it. You spoke of the cost of water posts, and so on. Do you include in that any cost connected with either the control of or any other thing in connexion with troughs, drinking fountains, through the city?—No.

5857. These are simply iron posts erected at cab stands, simply the water posts?—Yes, we pay nothing towards those large troughs which the Metropolitan Cattle Drinking Association erect.

5858–9. Can you tell me whether there is any case in which any drinking fountain or other supply of water is paid for out of public moneys?—Certainly we do not pay.

5860. I want to get your opinion upon this water post expense, why it should be charged especially to the cab services?—Because it is only used——

5861–3. Can you give me any precedent for it?—The water posts, of which I defray the cost, are only used for hackney carriage horses.*

5864. Well, then, we come now to this book, which makes a large item in 1894?—Yes.

* *See* footnote on p. 160.

Mr. A. R. Pennefather.

17 July 1894.

5865. Did you allow, in giving us the cost of that book, for the revenue that you may get by its sale?—Not any prospective revenue, but we credit the fund with all the money which we get of the copies we sell, we take it off the gross cost. If I were to sell 100*l.* worth of these books it would reduce the net expenditure by 100*l.*

5866. In which year?—In whatever year I receive it I take it off the expenditure.

5867. For the large sum which is charged in 1894 there will be some revenue coming in in future years?—Oh, certainly, and more than that; the stock of books which I have got will last for several years, three or four years, I hope.

5868. I come next to your second head of charges. You told us that they are divided *per capita*, that is to say, you charge so much for each four-wheeled cab as you do for one omnibus?—That is the basis I have taken up, yes.

5869. Do you think, it is fair to allot as much to one cab as to an omnibus?—In suggesting this test to the Commissioner, which he quite approves of, I thought it was rather in favour of cabs, because a cab costs us more proportionately than an omnibus does.

5870. Why?—It is very difficult to explain why in the limits of an answer. First of all, in connexion with an omnibus we should not go to the expense of providing that book, we really should not go to the expense of putting up these water posts at all; also in many other ways the cab produces more work to the office than the omnibus does.

5871. Then I wanted to ask you another question about this book; you said this is given to every cabman?—By the Commissioner, yes.

5872. Is it given every year when the licence is renewed?—That is a question which, strictly speaking, ought to be asked from the Commissioner, because I do not give them, but my own impression is, Mr. Lough, that we do not give them every year, only at starting, when the man is first licensed.

5873. Now we will go on. I come to your first head of cost. You say, "Cost of clerks in Public Carriage Department"?—Yes, sir.

5874. Is this the staff that is engaged in the issuing of licences?—In the issue of licences, yes.

5875. Is there any other large head of work that it does?—That, again, will be a question which, perhaps, ought to be addressed rather to the Commissioner than to me. Of course, I only know it as the Public Carriage Office. I believe the work which it does is almost entirely confined to the issuing of licences to cabmen and to vehicles, and the complaints which the public address as regards the misconduct of drivers or conductors, but as it is a department under the Commissioner's control, and not under my control, I think you would get a better answer from him than from me.

5876. You have told us that the cost is something over 3,000*l.* a year in these latter years?—Yes.

5877. And that they are chiefly police constables who are engaged in it?—Entirely police constables.

5878. Can you tell us how many clerks?—Mr. Chairman, might that question be asked of the Commissioner. To the best of my knowledge there is one superintendent and 14 other officers.

5879. (*Mr. John Burns.*) Does that superintendent take the rank in relation to pay and pension, that the superintendent of a division would?—Yes.

5880. (*Mr. Lough.*) I want to ask this question: these gentlemen are engaged all the year round on this work of issuing licences?—I am in a little difficulty in answering questions about the Commissioner's office. I will answer it if you like. I believe so.

5881. If instead of issuing these cab licences, and keeping this permanent staff, the rule in London was to issue all the carriage licences, say, during one fortnight each half or each year, or each quarter year, do you think this amount might be very largely reduced, if not brought to be a mere nominal sum?—No, the licences come in very regularly throughout the year; the daily amount is very level, therefore, unless the Commissioner was very considerably over-staffed, it is quite clear that if you brought all this work into a limited time you would have to have a very large staff for that limited time, which would be a very inconvenient arrangement.

5882. So you do not think any economy would arise in that department if there was a particular season for issuing the licences instead of spreading them over the year?—No; I may perhaps illustrate it in this way, that we used to pay our pensioners on the first six days of each quarter; we found it was a very inconvenient arrangement bringing in such a mass of work in six days, and we have been obliged to get rid of that system, and allow them to come up the whole of the year, so many each day.

5883. (*Mr. John Burns.*) But was there not another reason besides that; was it not a fact that men who had frequently been comrades in the force before they were pensioned made Scotland Yard a *rendezvous* for purposes that were not altogether commendable, and in the interests of the men?—I do not know for what purpose.

5884. I put it in a general way, although I could enumerate the purposes?—Oh, there were very many reasons which made us change the system, quite right.

5885. (*Mr. Lough.*) Can you tell us how many pensioners there were, roughly?—There are about 4,700.

5887. (*Mr. Lough.*) We come to the Lost Property Office; do you get more property from a hackney carriage than you do from an omnibus in lost property?—I believe so. I have no means of answering the question accurately, but I believe it is a fact that a good deal more comes from cabs than from omnibuses.

5888. I mean from each particular cab; of course the whole bulk of cabs might bring more than the whole bulk of omnibuses?—You mean the percentage?

5889. I mean, does each cab bring up more articles lost than a single omnibus does, or is it the other way?—I only express the general idea that I have that it does, but I really do not know. I asked the Commissioner, before dividing the expense, whether he thought the same basis should be adopted, and he informed me that, in his opinion, that was the only fair basis, to divide the expenditure.

5890. Does this include property lost in other parts of the city that is brought to Scotland Yard, but which is not lost in hackney carriages?—Oh, no; that is quite a different department.

5891. Then we have only a share of the lost property expenses here?—Yes, only the public carriage lost property office, on the Embankment.

5892. You have a lost property department for other property which is lost?—Other property which is lost is taken to the local police station.

5893. But it ultimately comes to Scotland Yard, does it not?—It does not necessarily come to Scotland Yard.

5894. But there is a lost property department, surely, in railway trains, and so on?—Oh, no, that goes to the railway company; we do not deal with that in any way.

5895. I will put it, then, all in one question: is there no class of property dealt with in Scotland Yard except property lost in cabs and 'busses?—In the executive department of Scotland Yard we deal with such lost property as is brought to Scotland Yard by an ordinary finder.

5896. (*Mr. John Burns.*) That is in the street?—That is in the street; who chooses to bring it to Scotland Yard. But they might equally take it to a local police station.

5897. (*Mr. Lough.*) Does not the cost of the management of the Lost Property Department come out of the General Police Rate?—It does.

5898. Can you point out any reason why there should be any special treatment of property lost by the public in hackney carriages as apart from property lost by the public on the street or any other way?—I have not given that question consideration, Mr. Lough, and it is a question which needs a little thought before one answers it; I should not care to answer it quite offhand.

5899. Now we come to the divisional inspection; we have already had inspectors examined, and I believe there are six inspectors?—I believe there are.

5900. You have given us 2,025*l.* as the annual cost of that?—Yes.

5901. Is there any charge in that, except practically the salaries of those six officers?—There are more than six inspectors.

5902. Perhaps they may have assistants?—Yes, there are six constables in addition. There is no item in that 2,025*l.* beyond the pay of the man, the charge for his clothes which we allow him, the charge for medical attendance, and the commuted rate for his pension, which goes into the pension fund—nothing else.

5903. (*Mr. John Burns.*) Do these inspectors pay into the pension fund the same as other constables do?—Certainly.

5904. The amount per week, please?—It is 2 per cent. upon their pay.

5905. (*Mr. Lough.*) The third head of expense, you said, was civil staff and yard space?—Yes.

5906. What did you mean by "yard space"?—Well, sir, I am glad of an opportunity of explaining about that, because I did not give it in my evidence, but when we were building New Scotland Yard we had to take into consideration the necessity which arose for providing a space for the large number of cabs which necessarily have to come up the yard from time to time, either for renewal of the drivers' licences or for other purposes, and the absolute yard space which I have there is 7,076 square feet, and we have not made any extra charge against the hackney carriages in respect of that sum. I have treated the office as a whole, and have merely charged the hackney carriages with one-twentieth of the whole expenditure, but as a matter of fact I ought to have charged the hackney carriages with the whole expense of the cost of purchasing—the sinking fund you know—the 7,076 feet which we bought for that.

5907. (*Mr. John Burns.*) Has the Receiver's office ever contemplated increasing the yard space in the direction of giving access to cabs and other vehicles that go to Scotland Yard with lost property and for other purposes from Parliament Street; have you ever contemplated widening the street from the Parliament Street side?—That would be a London County Council improvement.

5908. Have you ever contemplated the necessity of doing it?—No, we had communications with the Metropolitan Board of Works about it, and they said there was no necessity for any improvement there.

5909. Do you consider, as Receiver, that for hackney carriage purposes there should be a wider approach from Parliament Street than there now is?—I have not heard of any inconvenience.

5910. But do you think the approach in keeping with the character of your new building?—I do not know; it is not a very fine approach, is it?

5911. (*Mr. Lough.*) Now, those various expenses that you put down in your account as desirable to obtain, if possible, from the cab licence revenue, are they undertaken in the interests of the cabmen or of the public?—I suppose to a considerable extent they are undertaken in the interests of the public.

5912. Can you give me any other example, in your management of Scotland Yard, of a case in which you try to exact out of a particular trade the cost of that protection which you have to give the general public in connexion with the trade?—Oh, yes, a similar remark would apply as regards chimney sweepers or pedlars.

5913. Take chimney sweepers?—They are obliged to obtain licences, and pay fees for those licences.

5914. And hawkers?—Not hawkers, pedlars.

5915. Is there any other case that you can give just now?—Not off-hand.

5916. I mean, you do a great deal for shopkeepers in the preservation of order, and helping to keep order?—That is a police duty. Of course everything which is a police duty we must do, without any charge to anybody; if it is a police duty—the preservation of the peace.

5917. You do not think this is a police duty?—This is not necessarily a police duty, because it could be performed by other people, not police officers; in fact, as a matter of fact, before this Act of 1869 came into force the attendants at hackney carriage standings were not police officers. I daresay you remember, they were a curious class.

5918. (*Chairman.*) Whom were they under, Mr. Receiver, then?—They were under the Metropolitan Police. I find before this Act was passed we had 219 people who were employed exclusively at these hackney carriage standings. They were all very old and decrepid, sir.

5919. (*Mr. John Burns.*) But were not many of those a remnant of the superannuated "Charlies," before the police came?—I am not aware what they were.

5920. (*Mr. Hopwood.*) Watermen?—Watermen, yes.

5921. (*Mr. Lough.*) You have spoken of attendants at the cab stands; these police that you have spoken of, these 378 constables, are they attendants?—That is one of the questions, I think, probably, you would like to put to the Commissioner, what they do absolutely at the cab stands.

5922. At any rate, three-quarters of the total sum of the accounts that you have given us consist of this one item of the part of the expenses of 378 police constables?—Yes, the greater expense in connexion with the service is on account of the police engaged at hackney carriage standings.

5923. And you prefer to say nothing about their duties. You would like us to ask the Commissioner the duties of those people?—The Commissioner has desired me to say that he would afford you every information as to what their duties are, what number he employs, and why he employs them.

5924. You do not want us to ask you any questions on the policy of charging that 26,000*l.* to that account; have you anything to say to that, or would you rather we talked to the Commissioner about it?—Do you mind explaining your question a little more; I will answer any questions I can. What do you call this policy?

5925. It is in pursuance of what I asked you a moment ago; do you not think these 378 constables are as much employed in the interests of the public as any other constable in the force?—A policeman is a policeman always, and therefore, probably, one might say they are engaged in the interests of the public in maintaining order, but that really is a question which the Commissioner ought to answer rather than I; I can only express my own individual opinion, not an official opinion upon it.

5926. (*Mr. John Burns.*) With the exception of the surveyors, and your technical civil staff, all the others are policemen?—Yes.

5927. Are policemen who are mainly selected for physical reasons in your opinion the best class of person for civil service and purely clerical department work so far, might I put it, as cabs are concerned?—They are most efficient clerks, and I should say they are cheaper than civil servants.

5928. How many of them write shorthand?—I cannot say; they are not under me, they are under the Commissioner.

5929. You say that they are efficient enough?—You will, perhaps, ask the Commissioner; they are so entirely under him.

5930. What sum, if any, of the money you receive is diverted to local purposes, either in the shape of profit, if there is any, or deficit to be incurred by local or Imperial authority; you do not make any profit at all now?—Upon those figures which I have placed before you there has been no profit for the last two years.

5931. But previously?—There was a small profit.

5932. Where did that go to?—It went into the Metropolitan Police Fund and was treated as part of the Metropolitan Police Fund.

5933-4. But none of the profit when it was made went to any authority for metropolitan purposes other than the police force?—Other than the police force, yes.

5935. (*Mr. Lough.*) On that question, Mr. Burns, I cannot see how there ever could have been a profit, when you charge in this the cost of the police?—Oh, there was a profit, a very slight profit.

5936. (*Mr. John Burns.*) Yes, in this way; you get the profit on the total by including the stage carriages?—Yes.

5937. But you never had a profit when you separated the stage carriages?—No, there was no profit.

5938. There never was a profit for the last five years on hackney carriages?—Not for the last five years on the hackney carriages.

5939. Have you ever heard, Mr. Receiver, as to subordinate officials in your inspection branch ever receiving

Mr. A. R. Pennefather.

17 July 1894.

bribes from cabmasters who wanted to pass inferior cabs?—I have never heard a word about that.

5940-1. You have no knowledge of it?—No.

5942. Do you believe such a system has existed?—Practically, Mr. Burns asks me whether a policeman is capable of receiving a bribe.

5943-5. No; what I said was this: Have you heard of cabmasters bribing some of the subordinate officials?—I have never heard of such a thing.

5946-7. Do you believe that such a system exists?—No, sir; certainly not.

5948. You do not believe that under the present system of inspection it is possible, do you?—If you ask me that; I believe everything is possible; I believe that we are all human, and that everybody is liable to temptation, whether it is a policeman or whether it is a civilian.

5949. A new rendering of the old story that every man has his price?—I did not say that, but you ask me whether it is possible, and I will certainly not say it is not possible.

5950. You say that water posts are restricted to cabs?*—Yes.

5951. Do you consider that fair to the general horse traffic?—At the present moment the expense is defrayed entirely out of this revenue, and on that ground we consider it only right that if the proprietors pay the whole cost of these posts, and the whole of the cost of the water, we should not allow other people who do not contribute to the expense to have the advantage of the posts.

5952. But is this exclusive possession, so to speak, of the water posts and standings rigidly enforced?—It should be rigidly enforced. There is an order of the Commissioner which requires a police constable, if he sees any other person drawing water from a hackney carriage water post, to warn that person, and to draw attention to the fact; they do so in the interests also of the water companies.

5953. But let us put this case to you, which frequently happens in the streets of London. Suppose a horse is suddenly seized in June or July with the staggers, to cure which half a dozen or a dozen buckets of water are thrown over the horse's head—that is the primitive remedy for it—would a policeman be censured if he allowed the use of the buckets at the water posts?—Oh, no; the Commissioner is most reasonable in these terms. I may explain, Mr. Burns, that it is really the water companies who take exception more than the police. They fix a charge for use of the water posts, on the assumption that you are only going to use the water for hackney carriages or stage carriages. If you are going to use it for all the railway waggons and other traffic, then we must very materially increase our charge for the water, because the consumption will be so much larger, and then we feel that we could not possibly allow that increased charge to be paid out of the hackney carriage money.

5954. You do not think that the hearts of the water companies would harden if they knew that a horse which had staggers was being treated in that way?—We had a difficulty with the water companies two years ago, when you remember all the troughs were closed on account of glanders, and then I asked the water companies whether they would allow us to let anybody draw water from the posts, subject to certain restrictions, and they did; for three months they gave us permission to let any person draw water, and subsequently to that the London County Council have had communication with me unofficially upon the subject.

5955. Have you ever considered whether the watering of cab horses and the general manual attendance at the posts and standings could be more efficiently or more economically discharged by persons other than the police. I take this on the matter of cost, because it affects your department?—In order to enable one to answer that question I should have really to know what proportion of a man's time the Commissioner considers is police duty and what he considers hackney carriage duty.

5956. Very well, we will ask the Commissioner then?—Yes.

5957. Have you ever considered, in connexion with your office, the single point system as against the trough system?—Oh, yes.

5958. Has the liability to contagion ever been brought before you in connexion with your department?—Certainly.

5959. Have you formed any views about it?—It was brought before us some years ago, when we used to have wooden pails, and they were considered objectionable on that ground, of being liable to give contagion; we therefore abolished wooden pails, and brought in these galvanised iron pails, and there have been no complaints recently.

5960. Can you tell us what happens when the policeman who holds the key of the post of the standing is called away, say either to a fire or to a disturbance, necessitating his absence for a couple of hours—what happens to the horses in the interval?—Every cabman is allowed to have a key.

5961. A duplicate key?—And we encourage their having them, and I absolutely have a very large number now in stock to provide hackney carriage drivers with.

5962. (*Mr. Lough.*) Do you charge for them?—And our only regret is that they have not got them. What we do is this: if a cabman has got a key which does not fit the post, we have authorised him to get it exchanged at any police station for one that does fit the post, and we are very anxious indeed that they should exchange them, and that they should have proper fitting keys, and if every cabman had a proper key I think we should be very glad.

5963. (*Mr. Hopwood.*) What is the position—I think we should have put it upon the notes—the financial position as to the payment of the Metropolitan Police; as I understand it, the Metropolitan Police are paid out of what is known as the Metropolitan Police Fund?—Yes.

5964. Is that a fund created by Act of Parliament?—Yes.

5965. Would you give us the Act?—10 George IV. c. 44.

5966. Then the hackney carriage revenue is paid to the Metropolitan Police Fund under the Hackney Carriage Act of 1869?—Yes.

5967. And the sums for the licences are fixed by the Secretary of State's Order, Mr. Secretary Bruce's Order of the 10th March 1871?—Of the 10th March 1871, yes.

5968. As I understand it, you carry the revenue from the Hackney Carriage service *en bloc* into the accounts of the Metropolitan Police Fund?—Yes.

5969. Do you present the accounts of the Metropolitan Police Fund to Parliament?—Yes.

5970. They are published in the usual way?—Yes.

5971. Do those accounts show on the face of them the exact revenue from the hackney carriage service, and the estimated expenditure for the year?—The accounts presented to Parliament show the amounts received from proprietors, drivers, and conductors of public carriages for licences under the Metropolitan Public Carriage Act of 1869, and on the expenditure side we show expenses incurred under the Public Carriage Act of 1869 exclusive of the salaries and the fees, expenses and pay of the police employed in carrying out the provisions of the Act.

5972. So that upon the face of the accounts presented to Parliament it would appear that there is a large profit from the hackney carriage licences and that that profit is carried to the Metropolitan Police Fund?—Yes, on the face of the account as presented to Parliament, it would appear that there was a large cash profit; and in order that there might be no misconception about it, I have for the last eight or nine years put in these words: "That it is exclusive of salaries, office "rent, and other estimated expenses."

5973. Then there are no moneys voted by Parliament for this special service at all?—No.

5974. The only moneys voted by Parliament in the strict sense of the term would be the salary of the Commissioner, and possibly your own salary?—The Commissioner, and the Assistant Commissioners, and my own salary, 4,300*l.* a year.

5975. So that you would, therefore, feel that you are right in excluding from the hackney carriage account

* *See* 5573-4, 5860-3. The water posts are available for the use of omnibus horses as well as *cab* horses, but it is a matter of fact the former seldom use the water. The omnibus companies send out their horses from the yard for a stated journey and they are watered on their return, but during very *hot* weather the companies occasionally arrange to have a man at some convenient post who gives the horses a sip en route, generally with oatmeal. It is quite the exception for any water to be used by an omnibus proprietor, but he has a perfect right to do so if he chooses. I therefore think that the whole cost may fairly be charged to cabs as the use made of the posts by the 'busses is so infinitesimal. —A. R. P.

any apportionment of those salaries?—Well, the amount would be infinitesimal.

5976. Would it commend itself to you to make a separate annual statement of accounts for the cab service and the omnibus service, showing the receipts under each head and the expenditure under each head, for the purpose of presentation to Parliament?—That used to be done, before the passing of the Act of 1869, in the earlier accounts which I can show you here; a separate account was presented to Parliament of the receipts and expenses for public carriages.

5977. (*Chairman.*) What profit do they show?—412*l.* 10*s.* In those years the system was entirely different, because the Inland Revenue took all the fees, and they paid us the sum of 12,100*l.* a year, out of which we paid the expenses of the superintendent officer, the veterinary surgeon, and the attendants upon cabs. There were 215 I think at that time.

5978. (*Mr. Lough.*) How many cabs had you?—I can give you the number of cabs that we had at that time if you like. We had at that time 7,300 hackney carriages, 1,500 stage carriages, 9,800 drivers of hackney carriages, and 4,500 conductors and drivers of stage carriages, and the revenue, if it had been calculated upon the same basis as it is calculated upon now, would have been 20,775*l.*

5979. (*Mr. Hopwood.*) Then do I understand that the 12,100*l.* which was formerly received from the Inland Revenue was a fixed sum of money for the purpose of meeting the police expenses?—It was, sir, it was a fixed sum every year.

5980. Then, will you tell us why the form of account which was adopted down to the year 1869 was departed from?—I think it must have been on account of the provision of the Act 32 & 33 Vict. c. 113., which says that the money is to be carried to the account of the Metropolitan Police Fund, and which does not require any separate account to be kept.

5981. Will you be good enough to put in an account in the old form for the last year in which it was in existence?—I will put in a copy of the account in the old form for the last complete year.*

5982. Showing ——?—The receipt from the Inland Revenue Department, and I can also give you the number of licences of cabs licensed in that year.

5983. Now, as matter of fact, was not the old form of account abandoned, and the new form of account adopted, in order that the Metropolitan Police Fund might benefit from the large sum which is received for licences?—I have never heard that said; I have never heard that view put forward.

5984. Was not the effect of the abandonment of the old form of account to give the Metropolitan Police Fund the benefit of sums of money which they did not receive up to that time?—To a certain extent it was so; I have just pointed out that the revenue then would be about 20,000*l.*, and the expenditure came to 17,000*l.*, but the expenditure was at once very much increased on account of the Police Commissioner immediately having pensioned off or got rid of those old attendants, who were found very unsuitable, and having substituted metropolitan policemen, and therefore I do not think at the very earliest stages there was a great margin of profit from the year 1869; I should think not.

5985. But upon the figures of the present day, assuming that the expenses are anything like the amount they were in 1869, is it not a fact that the Metropolitan Police are making a profit out of the hackney carriages of about 15,000*l.* a year?—Now?

5986. Yes, I mean a profit beyond that which they made upon the ratio of the figures of 1869?—I do not know that I quite catch the purport of the question.

5987. I will try and make my meaning plain; as I understand it, the receipts are now about 35,000*l.* a year?—Yes.

5988. In 1869, they were about 17,000*l.*?—The receipts which I got in 1869 were 12,100*l.*, because you will notice that that other item there, which comes to about 4,830*l.*, was the drivers' and conductors' licences, and that money was paid over to the Inland Revenue; it appears on both sides of the account.

5989. Then, to begin with, there is a difference there of between 35,000*l.* and 12,000*l.*?—In the amount which we received, we received in 1868 12,000*l.*; we receive now 35,000*l.*

5990. Then does not the Metropolitan Police Fund get the benefit of a very large sum of money now which they would not have received upon the old basis of account?—We receive considerably more money now than we did receive in 1868.

5991. You credit yourselves, in fact, with a large sum of money upon the plea—which may be a good one, I do not say it is not—that the Metropolitan Police perform various services for the benefit of the cab trade, which were not included in the account of 1869?—That is not the argument which I put forward.

5992. Then what is the argument that you put forward?—I say we credit ourselves with the 35,000*l.* now because an Act of Parliament has distinctly stated that it is to be carried to the Metropolitan Police Fund.

5993. It does not say how it is to be carried to the fund; do you hold that the terms of the Act of Parliament compel you to swamp the entire hackney carriage receipts in the Metropolitan Police Fund?—It compels us to swamp—to use your own expression—the whole of the fees the Secretary of State fixes. He can fix the amount, subject to a limit, but whatever he fixes, I am obliged to carry the amount to the Metropolitan Police Fund; he need not fix 2*l.*, he may fix 1*l.* each.

5994. But still you contend that, under the terms of the Act of 1869, you are obliged to carry the cab-plate revenue to the Metropolitan Police Fund *en bloc*, and are not permitted to keep a separate account of it?—I think that was the intention of the Act.

5995. That it should be carried *en bloc*?—I think so, because the Act would have specified otherwise that we were to keep a separate account.

5996. I only want to have your answer upon it?—The Act does not specify that we are to keep a separate account.

5997. Will you put it as high as this, that you feel, in consequence of the Act of 1869, it is not open to you to return to the old form of account?—Yes.

5998. But at the same time you are prepared to admit that, from the business point of view, the keeping of a separate account would be plainer and clearer than merging the cab plate revenue in the Metropolitan Police Fund account?—I am very anxious to state our accounts in the clearest possible way to Parliament and to the ratepayers generally, so that they may have the fullest information, and of course your question really raises a very large question as to whether these fees which are mentioned here were simply intended to cover the expenses which we could legitimately put against them, or whether they were to be taken in as revenue to the Metropolitan Police Fund.

5999. I did not intend to convey an impression which would draw an answer of that kind; I was entirely upon the form of the accounts. I am admitting to you, for the sake of argument, that you are obliged to swamp the cab-plate revenue in the Police Fund accounts in consequence of the terms of the Act of Parliament; but I ask you, as an accounting officer, whether you do not agree with me that, from the mercantile point of view, it would be much better to have a separate account of the cab-plate revenue, showing exactly what the receipts are and what the expenditure; of course, some of the expenditure upon an estimated basis?—I should answer that in the affirmative if the Secretary of State were to say that this particular fee was merely meant to cover the expenses chargeable against the revenue; then I should say undoubtedly it would be a more businesslike matter to keep a separate account, but I cannot undertake to say what the view of the Secretary of State is upon this matter.

6000. I am not in the slightest degree reflecting upon the accounts; I am simply thinking of the future. One question more and I have done. With your judgment and the experience you have had of the office, are the charges to cab proprietors and cab drivers under the Secretary of State's Order fair and reasonable in return for the services which are rendered by Scotland Yard?—I think they are fair and reasonable if we can show that the expenditure which we incur approximates anywhere near to the revenue which is derived, and there is no reason why this particular service should be carried on at a loss.

* *See* Appendix II. 11

Mr. A. R. Pennefather.

17 July 1894.

6001. But from your experience you must be able to express an opinion whether the charges for licences, and so on, are in themselves fair and reasonable charges for the work done?—I should say that a charge of 2*l.* for a stage carriage licence is a reasonable charge.

6002. And you think that the metropolitan cab service and the public get a good *quid pro quo* out of the authorities for the amount which is paid for the cab-plate revenue?—I should think they do.

6003. (*Chairman.*) Only one question more. Were not the fees once much larger than they are now, Mr. Receiver?—Prior to the Act of 1869 the fees were very much higher than they are now. Before the Act of 1869, when the Inland Revenue paid me that 12,100*l.*, there was a hackney carriage duty, which was a guinea; and there also a wheel tax, which was 1*s.* a day, which came to 18*l.* 5*s.*, and therefore the Inland Revenue got altogether 19*l.* 6*s.* from each hackney carriage.

6004. (*Mr. John Burns.*) As against 2*l.* 5*s.* now?—As against 2*l.* 15*s.* now; the Revenue made a profit.

6005. Do you consider if the sum of 2*l.* was reduced, and the limitation of licences were not enforced, it would act as an incentive to increase the number of cabs; do you think it would have any effect one way or the other. Put it this way: do you think that a reduction in the sum paid for licences by the cab trade to Scotland Yard would have any appreciable effect one way or the other in increasing or reducing the number of applicants for licences?—I should think not; in all these matters of course there are the ordinary laws of supply and demand, and I imagine that if we were to reduce the fee of 2*l.* to any lesser sum it would not appreciably increase the number of cabs upon the streets. That is a matter of personal opinion. It is not an official opinion.

The witness withdrew.

Mr. Moses Smith called in and examined.

Mr. M. Smith.

6006. (*Chairman.*) You are a cab proprietor?—Yes, sir.

6007. How many cabs have you got, Mr. Smith?—I work about 40 cabs; I let a quantity of cabs.

6008. I think you may assume that we know by this time a good deal about the law?—Yes, sir.

6009. And a good deal about the practice and the way in which cabs are managed and let?—Yes, sir.

6010. We should be able to take your evidence very shortly, rather going upon the points which you think are wrong and upon which you think suggestions or corrections might be made?—Yes, sir.

6011. Have you any suggestion to make as to anything that you think might be altered?—On what subjects?

6012. Generally speaking as affecting the proprietors' interests and the interests of the men, and the public?—There are several things.

6013. Would you please deal with them one after the other shortly; what you think are hardships, or what you think ought to be altered?—I think the jurisdiction of the police courts.

6014. How would you change it; what objection have you to it?—So far as the cab interest is concerned, I do not think the cases ought to be tried at the police court; as far as the police courts generally are concerned, I object to them altogether. I think litigants in the police court ought to be treated as they are in the superior courts, and not as they are in the police courts, where they are shoved in at one door and put out at another; silenced, not allowed to speak, and compelled to sit down with a female with black eyes, whose clothes smell most offensively; they are not allowed to speak, the magistrate snaps you up if you make an application, you cannot get one quarter heard.

6015. You think they ought to take a great deal longer over their cases?—I think the Marylebone Police Court magistrate ought not to reside in Brighton and come at 11 o'clock instead of 10, and then hear 24 applications in 16 minutes, as I have heard him do. I think it wrong. I have sat and listened, and he has been wrong in law in two cases when he heard 24 applications in 16 minutes.

6016. In those cases were there no appeals?—No, sir, the persons making the applications were poor people, and what I complain of is that they are not properly listened to.

6017. You complain that the magistrates do not listen to cab cases?—That they do not listen to cab cases. They are too hurriedly disposed of; they ought to be more listened to; to dispose of 24 cases in 16 minutes is unreasonable.

6018. That depends on the nature of the applications. I will ask you whether 24 applications are not sometimes disposed of in 16 minutes in the Court of Chancery?—I have not been in the Court of Chancery.

6019. You are not able to say?—No, sir.

6020. You have no suggestion as to the court you would like?—I think they ought to have cab cases dealt with by the licensing authorities; there are many cases of proprietor against the driver and driver against the proprietor which there is no law to deal with.

6021. Would you be in favour of putting into the hands of the police the licensing authorities powers to decide questions?—Yes.

6022. And powers even to fine?—Yes, I think so. There are many things between driver and proprietor and between driver and the public and between proprietor and the public that in my judgment cannot be satisfactorily dealt with in police courts.

6023. I think you have got here a note of unlimited liability as to lost luggage?—I have, sir.

6024. What is the grievance there?—I do not think, sir, that my fares being fixed by Act of Parliament, I ought to be liable to be sued for one or more thousand pounds.

6025. What limitation do you think ought to be put on?—I think 40*l.* or 50*l.* limitation ought to be put on.

6026. That is a higher limit you are offering than the railway companies have, is it not?—You see we have had to pay such very heavy claims. We frequently get sued for a sum of 100*l.* and this amount would have been 20*l.*, but the persons suing us know that we must either pay 150*l.* costs and submit to a verdict of 20*l.* or give 100*l.* as the starting point; therefore we are between two fires.

6027. Have you anything to say about the Society for the Prevention of Cruelty to Animals?—Yes, sir.

6028. What do you think of them?—I think they are a persecuting society. They persecute the horse owners most shamefully; I have known of many of their cases. I never knew of a case but what there was gross perjury committed by some of the officers.

6029. By the inspectors?—I have pointed that out to them; I have personally informed young Mr. Colam of it.

6030. Do you know as a fact whether they obtain their promotion, or whether their promotion takes place on account of successful prosecution?—I do not, sir.

6031. What is the dress they go about in; is it like the police in any way?—In some cases uniform, but in other cases private clothes.

6032. When they are not in uniform?—They have the appearance of country livery stable keepers or persons out of the army.

6033. You apparently seem to think that the prosecutions for cruelty to animals ought to be in the hands of the ordinary authorities?—I think cab proprietors ought only to be prosecuted by the police; it is monstrous that our horses should be allowed to ply on the cab stands and presumably pass a constable every day, and yet be subject to be stopped by one of those men. When the case is put before the court it is supported by one of the most disreputable veterinary surgeons they can get hold of. They generally employ the same man; he is frequently to be seen riding about with the officers on the tops of 'busses. It is really he who points out the cases to the officers. There are other persons in the business who never get prosecuted; they can be seen on an evening in certain public-houses with

the veterinary surgeons drinking together. I am prepared to prove all that I say. I can also cite cases where people have given the officers of the Royal Society for the Prevention of Cruelty of Animals money; I could give you the names and addresses of people who have given them money to stay prosecutions.

6034. People who have given money to the officers of the Society to stay prosecutions?—Yes, sir; I can call witnesses at my own office before you who can tell you the monstrous statements they have made in order to patch up their cases and get evidence. They are cruel persecutions we suffer at their hands.

6035. I should like in connexion with that to ask you another question. It is said that in the licensing of cabs bribes, or something in the nature of bribes, are occasionally offered to the police. Have you any knowledge of that, of your own knowledge or by hearsay—I am speaking of the police proper now?—Such was the case 30 years ago, in fact, then it was not possible to get a cab licensed without, but for many years that has not been in existence, not for many years.

6036. We are much obliged to you for telling us what was, but tell us what is; do you know of any case?—No, sir, I do not. I build cabs and let cabs, and send cabs into my own district; I have never seen any inspector except the Marlborough one.

6037. Have you heard or do you know any case of giving, say, half-a-crown, to the man who nails the plate on?—No, I do not.

6038. Have you ever done that?—No, sir.

6039. Or anybody you know?—No, sir; in no case whatever. Thirty years ago I have done it in common with other people; it was a common thing.

6040. Have you heard it said by persons in the trade that it is done?—I have not heard it said for 15 or 20 years.

6041. But years ago it was?—I have done it myself; 25 or 30 years ago you could not get cabs passed without doing it.

6042. What has caused that change—a change in the police or what?—The inspector of our district was in the habit of doing so and he got found out and discharged; then the practice came to an end, and I do not think you could insult the police more than by offering them bribes.

6043. You think they would not take it?—No, they never approached anything of that sort with me.

6044. (*Mr. Hopwood.*) Can you give us the year in which he was found out?—It was 25 years ago, the inspector's name was Brooks; he was the son of one of the officials at Scotland Yard.

6045. (*Chairman.*) There are some exorbitant charges by keepers of green yards; what is a green yard?—A pound, sir.

6046. For what purpose?—Putting a horse in in any case in which the driver is charged with cruelty. They are used for no other purpose, but they are used in every case where the Royal Society for the Prevention of Cruelty to Animals have a prosecution.

6047. Where are these green yards; how many of them are there in London?—There is one green yard for each station house, sir.

6048. (*Mr. John Burns.*) For each division?—For each division.

6049. (*Chairman.*) Of the Society's people?—Sometimes there is more than one police station house.

6050. Why is it called a green yard?—That is the name by which it is known, sir.

6051. Are there some charges made by the keepers of these yards?—Some of these yards are appointed by the Commissioner of Police, and then there is a fixed charge of 1*s.* 6*d.* Some of them are not appointed by the Commissioner of Police, and there is a charge of about 7*s.* 6*d.*—6*s.* and 7*s.* 6*d.*

6052. How does a person become liable to pay that charge?—The horse is impounded and you cannot get it without that payment.

6053. Who is it exacts that payment?—The payment of the green yard is made in the presence of the police.

6054. But by what legal right does a person take your horse and put it into a yard and then charge you for keeping it there?—It is put there by the police.

6055. Are those sums sanctioned by the police—7*s.*?—Where the police have not appointed a green yard they put it in where they can, then the proprietor is charged 6*s.* or 7*s.*; it used to be 7*s.* 6*d.*

6056. Do you think if that question were tried before a local tribunal, a county court we will say, that the judge would say they were only to charge a reasonable sum?—I took the case to a county court 20 years back, and the judge decided that as they had all sorts of diseased animals in green yards, the sum was reasonable as the store might require to be lime-washed out and sundry other things.

6057. That was held reasonable?—That was held reasonable. In one case a 'bus proprietor refused to pay the charges and they retained his harness, and they have it to-day; he has never had his harness.

6058. That old decision being a legal decision has probably governed ever since?—Yes, sir; then we come before sympathetic magistrates; they order a horse a rest for a month; during that month the horse's teeth are resting as well as its limbs, as they have very little food and very little attention; sometimes they are retained in the green yard for a week.

6059. Who pays?—The proprietor has to pay for that.

6060. While they are getting a rest?—Yes, what a magistrate is pleased to call a rest.

6061. What is it?—7*s.* 6*d.* or 6*s.* a day; you can take a horse into a livery stable in Bond Street or Regent Street for 3*s.* 6*d.* or 4*s.* a day, and it will be well attended to. I have had a lot of communication with the police on the matter.

6062-3. I suppose in truth that the number of horses sent to these green yards in London in the course of the year is not very large?—Some green yards have two or three every morning, and where they exact these large sums they are in the habit of giving a fee of 1*s.*, the green yard keeper informs me, to the people who bring the horse in.

6064. The man who brings the horse in, and who has taken it for alleged cruelty, for instance?—We do not get our horses impounded for anything else, in every other case we are telegraphed to and we go and fetch the cab and horse home.

6065. It is under the Cruelty to Animals Impounding Clause?—I know of no clause, only this, wishing to secure a conviction. These people will practice great cruelty; for instance, we have a piece of cloth, sir, tight over the joint of the horse's leg, so that he should not hurt his leg if he struck it; that is termed a Yorkshire pad; supposing that horse is out in the green yard, they leave the Yorkshire pad on all night, and the next morning, when we go into the yard, the horse's leg is very much swollen and inflamed. They point that out to the magistrate as a great act of cruelty.

6066. (*Mr. John Burns.*) When it is due to their own neglect?—They purposely keep it on all night.

6067. (*Chairman.*) Can you produce a case of that kind?—I can produce a man who will swear that he had it done to his horse; I can produce witnesses to prove everything that I have said here.

6068. (*Mr. John Burns.*) In the case of the Yorkshire pad, which is the technical term for that form of bandage, the owner himself would have taken it off at night?—Yes, the owner would have taken it off.

6069. Would he take off an india-rubber ring as well?—There is not so much importance attaching to the india-rubber ring; we should slip it down to the small part of the leg.

6070. (*Chairman.*) You have complained that the police do not allow a cab driver, if charged with drunkennesss, to be seen by a doctor?—I have, sir.

6071. Tell us please?—I have a man of the name of Brown, who was in a very bad state of health; I had a telegram to say he was charged with drunkenness at Church Yards Road, Pimlico Police Station.

6072. At what time did that telegram come?—In the daytime; I attended there and asked the inspector if Brown had had a doctor. He said he had not sent for the divisional surgeon, and he declined to do so. After a long altercation he allowed me to bail the man; I put him in his cab and drove him to the divisional surgeon.

6073. The divisional surgeon of the police?—The division surgeon of the police, sir; I thought he was the most proper body to go to. The divisional surgeon

Mr. M. Smith.
17 July 1894.

was satisfied that the man was not suffering from drink not having had any for some few days, I paid 2*s.* 6*d.* for the examination, I paid 7*s.* 6*d.* the next morning to get the doctor to attend at Rochester Row, I had very great difficulty to get him to go, he thought it was not necessary and he objected to go and give evidence against the police. I attended there myself and gave evidence; I explained to the magistrate that I thought it was a case in which any person might mistake the condition of the driver for drunkenness.

6074. What was the matter with the driver that might be mistaken for drunkenness?—He had a slight stroke and was unsuitable to drive a cab, but still I thought it was a very proper case where a man ought to have seen the doctor, especially as I offered to pay the doctor's fees. That matter was before this office, but nothing was done in it.

6075. At all events you think it fair to say that it was something that an experienced person might mistake for drunkenness?—Yes.

6076. What you complain of is that a doctor was not allowed to see him?—Yes, especially after his proprietor had gone a distance of 3 miles to request a doctor to see him; I also think that any qualified man on the medical list ought to be allowed to see a prisoner, and that he ought not to be put to the expense of 7*s.* 6*d.*; you might get as many doctors as you liked for 2*s.* 6*d.*

6077. You mean to come and give evidence?—No, sir, to attend the man in the police station to say whether he is drunk or not.

6078. You are aware there are certain provisions in existence for the attendance of a doctor when a person is taken to the police station?—Only the divisional surgeon.

6079. Calling him is discretional?—And only at the expense of 7*s.* 6*d.*

6080. Not if they cannot pay it?—That is always included next morning in the charges. I think a doctor ought to be seen at a usual doctor's fee, that is my meaning.

6081. (*Mr. Lough.*) Are you in favour of the privilege system at the railways?—No, sir, indeed I am not.

6082. Do you think the railways would be well supplied with cabs if they did not make these privilege arrangements with the proprietors?—I am sure they would; they would not be supplied now, if it were not for outside proprietors, when there are excursion trains in the autumn, the privilege is no use at all.

6083. You think the privileges ought to be done away with entirely?—I do indeed.

6084. And the stations should be opened?—Yes, I have done my best to do away with them since I have been in the business.

6085. The South-Western Railway Company have a special system?—I used it when I drove a cab.

6086. Do you approve of it?—I do.

6087. Do you think the drivers ought to pay a penny when they go in?—I think they ought not to pay anything, but I would not object to paying a penny in the first instance.

6088. The great evil is making the arrangement with the proprietor instead of with the drivers?—Yes, sir, my opinion is this that the cab interest have tolls exacted from them by the various railway companies amounting to about 10,000*l.* a year. Then in addition to that we suffer an injury to the extent of about 100,000*l.* a year, therefore we suffer a matter of about 110,000*l.* a year through the railway system, and if that 110,000*l.* were saved to our industry we could either give the public a better article or let out cabs at a cheaper rate to the drivers.

6089. (*Mr. John Burns.*) Or employ more men?—Or we could employ more men.

6090. (*Mr. Lough.*) Do you know the railway bus?—Yes; I think that is a benefit to the public, sir.

6091. Do you approve of the railway bus?—I am afraid we cannot stop anything that is a benefit to the public.

6092. Do you approve of the licensing those 'busses?—I think it would be a great injury to the cab trade if those 'busses were licensed.

6093. So you would make no alteration in the present system of the railway companies' small omnibuses?—Except this, that the company ought not to allow those 'busses in the way they now allow them; they break the law by having these ready horsed and harnessed and with a driver waiting for the train to arrive. That is a thing I am not allowed to do; I am allowed to let a private carriage, but it must be ordered from me; I am not allowed to have a horse in the carriage and the driver mounted and waiting for the fare.

6094. Do you think there are too many cabs?—Yes, I do, sir.

6095–6. Do you know how many there are?—11,000 or 12,000.

6097. What number do you think would be sufficient?—Well, it is very possible that 2,000 or 3,000 less would be sufficient.

6098. And the number of men, you think, might be reduced perhaps in proportion?—I do not think so, sir; I have always thought there was a great scarcity of men; we have not been able to find men for our cabs, even since the strike terminated. We had not sufficient men yesterday.

6099. What system do you let your cabs on? Are they double-shift cabs or one man and one horse?—The majority of them is one man and one horse; all the four-wheeled cabs are one man and one horse.

6100. Do you let out the same cab again to another man?—No, sir; the men have an exclusive right to cab and horse.

6101. How many hours a day is your cab and horse out?—12 hours.

6102. Do you let him keep out the same horse 12 hours?—I do not trouble about the hours so long as the man is kind to his horse. For a horse improperly treated I find four or five hours too long; on the other hand, I find, if a horse is properly cared for and treated, 12 or 14 hours might not hurt it.

6103. Do you find a horse would be able to stand 12 hours a day for five or six days in the week?—Yes, sir.

6104. And your general system is one cab and one horse to one man?—That applies to all the four-wheeled cabs and to about three hansoms; we have to apply it to hansoms where you have a man aged or sick.

6105. What hours on an average do you think drivers work. I do not mean one-horse drivers, but the general average?—15 or 16 hours a day.

6106. Do you think it is right that they should work such long hours?—With two horses?

6107. With or without two horses?—I think a man driving a cab can work a few hours longer than a man in a shop. I have worked at both. A man in a shop sees nothing but the four walls and his companions, while a man on a cab is in the open air and sees a great variety of life.

6108. How many hours a day did you work when you were a cab driver?—I used to work about 12. I thought it long enough.

6109. Would you think a maximum of 12 as much as ought to be allowed?—No, I do not think that; some men like to work longer.

6110. (*Mr. John Burns.*) You told us at the commencement of your evidence that you owned 40 cabs?—Yes, sir.

6111. You said that you let a number of cabs?—Yes, sir.

6112. To whom do you let cabs?—To anybody who wants to hire a cab.

6113. In what way?—Some with plates on and some with plates off.

6114. Do you let cabs both with plates on and with plates off for purposes other than hackney carriage purposes?—Very seldom, sir. I should do so, but I very seldom do.

6115. Let me put it in this way: do you let any of your cabs to a man who in his turn lets them to a cab driver?—Yes, sir.

6116. Then you have in your possession what are known as sub-let cabs?—Yes, sir.

6117. On what basis are those cabs sub-let—Mr. Smith lets a cab to Mr. Brown for so much a day say?—A week, sir.

6118. So much a week?—Yes.

6119. Mr. Brown lets it to cab-driver Jones at so much per day?—Yes, sir.

6120–1. Why is that system adopted?—I am speaking of a cab without a horse.

6122. Why is that system adopted?—In some cases a man with three, four, five, or six cabs is having one re-painted, and he hires one while the other is being re-painted.

6123. You sub-let cabs only?—I sub-let cabs only.

6124. For plying for hire?—Yes, sir.

6125. And in those cases it is used less as a continuous means of carrying passengers than as a temporary means, as being a substitute for cabs that are laid up or are not running through some other reason?—Yes, sir; that is the chief of my lot, sir.

6126. Do you sub-let horses?—No; very rare indeed, a chance time.

6127. When you sub-let a cab how much do you charge for a four-wheeler?—15*s*.

6128. How much for a hansom?—11*s*. iron-tyred, 15*s*. rubber-tyred.

6129. Per week?—Yes.

6130. When you sub-let a horse for exceptional reasons, as you told me it was not general, what is the charge per week that you make?—Sometimes 10*s*., sir.

6131. For a week?—Yes.

6132. For a four-wheeler?—We seldom let a horse for a four-wheeler, a hansom generally; it just depends upon the season of the year.

6133. What do you charge for a hansom?—During the strike I let some horses at 1*l*. a week.

6134. That was an abnormal time?—Yes, sir.

6135. What was your usual charge?—About 10*s*., sir, is customary in the trade.

6136. Is sub-letting of cabs and horses general?—No, sir; cabs, not horses.

6137. Do you consider that it would tend to a bad class of vehicle and to bad treatment of the cab driver from the point of view of wages if the sub-letting of cabs and horses were generally practised?—No, I do not think it would. I think it would tend to the very bad treatment of the horses.

6138. Does not direct ownership of both cab and horse, and hiring by one person, conduce to the better treatment of a horse, better appearance of the cab, and better payment of the man generally?—No; better treatment of the horse in all cases.

6139. A better class of property?—No, I do not think that.

6140. But how does that third profit come in; it must come from somewhere; where does it come from?—I do not know that there is much profit.

6141. But you do not lose on the horses you sub-let, or the cabs you sub-let?—No, I was to explain to you, sir; a man who has got 50 cabs to let out can keep his cabs on a cheaper rate than a person holding one or two. For instance, I myself keep a staff of men with a large factory; I not only build cabs and let them, but I repair cabs for anybody who wants a cab built or paired. Cab hiring and letting is not much done. When a driver starts in business he frequently begins by hiring a cab, but he generally finishes by having a new vehicle on easy terms, frequently from the man he hires from. I had a case only yesterday of that sort.

6142. But you do think that sub-letting a horse would tend to cruelty and bad treatment?—It gets horses badly fed, and the horse is best under the proprietor's own care.

6143. Generally speaking, you condemn the privilege system?—I condemn it entirely; I cannot use language too strong to condemn the privilege system.

6144. In your experience is the supposed object of privilege secured, viz., a better class of driver and cab for railway stations?—It is utterly untrue; the drivers pass from one yard to another, from the privileged to the non-privileged, and they are neither better or worse.

6145. Are the privileged cabs, in class of superiority, better or worse?—Rather the worse of the two, where the companies will allow them to be.

6146. And the horses?—The horses are about the same—rather the worse of the two where the companies will allow them to be worked.

6147. You say the privilege system in slack times is not wanted in railway stations, and in busy times breaks down?—Yes, there are not cabs sufficient.

6148. And do you consider that if all yards were converted into non-privileged yards, and cabs were admitted as at Waterloo, that railway passengers would not be inconvenienced?—I am sure they would not.

6149. Do you contend as a cab proprietor that the horses and the men, and the cab property generally, would be improved, both in appearance and in comfort and in length of life of the horse, if many of the sheltered cab yards were thrown open to them as cab stands?—Yes, I am sure they would; we should be able to let out our things at a less charge; we should not have such an expense of maintenance.

6150. Is it your experience that outside privileged stations there is a congestion of traffic caused by cabs blocking the streets on purpose to get the surplus fares after the privileged cabs are exhausted?—That is so.

6151. At Victoria this morning?—At every station it can be seen at any time; in the autumn hundreds of cabs waiting.

6152. And not only in the autumn but on the occasion of race meetings and sports?—Just so, when people are returning to town.

6153. Privilege for a minority of railway passengers in cabs leads to inconvenience for the general public outside?—Yes.

6154. And in your opinion it would be an advantage all round, and no disadvantage to the railway company, if all stations were thrown open?—I am sure it would.

6155. Now we will come to the police courts. You complain of the present system of procedure at all London police courts on the ground that sufficient time is not given to each case, and the procedure generally is bad distinctly; is that so?—Yes, that is so.

6156. Have you ever noticed the attitude of some of the gaolers and constables to cabmen after they have been fined, and are on their way either to the rear of the court or to the cells?—I have not noticed particularly to cabmen, but their conduct is harsh towards every person.

6157. Have you ever seen them put their knees into a person's back?—No, I have not.

6158. Have you ever seen them take them by the scruff of the neck and hurry them down the passage?—I have seen them shove and blunder them about myself in common with other people.

6159. And you think the criminal associations of an ordinary police court are not conducive to the improvement of the *personnel* of the cab-driving industry?—No, I think that three-fourths of the offences in the cab trade might be dealt with otherwise.

6160. As in the City, in what is known as the Summons Court, where only street offences are taken?—No, I do not think that; I think they might be treated more as a police constable is who has done anything wrong; he is called before his superiors and dealt with.

6161. But as the number of cab cases would inconvenience the inspector at Scotland Yard, you would have no objection to a special court being instituted?—I think a special court ought to be at the head licensing quarters, whether at Scotland Yard or the London County Council. I think the proprietor or driver ought to be brought before it somewhat in the same way as you are brought before a county court judge, by filling up a form of summons and having two or three days' notice, instead of so many weeks.

6162. Coming from that, have you had much experience of the Royal Society for the Prevention of Cruelty to Animals' inspectors?—Yes.

6163. Do you consider them generally qualified men?—No.

6164. Do you consider them capricious in the exercise of their duty?—I do not quite understand the meaning of that word, sir.

6165. Well, capricious in the sense that they are actuated less by a desire to save the horses from suffer-

Mr. M. Smith.

17 July 1894.

ing cruelty than by a desire to show their knowledge—to play to a crowd?—Indeed I do.

6166. And to generally do everything excepting the right thing, viz., saving a horse from cruelty?—They care nothing whatever about it. All they care for is convictions and glowing reports for the public; they care nothing whatever about suppressing cruelty.

6167. You consider them partial and prejudiced?—I do.

6168. Do you consider that for contagious diseases purposes the local authority, whatever it be, whether it is at Richmond, or Twickenham, or in London, should have the supervision of horses, whilst in the police there should be qualified police inspectors to do that work properly, which you say the Royal Society for the Prevention of Cruelty to Animals now improperly discharge?—I was not speaking of contagious diseases; contagious diseases are dealt with by the London County Council.

6169. That is what I meant, but as we are not discussing the question of jurisdiction, I will put it in a general way to you; you would rather that the offence of cruelty to horses should be dealt with by a police inspector or a police officer than by this voluntary society?—I contend they ought to be dealt with by a proper authority, and even if dealt with by the private society they ought to call in any respectable veterinary surgeon who happened to be near, and not pick out one man, a disreputable man, and fetch him to all parts to maintain their prosecutions.

6170. Is he a veterinary surgeon in practice?—He is a qualified man, but he seldom has any practice; they say they have; they tell the courts they have a practice, but as a matter of fact I have known cases where they have not even had a surgery. This sort of thing frequently leads to practice, because cab and 'bus proprietors give them a practice.

6171-2. Then am I to gather from you that they are men technically and superficially qualified, but not men who are qualified by practice?—They are qualified men, but I think they lend themselves to anything, even to perjury.

6173. Generally speaking, you are not favourable to them?—I am very much against them.

6174. You spoke about green yards; what is the connexion, if any, between the owners of the green yards, the police and the inspectors of the Royal Society for the Prevention of Cruelty to Animals?—I think there is very little connexion.

6175. Yes, but is there any improper relation between the owners of the green yards and the officers of the Royal Society for the Prevention of Cruelty to Animals?—I think not.

6176. Or the police?—No.

6177. Have you considered the question of cheaper fares?—Yes, I have considered almost everything in connexion with the cab trade.

6178. Well, to go through one or two I will not keep you long. Have you considered the question of the age of applicants for licences. What is the age you would have men?—You mean the youngest?

6179. Would you raise the age from 18 to 21?—There is only one section of young licensed men that I object to, and that is people who have previously been connected with the cab trade, whether in the stables or otherwise; they seem to me to make very undesirable drivers at an early age.

6180. On the principle that the nearer to church the further from God, the nearer to the cab trade the less you know about cab driving?—I do not think that is it; they seem so initiated in the ways of cabmen before they drive; they seem to get corrupted before they start. Young grooms out of gentlemen's service we find make very good cabmen at very early ages.

6181. But generally do you think the age should be raised?—I should not object to that.

6182. What have you to say to the sixpenny fares?—I very strongly object to it. There was a sixpenny fare when I drove a cab, and I never knew a single case of a man approving of it.

6183. Have not things changed since then?—I do not think so.

6184. Is there not competition in the shape of telephone, telegraph, busses, electric railways, underground railways?—Yes; we still have the horse and the man and the cab to let for sixpence. I find people that want sixpenny fares go in the opposite direction to what a sixpenny fare ought to go. Instead of going from Regent Circus to Piccadilly Circus, they generally go from Edgware Road up to the top of the Lock Bridge, where the man has to go back again; or you would find it perhaps from Maida Vale up to Kilburn; the man has to come back again for the sixpenny fare.

6185. Then I am to gather from you that the sixpenny fare, particularly after a certain hour at night, would be from the outer metropolitan ring, and not in towards the City, where there would be a chance of getting many sixpenny fares?—I think any person offering a cabman a sixpenny fare to drive him, say, from the Strand to the Criterion would have it accepted. I think any cabman would take you for sixpence.

6186. Would you be in favour of a radius being formed in which sixpenny fares should apply, and outside which the present system of tariff should prevail?—No; we tried that with a very ingenious arrangement some 20 or 25 years back. It was proposed by Inspector Haddon. When he was connected with the police he caused nearly every lamp post in London to have a letter or a number placed upon it, and he had a little book about as big as my two fingers, not quite so big; you could carry it in your waistcoat pocket. By looking at the number on the lamp when you got in, and by looking at the letter or number when you got out, you could tell from your book the exact fare payable, 15*d.*, 9*d.*, 1*s.* 9*d.*, or whatever it was. I still have the book at home, and by it you could see the exact fare due.

6187. Would you lend it to the Committee; it shall be returned to you?—I will lend you anything I have, gentlemen. You could see the exact fare. It was worked out on this principle, that within a mile of Charing Cross the fare would run to perhaps about 4*d.* a mile, and then the next mile would be 5*d.*, then the next mile 6*d.* or something of that sort, and when you got out to the fourth mile the price would be 7½*d.*, and his idea was to work all the cabs away from the Criterion and those sort of places, on to the outskirts. That was never workable and the trade very strongly objected to it.

6188. Why did you object to it?—Well, we felt that our living lay where the 4*d.* fare was fixed; we did not find our living where he wanted to send us. They might have sent us away to West Hampstead, but as soon as we got there they would telephone for us to come back to Charing Cross and those places where they really wanted us.

6189. In a word you would rather gamble for your 1*s.* fares in the Strand and Regent Street than you would have a less frequent fare of 1*s.* 6*d.* or 2*s.* in the outskirts; is that so?—No, that is not what I am desirous of saying. I am desirous of saying we could not earn the money in the outskirts. By working about town we would earn 15*s.* or 16*s.* a day, whereas on Inspector Haddon's principle we should be earning 7*s.*; we still want to have the earnings.

6190. Are you in favour of the alteration either of the fare or of the radius, or of a modification of both?—I am in favour of a modification of the radius. I do not know of any alteration of the fare. I am not inclined to raise the fare. I have been in the business since that was suggested to us, and I do not approve of it; I do not think the time has come to lower the fare, but I am sure it has not come to heighten it.

6191. Would you be in favour of an experimental tariff for the sixpenny fare to be tried?—Well, that can be tried in any minute; if a person in the business was desirous to try it he could do so to-morrow morning. I could print on my cab to-morrow morning, "Sixpenny fares taken." Any person could take sixpenny fares; most of the old and respectable drivers do take a sixpenny fare.

6192. Is that practice on the increase?—No, rather not. When there was a sixpenny fare we seldom had a sixpenny fare; we did not have two a week, and when we did it generally ended in a jangle.

6193. What suggestions have you to make with regard to any alterations of the radius?—I think there are certain districts where the radius wants extending, and there are other districts where it ought not to be extended. We use a term in the cab business of being "in business." I do not know whether you understand that term, but that is, when you put down a fare are you eligible for another; is there any

prospect of getting one or will you have to travel a mile or two back to get one. Well, I say until we are "in business" at the radius post it is not time to extend the radius post. Now I will take St. John's Wood; we have to go to the top of the first hill in the Finchley Road before we get to the radius post, then we have to come back to the station of the Finchley Road before we are "in business," and until recently we had to come back to the Swiss Cottage.

6194. Then am I to gather from you that the present radius occasionally falls short of your sphere of business in some districts, whilst it is in the very midst of it in others?—Yes.

6195. You would be in favour of an irregularly formed radius adapting itself to the business sphere that the exigencies of the cab trade point out should be made?—Yes.

6196. (*Mr. Hopwood.*) Do you think you could give us the limits of the new radius on paper?—Yes, I would say no increase at St. John's Wood nor yet at Clapham Common, but I would say an increase at Finsbury Park and at Hammersmith Broadway.

6197. (*Mr. John Burns.*) Then you would not object to take the metropolitan police map and to mark upon it what you would term the generally fair re-organisation of the radius?—I am not qualified for that.

6198. But you could roughly point it out?—I am only qualified for a district I chance to know; not being in the habit of driving a cab now I am not qualified for it; those four districts I chance to know.

6199. What have you to say about the system of watering horses; are you in favour of the post and pail system, and against the trough?—I am very much against the trough; I think we get glanders through the troughs.

6200. Do you think that troughs, if allowed, should be under the local authority and not under any voluntary society?—I think troughs are very bad things. We have a trough in our yard and every time we have a break out of glanders we have to cease using the trough, otherwise we spread it all over the stables, through every stall.

6201. But may I suggest to you, as you yourself have located a trough as a point of contagion, would it not be wise if you were to give instructions to have it pulled down immediately you leave this office?—Well, we wash the cabs from it, and we find it a pretty good saving to the men.

6202. To dip the bucket in?—No, no; to allow the horse to go to drink. We do not often have outbreaks of contagion in the yard.

6203. When it comes it is like the small-pox, you feel it?—We never have it very bad; as soon as we discover one case we stop the trough.

6204. Then I gather you are for the pail system as against the trough?—Yes, I do not like the troughs.

6205. And where the pail system could supersede the troughs you would like it, but where the troughs could not be dispensed with you would be in favour of their being under the local authority and regularly cleaned?—No, I have no wish in that respect.

6206. You have no complaint to make?—I have no knowledge of it; I do not know whether there is any complaint or not.

6207. What do you think of the present cab rank accommodation?—I think we are shamefully served as regards cab rank accommodation.

6208. You have plenty of cab ranks in places where there is no business, and no cab ranks in districts where there is business?—That is so generally speaking.

6209. You are in favour of small cab ranks being established where the traffic would permit—I do not say small.

6210. Well, of any size?—I think cab stands ought always to be where cabs are employed, because if you do not place the stands there you will have double the number of cabs loitering about. Wherever there is work there is sure to be a cab.

6211. What have you to say about bilking?—I think something ought to be done to stop it.

6212. Is it better now than it used to be, or is it getting worse?—I think it is not done so much as it used to be, but there have been several of them these last few months, several of them.

6213. Although not done in many instances, when it is done it is a very large amount the man is robbed of?—Generally by the same individual.

6214. (*Mr. Hopwood.*) And done to several of your own men whom you can trust?—The last man bilked I could trust implicitly; I am sure the man was speaking the truth.

6215. Genuine cases of bilking?—Yes.

6216. (*Mr. John Burns.*) When you were a driver were you ever bilked?—Never lost a sixpence the three years that I drove.

6217. Have you any suggestion to make as to improvement in the inspection of cabs?—No, I do not see that any improvement is needed; the inspectors appear to treat us fairly. I frequently have a cab brought to me that has been refused to be passed, but in no case have I had a cab brought to me that in my judgment ought to have been passed; there has always been a just cause for the refusal.

6218. How frequently has the inspector visited your cab yard?—He has visited it twice within the last two months.

6219. How often before?—I never knew him before; he has only been appointed to our place about six months. He only comes when he has some complaint. Once he was there about a complaint about a cab; the other complaint was of a horse. He never visits my yard except he has a complaint against me.

6220. Then sometimes he visits the stable door after the horse has gone?—You see there is first a complaint. He had a complaint the other day; one of our cabs had been seen in the street with an approval mark but no plate on it. He was directed to inquire what was the meaning of it. It was a cab I had on hire, which had been sent on without the plate but with the approval mark on it.

6221. Have the cabmen improved generally, from the point of view of sobriety and civility?—Yes, there has been a great improvement these last 20 years.

6222. What have you to say in a similar direction about the police?—A marvellous improvement.

6223. A change for the better?—A marvellous improvement.

6224. In what way?—Well, I think we have got better men in the Force altogether, more gentlemanly; they speak to you better and treat you better; even in the streets the men seem to come from a different class altogether when they join the Service.

6225. (*Mr. Hopwood.*) Are you in favour of different classes of cabs?—I am not.

6226. You would not have first and second class cabs?—No.

6227. Is there anything else that you would like to say to the Committee?—Yes; I should like to call your attention to one or two things. I should like to call your attention to what we term cab stealing; that is, a driver leaves his cab unattended, another man takes it away. I had a cruel case of that. I had to send out 30 mechanics on point duty to try and find one of my cabs that had been stolen. I found the cab and charged the man. The man was committed for trial, and I was bound over to prosecute. One witness had to attend to be bound over, and when the witness attended the magistrate asked a question or two he could not answer, and he called the prisoner into the dock and discharged him in the absence of the prosecutor, the prosecutor's solicitor, and everybody else. That matter was brought before this office; I complained very bitterly.

6228. What remedy would you suggest for such a state of things?—I have had a case since where a man was fined 5*s*.

6229. For stealing a cab?—For stealing a cab. A fortnight ago there were two cases at the sessions where the men had 14 months each.

6230. Give us some particulars of the 5*s*. case; which was the court?—Marlborough Street.

6231. What was the name of the prisoner?—The proprietor's name was Neal, the same mews as I carry on my business in; I do not know the name of the prisoner.

6232. The prisoner stole one of Neal's cabs?—Yes.

6233. And was fined 5*s*.?—Yes.

Mr. M. Smith.
17 July 1894.

6234. Any other point?—I have one other point, and that is the treatment our non-union men are receiving; yesterday and to-day their treatment is worse than during the time of the strike, it is something shocking.

6235. (*Chairman.*) I think that is rather beyond the scope of our inquiry. One single point about shelters: is there any difference in the treatment of union and non-union men in the shelters; we have had some evidence on that?—I had a matter of four complaints; I went to the Shelter Association and complained, and I have not had a complaint since.

6236. May it be considered that everybody is very fairly treated now?—I think every person is being served, I would not say fairly treated.

6237. (*Mr John Burns.*) They are not large enough?—They are a perfect nuisance, no shelter at all. My idea of a cabman's shelter was a place where I could go and sit down, have a cup of coffee, and wait until I was required outside. The present shelter is nothing more than a place where a cabman can get food.

6238. A coffee shop on wheels?—A coffee shop on wheels, a smoky little place where all sorts of slang and demoralising conversation goes on, a perfect nuisance in the business.

6239–40. If you do not have food or drink?—You must not go there; you are not wanted there.

The witness withdrew.

Adjourned till Thursday next at 11 a.m.

ELEVENTH DAY.

Thursday, 19th July 1894.

PRESENT:

MR. GEORGE RUSSELL, M.P. (CHAIRMAN, PRESIDING).

Mr. HENRY CUNYNGHAME.
Mr. F. J. S. HOPWOOD, C.M.G.
Mr. E. H. BAYLEY, M.P.
Mr. JOHN BURNS, M.P.
Mr. T. LOUGH, M.P.
Mr. C. A. WHITMORE, M.P.

Mr. MALCOLM DELEVINGNE, *Secretary.*

6241. (*Chairman.*) I have received the following letter from the Commissioner of Police of the City:—

"26, Old Jewry, E.C.,
"Dear Sir, 18th July 1894.

"During my examination yesterday before the Committee, I was asked,* 'Is London Street (by Fenchurch Street) within your jurisdiction,' and on my replying in the affirmative, how it was that the railway company were allowed to levy a charge for cabs standing in a public street. I admitted my inability to answer the question, but added that on my return to the City an explanation would probably be forthcoming, or words to that effect. On inquiry I find that the honourable member who asked the question has been misinformed. Cabs do not stand in London Street, but on the private ground adjoining, belonging to the railway company.

"I am, dear sir,
"Yours very truly,
"(Signed) HENRY SMITH, Lieut.-Colonel,
"Commissioner."

Mr. W. E. COOPER called in and examined.

Mr. W. E. Cooper.
19 July 1834.

6242–3. (*Chairman.*) You are a cab proprietor, Mr. Cooper?—And a driver.

6244. How long have you been a proprietor?—I first started as a proprietor about 15 years ago.

6245. But were you a driver previously to that?—Yes.

6246. How long were you a driver before then?—I think it is 18 years I have been altogether.

6247. What were you before you took to driving a cab?—In gentlemen's service; a groom, sir.

6248. You had some knowledge of stable work and horses before you came into the business?—Yes, sir, my father was a small cab proprietor, and I always had a knowledge of it.

6249. Were you a Londoner?—Yes, sir.

6250. You had experience of horses and carriages, and some knowledge of London?—Yes, sir.

6251. How many cabs have you?—I and a man in partnership work 24.

6252–5. Are all your cabs licensed?—Oh, yes, sir.

6256. Each has been passed?—Yes, sir.

6257. But you do not habitually work them all, do you?—No, sir, you are obliged to keep out two odd cabs, so that practically there would be only 22 at work, in case of accidents or cabs being repainted and that like, sir.

6258. Is that the average number you have out every day, 22?—Yes, sir.

6259–60. Do you think that the present system of inspection is sufficient, in the first instance, before the lots are passed, and afterwards to see that they are kept in good order?—Quite so, I think, sir.

6261. Do you think that the examination at Scotland Yard is thorough and genuine?—It does not occur at Scotland Yard, it is locally.

6262. No, I mean under Scotland Yard?—Yes, sir.

6263. The testing, I mean?—Oh, they send us back for bad insides, or if a cab is not properly painted, or any defect in the springs or wheels or anything; they always refuse to pass the cabs.

6264. And do you think there is any sufficient examination into the fitness of the men to drive, and knowledge of London, and so forth?—No, sir, I do not; as regards knowledge of London, may be; to my idea all the drivers ought to be examined as regards their capability of driving.

6265. Do you know anything, either in your own knowledge or by common report, about the police authorities being squared with money in order to pass unfit cabs?—I have never squared them myself, sir.

6266. No, but have you any knowledge of anybody else doing so, or of their receiving bribes?—No, sir, I have not.

6267. Have you heard of it, as matter of talk?—Well, as matter of conversation I have, of course.

6268. But not further than that?—No, sir.

6269. Have you anything to say about the present system of fees?—What fees are you alluding to, sir.

* *See* 5713-27.

6270. The fees that are exacted from you?—As regards the licences?

6271. Yes?—Well, I think the licence might be reduced.

6272. You think you have to pay too much?—Yes, sir, it brings in over and above the amount that is regularly requisite to carry on the hackney carriage branch of the police department, and also the revenue, the 15*s.*

6273. How many drivers do you employ?—Twenty-four to 25 licences, sir, that would be about two odd men; one odd man to every 10 cabs would be about the average in a business yard, where you employ thorough business cabmen.

6274. How many actually have you on an average working a day?—Twenty-two, sir, but you might have one or two ill, or what not, sir.

6275. The extra ones are kept to fill up?—They term themselves odd men, sir, and they come down regularly to work of a morning, and if a man sends his wife down, who says he does not feel very well, a little note, or comes himself and has what they call a day's rest, the odd man drives his lot just as it is.

6276. How many days a week do they work on an average?—I have never averaged it up, but ours is a six days' week.

6277. I mean your men?—Six days a week.

6278. It averages six?—Well, if they rest one day it is an average of five; we never work on a Sunday, I have never had a cab out on a Sunday.

6279. But they do not take a week-day holiday as well as a Sunday?—Oh, yes, sir, that is why you are obliged to keep odd men; they occasionally work only five days.

6280. (*Mr. John Burns.*) What would they earn?—I have never averaged it up, sir.

6281. (*Chairman.*) Is it your experience that the drivers are a better class of men now than they were when you started?—Oh, yes, much; and they get a better living too, sir.

6282. First of all, about the men themselves. You say they are a better sort of men. Do you mean better educated?—Better educated.

6283. Better characters?—Better characters, a more respectable class; think more of their wives and families; their homes are kept better; more steady and more sober.

6284. How about their treatment of horses?—Well, some drivers treat their horses remarkably well; think as much of them as they do their children, and others the other way about, sir.

6285. You said a minute ago that they made a better living. Do you really think that the average driver makes a better living than he did 15 years ago?—Yes, sir, I should think so.

6286. How much do you suppose your drivers make a week?—Well, I must illustrate this point, sir. My partner and myself drive a cab alternately. There is only one required at home to attend to the business. Our average since 1891 has turned out, providing the dues to proprietors were paid every penny, about 7*s.* 7*d.* a day. That is 1891, 1892, 1893, 1894, up to the date of the strike.

6287. (*Mr. John Burns.*) That is 7*s.* 7*d.* a day?—That is 7*s.* 7*d.* a day.

6288. Over and above what?—Over and above if all dues were paid, which, previous to the strike, they were not; but provided every penny that was demanded had been paid.

6289. (*Chairman.*) How does that compare with what you were making when you began your business?—Let me put my question the other way. How does that compare with what you made yourself when you began driving before you became a proprietor?—Some years ago we used to have better seasons, but not such good winter time, Lent time, and such things as are scarcely recognised now. But there used to be a serious depression in the cab trade. The autumns were much worse, and through Lent time things used to be very very bad, in fact I have known my father to go out 25 years ago and not have a fare all day during Lent. Such things never happen now. It is more all round now than it used to be.

6290. Then how far does your experience go back beyond the time you actually drove yourself. I mean in your father's time; how many years have you been conversant with the cab trade?—All my life, sir. I was born in the cab trade.

6291-2. And all the time you were in service you knew something about it through your father. You kept in touch with it?—I still lived at home.

6293. You sum up your experience by saying that the cabmen as a rule make a better living now than they did?—I do not know whether they earn more money, but they do this, they do not fool their money away. They do not squander their money away.

6294. That is another thing; that comes from their being a more respectable class than they used to be?—Yes, sir.

6295. You do not contend that they receive more money?—They do not receive more money take the year round, but they used to earn a lot of money in the summer time, so I am given to understand, before my time, but the winter time would bring up the average.

6296. You do not think they make much less than they did 15 or 20 years ago?—No, I think not.

6297. Do you think things are getting worse gradually?—My average turn is not, sir; it averages about the same.

6298. Do you find a difficulty in getting as many good drivers as you want?—Well, we are so thoroughly practical, sir, that we do not: we employ what we call early men, men who get out with their cabs in a business-like way. They are more like mechanics; they come to work between half-past 7 and 9 in the morning, and they come back from half-past 8 to 10 or half-past 10 at night; they treat the job in a business-like way, and we give them the preference in the job.

6299. Have you any means of knowing what occupations your drivers have followed before they drove?—Well, sir, from a physician down to a horse-keeper. Every trade and mechanism that can be mentioned, I should think, sir; every tradesman, publicans, greengrocers, butchers, bakers, shoemakers, coachmen, gardeners, bricklayers, carpenters, every mortal trade that you can think, sir.

6300. So I have understood; but I suppose it follows from that, that a very considerable number of them never had any experience at all with regard to horses or driving before they came to it?—That is so, sir.

6301. They drive by nature, not by experience?—That is so, sir.

6302. And I think that applies to your own men as well as to the trade generally?—Most decidedly.

6303. You do not pick and choose out men who have been stablemen, or who have driven tradesmen's carts, or anything of that sort?—We never give a new man a job. It is a great mistake to give a new man a job without you know him to be practical. You might give a new man a job, and he would kill a pair of horses in a few months.

6304. How do you test whether a man is practical or not?—We never take a new licence without knowing the man, sir.

6305. Have you any reason to think that the present number of licensed cabs is greater than the requirements of the public demand?—Well, I think not, sir.

6306. You do not think they could do with many less?—I do not, sir.

6307. Do you think any large limitation would be inconvenient to the public?—I am sure it would at certain seasons and times, sir.

6308. You do not, in other words, believe that London is over-stocked with cabs?—No, sir.

6309. Have you any opinions about the men they call butterfly drivers, whether they ought to be discouraged. Do you think they do harm to the other men, to the public?—Butterfly drivers are very few and far between, sir, and it is only unpractical cab proprietors, as a rule, that will employ them. It would be very detrimental for me, as a practical cab proprietor, to employ a man who I know would put in three or four hours more because he is only to drive a cab a few weeks, who would lick up the horse almost to a standstill, and run away and leave you. So practical cab proprietors seldom or never employ these

Mr. W. E. Cooper.

19 July 1894.

men if they know it; they would be more likely to get in with a new cab proprietor or new company formed, somebody that was not practical.

6310. Then you do not think the butterfly drivers are sufficiently numerous to take into consideration or make any changes in the law for?—I am sure not, sir.

6311. Have you ever had any experience of the privilege system at railway stations?—I have never been a privileged driver, sir.

6312. But I suppose you must in your business have seen something of the working of it?—It is very detrimental to the trade in general, sir.

6313. It is?—Yes, sir. For instance, if the railways were open, it would stop prowling the streets, blocking thoroughfares, and cruelty to the horse as you might say. If a horse has been a long journey of 5 or 6 miles to a railway as soon as it sets down there is no rank for him to put on, so he has to walk about for miles before he gets on a rank or has another fare, whereas if he could put into the station for an hour's rest it would be to the benefit of the driver and also the horse.

6314. Would you be in favour of throwing the stations open?—Decidedly so, if the companies could not do it free the drivers would not object to paying a halfpenny or a penny for each fare the same as on the South-Western Railway, and all other railways have what they term the blucher after their own stock is exhausted.

6315. And what do you think about the fares charged per mile; are you in favour of reducing that to sixpence?—I think the fare is very reasonable, sir.

6316. You see no reason for changing?—No, sir, I do not.

6317. You do not think there would be any advantage in having a 6*d.* fare for the first mile, 6*d.* fares in fact, to put it shortly?—I think not, sir; it would have to be general for the benefit of the public as well as the driver, and for instance, putting in a railway station, getting off with a cab load of luggage inside of the mile for 6*d.* after waiting and paying a ½*d.* or a 1*d.* for your job, it would not pay at all, I think.

6318. You do not think that the increased number of people who would use a cab if they could get it just for a short job for 6*d.* would compensate you for any loss of that kind?—No, sir, it would not, they would pay the legal.

6319. Do you not think that the much greater number of people who would use a cab if they could get it for 6*d.* would compensate you for the loss that you speak of?—There are so many thousands of people daily riding a cab now pay 1*s.*: they pay 1*s.* because they could not pay 6*d.* If those riders that pay 1*s.* only paid 6*d.*, I do not think the increased number of sixpences would compensate that.

6320. You do not think there would be such a number of people would take cabs who do not take them now for short jobs?—No, sir, I do not.

6321. Have you ever considered a machine like that thing we have in that corner there, or anything of the same sort for registering distances?—I have seen them on the cabs.

6322. You have seen them in the cabs?—Yes, sir; I have never taken any interest in it, it was only on two occasions.

6323. Was it lately?—Seven or eight years ago, the same cab is in the possession of the proprietor, but it has not got the indicator on.

6324. I do not call that lately; you have not seen it within the last year or two?—No, I have not.

6325. You have not seen it extensively worked since?—The cabmen used to have a game with it; they would put the cab on a rank, give a man some beer to turn the wheel round while they were having their dinners.

6326. Was it done often enough or on a sufficient number of cabs to enable any judgment to be arrived at about it?—No, sir.

6327–8. I thought it was done by a mere handful of people?—That is all it was done, sir.

6329. A man who made a cab appear to go so far would have to account for the money to the proprietor. If he made the cab appear as though it had gone 10 miles, he would have to show the money equivalent to 10 miles?—It would be almost impossible for him from the time he went out to go the distance.

6330. No doubt, but it seems to me that the attempt to cheat you in regard to this would defeat itself, because the man would have to show you an equal sum of money?—They would make the proprietor believe that the thing was no good, or that he had been walking about all the time he had been out, had not had a fare or what not.

6331. On the whole, as far as you have had any opportunity of observing it or of forming an opinion about it, you do not think any advantage would be gained by introducing a kind of mechanical register?—Not without it could be stopped when a man had not a fare in, sir. I stand at Brixton; it is a frequent occurrence for me to set down at Camden Town, Holloway, Highbury, Bayswater, and have six or seven miles in front of me, to change horses, and the same at night, sir.

6,332. (*Mr. Hopwood.*) That particular taxameter does provide for that; it locks the apparatus until a fare gets into the cab.

6,333. (*Mr. John Burns.*) But, as a matter of fact, Mr. Cooper, do you not drive and walk more miles without a fare than you actually drive with a fare in mean average?—A great number of days we do, sir.

6,334. (*Chairman.*) We have heard a great deal in this inquiry about bilking; have you ever in your own experience as a driver suffered much from bilking?—I only recollect about twice in the whole of my experience.

6,335. Your own personal experience?—Yes.

6,336. Then with regard to your men; do you often hear of it from them?—Very rarely, but sometimes we do; some men are more unfortunate. I have known men to have such a thing as two in a week.

6,337. You believe that to be genuinely the case?—Oh, I am sure, sir.

6,338. Have you any opinions as to how the bilking should be checked by law?—Well, it is rather difficult, sir, as the law stands now.

6339. Yes, but I mean by alteration of the law?—I think you ought to be able to charge them, sir.

6340. At once?—At once.

6341. If you see the man again?—A week or so afterwards; lodge the complaint at the police court or police station the same day or next day, and have a note given you to that effect that you should be able to charge the bilker.

6342. So that the next time you were able to recognise him you should be able to give him in charge of the police?—I should think it would be most beneficial; it would stop it at once, sir.

6343. (*Mr. John Burns.*) Did I understand you to say, Mr. Cooper, because it is in my opinion a new suggestion, that when a cabdriver was bilked of his fare, and upon his making a complaint either that day or sometime after at the police station, and the inspector being satisfied that it was a genuine case of bilking of which the man complained, that man should have given to him by the inspector a note, and in the event of his seeing the bilker the same day or subsequently, that should be sufficient to take to a police constable, and to have summary arrest?—To charge the man.

6344. (*Mr. Lough.*) I think what you mean, Mr. Cooper, is that if the man is bilked the moment he sees the man who bilked him he could give him in charge?—The constable would not take the charge without he got a notification.

6345. I know that, but you would like to see the law altered, that the constable could take him in charge?—I should, sir, very much.

6346. (*Mr. John Burns.*) And, failing that, your other suggestion?—Yes, sir.

6347. (*Chairman.*) Those are two different suggestions; I should like to know which he adheres to. I understood your first suggestion—a very good one, and a new one—was that the cabmen bilked should go and make a complaint and be able to get a ticket which would warrant him?—That is what I adhere to.

6348. Then there is the other suggestion that without the preliminary of going to the police court he should be able to give him in charge?—That would not be

advisable at all, because the constable would not take the charge.

6349. (*Mr. John Burns.*) Do I understand you to say, Mr. Cooper, on this point that you would prefer a power of seeking a notification from the inspector to arrest a man after the man had bilked, than the power to arrest him at the actual moment that he had bilked you of your fare; and, if so, why do you differentiate between a crime detected on the spot and one about to be detected 24 hours afterwards?—You were talking about the bilkers, sir; we do not term a man a bilker who quibbles about the fare. A bilker is a man who goes clean away, and you do not see him at the time.

6350. Supposing you see him half an hour or a few minutes after. For instance, a man might go in one door of St. James's Restaurant and out of the other, or in at the end of the Burlington Arcade and out at the other, and you might be going round Bond Street and you might meet him there?—I might meet him there.

6351. Would you not rather have the power of stopping him with a constable there than going to the nearest police station?—Now you place it in that light, that would, of course, be beneficial.

6352. (*Mr. Lough.*) That is my point. Now I want to put another question. Had not you heard of a bilker in Southwark, a solicitor, who simply said to the cabman after he had had them all day, "Now, I am very sorry, I have no money"?—I have had him myself.

6353. You do not call that bilking?—We do not call that bilking, we term a man a bilker who goes in one door and out at another, or dodges round a corner.

6354. Can you tell me why a thief who is a little ashamed and dodges out at the back door is a bilker, and the thief who brazens it out and says, "I am not going to pay," is not one?—As a rule, we call a constable to demand the name and address of the man we have in our presence, the other we cannot, and, as a rule, they give you some card or envelope.

6355. Supposing they give you a wrong address, have you any remedy now?—No, sir, we have not.

6356. That is the point I want to get at; would you be in favour, in that flagrant case, of having a constable to arrest the man?—I should, most decidedly.

6357. (*Chairman.*) When we come to thrash this out you see your view is not a very clear one. You would be in favour of having a power of summary arrest if you could see the man directly afterwards, rather than of the dilatory process of going to the police court and making a charge?—I was thinking of the police court; practically the bilker means the man who goes in at one door and out at another, you lose sight of him, you do not see him the same day or a few days afterwards; but since Mr. Burns and Mr. Lough have called to my mind the man whom you chance to see four or five minutes afterwards, I would rather alter my proposal.

6358. You think, in that case, it would be rather an injustice that you should be compelled to go through the formality of going to the police court, when you could lay your hands upon him at once?—That is so, sir.

6359. What is your experience about the cabstands; do you think there are enough of them?—No, sir, I do not.

6360. And what there are, do you think they are in suitable places?—A great number of them are very suitable, and others are not, sir.

6361. We have been told a good many are put in out-of-the-way places where nobody wants cabs, and that they are really superfluous?—That is so in some cases; cabstands for two or three might be put in prominent positions in wide streets in a number of parts of London, in front of large shops, behind a refuge in the middle of the street where they would not obstruct the traffic; two or three cabs in a great number of places would be very beneficial.

6362. Then, have you ever made use of the shelters?—Yes, sir, a great deal.

6363. Do you think they are convenient?—Very convenient and very handy.

6364. Are they shelters in the strict sense of the word, places where you can take refuge in case of bad weather, or merely eating places?—There are shelters on the quiet ranks where you could go in and read; you can go into any shelter and read, but you would be rather in the way in a busy shelter, sir.

6365. That is what I mean, they are entirely taken up by men taking their food?—That is so in the central districts.

6366. (*Mr. Whitmore.*) At all times during the day is that so?—Yes, sir.

6367. (*Chairman.*) Is it your experience that the people who have the shelters dislike non-union men in them?—The union has been formed so very recently that I have not had experience; I have not been in a shelter these last few weeks much.

6368. Have you heard that complaint?—I have seen it in print.

6369. Then about the troughs. Have you any reason to think that the drinking troughs are a source of disease to the horses?—Well, they are very likely to be so. We ourselves lost four or five horses two or three years ago, when the glanders were very bad, and ours is a young good stock of horses, and how they got it I could not tell you, sir, but they did get it.

6370. You think it is very likely they might have got it by drinking out of the large troughs?—I think it is very likely.

6371. That is all the questions I have to ask you, but if there are any views on any subjects that I have not mentioned that you would like to give us we should be glad to hear them before the other gentlemen examine you?—The radius question, sir. I think it would be very beneficial if it were extended half a mile beyond where it is now.

6372. In all directions?—In all directions, sir. Taking into consideration the growth of London; and the same fares to be inside that are outside. For instance, you may be driving a little way out of the radius, and, as I have had it occur to me a great number of times, a gentleman or a lady will stop you, and say, "I want to go to town, but I cannot pay "1*s.* a mile all the way up. I shall pay you 1*s.* a mile "to the radius, and the usual 6*d.* a mile inside the "radius."

6373-4. But you are in favour of extending the radius equally in all directions?—About half a mile.

6375. We have had it suggested by a great many witnesses that it does not require to be extended in a direction north of London, but that it does require extending in south-west London?—Yes, it does in south-west London, the neighbourhood has grown so large.

6376. But would you say the same about the boundaries all round?—Well, in the north of London, practically, it is hardly requisite, you do not get outside the radius once in six months, scarcely.

6377. (*Mr. Whitmore.*) That would not be true of the north-west of London, would it?—Not of the north-west.

6378. The Harrow Road?—That is, you frequently get out to the cemetery.

6379. (*Chairman.*) Have you anything more to suggest?—I have nothing more to suggest.

6380-1. (*Mr. Cunynghame.*) Just one word with regard to the radius question. It has been suggested that if the radius were extended the difficulty of extending it unequally in different places might be met by putting a conspicuous mark on some of the lamp-posts on the main thoroughfares, such as the Hammersmith Road, the Kings Road, the Hampstead Road, and so on, and then causing the radius to be bounded by straight lines drawn between these different posts. Do you follow the meaning of what I have described, do you think that that would be practically workable?—I should think it would hardly be, sir.

6382. Why not? It gives you the advantage of being able to extend the radius in the direction you want, and makes it fairer; that is the object of it, instead of taking a hard and fast four miles round London, it enables you to extend the area where you wish, and by painting it up on big lamp-posts on the road people could see whether they were outside or inside the radius?—That is so now.

6383. But at present it is a mere circle?—A mere circle.

6384. Then with straight lines between like a spider's web, you could extend the radius without

Mr. W. E. Cooper.

19 July 1894.

necessarily altering the circle?—Oh yes, you could do that.

6385. The question is whether that would work well?—I should think it would; yes.

6386. Now with regard to taxameters; there is one form of taxameter of the simplest kind that I should like to hear your opinion upon, and that would be a taxameter exactly like the cyclometer on a bicycle; you have seen those, have you not?—Yes, sir.

6387. All it does is merely to go on registering mile after mile; there is no apparatus to show the money, no apparatus to stop it or to make it go on, and the only use of a taxameter just in that way would be, I suggest to you, to help the person inside and the cabman in calculating the real distance gone, but not to be conclusive evidence at all; leave the evidence to be the real distance they have gone from place to place as measured by the police; do you approve of such a taxameter as that?—I should not be in favour of that.

6388. Would it not help the fare to tell what he really had to pay?—We depend for our living on the generosity of the public, sir, and I think that would materially stop us.

6389. A second thing; do the cabmen generally carry the red books with which they are provided?—They do not as a rule, sir.

6390. Would it not settle a great many disputes at once?—A sensible man, who is used to driving a cab, does not have a dispute once in six months, sir.

6391. Would it not aid people to tell the real fares if they did carry the red book?—They would not show the red book without he were asked for it.

6392. No, but suppose it were to be in a pocket in the cab, for instance?—I do not think people would take the trouble; I do not think they would understand it if they saw it.

6393. You are aware that a considerable expense is gone to in printing the red books?—Yes, sir.

6394. In your opinion perhaps, that is not much use?—Oh yes, sir, it is for the driver.

6395. What is the use of it if they do not carry it in the cabs?—The drivers refer to it frequently; I do myself, sir.

6396. Would it not be desirable that the fare also should have an opportunity of seeing this book?—The fare, you see, would not understand the ranks; the red book is taken from cab rank to cab rank, and the fares going into all parts of London know nothing about the different cab ranks; thousands of people who get into a cab do not know where they are going themselves until they arrive at their destination.

6397. You think the red book would confuse the people taking the cabs, rather than do them any good?—I am certain it would, sir.

6398. (*Mr. John Burns.*) I will only ask you a question, Mr. Cooper, on matters other than those upon which you have been interrogated; have you any opinion about raising the age of cabdrivers?—No sir, I have not. Do you mean, to apply for a licence, sir?

6399. Yes; are you in favour of the privilege being given to a cab proprietor's son below the age of 21, of being licensed, or are you against it?—No, sir, I am in favour of it.

6400–1. Why should a cabdriver's son have an advantage over anybody else?—That is not so.

6402. A proprietor's son can now get a licence a year younger than an ordinary applicant. Are you in favour of that?—Certainly not; there ought not to be more advantage for one than for another. But I was under the impression that a lad, whether he was a cabdriver's son, or a cab proprietor's son, or anybody else's son, could have a licence the same as I had. I applied for a juvenile licence. I had a proprietor who knew me all my life, who knew that I could drive, &c., and that I was fit to drive a cab, and therefore I got my licence.

6403. I should say you were one of those men that when you were 16 you looked 22?—That is quite right, sir.

6404. Are you in favour of raising the age, or not?—I think not; I think young drivers make the best cabmen, sir.

6405. (*Mr. Whitmore.*) You mean make the best cabmen later on, or at once?—Later on; sometimes at once, sir.

6406. (*Mr. John Burns.*) What age were you, as matter of fact, when you got your licence?—18 sir.

6407. Now we will come to privilege. You are in favour of its being entirely abolished?—I strictly adhere to that, sir.

6408. And you contend that privilege does not give that convenience to the railway passengers that it is supposed to give?—No, sir, I am sure not. They get equally well supplied at the South Western, and what other railways there are in the same position, as they do at the other.

6409. Is it your opinion that privileged cabs are better than street cabs?—No, that is not so. I think *vice versâ* in a great number of instances.

6410. Then you think the abolition of privilege would not only give greater convenience to railway passengers, but would afford relief to the congested streets?—I am certain it would, sir.

6411. In the neighbourhood of railway stations?—For instance, a privileged cab at London Bridge has a fare from London Bridge to Liverpool Street, and at the same time a privileged cab at Liverpool Street has a fare from Liverpool Street to London Bridge. They meet one another with their fares in Gracechurch Street, and the same on the return journey, they meet at Gracechurch Street empty. If it were not for the privilege system, these drivers would not meet again in Gracechurch Street empty, and the same applies all over London.

6412. That happens two or three times a day?—Oh, frequently, sir.

6413. Is there no distinction to be drawn between Waterloo and other stations?—At Waterloo Station there are no privileged cabs, except on the main line. That is merely a bribing affair; it was started with a bribing affair with the railway police.

6414. It is a relic of an old system, I believe, that the representatives of the old proprietors now enjoy; is that so?—That is not so, they are all small proprietors, or nearly all of them, and nearly all of them are cabdrivers.

6415. (*Mr. Whitmore.*) And they paid the railway officials for the privilege of going?—Not now, sir; that was how it was started; when they first had the new south line opened, it was open for all cabs, the same as the inside of the larger arrival, but several men, by a little creeping, got the privilege from the police, and the other cabmen wrote to the stationmaster to that effect, and he said, "Well, if they can afford to "pay them, they can afford to pay a privilege on "that"; and now they pay a privilege for the main line.

6416. (*Mr. John Burns.*) That only applies to 25 cabs?—That is all.

6417. Whilst, generally speaking, in the course of the day, 2,000 cabs, non-privileged, go through the yard into Waterloo?—At certain periods of the year.

6418. (*Mr. Hopwood.*) Is not Waterloo Station in a different position to the other stations because there is so much more yard accommodation?—That is so at some places.

6419. But at Waterloo?—They have an advantage over some railways, but not over all.

6420. (*Mr. John Burns.*) Is not that entirely due to the fact that the South-Western Railway Company have had the good sense to utilise railway arches and approaches to the platforms, that in many other stations could be similarly used, if the railway company were so inclined?—That is so, sir.

6421. You ask for the abolition of privilege, also, because it would afford opportunities of giving the horse a rest, and protection from the weather, which now they do not enjoy?—That is so.

6422. Now, have you anything to say about the inspection of cab horses by the Royal Society for the Prevention of Cruelty to Animals; have you had any experience with them?—Well, it very often causes a mob to form in the streets; a man will come up to you on the cab-rank and pull all the horses and harness about; it creates quite a little disturbance for the time being; that is a very frequent occurrence.

6423. You admit that horses should be inspected on the street?—Decidedly I do.

6424. Do you think that either the police inspector or an inspector under the Contagious Diseases Animals Act, appointed by the local authority, should take the place of the Royal Society for the Prevention of Cruelty to Animals?—Well, I should not be in favour of the police exactly doing it, although they do do it; for a great number of policemen have not any knowledge of a horse whatever; but if he were a practical man——

6425. I do not mean policemen, but police inspectors properly qualified?—On yes, I should be in favour of that.

6426. If you had to choose between a police inspector properly qualified to inspect horses, acting under the police, or the same man acting for a voluntary society, would you rather be for the police?—I would rather be for the police.

6427. Have you formed any opinion as to the necessity of abolishing the horse-trough system altogether in London, and substituting posts as a matter of practical convenience as apart from the contagion?—Well, it is practically convenient in London to have troughs as they are.

6428-29. Are they kept as clean as they might be?—I think so, yes.

6430. Another point I wish to ask you; you said that in your opinion cabmen were better paid than they were?—I mean the average of the year, sir.

6431. The average of the year was slightly better?—Quite as good.

6432-33. You said that in your yard, based on your own experience and that of your partner, the average was 7*s.* 7*d.* net after all dues that would have been paid to a proprietor, if you had not been a master, were deducted?—That is quite right, sir.

6434. Now, Mr. Cooper, is not yours first-class property?—Yes, sir, very good property.

6435. And have you not got exceptionally good men?—Yes, sir, we always pick; we know every driver outside the yard, and we give a good man the preference, certainly.

6436-37. Was not that 7*s.* 7*d.* net based on the continuous application to business by you as a master with a good cab and a good horse, and is it a fair test for the average cabdriver all over London?—Yes, sir, it is.

6438. Well, is the average cab in London equal to yours?—No, sir, but they pay less for it; we pay an average of 14*s.* a day the whole year, sir.

6439. And are the horses as good as yours on an average?—We are rather at a loss as regards horses; in the cabs we drive ourselves we take out funny horses now—horses up from the country, not up to the job.

6440. Is it fair for you to institute a comparison between the net wages earned by you and your partner as masters, with that incentive to earn, with a knowledge of London that would perhaps be better than that of the ordinary cabdriver, and with first-class property and a good horse, and those of an ordinary man who is not a master, and who drives inferior property?—I think it is quite fair, sir.

6441. Do you not consider that the men who earn the same wages now, if they do earn them, as they did 15 years ago, have to be two or three hours longer on the street than they used to be 15 years ago?—No, sir, more men work less hours than they used to; they are more eager to get home, they think more of their homes.

6442. Is not that a select minority with best property and under special conditions; and does not the ordinary cabdriver in the cab trade work longer hours for the same or less money than they did 15 years ago?—No, sir.

6443. Have you had any experience in the police courts?—Very little, sir, indeed.

6444. Have you formed any opinion as to how the cab service could be improved in relation to police court business?—Well, yes, sir, I think I have formed a slight opinion. I do not consider that a cabman ought to be summoned for plying for hire, absolutely, without any other offence.

6445. He ought to be cautioned?—Well I do not think it is an offence at all, sir. The Act distinctly tells us that as soon as we leave the yard we are deemed for all purposes plying for hire. If we stop to take a fare, the policeman can summon us for taking it, and if we do not stop to take a fare, the fare can summon us for not taking it, as the law stands just now.

6446. You are between the Devil and the deep sea?—If you call my cab and I do not take you, you can summon me for refesing to carry; and the policeman can summon me for plying for hire from a place not appointed. It is a well known fact that there is not sufficient accommodation for the cabs and that they are compelled to walk about the streets; yet every time we look at a gentleman, or hold up our finger, we are liable to a summons.

6447. Do you think that could be remedied by appointing more cab ranks?—It would have a considerable effect.

6448. Would you stop plying for hire, walking about the streets, if the cab ranks were sufficient?—No, sir, I should not be in favour of that; we get half our living in the streets.

6449. You said, in your opinion, there were not too many cabs?—No, sir.

6450. How do you reconcile that with the fact that during the strike 3,000 to 4,000 cabs were off the streets of London, and the amount of money earned during that time was not equal to the proportion of cabs off the street?—Was not equal.

6451. Was not equal?—There was a lot of money earned during that time.

6452. There was?—My partner earned 17*l.* 6*s.* in the course of the week.

6453. Well, I am glad to hear it; do you not think, irrespective of the working of each cab during the strike, that though there were 3,000 or 4,000 off the streets, London was still left practically supplied with cabs?—It was not nearly supplied with cabs; the public were greatly inconvenienced.

6454. But do you know that nearly every cab proprietor in London who has spoken upon this is under the impression that nearly 2,000 to 3,000 too many are in the streets?—If the cab trade was always like it was during the strike, sir, each cab would want six horses; during the strike six horses were required to work a cab, if the man could work it.

6455. That was an exceptional state of things?—Not exceptional if the 3,000 or 4,000 at home left a sufficient number on the street; I say it would require six horses to a cab to work it. We worked three horses a day each, and we tired them out with three each.

6456. Supposing there had been 2,000 less on the streets?—Considering the number of streets, the cabs in railway stations and in the paint shops, the quiet season of the year, when all cab proprietors have a certain number at home; for instance, I myself had two at home last week, and I know some proprietors had three or four at home, and in a few weeks' time if you could count all the big cab yards, you will see seven or eight, nine or ten, left at home. Taking all that into consideration, and the time of year when the busy time is and there are no cabs at home, I think it averages out that the cab service, as a rule, is not over and above the requisite.

6457. Then you do not think there are too many cabs in London?—I do not sir.

6458. How do you reconcile that opinion with the fact that cabs are falling every year in number; does not that imply that the supply is rather in excess of the demand?—There are so many people these last few years misled by the untrue statements of the drivers as regards money paid in—the generality of the public that get out of a cab and have a little chat with you are under the impression that the cab proprietors have been receiving 17*s.* or 18*s.* a day, the whole of the year. It never entered into their mind for a moment that during the winter time we take what we can get, practically; the number of people who, during the last few years, have plunged into the cab trade, have not been so eager; and there have been no new companies started these last few years as there were six or seven years ago; and that accounts for the slight depreciation to a certain extent.

6459. Should you think that certain cab companies that have presumed upon the ignorance of the investing public having collapsed, there is no probability of a continuation of cabs being put on the street in

Mr. W. E. Cooper.
19 July 1894.

excess of the required limit?—I have never known a cab company pay except the London Improved; that is the only one that has ever made the cab trade pay; and I could quote dozens of cab companies that have started, in my experience, and have all gone broke.

6460–61. (*Mr. Lough.*) Did I understand you, in answer to that last question of Mr. Burns, to admit that a great many of those proprietors who started without sufficient thought have failed?—They have; yes, sir. Do you want to know why they have failed?

6462. No, I do not. Does not that prove, then, that including those companies there were too many cabs?—No sir, that is their insufficient knowledge of the trade. The cab trade has to be conducted on very economical lines, and by thoroughly practical men. Nearly all the large proprietors in London have originated from drivers; and the cab trade can only be conducted on one line, and that is the turnover of the money at once, and gradually increased.

6463. Well that applies to other trades?—Yes.

6464. You mean to say this, that if all the proprietors had developed from drivers we would not have too many cabs; but that as it is with those companies that do not develop from drivers we have too many?—I think a clear proof, sir, that the cabs are not too numerous is this: I take ours as an experience, I cannot speak for other people; our men stop with us for years; they come to work every day.

6465. How many have you?—22, with 24 or 25 drivers; the men pay their money, and they keep their wives and themselves comfortably.

6466. Do you know the Shrewsbury-Talbot Company?—Yes, sir.

6467. That has failed?—That has failed two or three times.

6468. Is that not proof that there is not work for all the cabs?—That is not a proof, that is through inexperience of the trade.

6469. (*Mr. Whitmore.*) Did they not have a practical manager?—The cab trade is different to others, you practically have to grow with the trade; if the stock is all started at one time that stock wears out at one time, and the inexperienced owner never dreams that there will be a replenishing of the stock all at once. The ordinary cab proprietor replenishes his stock as it is required, a new cab now and a new cab again. In the case of an inexperienced man, who starts his stock all at one time, all his things collapse at one time at the end of a few years, and he has to restock his cabyard all at one time.

6470. (*Mr. Lough.*) Just a word or two about figures. Supposing they get to 15,000, do you think that would be too many; do you know how many there are now?—I do not.

6471. How are you able then to tell there are not too many?—I work a cab nearly every day.

6472–3. That will not enable you to tell; you have only a small experience of 22 cabs?—I have good experience.

6474. How do you know there are not too many?—By practical every-day experience; figures would not help me the least bit as regards the exact number.

6475. Figures would not assist you?—Not in the least; I go on daily experience.

6476. You just judge by the little experience you have yourself?—Yes, sir.

6477. (*Mr. Whitmore.*) Do you drive mainly in one part of London?—No, my cabs drive all over London; there are no districts for a cab to keep to.

6478. (*Mr. Burns.*) Have you any special private job that forms a nucleus of your daily takings?—None, whatever, I would not have one if I had the chance.

6479. (*Chairman.*) It is your own experience, you say, which enables you to form this view about the cabs of London not being too many for the requirements; I suppose you mean not only your own takings but what you observe and see going about as to the proportion between the cabs and the people wanting them?—Yes, that is what I mean to say.

6480. Not only your own practical experience of the number of times you are engaged, but what you see of the business all round you?—That is it, sir.

6481. (*Mr. Lough.*) You said to Mr. Burns that there were sometimes seven, eight, nine and ten cabs of a yard at home in one season of the year?—Yes, sir.

6482. At that season, then, is there not too many?—Well, sir, there would be if they were all out in the street, but they never are in the street.

6483. Well, then, you tell us that in one season they all out on the street, that is in the season?—In the busy season.

6484. In the slack season you think there are too many?—Well, in the autumn time I do most decidedly if they were all out in the street.

6485. How long is the busy season?—The height of the season is about 13 weeks as you might say.

6486. Then except those 13 weeks, you think there are too many?—No sir, I do not; I am alluding to the quiet season, merely for a few weeks in the autumn, August and September.

6487. You quoted some takings—*7s. 7d.* net?—Yes.

6488. Are these takings of yourself and your partner, or of your men?—I have one man who turns out about the same average. The other drivers would not give me their books, although I know several who have books.

6489–90. Your entire calculation is based upon the takings of your partner or yourself, or your man?—Both, I have one man's book as well.

6491. Do you really believe that all the cabmen through London earn that?—Yes, I do.

6492. I want to ask you a question about the price of cabs for a moment; do you let out cabs generally on the two horse system?—Yes sir, all of them.

6493. Then you do not know much about the price of one horse and one cab?—I have never done that, sir.

6494. Do you think the two horse system is best?—Old men prefer one horse, sir, simply because of the short hours; the young men prefer two, because the horses get tired.

6495. How many hours do these young men work?—On an average, from 12 to 13 hours.

6496. On the cab?—I think they would average 13 hours.

6497. Have you got the system of two men working the same cab?—No sir, I have not.

6498. One man, one cab, and two horses is the system you run?—That is it, sir.

6499. Do you think it would answer to have fewer cabs, but to have them worked double shifts, that is, with two men and out a longer number of hours?—I do not think it would, sir.

6500. We have a statement here from Liverpool that the price of one horse and one cab in Liverpool was *4s. 6d.* or *5s.* a day in Liverpool all the year round; do you think that could be done in London?—I think not, sir.

6501. Do you know what the men pay for one horse and one cab?—In London?

6502. Yes?—Yes, I do according to the property and the season of the year; the same applies to a cab and two horses.

6503. Is the cost higher to the cab proprietor in the season than at any other time?—The wear and tear is much greater.

6504. But except the wear and tear?—You keep more horses; you are obliged to keep a larger average of horses in the summer.

6505. You said that there were not too many drivers either?—That is what I say, sir.

6506. You said you never take a new driver if you can help it?—We do not, sir.

6507. Because you do not consider that you have any guarantee that he can drive?—That is quite right, sir.

6508. If the driver's licence was a guarantee that the man could drive, do you think there would be too many drivers at present?—My opinion is that, if a character was required that the man was competent to drive from a situation, I do not say the last situation, as he might have been at a job that had nothing to do with horses, but a previous character that he was

qualified to drive, I do not think more men would pass the examination than would be required.

6509. In other words, you think that fewer would pass the examination?—I am sure, sir.

6510. If the drivers were competent a smaller number would do?—A smaller number would pass.

6511. That is, would be sufficient?—There is a great number of men now that actually cannot get a living with a cab, although they are licensed drivers.

6512. They do not get that 7*s.* 7*d.* a day?—The job does not suit them when they have got it, the business does not suit the men, they are not actually at work with the cab, it is different to what they think it is.

6513. Do you think those men should have a licence?—They should not if they do not use it, that is so now; the man has to account for the time he is not driving a cab.

6514. I want to put it very briefly, and get it in one answer, if you can give it me; if the men were all good drivers and devoted to their business, do you think a smaller number of drivers would be sufficient?—I do not think you could alter it, sir.

6515. I would rather you would answer the question?—No, sir, I do not think a smaller number would do.

6516. Even if they all stuck to their business always, and all could drive?—That is so; I do not, sir.

6517. Do you know what a green-yard is?—Yes, I know what a green-yard is, but I have never had much experience of a green-yard.

6518. You do not know how many there are in London?—No, sir, I do not.

6519. Have you ever had a horse get into it?—Sometimes if a man gets locked up, your things are taken to the green-yard: the police telegraph to you; you fetch your horse away in two or three hours, in that case there are no green-yard fees to pay, though they are put in the green-yard.

6520. Have the inspectors for the Society for the Prevention of Cruelty to Animals not the right to put your horses into a green-yard if they like, and have them detained there?—I could not answer that question, sir.

6521. You said you were against sixpenny fares?—Yes, sir.

6522. A suggestion has been made here that we might have sixpenny fares from 9 o'clock in the morning till 6 o'clock in the evening, for 1 mile; would you be in favour of that?—No, sir, I should not, it would be misleading to the public.

6523. Supposing the public would gradually get to understand it, would you be in favour of it then?—No, sir, I would not.

6524. There is a system in many cities of a fixed fare: you get taken anywhere for a certain price; do you know that?—I do not know that.

6525. Would you be in favour of such a system in London?—I do not quite understand you, sir.

6526. Well, if a man asked you to drive as far as he liked, say, for 1*s.* 6*d.*, you would not be in favour of that?—No, sir.

6527. (*Mr. Bayley.*) You say that your earnings are 7*s.* 7*d.* a day net?—Yes, sir.

6528. And that is your partner's experience?—And my own.

6529. And you think of the best of your men?—I am sure, sir.

6530. Have you any books to prove it?—Yes, sir; not here. I have not brought them here.

6531. How many years have you been in business, Mr. Cooper?—I have been a cab proprietor altogether 15 years.

6532. How many horses and cabs had you when you started?—When I first started I only had one cab and two horses, sir.

6533. Have you acquired the 22 cabs and, I suppose about 60 horses, or how many is it, out of your earnings?—I and my partner together, yes, sir.

6534. You have been earning this money, and increasing your business out of your earnings, I suppose, by degrees?—Yes, sir, by slow degrees.

6535. (*Chairman.*) But perhaps your partner was a well-to-do man; was he?—He was a cabdriver, the same as I was.

6536. Not a proprietor?—No, sir.

6537. (*Mr. Bayley.*) You say the principal cab proprietors now have risen from the ranks in the same way?—That is so, sir.

6538. They have all, as you have, risen by degrees, by saving their money, and buying their horse and cab out of their earnings?—In a great number of instances.

6539. And you think then, that all over London, that is a fair amount to put down as the earnings of a respectable, industrious cabman?—Yes, sir. I do not say the lie-about cabdriver; I say the practical man who works and looks after his living.

6540. Who looks after his business, and does not waste his time in the public-house?—It only means about 5*s.*, practically, taken home. The cabman spends 2*s.* to 2*s.* 6*d.* a day with his daily food, and such like. The drivers would not live under. Many drivers say they do not leave 5*s.* at home. All cabdrivers in London spend 2*s.* to 2*s.* 6*d.* out of doors.

6541. On their food?—And such like.

6542. (*Mr. Lough.*) How do you know that?—I know for a positive fact they do. You cannot have dinner under 1*s.* in a shelter.

6543. (*Chairman.*) We have been told of a cabman who lived near his yard, and had all his meals at home?—Very rare; few and far between.

6544. You cannot say positively?—Not every single cabdriver, sir.

6545. (*Mr. Whitmore.*) You mean that is the average?—The general rule, sir; I speak generally.

6546. (*Mr. Lough.*) How do you know it?—I see it every day in my life.

6547. How can you see what a cabman takes home, or what he spends in the public-house?—I do not say public-house.

6548. In a coffee shop?—Sitting beside a man you can tell what a man's dinner comes to.

6549. 2*s.* 7*d.* a day?—No, I do not say 2*s.* 7*d.*, I said from 2*s.* to 2*s.* 6*d.* a day.

6550. (*Mr. Burns.*) Do you seriously contend, Mr. Cooper, that what you and your partner have done is equally open to every other cabman to do?—It is open, yes, sir.

6551. That means that it is within the possibility of every cabman to own 22 cabs?—No, sir, it would be impossible.

6552. (*Mr. Bayley.*) It takes 30 years to do it?—You asked me a question when I first started proprietor. I started as a proprietor 15 years ago, but I was a driver years before I went into the proprietary.

6553. (*Mr. Burns.*) Is not the fact that you and your partner have been able to accumulate 22 cabs in 15 years an indication that you are above the average in business capacity, and what we may call sobriety and thrift?—Industrious men decidedly, sir.

6554. Your condition is rather exceptional, it is not a fair standard to apply to every cabman. Is not that so?—What we have increased have come off our earnings out of a cab, sir.

6555. I will put it this way, that you are practically sergeants in the cab industry, and you do not contend that every private can be a colonel, do you?—We are no better or worse than ordinary cabdrivers, no better tools, no better chances.

6556. I know a few proprietors of your type, they get the pick of the yard stud, the best of the horses, and sometimes a third horse.

6557. (*Chairman.*) I understand you to say you do not see why everybody else on the streets should not do as well?—If they attend to their business; they have the start and the same tools.

6558. The same chances?—The same chances.

6559. It entirely depends whether a man makes a better use of his chances?—I will explain more. You see when a man starts cabbing, if he is married, with a wife and four or five children, he can only get enough to live upon. But I was a single man when I started, steady, hard working, the same as I am now. I was able to save week by week. There are different men

Mr. W. E. Cooper.

19 July 1894.

who start on a different footing; and we both earn our own wages and always have done, sir.

6560. (*Mr. Burns.*) You said, in answer to a previous question of mine, Mr. Cooper, that, on an average, half the miles walked or trotted with a cab were without fares, did you not?—Half the miles.

6561. On an average?—I should think it might be.

6562. Does not that indicate that there is an excessive supply of cabs over the demand?—No, sir.

6563. If not, must not the cab business, from point of view of the master, and of the public regulation of the cab trade, be in a very bad condition and disorganised, when half the working hours of the horse and man have to be with an empty cab?—The privileged fare would stop that materially.

6564. A great deal?—Yes, the walking about.

6565. Do you think that 'busses could be run on a similar system, half the time of running to be without fares?—Not half the time, because there is more wear and tear to a 'bus.

The witness withdrew.

[Mr. CUNYNGHAME in the Chair.]

Mr. THOMAS CRABBE called in and examined.

Mr. T. Crabbe.

6566. (*Chairman.*) You are a driver?—Yes, sir.

6567. Do you represent any institution?—No, sir.

6568. Are you a unionist or a non-unionist?—Trade unionist.

6569. Will you give us your opinion of the privileged system in railway stations?—Yes, sir; to my mind it is utterly illegal.

6570. (*Mr. Whitmore.*) Illegal?—Yes, illegal. There is no law that I can find to make it legal.

6571. (*Chairman.*) Is the reason you think it illegal because the cab-stands in stations have not been nominated by the Commissioner of Police?—Not appointed.

6572. That is the point, is it not?—That is the point.

6573. Are you aware that that point has been overruled in the Supreme Court—in a case by the Supreme Court?—No.

6574. Well, it is so. Would you like to say something more upon the point of illegality?—I say wherever one cab goes, I have a right to go.

6575. Ought to have a right to go, you mean. You have not that right now, but you ought to have it?—Yes. Mr. Matthews declared to me that a railway is a place where a cab has no right to stand, two years ago.

6576. Are you not aware that the stations are the private property of the railway company?—The private property?

6577. Yes?—No, sir.

6578. You do not think they are?—No. The Act of Parliament says they are a public place, because they are appointed; 16 and 17 Victoria, I think you will find it.

6579. Do you think it would work well if the railway stations were open to the public?—I am sure of it.

6580. Do you think the railways would get a sufficient amount of cabs?—I am sure of it.

6581. Would you have them pay a penny, on the Waterloo system?—Certainly.

6582. You think that would act well?—The Waterloo Station had 1,800 cabs, on the 31st July, in one day; that I am sure of.

6583. Do you drive a privileged cab yourself?—No, sir.

6584. Have you ever driven one?—Yes, sir; 20 years ago.

6585. You did 20 years ago?—Yes, for four months.

6586. Why did you stop driving it?—Because you cannot live with the privileged drivers; they are too greedy, too paltry-spirited; they will not let you work fair.

6587. Mr. Crabbe, would you kindly tell us what conduct it is that is evidence that a man is paltry-spirited?—You mean the privileged driver?

6588. Yes?—If you drive a privileged cab, and paid a fair price, you would find you would be pointed out and be told you must either slip up or pay a shilling or two short or get stopped, that is to say, a less price than you have undertaken to pay. That is the privileged driver. I am speaking of 20 years ago; if you paid the full amount, I was told by a master even myself, if I did not slip up he would have to get rid of me, as the men grumbled because they were afraid they would have to pay a shilling or more for the cab.

6589. You mean the paltry spirit is the paying of the extra sum to the proprietor?—I paid a fair price; my price for the cab is 10*s.* 6*d.* a day, and that is a fair price all the year round.

6590. And you objected to pay 10*s.* 6*d.*?—No. The men objected to my paying 10*s.* 6*d.* They wanted me to pay a shilling or two less. The privileged cabdriver says he robs the streets of 6*s.* a day to pay the master's demand.

6591. (*Mr. Whitmore.*) Robs the streets?—Privileged cabs out here know they could not get their money out of the rail; they have to get it out in the streets.

6592. (*Mr. Burns.*) You mean, Mr. Crabbe, that if a privileged cabdriver in the railway station agrees to pay 12*s.* a day to the master for the cab, he cannot do it from the earnings off the station?—He could not do it.

6593. He is able to earn that money by taking four or five fares in the street?—Certainly, that is what I grumble about.

6594. The high price?—No, it is privileged cabs at railway stations. At the Great Eastern you can borrow a shilling to keep your place; a halfpenny on a shilling a day, that is 1,300 per cent.

6595. (*Chairman.*) Whom do you borrow the money from?—Any of the men in the yard, horsekeepers, or anybody else.

6596. In order to pay the fees?—Yes, sir, that is what made cabbing so poor at the Great Eastern. That was the cause of the strike this year.

6597. Have you any opinion, Mr. Crabbe, upon the 4-mile radius; do you think that ought to be extended, or made smaller, or remain as it is?—I should let it be, with one alteration—that the cabmen come in the same as we go outside the circle.

6598. Let them come in on the same terms as you go out?—Just so. Everybody pay the same price out as in.

6599. In what part of London do you chiefly take up your fares?—North London.

6600. Would you be in favour of limiting the number of licences for cabs or drivers?—I would not limit either.

6601. Why not?—I should say, let everybody have fair play—everybody live as myself. I do not care who comes in opposition to me.

6602. (*Mr. Whitmore*) Can they live if there are too many?—Give a cabman open rails he would be able to pay 2*s.* 6*d.* a day more for his cab than he pays now.

6603. (*Chairman.*) Have you any other points you think it desirable to bring forward before the Committee?—No, nothing but the privileged system I want.

6604. (*Mr. Burns.*) Do I gather from you, Mr. Crabbe, that there would not be too many cabs in the streets of London if the places where the privileged cabs now ply were thrown open to privileged cabs and non-privileged cabs?—Certainly not.

6605. Do you believe, Mr. Crabbe that, hour for hour that the cabmen are now in the streets of London, they take home as much money to their wives, after they have paid the masters, as they did 10, 15, 20 years ago?—No, certainly not.

6606. How much could you earn on the streets of London 15 or 20 years ago?—These last two days 7*s.* 2*d.* I earned on the street. That is the reason I object to the privilege. I have not paid a farthing to the master for it, he has to wait.

6607. How long have you been with your present master?—Four or five years. I have only had three places in 20 years; not a very bad one.

6608. Generally speaking cabmen have to stay on the streets longer now to earn the same money than they did 10 or 15 years ago?—I was 11 hours yesterday at the "Brecknock," but I could not have done that at a railway station. You know that is our drawback, the one-horse 'bus and the privileged system. They rob us of 170,000*l.* a year. It is 21*l.* 5*s.* for every cab that is not privileged. I mean this, by the one-horse 'bus there is 60,000*l.* a year taken out of the cab trade. privilege money, 10,000*l.* and privileged cabs, 100,000*l.* —170,000. Eight thousand not privileged cabs.

6609. You contend that that amount of money should be distributed over the existing privileged and non-privileged cabs by opening the stations to all?—Certainly, that is all I ask for, fair play.

6610. On an average, how much have you earned during the last year?—About 12*s.*

6611. How much for yourself?—About 4*s.* 6*d.*

6612. Twelve years ago what did you average?—Twelve years ago I do not think I was driving a cab. Oh, about 2*l.* a week then. That was before the one-horse 'bus came about.

6613. And, generally speaking, you think the cab trade, from the men's point of view, is not so good as it was?—It is not so good for the driver. There is one thing about it, if the privilege were done away with we should have a fairer chance. I should get 40*l.* a year more, 2*s.* 6*d.* a day.

6614. (*Mr. Whitmore.*) How should you be sure of getting your cab into a railway station?—I should have to wait my turn. There are 20 stations in London

6615. That is what puzzles me in your view. I do not understand why necessarily it should be so profitable to you if the privileged system were done away with?—In the first place, the Great Northern has 50 privileged cabs; that would be filled all day long, would it not?

6616. No doubt?—The Great Eastern the same—150 privileged cabs; they would be all there. They are outside in the City of London now. The Great Western at Paddington—there is room for 300 cabs at the Great Western. London Bridge——

6617. My point is this: it is desirable to every cabman to get into the station?—That is the only work there is.

6618. There are many more cabs than can find room in the station?—You could put 3,000 cabs into the station ranks—only 10,000 cabs licensed within 15 miles of Charing Cross; not above 9,000 cabs in the 4-mile circle.

6619. Still, you would not yourself be sure of getting your cab in when you wanted?—I should have the rank and the streets. I have got two chances to one, the same as the railway man has now.

6620. You think it makes so much difference in your favour?—It would do so certainly.

6621. (*Mr. Burns.*) Do you believe, Mr. Crabbe, that if the privilege were abolished, and all railway stations were open to all cabs, that many people who now ride in 'busses because the privileged cabs are frequently not there, would take non-privileged cabs which then would have the right of admission?—I understand you to mean that the one-horse 'bus is the thing that takes the cab job.

6622. I am not talking of the one-horse 'bus. You said if the railway stations were open to all cabmen you could earn more money than you now do?—Certainly.

6623. Is not that partly due to the fact that when the privileged cabs are exhausted, people who would ride in a cab prefer to take a 'bus because there is no street cab?—Certainly. I am prosecuting the Great Northern now for breaking the law, at least, Mr. Asquith is. I have got his letter here.

6624. (*Mr. Whitmore.*) You are rather fond of law, are you not, Mr. Crabbe?—Oh, yes, sir. That is the gentleman's letter. I should grumble if he did not do it.

6625. (*Mr. Burns.*) When the cabmen form a library, Mr. Crabbe, you will have to be librarian?—Yes, I have got a rare lot at home.

6626. (*Mr. Bayley.*) Mr. Crabbe, do I understand you to say that if you were a privileged driver you would earn 40*l.* a year more than you do now?—Certainly.

6627. Does that apply to all the non-privileged drivers?—Yes.

6628. Two thousand—that would make 80,000*l.* a year which you think would come to the general cab trade if the privileged system were abolished?—Yes. I want it fair and equal.

6629. That is, assuming that the railway stations were all thrown open—you and everybody else allowed to go in with your cabs?—The number of cab jobs——

6630. You mean that if you and every other cab-driver had perfect freedom to go into these railway stations this 80,000*l.* a year would then come into your pockets?—Yes.

6631. But suppose the railway companies bought their own cabs?—They cannot.

6632. One moment. Suppose the railway companies bought their own cabs, and employed young men from the country and their own carmen to drive them, this 80,000*l.* a year would never come to you?—It will not so long as I live. I will not have it.

6633. You will not have it. But I am asking you the question, will the railway companies have it—buy their own cabs in the same way as Harrod's Stores have done—employ their own staff, young men from the country, to drive them; then you and the outside cabdrivers will not benefit?—The railway company cannot be drivers.

6634. Will you answer the question?—I should get no benefit that way.

6635. Nor the street cab?—No.

6636. The only effect of abolishing the privileged system would be to throw 1,500 or 2,000 cabdrivers out of employment?—No.

6637. Is not that so—that the effect of abolishing the privileged system would be to throw 1,500 or 2,000 men out of employment, and so instead of being a benefit to the trade, it would be a curse, would it not?—If that is the way you put it.

[*The Chairman resumed the chair.*]

6638–40. (*Mr. Lough.*) Supposing these 2,000 cabs belonging to the companies had the exclusive right of going into the stations, there would still be the privileged system you complain of?—Yes.

6641. At the same time they now ply for hire in the streets?—Yes.

6642. It would not abolish what you want to abolish?—No.

6643. It would not abolish the privilege system?—No.

6644. (*Chairman.*) It would put another on?—They could not ply for hire in the streets.

6645–6. (*Mr. Cunynghame.*) In that case, they could not drive in the streets?—We should not care even that way. If you put it that way, we would not care a bit as long as they could not come and ply for hire in the streets—take jobs from us in the streets.

The witness withdrew.

Mr. Alfred Mills called in and examined.

Mr. A. Mills.
19 July 1894.

6647. (*Chairman.*) Kindly tell us, as briefly as you can, what your views on the subject are. In the first place, I will ask you, what do you think of the examination of the drivers; do you think it is an efficient system?—As to the knowledge of London.

6648. And as to the power of driving?—Well, I think the more important matter in that direction is the power of driving or the knowledge of driving.

6649. Yes; do you think the inquiry is efficient as regards that?—No, I think there might be a more severe test in that direction.

6650. Is there any test at all now?—No, sir; not to my knowledge.

6651. There is a formality, as you are aware; they are obliged to bring a certificate from two householders that they have a competent knowledge?—That is so.

6652. Do you consider that a mere form?—I do not think so. What I mean by that is, that I think if the authorities looked closer into those who give the certificate, that will be a sufficient guarantee as to the *bona fides* of the applicant they licence.

6653. Yes. But as a matter of fact they do not. That is what I mean by asking you if it is a form. I did not understand that the authorities test the value of those certificates at all. They take them for what they are worth and act on them. I do not think they search out and inquire into the credibility of the witnesses on such a point as driving?—Well, what happens is this: Supposing I sign a man's requisition which I have to do as a proprietor, a police sergeant of the district in which I live would come to me and ask if that is my signature. I would answer accordingly, and then, "What do you know of the man; has he "been in your service so long?"—"Yes." "Is he "fit to hold a licence?"—"Yes" or "No," as the case might be; and that has been my experience the whole of the time I have been in the trade.

6654. Yes. You are in the trade and, therefore, your opinion would be worth something. Of course, these inquiries are not confined to people who are in the trade or have any knowledge of driving; as I understand, any two householders would do to give the certificate?—I am speaking more now as to the last employer. As a matter of fact, as a householder, I have filled up very few requisitions.

6655. That may be, but what the law requires is that this certificate of competence to drive should be filled up by two householders?—That is so.

6656. And they may or may not be judges of what constitutes a driver or a horseman?—Oh, there may be some looseness in that direction. It has come to my knowledge that certain persons may fill up a requisition, and that is deemed sufficient, and, perhaps, they do it without full inquiry into the character of the applicant.

6657. I am not suggesting that they fill it up and state what is not true, but they are not capable of knowing whether a man knows anything about a horse, or cab, or driving?—That may be so.

6658. That may be so in many instances. Unless a man is a driver himself he is not a competent judge of another man's driving, is he?—Most of those who make application for licences are those who have been employed as drivers—as cart boys.

6659. Ay, now we are coming to another question. I was asking you whether the system of testing their capability for driving is sufficient. I cannot pursue it any further. But do you think, roughly speaking, it is sufficient or insufficient?—I think it is sufficient, sir.

6660. You do; in spite all you have said just now?—I think so, because the driving test is when a man begins to drive.

6661. That is quite a different thing; that test is one which we can all apply. But I am speaking of the preliminary test before he is allowed to drive; you do not think it need be made any stricter than it is?—I do not think so, sir.

6662. Now, we get to the subject of the occupations from which the men come; do you say that the majority of men who get licences to drive cabs have been in the habit of driving before?—The younger members are lads who have driven carts, and so on; and then there are others of a more mature age who have been carmen; then there are horsekeepers, and then there may be a section of failures in other businesses.

6663. You have not counted the gentlemen's servants—I suppose there are a great many coachmen and grooms?—No doubt there are, sir.

6664. Then, taking all those different classes together, are you of opinion that the majority of cabmen have had some experience of driving before they come to be licensed?—I should say so, sir.

6665. What is your opinion about the fares, sixpenny fares. Do you think that the introduction of sixpenny fares would be a benefit?—Well, I am old enough to know when sixpenny fares were in existence, and I know there was great dissatisfaction at that time, and I have heard different opinions expressed as to introducing a sixpenny fare at present.

6666. (*Mr. Whitmore.*) Dissatisfaction amongst whom?—The drivers.

6667. (*Chairman.*) What is your own opinion?—Well, I think it is worth a test. But it must be narrowed down, not to take it on the outskirts, hills, and that. I think it would be worth trying, a sixpenny fare, say a two-mile radius from Charing Cross, simply as a test. I am only expressing my own opinion.

6668. Of course it is all speculative, but do you think that within some such limited area as that, the extra number of people who would take a cab when they could get it for 6*d.*, would compensate and more than compensate for the reduction of the fare?—The way it has been put to me by business men is this: Say they are in the Strand; they want to go to Temple Bar or Fleet Street; well, they do not care to go in a 'bus, but they would not mind 6*d.* for, perhaps say, two or three hundred yards. Just have that lift on a hot day or a wet day, and so on; well, I think that would compensate the cabman much better than walking about for an hour or so on the chance of getting a 1*s.* fare.

6669. Well, that is an answer to my question. I said, did you think that the increased number of people who would use a cab if they could get it at 6*d.*, would compensate and more than compensate for the less hire?—Yes.

6670. Within that narrow area—a limited area?—Yes.

6671. Pray direct your attention to that machine in the corner; have you in your experience had anything to do with mechanical contrivances of that kind for recording distances truthfully; in other words a taxameter?—Well, no, sir; my experience is very limited in that direction.

6672. Yes, every one's experience is limited about it. But have you had any at all; I mean have you ever seen such a thing in use on a cab?—Oh yes, I have.

6673. Have you ever driven a cab that had one on?—No, I have not.

6674. Do you happen to know, in the few cases where they have been used, whether they have been thought to be a success or not?—A failure, sir.

6675. Are you inclined to think that they might be made a success if they were more generally adopted?—No, I do not, sir.

6676. Now, about bilking. You are a driver yourself, are you?—Well, I have not driven now for five or six years, five years.

6677. But you have been a driver?—Yes, I have been in the trade 27 years, and I drove up to about five years ago.

6678. During the time you actually drove, did you have any experience of being bilked?—Only twice, sir, during the time I was driving.

6679. And from your inquiries amongst other people in the trade, should you think it is a common practice?—It is an alleged common practice, but I am only speaking from my own experience. I have been told over and over again that men have been "done," but my own experience is limited to two cases.

6680. But should you believe from the various grounds on which we can form an opinion on such a thing that it is a sufficiently crying evil to need special

legislation to deal with it?—Yes, I think something should be done.

6681. You think there is enough of it going on to require some alteration of the law?—Yes. It is done—of course, I hear this through being in the trade—it is done by certain individuals who make a common practice of it, and there are cases on record where certain individuals have made a common practice of doing it; and, of course, we were fairly well off in that direction up to the passing of the Summary Jurisdiction Act. Prior to that we could go to a police court and get redress; if the party refused to pay the magistrates had power to send the party to prison. But on the passing of the Summary Jurisdiction Act that power was removed, and it has remained in that condition ever since.

6682. Have you any views about the line which the alteration should take—if there is to be any alteration of the law with regard to bilking, what alteration would you suggest?—Well, as it stands now, a person may engage a cab and give a false name and address, and it is known to be a false name and address, and the police are powerless to interfere. If I may make a suggestion, I think that the police should have power to make full inquiries to see that that is a proper address that is given. I might instance a case that came under my notice. Two men engaged a cab to go to Richmond for a drive. They went to a certain hotel there, they had what they required, they told the cabman to put the horse up, and they would be back at a certain time. Just as that time arrived the hotel keeper sent out one of his servants to say that he could get no satisfaction from his fare—they had had all they wanted, and he could get no money, and what did he intend to do? He said, "do you not know them?" "No." "Oh, very well, they have given this address," and the landlord of the hotel gave the cabman the two addresses. The cabmen said, "Well, I am here, I may as well go back to London, and chance my luck." Getting to London, one of them jumped out of the cab at the corner of Tottenham Court Road, but the other one, being a little lame, could not get out, so the cabman stopped him, took him to the police station, and the address he gave was different to the one he gave to the hotel keeper, and yet the police were powerless to detain that man. The consequence was the cabman was done out of his fare.

6683. That would be an illustration. Now, what would be your remedy for that state of things?—I think the police should have power to make inquiry to see that that address was a correct one.

6684. (*Mr. Whitmore.*) Detaining him until they had made those inquiries?—Just so, detaining what was in this case a fraudulent hirer until sufficient inquiry took place to enable a man to proceed in some way or other to recover the fare.

6685. (*Chairman.*) Then it has been suggested to us by many witnesses that if he sees the man who has bilked him, if he meets him accidentally at a later time, that he should have the power to give him in charge summarily; do you agree to that?—I do not think there would be any hardship to a person who did a thing of that kind.

6686. There would be no hardship if it was the right man. But would it not open the door to false charges, giving in charge not the real culprit?—I quite recognise that difficulty. My opinion is this, having some knowledge of the world, it would be most inconvenient to a hirer in evening dress having changed his clothes without putting any silver in his pocket; he would say, "Call at such and such an address, cabman, "to-morrow, and I will pay you, and I will pay handsomely for your trouble." It would be rather hard on that gentleman to be locked up.

6687. Now, we are coming to a different sort of practice. If a man makes any show of paying or offers to pay, you reckon him in a different class; you do not call him a bilker technically. A bilker is one who has dodged out of the way. That is what most of our witnesses have defined as a bilker?—That is all right, sir; a man gets into a cab, and does not intend to pay for it.

6688. He does not make any pretence of paying, he shoots away. The case you have described is hardly what has been described to us as bilking hitherto. He goes through the show, at all events, of pretending that he intended to pay, and intends to pay, and so on; but we have had the word "bilking" limited to the people who simply disappear and say nothing about it?—Well, I might say what happened to one of my men last Saturday. He went to Hurst Park Races with a fare, and he took the precaution to draw half the agreed hire before the fare went away, and the fare never came back, so the man had to come from Hurst Park to London only having half what he agreed to start with. Well, I should call that a "bilker."

6689. Have you any opinion as to dividing cabs into classes, first and second class?—No, I do not think that would answer at all, sir.

6690. Not to have a better cab called first-class, and charging a higher fare to the passenger?—I do not think that would work, sir. I think it should be left to the licensing authority to decide whether a cab is fit for the public service or not.

6691-2. Then what are your opinions about the fees which are exacted; I believe you gave some evidence about that before the Labour Commission?—I think they are very excessive, sir.

6693. Would you go into that a little, and say what reduction you think ought to be made?—I saw in the "Echo" of last evening that Mr. Pennefather, Receiver of the Metropolitan Police, stated that the police lost 26,000*l.* per annum on the plate duty. Well, I am at a loss to know where that comes in, the 2*l.* plate. The police bore half the cost of supervision, and now they have to bear the whole of it. The staff for passing cabs is not greater now than it was 25 years ago, but I have had it hinted to me that they want to make a charge on the cab trade for the police who regulate the traffic. Well, if they are going to tax us in that direction over and above what we pay in the rates, then they should tax other owners of vehicular traffic.

6694. (*Mr. John Burns.*) You consider that there are too many cabs on the streets?—I think it would be better all round if there were less.

6695. By what amount?—Well, that is hard to say, but there is a reduction going on now by a natural process.

6696. But is that sufficient in your opinion?—I think it will regulate itself in time. My own opinion is that some of the oldest things should be removed from off the streets, and that would reduce the numbers very materially.

6697. Then, although in favour of a reduction of the number of cabs in the streets of London, you are not in favour of it being done by limiting the number of licences?—No, I do not think that would work at all.

6698. You are for a reduction of the number of cabs by increasing the superiority of the article?—Just so.

6699. And also the qualification of the driver?—Just so.

6700. (*Mr Keogh.*) Do you work the one-horse system?—No, I do not, sir.

6701. Is it all two horses?—Yes, sir.

6702. How many hours do your men work do you think a day?—Well, that depends very much upon the men. Some men find 12 hours enough, some find 14 not enough.

6702A. Do any work more than 14?—No, I should say not.

6703. That is, in both cases, on the box?—No, from the time they go out in the morning till they come home at night.

6704. And you give them two horses for that?—Well they get two horses, and then there are spare horses, of course.

6705. Have you any idea what they make themselves, the drivers?—Well, I think they get a very good living.

6706. What weekly wages do you think they make if they are fairly industrious?—I should say they make quite 30*s.* per week after paying all their expenses. I might say that I earned a great deal more than that when I drove a cab.

6707. (*Chairman.*) Would you put it at 30*s.* per week now?—I say 30*s.* and above.

6708. How does that compare with what was made, say 15 years ago, should you suppose better or worse?—I should say the man is quite as well off now as he was 15 or 20 years ago. For instance, I have known

Mr. A. Mills.

19 July 1894.

the time since I drove a cab, you could go out in the autumn, when everybody was out of town, and scarcely get a fare all day, but that does not happen so now.

6709. (*Mr Lough.*) One other question on the sixpenny fares. You said that, subject to restrictions, you were in favour of them?—I think it might well be tried.

6710. I want to put a direct question to you. Would you be in favour of sixpenny fares from 9 o'clock in the morning till 6 o'clock in the evening, for one mile?—Personally I should within that restriction, the narrow limit.

6711. (*Mr Hopwood.*) Is the 30*s.* you earn over and above what you pay for your dinner and tea?—The cabmen reckon nothing at all what they spend out.

6712. (*Chairman.*) I think what Mr. Hopwood means is this, do you mean 30*s.* over and above what he pays for his meals, or including that?—Oh, over and above.

6713. After he has paid for his meal?—Well, to put it in cabmen's phraseology, "There is a dollar for mother."

6714. (*Mr. Hopwood.*) Do you not think that the sums paid for licences at the present time, both by the proprietor and the driver, are excessive?—For the licence?

6715–16. Yes?—Oh, yes, I should say that they are too excessive.

6717. Too much for what is done by the authorities in return?—I think too much in themselves, and it is a breach of the arrangement made at the time the new 1869 Act was passed. Then it was understood that the cost of supervision was to be borne by the proprietors, and they were only to be charged a licence fee to cover the cost of supervision.

6718. But you would not be averse to pay the existing sums for licences if the supervision were more effective?—Yes, I object to pay in any case.

6719. Then how would you have the supervision paid for?—By the owner of a cab, and we say we pay more than sufficient.

6720. I am speaking both of the sums paid by the owners, and the sums paid by the drivers for licences?—I am speaking from the owners' point of view now. We pay 2*l.* 15*s.*; 2*l.* for the police licence, and 15*s.* for the carriage tax, which we never ought to have paid; that is agreed by all parties who know anything at all about the matter, that it was never intended that we should pay that tax, but having started with it we have been fixed with it ever since, and my own opinion is that it was never legalised until 1884, when Mr. Childers reduced the four-wheeled cab from 2*l.* 2*s.* 0*d.* to 15*s.*, and then legalised it; it was never legal before that.

6721. I understand you do not object to pay the 40*s.*, but you object to pay the carriage tax as well?—Just so. I look upon a cab as a trade vehicle. The baker, and the brewer, and all those people do not pay any carriage tax.

6722. Then you are in favour, you say, of further supervision by the authorities of cabs, horses, and men, but at the same time you suggest that the income which is paid to the authorities should be cut down. Given better supervision, I suppose you would admit that the present income would be necessary to keep it going?—No, I have not found fault with supervision yet.

6723. You suggest that the number of cabs can best be limited by a better system of inspection both of drivers and of cabs?—Just so. Well, the man who passes the cab now, if it were clearly made known to him that he was only to pass cabs which were up to a certain standard, it would be no more trouble to pass a good cab than it would be an inferior cab, so they would not require an extra staff.

6724. You think the existing staff would be sufficient?—Just so.

6725. (*Mr. John Burns.*) What is your view about privilege?—Oh, I think it would be a good thing if it were done away with.

6726. For what reasons?—I think there is a great deal of unnecessary going to and fro through the privilege system, and I think that is fully set forth in my evidence before the Labour Commission.

6727. And it would remove congestion in the streets and round railway stations?—I believe so.

6728. And it would confer comfort and convenience on the railway passengers, the horse, the men, and the general outside public?—And it would do away with a great deal of friction between privileged men and non-privileged men.

6729. Do you agree, as has been stated by some advocates of privilege, that privilege property is better than street property?—In some cases it is, and in others it is not. There is one thing I would like to say, sir, with regard to the action of the officers of the Royal Society for the Prevention of Cruelty to Animals. I do not know whether that question has been gone into in this enquiry or not.

6730. (*Chairman.*) Yes?—I may say I have the opinion, and that is endorsed by a large number of cabowners and drivers, that the control in that direction should be left entirely to the licensing authority, whoever it may be. We have found most glaring cases in connexion with the Royal Society for the Prevention of Cruelty to Animals, and the way they conduct their prosecution is most unfair all round. Two magistrates in particular are very prejudiced in those cases, in fact they will not hear veterinary evidence, in fact one has gone the length of saying he would not believe the whole Veterinary College if they came and swore a certain thing if he had made up his mind that it was another thing; and I have had some experience in that, for my own brother was dragged off his cab by one of the Society's officers and locked up in a cell all night, and the horse was taken to a green yard. It was a young five-year-old mare, nothing at all the matter with it; she must have ricked herself prior. My brother took a fare from the City to the West End; it was a four-wheeled cab, put his cab on St. James' Hall rank, and got off there after being on the rank two hours and a half, and then the mare went the least bit stiff. This particular man I am speaking about, who was very touchy in that direction, rushed out, pulled my brother off the box, gave him into the hands of the policeman, and he was locked up all night. The mare was brought to the police station and kept there four hours outside the police station, upon a bitter cold day; she had no food nor water, nor any covering, and the job cost me 10*l.*

6731. (*Mr. Bayley.*) Would you mention that case where the magistrate said he would not believe the whole College of Veterinary Surgeons if they came before him?—Yes, that was the case.

6732. Was this the case in which that happened?—No, it was not.

6733. Would you mention that case?—In the case where the magistrate made that statement he fined the man 40*s.*, or a month, and we appealed against that, and it cost us nearly 100*l.* to appeal against it. No, it was 14 days' hard labour, that was the sentence, and there was eminent veterinary evidence to show that the horse was sound and was fit to work, and notwithstanding that the magistrate gave the man 14 days' hard labour.

6734. (*Mr. Hopwood.*) Without the option of a fine?—Without the option of a fine. We appealed against that, and it cost us 100*l.* to appeal, and the only redress we got from that was that the 14 days' hard labour was altered to the 40*s.* fine.* I know innumerable instances. A man had only two horses, it cost him 14*l.* before he got out of the court. It was a case of a five-year old mare that had simply ricked herself, going along, and then dropped suddenly lame, it cost him 13*l.*; that was at the same court.

6735. (*Mr. Bayley.*) You had better tell us which court that was?—Westminster, and the Marlborough Street too. I will tell you the name of the magistrate, if you please.

6736. (*Mr. Cunynghame.*) Would you tell us which court it was that confirmed the decision of the Westminster Court, on a question of fact; you see it is important?—That was the Middlesex Sessions.

6737. The Middlesex Quarter Sessions?—I believe it is called the County of London Sessions now, at Clerkenwell.

6738. (*Mr. Bayley.*) Did the defendant produce veterinary surgeons as witnesses in favour of the proprietor?—Professor Hunting.

6739. Who else?—Mr. Williams, the Queen's veterinary, and Mr. Dollar, of Bond Street.

6740. Who else?—And Mr. Ridler, and two County Council Inspectors.

6741. Professor Hunting is a Government Inspector?—Yes.

6742. Did the magistrate say he would not believe them?—Well, he said he would not believe the whole Veterinary College "if you bring them here."

6743. (*Mr. Cunynghame.*) Now, will you answer me a question. Supposing the whole College of Veterinary Surgeons came and gave evidence as to something, and you from other causes were absolutely convinced that they were wrong, would you believe them then?—I mention this matter——

6744. Would you answer my question?—I do not quite catch it.

6745. Supposing you had seen a thing with your own eyes, and the College of Veterinary Surgeons came and told you you had not, would you believe them, just answer, yes or no; of course you would not?—Well, I should use my own judgment certainly.

6746. Exactly, and therefore what I want to point out to you is that it is not merely enough to say that a magistrate said that the case was so clear that he would not believe the whole College of Veterinary Surgeons: it is not enough to say that to make out that he was necessarily wrong, is it? There might be cases in which that remark would be a perfectly legitimate one, might there not?—I should say in that case——

6747. Would you answer me first. Might there not be cases in which such a remark would a very just and fair one?—I do not think in a case of that character, sir.

6748. (*Mr. Lough.*) You mention the greenyard in connexion with that mare of yours?—Yes.

6749. Are there many greenyards now in London?—Not many, sir.

Mr. A. Mills.

19 July 1894.

6750. How many do you know in number?—There are very few police stations that have any accommodation at all for horses, so they are sent to the nearest livery stable or carman, even cab yards they send them to.

6751. Can you tell us where there is a greenyard?—Well, the only one I know of, a greenyard proper, is in the City.

6752. Where is that?—In Whitecross Street, it is a very nice place; it is a livery stable keeper's, but they charge you 6*s.* if a horse is only there five minutes.

6753. They charge you 6*s.* Do you know what they charge you for a day?—If a horse is put up for the day?

6754. Yes?—I could put up a horse any day for 3*s.* 6*d.*

6755. Say a horse is brought in by the officers of the Royal Society for the Prevention of Cruelty to Animals to the Whitecross Street greenyard?—They would not do that, because it has the police in the City.

6756. Do you know of any greenyard into which the officers of the Royal Society for the Prevention of Cruelty to Animals put horses?—Yes, of course, they would be sent from the nearest police station, for instance, Westminster would send to Horseferry Road; there is a carman and contractor in the Horseferry Road who is appointed by the authorities.

6757. That is not it; really you are not marking my question. I want to know about the greenyard, I do not want to know about livery stables and carmen?—I do not know any.

6758. You do not know a greenyard in London?—No.

6759. (*Chairman.*) You only know one in Whitecross Street?—Only one that is a greenyard proper, and that acts for the City.

The witness withdrew.

Mr. C. Scotter called in and examined.

Mr. C. Scotter.

6760. (*Chairman.*) You are the general manager of the London and South-Western Railway Company?—Yes.

6761. We wish to have some information from you about the open system which we believe obtains at Waterloo?—What is termed the open system has really been in operation at Waterloo for more than 30 years. I believe I am correct in saying that it has been in operation ever since the station was built.

6762. Which was how long ago about?—Nearly 50 years. I cannot trace any record of any other system being in operation, and our oldest member of the staff is of opinion that it began when the station was opened, and it is in operation to-day. The open system is, as far as we are concerned, this, that we admit anyone to the yard on payment of 1*d.*, and we provide what we consider is very excellent accommodation for the men in the shape of a shelter for their horses and cabs, and in the shape also of a very liberal canteen which the company provide, and which is run by Spiers and Pond on a most moderate tariff, and there the men can either get their food or may take their own food, for there is a kitchen attached, and for a nominal sum can get it cooked. There is also a shelter or canteen provided by a society called the Cabmen's Shelter Society; it has got its offices in Westminster; I do not know much about it.

6763. Do you mean the same sort of thing that one sees on the street?—Yes, the same sort of thing, only on a very much enlarged scale. In the open yard there is shelter accommodation for 30 cabmen to sit down and get their food at one time. Well, then, the entrance to our yard is in York Road. There is first the entrance, then there are three or four arches, all of which are under the station leading to the centre of the station, which is at the top where the cabs stand, and I think from first to last we can take in and accommodate about 300 cabs. You have got it on some of my notes; I think, it is about 300 cabs.

6764. In round numbers 200 can be accommodated under shelter and 70 within the cab yard?—That is correct, sir.

6765. And you provide sanitary accommodation for hem too?—Yes, latrines are provided for the cabmen as well, and then, of course, the arches are lighted by gas.

6766–9. Has any alteration obtained in your system since 1891?—Yes, up to 1891 what we call the South station, that is, the station yard which is used for the departure platforms, and for the arrival of what we call the Hampton Court service, the entrance to which is from the York Road, and from the Waterloo Bridge Road from the other side. That particular part of the station yard was open free to all comers. Any cab could come in and go out just as it liked, but it became an intolerable nuisance. In the first place, when cabs were wanted they were not there, and in the second place, we had no control over the men; we did not know them, they came for one trip, and went away, and we never saw them again, perhaps, for a lengthened period; we had no control over them in any shape or form, and they sometimes assembled in large numbers, and blocked up the station yard, which, as I told you, is used largely for the departure platforms, and necessarily must be kept pretty clear for cabs arriving with luggage at the station. The consequence was that I decided to do away with the old system, and to give a licence or a privilege to 20 cabmen. As distinguished from a cab proprietor, we give the privilege to the cabmen.

6770. (*Chairman.*) So I understand. Would you, please, explain that distinction a little, how it works?—Yes, if you will allow me, sir. We first began with 20 cabmen, we selected 20 men with decent cabs, we put the arrangements before them, and they agreed willingly to abide by our regulations, to stand at this particular part of the yard, to meet the requirements of the public, and to pay our 2*s.* per week. We found 20 was not quite sufficient; we increased that to 25, and those 25 men from that time to this have used the yard, and I believe have served the public; they have served us very well, they have served the public very well, and I believe they have done very well for themselves. We get a little better cab, we get our regulations carried out, we place them where we want them, and we have always a supply for the public throughout the day. Whereas, before 1891, sometimes in the middle of the day we had nothing, and very often at night not a cab could be got.

Mr. C. Scotter.

19 July 1894.

6771. (*Mr. Whitmore.*) Do not non-privileged cabs go to that station now?—No, we keep that exclusively for these privileged cabs.

6772. (*Chairman.*) Then would you kindly explain the point about privileging the men, and not the proprietors?—When first we began the arrangement in 1891 the idea was to have ten cabs, and there were some men that had constantly attended the yard—a few—and our superintendent spoke to them and asked them if they would like to have the exclusive privilege of standing in this yard, and they said yes they should indeed, and it began really with negotiating with the men themselves. We have had applications from proprietors, and I have had a good deal of pressure brought to bear upon me during the last few years to alter the open system into a system of privileged cabs at so much per week, but I have resisted it up to the present time, because Waterloo Station, as you know, is a very large station with an enormous traffic. I believe that the public are served as well with cabs at Waterloo as at any other station except, perhaps, Paddington, where they have a better class of cab, a privileged cab, but at any other station, King's Cross, St. Pancras, or any other station, I do not see any difference in the cabs plying for hire although privileged, from the cabs plying for hire at Waterloo, where they are not privileged.

6773. (*Mr. Hopwood.*) Do you not think that the privileged cabs at the stations you name are rather worse than the cabs are at Waterloo?—No, I would not put it so high as that. I do not see any difference between the cabs that come into our station casually, paying their penny, and plying for hire, and those cabs which are privileged attending other stations, except at the Great Western, where, I believe, they have 300 or 400 cabs of a superior type.

6774. If you arrived at Victoria without luggage, would you not rather walk outside to get a cab than take one in the yard?—I do not think so. I go very little to Victoria Station, so I do not know that.

6775. (*Chairman.*) I wanted to find out what the advantage is in your view of your system of privileging the men and not the employer. I understand that you do think that your existing arrangement is a preferable one, but in what respect is it preferable to an arrangement by which you would privilege an employer, an owner of 20 cabs, for instance?—I say that we began by privileging the men because it was such a limited number of cabs that we required for that particular place, and that we found the arrangement to work very satisfactorily, and we have had no reason to change it.

6777. You see no reason for changing it?—We see no reason for changing it. I think the men like it. I do know this, those particular men are rather a superior class of men; for instance, they were always in attendance during the whole of this strike; we never had the slightest difficulty with any of these men, neither had we any difficulty with the men at the station. I have a return of the number of cabs using Waterloo Ststion, paying the penny you know, for the last 12 months, and it is a remarkable fact that the number during the month of the strike was nearly the same as it was the corresponding period of last year, when there was no strike.

6778. Then I understand you to be thoroughly satisfied, and think that the public are thoroughly satisfied with your double arrangement, the open station on the one side, and the privilege part on the other?—I think so.

6779. You would not willingly give up either?—I would not willingly give up either. I think for what I call the south station we must have some system similar to what we have got, because it would never pay, for instance, to allow cabs to come in there paying a penny. To begin with, the demand for cabs in the south station is limited; it is merely the arrival of these short distance trains, the Hampton Court service, and the Leatherhead service, and those services are principally residential people, and not people to constantly use cabs, and therefore the demand on that particular station is limited. Then the access to the station. There are two wide accesses, one from the Waterloo Road and one from the York Road, and it would require four policemen to take the toll of a penny for the sake of the few cabs that would come and ply for hire at that place. Therefore we should get 1*s.*, and it would cost us 4*s.* perhaps.

6780. (*Mr. John Burns.*) May I at this point ask you if it is not a fact that the reasons which have induced you to have a privileged system at the south station are rather financial and physical, than a desire to break up the non-privileged system which prevails in other yards?—I do not think the question of finance ever entered into the question.

6781. For instance, you say four policemen would be required to collect the tolls; surely that is a financial consideration?—I say that now, but when the arrangement was made, I do not think a financial consideration ever entered into the mind of myself or my superintendent.

6782. That must have been one of the factors surely, Mr. Scotter, in varying from the opinion of the privileged system?—It may have been a factor. It has only occurred to me now you mention that particular fact; it has never occurred to me before.

6783. Is not the main reason, I speak with some knowledge of your system on which you have got the privileged system, the structural difficulty of the approaches to your station?—In a great measure it is so.

6784. (*Mr. Whitmore.*) And in the event of access being possible to the south station under the same conditions as to the other parts by non-privileged cabs, you would not voluntarily have established the privilege system?—No, we should not.

6785. But that consideration in favour of the privilege system—the physical consideration—would apply of course in the case of all other railway stations in which the same physical considerations existed?—Yes. Well, I speak for the South-Western, I will not speak for any other company.

6786. (*Mr. John Burns.*) There is not another railway station in London built on arches to the same extent as yours is?—No, I do not think so.

6787. (*Chairman.*) Perhaps you would not feel disposed to give any general opinion on the subject of the merits of the two systems, privileged and non-privileged; you prefer to speak entirely of your own experience at your own station?—Well, I must say, all conditions being equal, that is to say, as the honourable member has pointed out, if we could check the entrance, and have one certain entrance to the south station, we should have the open system throughout the whole of our station. I prefer the open system, I think it is fair. You see a man may pay 1*d.* when he could not afford to pay 2*s.* I do not know what are the other companies' charges, but I believe it is lower than most of them.

6788. (*Mr. John Burns.*) Some pay 8*d.* a day?—I do not know what it is.

6789. Some proprietors pay 8*d.* and the men have to pay 1*s.*?—I must say that the complaints that I get of excessive charges of cabmen and abusive language, or refusing to take up fares from the station, or general complaints of misconduct, are exceedingly few, and from the inquiries I have made of our police superintendents during a recent period, I am satisfied that, taking into consideration the enormous number of cabmen visiting our station, I do not know whether I have given the figure, but more than 300,000 cabs entered the York Road entrance during the last year, I say, taking into consideration the enormous number of men that have used the station—a peculiar class of men—complaints have been exceedingly few, and the complaints of our own police, who supervise all our arrangements, have been exceedingly few, and on the whole I do not know of any system that could work more satisfactorily than the system we have got in operation at that station. I do not know whether, sir, that answers your question as to my views. Would it be of any interest to the Committee to have the figures for the 12 months?

6790–2. (*Chairman.*) Yes, certainly, and would you kindly tell us your arrangements about the 'busses?—The private 'busses you mean?

6793. Yes?—The private 'busses belong to the London City Omnibus Company, I think it is called, not the General Omnibus Company.

6794. (*Mr. John Burns.*) The Metropolitan Omnibus Company?—Yes, the Metropolitan Omnibus Company.

6795. (*Mr. Whitmore.*) You have none of your own?—We have none of our own.

6796. (*Mr. Lough.*) I do not think that is a private 'bus, Mr. Chairman, in our sense.

6797. (*Mr. John Burns.*) The 'busses are those which ply from your station at Waterloo, and go down Stamford Street, over Blackfriars Bridge. They are not private 'busses in the sense that they run without a plate, and receive no 1*d.* or 2*d.* fares from the public?—There is an omnibus company. Although I accepted the honourable member's suggestion, I think it is called the Railways and Metropolitan Omnibus Company.

6798. The Railways and Metropolitan Omnibus Company?—They run public 'busses from Waterloo Station to the City, and they also supply the private 'busses which used to be supplied by a man named Barwick. Now they are supplied by this company. We have nothing whatever to do with them; they simply supply them as required. Then, sir, if you will allow me I will give you a statement for the monthly totals.

6799. (*Chairman.*) Would you please hand it in?—Yes, there are 303,000, I see, in the York Road entrance.

LONDON AND SOUTH WESTERN RAILWAY.

PARTICULARS showing the Number of Cabs that entered the Yard on the Main Line arrival side to ply for hire for the 12 months from July 1893 to June 1894 inclusive.

Month.	Number of Cabs.	Amount.
1893.		£ *s.* *d.*
July	31,136	129 14 8
August	34,516	143 16 4
September	32,283	134 10 3
October	26,115	108 16 3
November	20,678	86 3 2
December	22,999	95 16 7
1894.		
January	21,096	87 18 0
February	17,495	72 17 11
March	22,520	93 16 8
April	25,906	107 18 10
May	23,854	99 7 10
June	25,102	104 11 10
Gross total	303,700	1,265 8 4

6800. (*Mr. Cunynghame.*) Does that statement you have put in show the receipts and expenditure the money received for penny tolls?—It shows the receipts from penny tolls but not the expenditure.

6801. What is the total amount you have received in the course of the year from penny tolls, and secondly, the total amount you receive from the 2*s.* a week for the privilege station you have told us of; have you got those two totals?—I have got the totals for the penny tolls; it is on the sheet; the total amount of pennies received during the 12 months amounted to 1,265*l.* 8*s.* 4*d.* I have not got the other but I can easily tell you.

6802. The others would make about 100*l.* a year?—About 100*l.* a year.

6803. That is about 1,300*l.* a year?—Which is about 1,300*l.* a year.

6804. Can you give us an idea, roughly, of what the expenses are that that 1,300*l.* a year represents. I presume the reason for taking the penny is that it pays for certain expenses consequent on these cabs coming there?—Yes.

6805. Can you give us an idea of what those expenses are?—Not the slightest.

6806. Well, but if you say that the 1,300*l.* is taken on the ground that it covers certain expenses, logically one ought to be able to say what the expenses are that it covers?—Yes, if I had known that the question would have been asked of course I should have made inquiry and ascertained the number of men employed, the value of the arch with the cantcen, the cost of lighting the arches, the cost of paving, and all the other incidental costs in connexion with it, but I have not got it.

6807. I will take one of those items; would it be fair to put such a thing as the cost of lighting the arches; you would be obliged to incur that, I suspect, under any system of lighting the arches?—Not if the cabs were not there at all.

6808. Though no cabs entered the station, but only private carriages? You would be brought to book by some of the authorities if you did not light the arches, and left them in a dangerous condition, would you not?—Let me clearly understand; if you want me to make a statement of what I consider the just and reasonable expenses in connexion with the cab business I can give it, but I cannot give it now.

6809. It struck me one of your points was that the lighting of the arches was justly so chargeable?—It is for you to decide whether it is justly or unjustly, but it is an expense.

6810. It is an expense: whether that ought to stand over against the 1,300*l.* would be a matter of opinion?—Yes.

6811. (*Chairman.*) Would you be so kind as to get out those expenses and let us have them on paper; if it is not giving you too much trouble, it would be very interesting?—Yes.

6812. (*Mr. Cunynghame.*) Can you give us about the number of private omnibuses, pre-ordered omnibuses, that are used at your station in the course of the year?—I have not got it with me, but I know there are about 20 in existence.

6813. That are used from day to day?—I cannot tell you that.

6814. And are a considerable convenience to the public?—We have nothing whatever to do with them.

6815. You take the orders for them?—No, we have nothing whatever to do with them; there is an office on the station, a 'bus office.

6816. It is said by some people that these omnibuses stand in the station, and practically ply for hire; do you know anything of that?—No, I do not believe it.

6817. You have known of no cases of that?—I have known of no cases of that; I do not believe they would, there is no room for them. I do not believe they are standing there unless they are ordered. If they are it is contrary to what, I believe, is the practice.

6818. The most that would be done would be that if a person who ordered them did not take them, and somebody came who wanted them they might be handed over to him?—Oh, I suppose so, but we have nothing whatever to do with them.

6819. (*Mr. Lough.*) This is very important; then you do not know that if A. B. ordered a 'bus and did not come, X. Y., who arrived instead, could take it?—I should think that, as a matter of fact, that 'busman would accept the new comer; I should think so; I do not know.

6820. (*Mr. John Burns.*) Under the open system, Mr. Scotter, you have very little fault to find with the general character and behaviour of the men indiscriminately admitted?—No, I think I tried to make that very plain, that taking into consideration the enormous number of men the offences, I do not say it offensively, but I mean the complaints, we will say, of minor offences, are very few.

6821. Under the open system, at Waterloo, have you ever received complaints from the police of congestion of cab traffic outside Waterloo Station?—No.

6822. You think that the open system that prevails at your station at Waterloo tends rather to diminish congestion of cab traffic than otherwise?—Well, by some mode which I cannot fathom, the supply somehow or other seems to be about equal to the demand, and how it is arrived at, and how they manage it, I do not know, but I suppose there is some communication between the men inside and the men outside, and they know as well as I do the number of cabs that are inside, and if there is a certain number, I do not think the men stand they go off and see if they cannot get employment elsewhere, therefore I have never seen what you may term a block of cabs waiting to get into the York Road. I have seen a long line, but they only stand one deep.

6823. Then, under the open system, have you ever had complaints from railway passengers intending to use a cab about insufficient supply?—No, I cannot call to mind a complaint; you must take this with a little reservation. For instance, last night an American steamer arrived at Southampton with 1,000 passengers.

Mr. C. Scotter.

19 July 1894.

Well, that is an enormous number to be landed into Waterloo Station within 40 minutes.

6824. (*Mr. Whitmore.*) They came up in consecutive trains?—They came up by trains arriving within 10 minutes of each other, and with an enormous amount of luggage. It is possible and probable, and in fact it does occur, that sometimes the passengers by the second and third trains have to wait a few minutes until the cabs return, or until new cabs come in.

6825. (*Mr. John Burns.*) That is an extraordinary thing?—That is an extraordinary thing.

6826. (*Mr. Whitmore.*) That would occur, although the station at the time were absolutely full of cabs?—That would, you see all those people who come from America want cabs.

6827. (*Mr. John Burns.*) Under ordinary circumstances the supply of cabs in your station is equal to the demand; there is no complaint as to the character of the men, and you have not received complaints about the congestion of traffic outside?—Well, with the modification which I rather put upon it, that the complaints from the public are exceedingly few, and the complaints against the men are exceedingly few, but I do not mean to say that there are no complaints. We have got regulations in force, and one of those regulations is this, that if a man misbehaves himself, or there is a complaint against the man, we exclude him from the station, and we find that that has a better effect; we suspend the man coming into the station for a certain time.

6828. But the most important point I want to get at, is, whether or not, Mr. Scotter, the open system does in any way tend to encourage a congestion of cab traffic either in Waterloo Road or in York Road?—No.

6829. You say it does not?—Absolutely not.

6830. And, in your opinion, the control is the effect of the open system?—In my opinion the open system has nothing whatever to do with the points which you mention.

6831. (*Mr. Lough.*) I want to ask you a question or two about those 25 cabs?—Yes.

6832. Supposing one of those drivers went to another proprietor, you would not make that a reason for making him leave your yard?—No.

6833. If he brought an equally good cab, he would still retain the privilege?—Certainly, we do not know the proprietor, we know the man.

6834. You do not know the proprietor?—No, we do not know the proprietor, we know the man. The man signs a condition; if it will be of any use to you I can produce it.

6835. You are aware there is a great contrast between your system and that pursued at other stations?—I am quite aware of it; I mentioned it incidentally at the beginning, that the great difference between our system and other privilege systems is that we privilege the men and not the cabs.

6836. In short, yours is a privilege system arranged with the drivers?—Yes.

6837. Whereas others arrange it with the proprietors?—That is put better than I have put it. There is a privilege, the privilege is that the driver in one case gives 2*s.* a week, and in the other he gives a penny each time he enters.

6838. I suppose you do not think there is very much difference between what is paid by a driver in the one case and the other?—Well, we do not care a rap about the 2*s.*, that is not the point. Even the 2*s.* was an arrangement with the men; the question my traffic superintendent discussed with the men. Remember, at the beginning they talked about 3*s.* 6*d.* a week, and I opposed that, and at last it eventuated in an arrangement at 2*s.*, and I do not know what is charged to privilege cabs in other directions, but I believe the 2*s.* a week is about as low as any payment at any station.

6839. (*Mr. John Burns.*) Was not that 4*d.* a day or 2*s.* a week, for the 25 cabs at the south station, based upon an estimated average of four journeys?—Very likely it was.

6840. (*Mr. Lough.*) So that, practically, except that the construction of this station makes it a weekly arrangement in one case instead of an arrangement by the job, really the two systems were the same?—With that exception the systems are precisely the same.

6841. And you rigidly adhere to the principle of arranging with the driver, and not with the proprietor?—Yes, but please understand that we thought there was no principle involved in it in the beginning—it was quite by accident it was done; the arrangement was made with the men and we have continued it, and shall continue it.

6842. And you find it answers?—And we find it answers.

6843. (*Mr. Hopwood.*) Is it true to state it broadly, Mr. Scotter, that such a distinction can be drawn between Waterloo and the other metropolitan termini, that the open system is feasible at Waterloo but impossible elsewhere?—Oh! I should think the open system as we adopt it can be adopted anywhere; I do not know of any reason why it should not myself.

6844. The fact that you have this extraordinary arch accommodation really makes no practical difference?—I would rather qualify that by saying that if the cabs approach other stations in more than one direction, that is to say, there is more than one entrance, then comes the difficulty that I have mentioned in connexion with this south station, but the difficulty is not so great if the whole of the supply of the station practically got focussed, so that the toll can be collected. It did not occur to me before, but as I have pointed out to the honourable members in the Committee this morning, it would never pay us to keep four men to collect pennies. It would take four men, one at each end, and two a day from six in the morning to 11 or 12 at night, and, therefore, the other system was adopted. But if at other stations their conditions are the same as ours as to their entrance being at one particular place like York Road, then I say, emphatically, there is no earthly reason why the system could not be adopted at any other station in London as it is in Waterloo.

6845. (*Chairman.*) May I put it in this way: I think Mr. Burns suggested to you that your reasons for adopting the privileged system, were partly financial and partly physical. The financial consideration is based on the physical consideration?—Yes.

6846. (*Mr. Hopwood.*) It is really a physical consideration in the last resort?—I am much obliged to you for putting it in that way, for I need hardly say the financial consideration was not one of the considerations.

6847. And it would not arise but for the physical condition?—Yes, I am much obliged to you for putting it in that way. It has explained it.

6848. From your experience of the other metropolitan stations, I take it, you would be able to say that, as a rule, there are such physical conditions as would enable the companies to collect a toll that way?—My impression is that the whole of the North-Western cabs at Euston enter from one place at the back, congregate in the yard, and then the station roads are fed from those. Well, if it is so, that is precisely the same condition as York Road.

6849. King's Cross the same?—I think King's Cross the same.

6850. We need not carry that further. I think there is only one other question, Mr. Scotter; it would be very interesting if you could tell us whether in the course of time the same men go backwards and forwards to your station with cabs?—They do.

6851. In the course of years, do you find that men haunt the station?—We do.

6852. It would follow from that that you can, to a very great extent, depend upon a regular service of cabs?—Yes, that is so, Mr. Hopwood, and not only that we have got men now plying under this open system, that have used our station for 30 years, and have come as regularly as clockwork. I think that rather indicates that the men are satisfied with the arrangement.

6853. Certainly; but do you think, as a matter of experience, that the men who haunt the station take away a fare and then come back again to your station empty, after the manner of the privileged cab?—No; I think that is the difference between the privileged cab and one of those cabs: the probability is that the man would take up a job on his return journey and go anywhere, and not come direct to the station. If a man has to pay 3*s.* or 3*s.* 6*d.*, or whatever the charge

may be—10*s.*, we will say if you like, for a privileged cab—pays so much down, there is a quasi-inducement to him to go back to the station to pick up another fare from the station because he has paid his money for the privilege.

6854. But is not the consideration stronger than that—is he not under an obligation to go back?—Yes, he is under an obligation so far as the privileged cabs are concerned.

6855. Are your men under an obligation?—Our men under an obligation? No, neither a privileged man nor a man who paid the penny; they are under no obligation to come to us. But as a matter of fact they do; and in that statement you will see the regularity with which the station is supplied. There is very little difference every month; there is between twenty-eight and thirty thousand cabs a month, an average of a thousand cabs a day.

6856. (*Mr. Bayley.*) Before granting the privilege to the cabman on the south station, you inquire, I suppose, into his character?—Well, I do not think we did with these men, because these men were known.

6857. You know them without inquiry?—Without inquiry.

6858. You knew them to be men of good character?—We knew them to be men of good character.

6859. Do you not get a more select class of men for the south station by your means than by admitting every cabman?—Yes, of course you do. But, as I have explained, though the thousands of casuals, if you like to term them such, coming in every week are strictly watched—we have police at the entrance, we have police at the arches, we have police at the stations, we have a byelaw, and each cabman is bound to obey—we have all these police, and still the complaints are few; and when we do deal with a man for any particular offence, and debar him from coming into the station, we find it has a good effect upon the other men coming into the yard. I cannot say that as a class these cabmen are one whit worse than even our own porters who are all selected, and who must come to us with good characters. I was astounded when I went into the figures, to see how few the complaints were.

6860. Then the open system pays you better than the privileged system?—I have not gone into that, but you may take it from me that neither the 1*d.* nor the 2*s.* weigh with any railway company taking a million a year. It cannot be a question of the money. The whole amount, speaking roughly, is 1,300*l.*

6861. (*Chairman.*) May I ask you a question? You were speaking of what I am sure has interested us all very much, your experience in these matters. I do not think I asked you at the time how long you had held your present responsible office?—I think about 10 years.

6862. (*Mr. Lough.*) On the latter two questions I would like to put two points to you. With regard to the characters of the men first, do you not think that if proper supervision is exercised in the granting of the licence to drivers by the authorities who grant these licences, that ought to make that point quite safe, with regard to the admission to a railway yard?—I do not see how you could get characters for the cabmen, really.

6863. Well, they have experience of whether their licence is marked—whether they are prosecuted for any offence?—Of course, that is *primâ facie* evidence that they are respectable when their licence is all right.

6864. You think that if there is an expensive system, if the men pay 5*s.* for the licence and are obliged to keep a clean sheet as a character, that should form a certain guarantee for the railway company?—So far as we are concerned, we have been satisfied with it.

6865. I want a similar question as to the cabs. The suggestion is made sometimes that in these open yards you get a bad class of cabs?—Yes.

6866-7. (*Chairman.*) Do you think that you do get a worse sort of cab or better?—I have said I do not see any difference between the cabs we get and the cabs that are supplied under what are called the privileged systems. But I do say this, if I may (I do not know whether it is in the province of this Committee; I must be excused if it is not) there are some cabs licensed that ought not to have been licensed, and the municipal authorities ought to see that before a cab is licensed it is fit to run about the street.

6868. (*Mr. Lough.*) In short, a cab that has got a licence, and a man that has got a licence, ought to be fit to go to any station.

6869. (*Mr. Cunynghame.*) I understand from your remarks, you make a great point of your power of suspension in case of misbehaviour?—Yes.

6870. You regard that as important?—Yes, certainly.

6871. (*Mr. Lough.*) A better system of supervision at head-quarters would make that comparatively of little importance possibly. My only point is this, you can only know that that power of expulsion has been valuable to you in the past?—Yes.

6872. You do not about the future?—Oh, no.

6873. What I meant to say was, that if there was more severe inspection at head-quarters, it might make that power one very seldom used in the future?—Well, human nature is human nature all the world over.

6874. (*Chairman.*) And likely to remain so?—And likely to remain so.

6875. (*Mr. Hopwood.*) You take care of your private property; the station is your private property, and you must protect it?—Yes.

The witness withdrew.

Adjourned till to-morrow at 11 a.m.

TWELFTH DAY.

Friday, 20th July 1894.

PRESENT:

MR. GEORGE RUSSELL, M.P. (CHAIRMAN, PRESIDING).

Mr. HENRY CUNYNGHAME.
Mr. F. J. S. HOPWOOD, C.M.G.
Mr. E. H. BAYLEY, M.P.
Mr. T. LOUGH, M.P.
Mr. C. A. WHITMORE, M.P.

Mr. MALCOLM DELEVINGNE, *Secretary.*

6876. (*Chairman.*) This is a letter from the Chief Clerk at Bow Street Police Court, with reference to a point that was raised yesterday. I shall read it, so that it may go upon the notes:—

"Police Court,
"Bow Street,
"19th July 1894.

"DEAR SIR,

"A warrant can issue against a person whose name is unknown provided such a description is given as will identify the person:—thus height, age, features, &c., &c. Warrants of this kind are not infrequently issued here; one only two or three days ago.

"There is a certain responsibility, of course, attaching to the execution of the warrant, but as a matter of practice this is not a very serious difficulty here.

"Excuse this. I write in court in middle of the business.

"Yours very truly,
"(Signed) JOHN ALEXANDER."

Sir JAMES WHITEHEAD, M.P., called in and examined.

Sir J. Whitehead, M.P.

20 July 1894.

6877. (*Chairman.*) The reason why we have asked you to be good enough to come here to-day was that a great desire was expressed by some members of our Committee to have evidence with respect to the special practice in the City with regard to cab cases, which, we are informed, differs in some particulars from the practice at the West-end police courts, and, as I understand, you have had charge of the business?—Well, along with others; the Aldermen of the City take the Police Summons Court in turns. We sit, each of us, twice a week for, I think, four times a year.

6878. You sit alone when you do sit?—We sit alone twice a week; that is Tuesdays and Saturdays.

6879. Then every Tuesday and Saturday in the year does this court sit for cab business?—Yes.

6880. Always presided over by an Alderman?—Always presided over by an Alderman, who, being himself connected with the City, has a very good knowledge of City life and City traffic.

6881. Does this court take any other business, or is it exclusively confined to cabs?—No; it takes all what we call the police summonses, that is all summonses issued at the instance of the police officers in regard to cabs, obstruction by hand barrows, and so on.

6882. Then it deals with all cases connected with traffic?—All cases connected with traffic.

6883. For instance, a summons arising from the misconduct of an omnibus would come?—Certainly, omnibus cases come before us. The total number of the summonses issued during the past five years in connexion with that court amount to in 1889, 3,620; in 1890, 5,475; in 1891, 2,025; in 1892, 3,231; and in 1893, 2,321; but of these the numbers issued against drivers of hackney carriages were only in 1889, 429; in 1890, 468; in 1891, 182; in 1892, 246; and in 1893, 225. But I must tell you that these figures include cases that are adjourned. Sometimes the evidence, either on the one side or the other, is not very clear, and either the police constable or the defendant would apply for an adjournment, in order that evidence confirming his own view of the case may be brought forward, but the number of cases adjourned would be very small indeed, so that for all practical purposes you may take the figures I have given as approximating to the number of cases heard by us in connexion with cabs in the Police Summons Court. I understand that Colonel Smith has given evidence before you, and you will possibly find—probably find—that his figures differ somewhat from these, because he will only give you the number of summonses issued. I give the number of cases heard, and those figures include cases adjourned.

6884. (*Mr. Lough.*) So that one case might be counted twice in your figures?—Would in that case be counted twice.

6885. (*Chairman.*) I do not quite understand from what you said before, whether your court takes any other business than business arising out of traffic. All these police summonses that you speak of, do they all relate to traffic and obstruction?—They relate to traffic and obstruction. I ought to tell you that cases of drunkenness are taken in another court. When a man is drunk he is apprehended, he is taken to the police station, and his horse and waggon, or his horse and cab are taken to the green yard, and then in order that there may be no delay, a delay of a day or two in waiting for this particular court, the charge against him is heard in what we call the justice room, so that there are a number of charges against cab drivers that are not heard in this particular court.

6886. It would come to this then practically, that charges relating to misconduct rather are heard in the justice room, and charges connected with traffic are heard in your court?—Charges of misbehaviour are also heard in this particular court.

6887. Oh, they are?—Yes.

6888. For instance, abusive language?—Perfectly. I will give you the figures making up these, if you like.

6889. Thank you.—I will give you the different charges.

6890. If you please?—I will take wanton driving first, and we look upon that as one of the worst offences. For wanton driving, 1889, 71; 1890, 82; 1891, 54; 1892, 45; 1893, 67. Obstruction, 1889, 160; 1890, 147; 1891, 49; 1892, 108; 1893, 79. Plying for hire, 1889, 95; 1890, 106; 1891, 19; 1892, 18; 1893, 22. You will observe that the numbers there are very largely reduced from what they were in 1889 and 1890, indeed that applies to all offences charged in this particular court. And then for leaving cabs unattended, 1889, 36; 1890, 53; 1891, 18; 1892, 23; 1893, 17. For not wearing a badge, 1889, 37; 1890, 65; 1891, 34; 1892, 32; 1893, 24. And for misbehaviour, that is, refusing to obey the police, and perhaps using bad language, 1889, 30; 1890, 15; 1891, 8; 1892, 20; 1893, 16. Now, I think as a court we deal very leniently on the average with cases of this kind. We recognise that cabmen are quite as human as the rest of us, and have human frailties, and we recognise also that they are drawn from a class who have great difficulty indeed in getting a living, and we make allowances for their sometimes overstepping the bounds of prudence. It is a custom with us, if there has been nothing against a man before not to fine him unless it is a bad case; if it is a very bad case we fine him even the first time, but taking into account the fact that when he is summoned he loses a day's pay, we think that in itself is sufficient punishment, and the justice of the case is met if we only call upon him to pay the costs of the summons, which are 2*s*.

6891. (*Mr. Hopwood.*) And that does not necessitate the indorsement of the licence?—No, I was going to say that. There is another point, which is this, that in the event of his being fined the licence would be endorsed, and it would be a black mark against him if he were at any time summoned in another court. We therefore for the first offence, if it is not a very bad one, as I have said, merely call upon him to pay the costs of the summons, we do not fine him, and we do not endorse the licence. The usual penalty inflicted by the magistrates for obstruction, plying, leaving cabs unattended, and so on is, I should say, probably from 6*d*. up to about 5*s*., but if it were for wanton driving (sometimes there is racing in the streets or an offence of that kind), then the culprit would be mulcted in rather a higher fine. Of course, if there is any damage done, if the defendant does not at the moment satisfy the person whose carriage or van or cab is damaged, that is also taken into account, but, of course, you know that we cannot call upon a man to at once pay the damage; that would be the subject of an action in the county court. Still, if a man shows contrition and satisfies the person whose carriage or van or cart or whatever it may be has been injured we take that into consideration.

6892. (*Mr. Cunynghame.*) We have had evidence before us that cabmen are occasionally, as it is termed, bilked by people who employ them and who either turn round and say, "I have got no money, and I knew I had not when I hired you," or else who run away round a corner and escape; that is bilking?—That is bilking the cab driver.

6893. The man gets into a cab and then turns round and laughs at the cabman and says, "I have no money and I knew it, and now you must sue me civilly"?—Yes.

6894. And sometimes again the fare will run away round a corner, down a street where there are two entries and get away, and that, I understand, is termed bilking?—Yes.

6895. And then in addition to that we have had evidence before us that there are a certain number of bonâ fide disputes, in which, possibly, the fare is quite wrong, but still in which he is bonâ fide?—Yes.

6896. Suggestions have been made to the Committee that the law is not sufficiently stringent at present. I was going to ask you would you be in favour of giving any power to a cabman in either of those two cases of arresting or causing to be arrested a fare without a warrant. I may say at once I want to point out the gravity of that power?—Yes, it is a very serious matter; you see that would be an apprehension on the mere *ipse dixit* of the cab driver himself.

6897. It would?—And if a fare were giving the driver less than he felt to be a full fare he might—because they are not a very high class of men—resort to a charge against the fare, which would not be well founded.

6898. You mean he might use this power for intimidation with a man who wanted to leave town very suddenly and did not like to appear, and would rather pay anything than be bothered with the thing further?—Yes, I should think that would be rather an extreme power to give, either to the police or to the driver himself.

6899-6900. Perhaps, you are not aware that the Summary Jurisdiction Act made a difference in the way that cabmen could recover their fares?—Yes.

6901. And Sir John Bridge has said that he thinks we ought to go back to the old system; I do not know whether you can give us—perhaps if you have not read the Acts you would not be prepared to express any views upon that?—I cannot speak upon that.

6902. It is rather an intricate case?—Yes. Of course, I do not suppose that those cases of bilking are very numerous; I do not think they are.

6903. Not very numerous?—Not very numerous; and do they not correspond to the bad debts that are made by tradesmen in business?

6904. I would suggest that it is rather similar to a case of a man going into an eating house?—Precisely.

6905. And knowing that he had not got any money to pay?—Yes.

6906. Or else having bonâ fide left his purse at home?—Yes.

6907. Or else, in the third place, disputing the amount that the eating-house keeper charges him for his meal?—Oh, yes.

6908. And a fourth case, a man who has the money and endeavours to bolt away out of the shop while the innkeeper is looking on?—I do not know what is the extreme penalty in a case of that kind, can you tell me?

6909. I believe if it amounted to getting goods under false pretences it would be punishable?—Or taking a cab?

6910. At present the only thing a cabman can do is simply to recover it as a civil debt, whether there is bilking or it is a disputed case, summarily before a magistrate under the Summary Jurisdiction Act?—Well, we hear these summonses in the justice room, and we always make the delinquent not only pay the cabman his full fare, but the costs of the summons, and payment for the number of days or the number of hours the cabman may have been obliged to take away from his duty.

6911. That you have the power to do?—And that we do.

6912. But you have no power in case the fare had no money at all and knew it; all you have power to do is to put in a distress, and if the distress yields nothing you can then do nothing, for you cannot commit a man to prison unless he did not pay having the means to do so. That is the present law?—I think the law requires to be strengthened.

6913. That is what Sir John Bridge thought?—I should say so, certainly, so as to give the magistrate jurisdiction to send the man to prison or to pay a heavy fine.

6914. We are anxious to know whether there is any power of arrest that can be safely given—any modification?—That can be safely given?

6915. Perhaps with a warrant or something of that sort. I do not want to lead your evidence at all; I wanted your own entire view on it?—Well, I should think probably that it would be the best way to give power to issue warrants in such cases.

6916. On complaint?—On complaint.

6917. But you are against the power being given to the cabmen to arrest as if it were a felony, for instance?—Yes, I think so; in my judgment the temptation would be too great.

6918. I suppose you would agree that in some cases of heartless bilking it might be just as bad as taking a loaf of bread; it might really morally amount to a felony?—In some cases it is as bad as a theft.

6919. It is as bad as a theft?—And it is theft from a poor man.

6920. It is theft of an aggravated character from a poor man?—Yes.

6921. But in spite of that you would regard it as dangerous to give a power of summary arrest?—I think so.

6922. Then there is only one more question. I have been struck, and I think the Committee have, with the very much fewer cases of offences by cabmen there are in the City in proportion to their number than in the rest of the metropolis?—Yes.

6923. We asked Colonel Smith for some explanation of that, and he said that he thought that the City conditions were rather different from the conditions in the metropolis?—Yes, I do not suppose he would go further than that; but without making any reflection whatever upon the police constables outside the City, I think it is generally conceded that we have a better class of men.

6924. Do you pay them higher?—Yes, a higher scale of payment and pensions, and a better quality of clothing, and so on.

6925. (*Chairman.*) I should like if I might be allowed to ask a question upon that; it is entirely illustrative; but some comparison has been made between the ordinary metropolitan police force and your City police force, and I am glad of the opportunity of asking you, I should have asked you before, whether you think there is a difference between the two in favour of the City force?—I think it is manifest.

6926. And with respect to the way of accounting for it you say you give them better pay and a better scale of pension, but are they recruited in any degree or sense from a different class from the Metropolitan Police?—No, I do not think so.

6927. The Metropolitan Police are chiefly, I believe, agricultural labourers, is that the class from which your City Police come?—I should think that very likely the best of the class who seek such positions offer themselves first to the City and I think I am right in saying that our standard of height and size is higher than that of the Metropolitan Police.

6928. In fact, you get the pick of the lot that want to go into the police service?—We get the pick of the lot.

6929. (*Mr. Cunynghame.*) You are aware that the police of the metropolis since 1890 are in receipt of better pay and better pension than they were previously?—I believe there was an increase.

6930. There was an increase you know?—But the scale does not come up to our own.

6931. Not even yet?—No.

6932. I presume it may be conceded that the gradual operation of these improved conditions in the Metropolitan Police may be expected in time to improve them?—Yes, in the natural order of things, though I think our policemen are sure to be a better class than they will in the metropolis at any time, for the simple reason that a large number of them in the City live rent free, inasmuch as the constable and his wife are the caretakers of offices. That goes materially to add to their wages, and there are not the same facilities for caretaking outside the City as we have in the City because the great bulk of the population of the City is non-resident.

6933. And it is for these various reasons that you have given us that you think the City Police is rather better than the Metropolitan Police?—Yes, I think so, it is more attractive than the Metropolitan force for the reason that with one thing or another their payment is better.

6934. And you are able to secure a better and possibly a steadier class of men, without making any reflection, of course, upon the other?—Yes.

6935-6. (*Mr. Lough.*) Are not the police under the Common Council, Sir James; how are they controlled?—Well, nominally they are, but actually they are under what is called the Police Committee of the Court of Common Council, and indeed I do not think I can call to mind at any time any interference by the Court of Common Council with the committee appointed for that purpose. The committee is composed of a certain number of members of the Court of Common Council and presided over generally by an alderman.

6937. But they are, under the Court of Common Council, managed by a committee?—They are managed by a committee of the Court of Common Council.

6938. The Court of Common Council is 226; is not that the number of it?—Well, 232 I think it is.

Sir J. Whitehead, M.P.

20 July 1894.

6939. It does not matter; it is about 230?—206 and 26, 232.

6940. And they are mostly gentlemen—the members of the Court of Common Council—resident in the City?—They must all have an occupation in the City; they must be occupiers in the City.

6941. Practically their eye is always on the police force?—19 out of 20 of them carry on business or some profession in the City.

6942. Practically then they are always seeing the police?—Yes.

6943. Have you ever noticed that there is a difference, or I may tell you that we have had evidence here that there is a difference in the system your police pursue in the City and the police in the metropolis?—Yes.

6944. For instance, we were told by Colonel Smith that it is the invariable rule of the constable to caution cabmen on the first occasion even before he brings them into your court; do you know that that is so?—Yes. Oh, that is a common thing. I only know it because I have had it from Colonel Smith and others connected with the force.

6945. Did you know before that that is different, so far as we have got evidence, from the outside?—I know nothing of what is outside the City.

6946. Do you know that no constable is allowed to summon a cabman in the City without having Colonel Smith's sanction or that of his assistant?—I know that the facts are first put before Colonel Smith before a summons is issued.

6947. Did you know that that was different from the outside?—No, I did not.

6948. And finally when they come into court for mild offences it is your invariable practice to let them off on the first occasion without endorsement?—As I have said, unless the case is a serious one; we look upon the fact that they have lost a day's pay as being in itself a sufficient punishment, and only call upon them to pay the cost of the summons.

6949. Do you know, as a fact, that that is quite different from the evidence we have had of the course pursued outside?—No, I do not know that.

6950. Now I ask you, having so far described that, whether you do not think that milder system pursued in the City might have something to say to the decrease of crime, as well as the fact that the men are a certain height and get more pay?—Well, I should think very likely it would. I see a great many licences endorsed by magistrates outside the City, and I notice that it is not at all an infrequent thing that they are only fined 6*d*., but the fine carries endorsement.

6951. It does; and you avoid that where you can in the City?—We avoid that where we can, and I will go further and say this; that when a cab driver or a 'bus driver, or indeed anyone who comes before us as a defendant in that court, is unable to pay the fine—you see the fine is always so much or so many days imprisonment, say 5*s*. or three days, 10*s*. or seven days, as the case may be—if he is unable to pay the fine on the spot we ask him to stand aside. He sits down, and he waits until the whole of the cases have been heard and the public have gone out of court, and then we inquire into his circumstances, and unless, as I have said before, the case has been an extremely bad one we do not send him to prison, we let him go. We always hesitate to send a man or a woman to prison.

6952. In the figures that you have given us this morning there is a sudden drop between 1890 and 1891. In 1890 you gave us 468 total of cases; in 1891, 182. Can you give any reason for that sudden drop?—No, I cannot.

6953. It is rather remarkable, is it not?—It is very remarkable. Did Colonel Smith give you any information upon that point?

6954. No, Colonel Smith only gave us one year, the year 1893, and I am going to ask you about his figures in a moment; but practically the last three years have continued on a low scale—less than half the first two of the five years?—Yes, that is so.

6955. You cannot, from recollection, give any reason?—No, I cannot state any reason.

6956. Now we come to the year 1893; you give a total of 225 in your court, Sir James?—Yes.

6957. Well, Colonel Smith's total was 162; you have intimated that the difference may be due to the fact that you count postponed cases twice?—Yes. I should not think there would be all that difference though; I should not think that that difference would be created by adjournment.

6958–9. Here is Colonel Smith's statement; perhaps you would look at it. The lower one is your court. All the figures are a little lower than yours?—This is in 1893.

6960. 1893, the last column?—Obstruction, 59 as against 79; wanton driving, 48 as against 67; unattended, 15 as against 17; plying off stand, 21; wilful misdemeanor, 10; not wearing badge, 12; total 162. Yes, it may be that that number of cases have been adjourned, but I should not have thought that the number would have come to anything like that.

6961. Would you go the length of saying that there was any material inaccuracy in Colonel Smith's statement?—No, I would not.

6962. Colonel Smith then says that of your 162 cases in 1893 only 128 were convicted?—Yes.

6963. That is probably correct?—I should think that is probably correct. Of course I must say that with the reservation that in all probability a large number of those who were not convicted had to pay the costs of the summons.

6964–5. If you dismiss a man do you still make him pay the costs of the summons?—Well, so far as the fine is concerned he is dismissed; it is in order that we may not put a black mark on his licence we merely call upon him to pay the costs of the summons.

6966. But would you call that a dismissal, Sir James?—Well, it is not quite a dismissal, I should not exactly say that; technically he would be convicted.

6967. Colonel Smith has called it 128 convictions, 34 dismissals?—Well, I should think a large number of that 34 would have had to pay the costs of the summons; that is my conviction.

6968. Is there any hurry in dealing with these cases in your court, Sir James?—They are very simple as a rule, and in a considerable number of cases the defendant pleads guilty.

6969. There is no suggestion that he should plead guilty made to him, is there?—No, not to my knowledge.

6970. Not to your knowledge?—No, I do not think so for a moment. He will say, "It is quite true what "the constable has said, but"——— and then he will give some explanation of his own as to how it happened.

6971. In fact, is one reason why you have got this special street court in order that attention might be given to those small cases without blocking the more serious business of the other court?—There is another reason.

6972. But is that one, first?—Yes, it is partly that, but there is also this reason, that if the summonses had to be heard in the justice room, these poor people—costermongers, cabmen, 'bus drivers, 'bus conductors, and others might have to wait a very long time before their cases came on, but these are very simple cases, and can be heard and disposed of very quickly.

6973. Do you take them at an hour, so far as you can judge, convenient for these poor men?—We take them at the hour that we believe to be most convenient for them, that is 11 o'clock in the day, so that they may not lose more than the half day.

6974. Do you know that the system outside is to take them at 2 o'clock, in the middle of the day?—Well, would not that give them the opportunity to do half a day's work before they went to the summons court?

6975. Perhaps so, yes. Have you given us the figures for two courts, Sir James, or only one?—I have given you for one court only.

6976. That is at the Guildhall?—We never hear these cases at the Mansion House.

6977. They are all heard at the Guildhall?—They are all heard at the Guildhall; cases of drunkenness, and so on, are heard at the Mansion House.

6978. (*Chairman.*) That is what you call the justice room?—They are heard at the justice rooms, because, if a man is drunk, he is taken to the police station and then is brought up the following day.

6979. That I think we understood at first; that is rather a separate procedure, but your traffic court, if I may so call it, is held at the Guildhall?—Is held at the Guildhall only, and only twice a week.

6980. (*Mr. Lough.*) And all these small cases, street cases, that occur in the City are brought to this one particular court?—That is so.

6981. (*Mr. Hopwood.*) Do you entertain prosecutions by inspectors of the Society for the Prevention of Cruelty to Animals in the City, or are they done by the police?—We do, but those cases are heard at the justice rooms, not at the Police Summons Court.

6982. I see; but prosecutions by the inspectors of the Royal Society for the Prevention of Cruelty to Animals are sometimes instituted in the City?—Oh, yes. The chief of the cases that come before us are prosecutions by the police. Indeed, of nearly 600 cases last year, only about six were prosecutions by the society, the rest being at the suit of the police. A man is seen to drive a horse through the City in an unfit condition by a police constable, he at once pulls up and stops him, tells him to get off his box, takes his horse and cab, if it is a cab, or cart, if it is a cart, off to the green yard; then the man is brought before the magistrate. In nine cases out of ten he says, "I am not the "owner, the owner is so-and-so." Very well, then, the case is adjourned for the production of the owner.

6983. The whole point I want to make, Sir James, is this, whether the police conduct all the prosecutions for cruelty in the City, or whether they are, sometimes delegated to these inspectors?—They are conducted by the police, and the magistrates personally see the horses.

6984. I should like, Sir James, to ask you one question as a member of the public and not as a magistrate of the City. Do you think there are too many cabs?—I should think there are; that is my conviction. I think it would be a desirable thing in the interests of the cab drivers, and it would be no inconvenience to the public, if the number were reduced.

6985. And as a member of the public, have you any criticism to make of the cab service generally?—I think the character of the cabs might, in many cases, be very much improved.

6986. That might be done by a more rigorous system of inspection?—Certainly; there are scores, I should say, probably hundreds, of cabs on the streets now that ought never to be used as a public vehicle.

6987. And the same observation would apply to the examination of drivers?—Yes, I think so, too; in my own judgment no man ought to be allowed to drive whose character is not good and known to be good.

The witness withdrew.

Sir Myles Fenton called in and examined.

(Mr. Cunynghame in the chair.)

6988. (*Chairman.*) Sir Myles Fenton, you are the general manager of the South Eastern Railway Company?—Yes.

6989. How long have you been with that company in a position to be able to observe?—Fourteen years.

6990. Will you give the Committee your opinion upon the privilege system of cabs at stations?—Yes. I have prepared a statement here; perhaps the simplest plan would be for me to read this statement.

6991-2. I think that would be the most convenient plan, probably it would shorten matters?—Our experience has been rather different from that of other companies, because we have tried several systems; the privilege system, the penny system, the three-half-penny system, and a farming-out system, and we have come to the conclusion that the privilege system which we have re-adopted is the best in the interests of the public, the cab proprietors, and generally.

6993. You will explain what your system is will you not? Perhaps it will be contained in your paper?—At the present time (July 1894) the numbers of privileged cabs at the three London stations are as under:—

At Charing Cross - - -	158	cabs.
,, Cannon Street - - -	59	,,
,, London Bridge - - -	17	,,
	234	

The rent charged per cab per week for the privilege is 3*s.* = 35*l.* per week and 1,820*l.* per annum. As regards the experiment made by the company of the open system, the following particulars explain it. I may say that when this question was first raised, a deputation from the cab proprietors and the cabmen themselves waited upon Sir Edward Watkin and myself, and the following agreement was the result of several interviews which we had with them. The company entered into an agreement with the Amal- 1883. gamated Cab Drivers' Society and the principal cab proprietors of the metropolis, that from the 1st May 1883 the privilege system should be suspended, and that, by way of experiment, the company's stations (Charing Cross, Cannon Street, and London Bridge) should be thrown open upon payment to the company by each cab driver of a penny each time he entered either station to take up a fare. From the 1st May 1883 to the 31st October 1884 (18 months), this was continued at a loss to the company of 1,897*l.* 16*s.* 8*d.* by the difference between the rents formerly received and the penny toll, expenses of collection, &c. During that period there were innumerable complaints; but inasmuch as the company's officials had no authority, so to speak, it was only in extreme cases that matters were taken to the police court, and after a while it was found the staff could not be spared from the stations for the time required to support the charges against the cabmen, and the practice of prosecution had to be abandoned. The horses, cabs, and drivers were generally of an inferior class than was insisted upon under the privilege system, and it was not possible to exercise control over the men, the language they used, or the condition and cleanliness of the horses and cabs. Mr. Rowland (who represented 9th Dec. 1884. the cab-men and proprietors) was informed that with the view to a full and fair trial, the experiment had been allowed to continue over two summers, but the financial result was very unsatisfactory. Mr. Row- 9th Jan. 1885. land now proposed that in order to keep the stations open, his society should farm the tolls and pay the company the sum which the company would have received under the old arrangement. The proposal was made to 24th Feb. 1885. Mr. Rowland that his association should pay in respect of the three stations 40*l.* 19*s.* tolls and 8*l.* 15*s.* cost of staff, &c. each week. Mr. Rowland stated it was impossible 11th Mar. 1885. to pay more than the bare rent. A cab trade meeting was summoned and held at the Olympic Theatre, at 17th Mar. 1885. which it was stated that if they could arrange to keep the South Eastern Company's stations open, the other companies (excepting the London and North Western Company) would follow suit, and that after a time and at the proper moment, they could turn round and laugh at the companies and not pay them any further tolls or premiums as they had taken legal advice that the privilege system, the running of private omnibuses, &c. was illegal. In the end it was decided to offer 40*l.* to the company. The association commenced to 1st June 1885. farm the tolls, paying the company 40*l.* per week for the admission of the cabs, and appropriating the penny tolls collected from the cabmen. Owing to the deficit 16th June 1885. in the tolls (25*l.*) in the previous fortnight, the association increased the penny to three half-pence. There Oct. and Nov. was a gradual falling off in the pence received, and the 1885. association appealed for a reduction of the 40*l.* to 30*l.* This was agreed to and adopted. In consequence Nov. 1885. of the continued unsatisfactory state of affairs it was Feb. 1887. decided to revert to the privilege system, whilst on behalf of the association it was alleged "they were losing money largely every week." The privilege system was re-adopted after having been suspended for three years and 10 months. With regard to these prosecutions, I do not like to say very much about them, because many of the complaints, as Sir James Whitehead has said, were more or less of a trivial character, but there were other cases which were of a serious nature; during this period there were these cases, seven prosecutions for refusing to leave the company's premises or pay the toll; the magistrates inflicted fines varying from 5*s.* to 40*s.*; there were

Sir M. Fenton.

20 July 1894.

nine prosecutions for obstruction and assault, fines 20*s.* and two 4*l.* 10*s.*, and in one case a man got seven days' hard labour; three cases of obscene and abusive language; three instances of driving furiously in at wrong gate, and nearly running over persons; three cases of gambling with cards, one man fined 4*s.*; there was another prosecution for obstruction and abusive language for which a fine of 40*s.* was inflicted. There were a good many complaints in point of fact; the station-master at Charing Cross, where we have the largest number of cabs, used constantly to complain to me of the men in one way or other, and he had a great deal of trouble with them. Unfortunately, since that time he has died, but I have a copy of his full report here if the Committee would like to hear it read or any portion of it, but I have summarised it.

6994. It might be put in if you would hand it to the secretary, and we might look at it?—I have summarised his statements in this little paper that I have read.

6995. Is that the only paper?- That is the only paper.

6996. I should like to ask you with regard to that in the first place, have you any figures showing what is the total amount in London paid by the cabs or the cab owners for privilege?—No.

6997. The figures you have given us are apparently only the South Eastern Railway?—Simply our own.

6998. During the time that the open system was tried by you, did your officials retain in their hands and exercise the right of suspending those men who rendered themselves obnoxious by improper conduct in any way?—Well, the difficulty was that they had not sufficient control over the men; the men rather defied them.

6999. Yes, but, as a fact, could they not have met that, or did they meet it by saying "If you do not "behave better you will be a marked man, you shall "not come into this yard again?"—They could not carry that out, it was impossible to carry it out.

7000. Did they try to carry that system out?—They did the best they could under the circumstances I have no doubt, but I think they would have found it very difficult and a very invidious thing to have prevented a man from coming in; and there is such an immense number of cabmen, that it would be almost impossible to remember those men from time to time.

7001. There would have been no difficulty would there in marking the numbers down of the men who are not allowed to come in; the men would be known if they came again?—I daresay they might be in some special cases; no doubt, for instance, in this case where the man was fined 4*l.* 10*s.* he would be a marked man.

7002. In the evidence that we have received from the manager of the department at Waterloo, he says that simply the plan, the power of suspension, is an ample weapon in his opinion to deal with the difficulty of men who misbehave in stations?—I do not know exactly what the experience of the moment was with these men; but that difficulty does not now arise under the privilege system, because we know the whole of the men; we know the whole of the masters and we have such a complete control over them, that if a man does misconduct himself seriously, we say at once to the master, "We will not have that "man, you must dismiss him."

7003. Yes, but I was trying to point out to you, Sir Myles, that without adopting the privilege system, by adopting a plan of suspending those who misbehave, it might be possible, as the manager of the South-Western Company says it is, to work a station upon an open system?—Of course, he has had a larger experience of the open system than I have had; but, take Charing Cross for instance, we should have two openings—three openings in point of fact—because there are two into the courtyard itself and the main entrance of the cabs is by going down Villiers Street, and coming up the slope to the station; you have three entrances, so it would be an extremely difficult thing to prevent a man coming into one of those three entrances. Perhaps he had never come in before at one entrance. You see if they all came in at one place it would be a different thing; the man no doubt could recognise them, but here you have three separate entrances.

7004. At all events during the time of the suspension of the privileged system, your inspectors, as a fact, received no specific instructions to suspend men who were thought to be troublesome or misbehaved themselves?—The difficulty was to deal with the men themselves, because they positively defied the station-master and the inspectors. There are many cases here where the men refused to leave the place; they used to come in there, block up the fore-court where there was only room for a dozen cabs, and positively refuse to go away. They seemed to think that having paid their pennies they were privileged to remain there as long as they chose.

7005. But as a fact the station inspectors do not seem to have resorted to that weapon, or asked you to give them leave to do so. of suspending offenders?—I do not see how they could have suspended them.

7006. They might have threatened them that they never would be allowed in again?—I have no doubt they did threaten them and did everything they possibly could to induce them to behave properly and correctly, but I do not think they could absolutely have the power of suspension.

7007. But the greater includes the less; if you have the power to exclude any cabmen that you please from your station, you have the power to say to a man "If "you misbehave I shall never let you enter again"?—Yes, the difficulty is to remember the man and detect him, and especially if you have more than one mode of access to your station; at any rate the difficulty would be infinitely greater than it is now. There is no difficulty whatever now, any man who does misconduct himself is dealt with, and can be punished through his employer, but if you had the open system I am bound to say I think it would be extremely difficult to remember all the men who ply for hire to and from the station.

7008. Do you not think that it might be possible to secure an equally beneficial system by attaching the privilege not to the cab, but to the driver of that cab?—Well, our practice is this, to employ as many men who have single cabs or two cabs as possible. We find that these men are the most reliable, and that they keep their cabs in very good condition, and we have fostered and encouraged the small men and not the large cab proprietors. I have got a list here of the privileged cab proprietors at Charing Cross. There is one large cab proprietor who has 45 cabs, one with 10, one with 14, one with 12, three with seven, then one with six, one with four, several threes, half-a-dozen, two, and 26 proprietors of single cabs.

7009. Does not that represent nearly the general average of holding of cabs throughout the metropolis; perhaps you are not able to answer that question?—I have no means.

7010–11. It has been suggested that it might be better to give the privilege of entering the station not to the cab but to the driver, to be taken away, of course, in case he misbehaves himself?—Where you have to deal with the one master it is rather immaterial who the man is, because you get the man punished through the master at once. Now here, for instance, in the case of Mr. Guilliford, we deal with him alone, whereas we should have to deal otherwise with 45, all his men, who are constantly changing.

7012. If you think it is a good thing that the cab privilege should be given to men who have a very small number of cabs, that objection perhaps would rather become weaker, would it not?—Naturally it would in those cases where you have got single cabs it goes with the driver and the owner, and we encourage that system as far as we can, and at the present moment we have four vacancies which we expect will shortly be filled up; but where you are dealing with larger numbers, for instance, in the case of 45, I am bound to say I think it infinitely better, so far as the control of the men is concerned, to deal direct through the owner rather than with the single driver.

7013. Would you give us very shortly—I do not think you have done it in your paper, Sir Myles Fenton—the advantages which you think the privilege system gives?—Well, in the first place, it ensures a supply of cabs at all times. Before we had the privilege system, we occasionally were short of cabs, and especially for morning mails. We had very considerable difficulty in obtaining from the drivers during the open system the particulars of their destination; they sometimes gave a false destination; they sometimes would not give any answer at all. We required the destination of the man, in order to trace left luggage, or in case of complaint, and that was complained of very much by the then station-master.

7014. I suppose that you might, in some cases, have responsibility yourselves for luggage put by your porters in the wrong cab?—Yes, and left luggage; luggage left in cabs very often. The second advantage is that we have complete control over the cabs themselves, as to their cleanliness and their fitness for the public traffic.

7015. Are those all the advantages?—Well, I think that all these were secured; men who are more amenable to discipline, who are better under control, and who can be directed by the station company's police who are on duty in the courtyards of the station.

7016. Have you any other point of advantage?—Well, I can only say this, that whilst on the one hand we had from the public innumerable complaints (I have a long list of them here, which I need not trouble the Committee with at the present moment), we now have no complaints from the public; none with regard to the cabs themselves, and altogether the whole thing works as smoothly as it possibly can. I may say when we fall short of cabs at Charing Cross, for instance, the outside cabs are allowed to follow in; they are very pleased to follow in, and we charge them nothing for the privilege. Of course, under the present system, we can insist on these proprietors providing cabs at the morning mails and at other times when there is any pressure of traffic.

7017. One of your letters led me to the conclusion that you think in the metropolis generally there is a number of cabs that ought not to be licensed and allowed to run, as not being good enough in quality?—That is so.

7018. You would then be in favour of limiting possibly or, at least, rejecting a great many bad cabs that exist already?—Well, I think so. I think there are some that are in a dangerous condition. A rather unusual accident, which might have been serious, occurred the other day. My wife was coming to Charing Cross Hotel in a four-wheeled cab with three or four friends. She is not a very stout person or very heavy, but, in rising to get out of the cab, the whole floor of the cab came out. If it had been late, and she had stood up to get her purse while the cab was going, there is no question at all about it, it would have been a serious accident.

7019. (*Mr. Hopwood.*) Was that a privileged cab, Sir Myles?—No, an outside cab; and there is no question or doubt that altogether the cabs require closer supervision.

7020. (*Chairman.*) And you think that although such a system led to the diminution of cabs it would be a good thing so to reduce them, and possibly a good thing also to have a smaller number?—Well, I think from general observation—it is only a matter of general observation—there is no doubt there are too many cabs in the street. I think it would be better if it were possible by any means to reduce the number; it would be better for the men, very much, who are left.

7021. What kinds of omnibuses have you at your station?—We have a few one-horse omnibuses, and we have one two-horse omnibus which is only used on special occasions for specially large parties, or for persons who have an enormous amount of luggage or for long distances.

7022. Are they licensed or non-licensed?—They are all non-licensed.

7023–4. Therefore, they can only be used by persons who specially order them?—Specially order them.

7025. Like, I suppose, a fly from a livery stable?—Yes, quite so; they write to the station master at Charing Cross or call at the office—we have an omnibus office at Charing Cross to receive orders; I have got the conditions here* if you would like me to put them in.

7026. Perhaps they might be put in?—There are only six in use at a time.

7027. You find that enough at present for your requirements?—Well, at a busy time when families are going down to the seaside, and that sort of thing, we find they are insufficient, but in winter they are quite enough for our purposes.

7028. Then when you want some more omnibuses for families going to the seaside, do you tell some livery stable keeper to provide them?—No; we simply tell them they are all engaged.

7029. These are your own property?—These are our own property.

7030. And kept in your own yard?—And kept in our own yard. I may say we did not initiate this omnibus system at all; we fell into it.

7031. You fell into it, because it was invented by other companies?—Yes. We do not propose to extend the system at present, at all events.

7032. In your opinion, I presume, it would be illegal for one of these omnibuses, having failed to find the person who ordered it, to stand there to take up anybody?—Certainly.

7033. That would be a plying for hire, and would be illegal?—Certainly.

7034. It is said that that is done to a certain extent—I am not speaking of your particular station; no particular station has been named?—No.

7035. What is your experience?—I can only say I have not heard of it so far as our men are concerned.

7036. You do not know of it?—I do not know of it; it has not been brought to my knowledge if it is so.

7037. You have only six drivers in your employment?—Well, we have more drivers, because we have to work long hours.

7038. How many drivers have you to these six omnibuses?—I should think we have eight or nine drivers.

7039. They have not licences?—No.

7040. It is said they come from the country, is that so?—Well, we get the best men we can; I suppose, as a rule, they are from the country.

7041. You take care that they know something of driving, I suppose?—Oh, yes.

7042. What sort of test do you impose upon the men that you commit the driving of your omnibuses to?—Well, in the first place they are approved by our horse inspector as being men who are competent to take charge of horses. That is the first thing.

7043. How does he proceed to find out their qualifications?—Oh, ascertaining their experience, and all that sort of thing, and their previous characters, and if they have been accustomed to driving horses, and so forth.

7044. And then, how do you proceed to find out whether they know how to drive at all?—Simply from the characters that they bring.

7045. From the characters?—From the characters that they bring; and then very often we have, at least, we cannot say very often, because there are very few of them altogether; but we have, we will say, a boy who has been driving a van, a goods van, or a parcels van who is promoted to one of these omnibuses.

7046. Those boys, perhaps, will look forward to that as a promotion?—As a step in advance.

7047. And then, in that way, you have had experience of their powers of driving?—And I may say we have never had a single complaint against any one of these men.

[Mr. Russell resumed the chair.]

7048. (*Mr. Lough.*) I want to take you through one or two of the points of your paper, if I might, to look at it from the other standpoint?—Certainly.

7049. You say it answers the public, your system?—Yes.

7050. Do you mean the general public of the City, or the travelling public as you know them?—I mean the railway travelling public.

7051. You mean the customers of the railway?—The customers of the railway.

7052. With regard to this statement that you put in, the first, I want to ask you whether you think the best reason you give for abandoning the free system is that it caused a loss to the company?—Oh, no. I say this emphatically, that if we had discovered that the other system was as good in every respect as that of the privileged cab system, the money consideration would not have weighed with us at all. Sir Edward Watkin and I were both most anxious in the interests of the men and the interests of the trade generally to assist

* *See* Appendix IV. 3.

Sir M. Fenton.
20 July 1894.

them and help them, and we have given them, as you see, a very long trial; and it was only after we found that in our special case it was impracticable, that we, with very great reluctance indeed, abandoned it.

7053. I am sure you have stated the thing in the written paper that is put in in the most accurate way, in the fairest way, you could?—In the fairest way I could. I have not gone to extremes in it at all; because I might have given a great many cases, here we have got a long list of cases, against the men; but I did not wish to say anything against the men at all. I have a great regard for cabmen as a class, and I sympathise with them extremely, because I think their duties are very arduous, and I think their pay is in many cases insufficient; and I am bound to say, so far as I am concerned, I never had to complain of a cabman, perhaps that arises from the fact that I pay him a little more than his fare in all cases. As a class I sympathise with them exceedingly; I would only be too glad to do anything to assist in promoting their welfare.

7054. I want to keep, if we may for a moment, Sir Myles, to the money point, because, in the statement, after describing the free system, you then say, it was found after 18 months to work at a loss to the company of 1,897*l.*?—Yes.

7055. That is your first objection?—Yes.

7056. Then it is not put first because it is the chief objection, but only casually?—It was one of the objections with us. It was not the chief objection. If we had found, as I said before, that the open system was as convenient for our passengers as the other we should have continued it most certainly.

7057. I will come to other points of the system in a moment, Sir Myles, because the men have a strong opinion that it is the money point of view that is taken, and we want to get that out. You told us also that you raised the price from a penny to three half-pence?—Yes.

7058. If it was not a consideration of the price why did that take place?—It was at their suggestion that we did that.

7059. Yes; but did you point out to them that it was not paying before you raised it?—I told them, for one thing, that it was not paying.

7060. That lends some support to the supposition that your company attaches a great deal of importance to the financial part?—Well, I am bound to say this, although I have stated there was a considerable loss, and say that still, that was only one of the things that weighed with us; it was not really the primary thing; the chief thing was the extreme difficulty of dealing with the whole question; and the masters themselves said that if they had the regulation of it in their own hands that they thought they would be able to work the whole thing better. They tried first with the penny; they then tried with three halfpence; they then tried paying us so much a week.

7061. (*Mr. Cunynghame.*) Did the men raise it from a penny to three halfpence?—They did.

7062. (*Mr. Lough.*) Do you mean to say, Sir Myles, that the men voluntarily offered to raise it 50 per cent.?—No, they did not; they wanted to make up the amount we wanted.

7063. You pressed them for a certain amount?—We pressed them for a certain amount.

7064–5. Did not that show to them the financial point was then and is still the chief point with your company?—No, I am bound to say it was not, because when we found they were in difficulties we again reduced it to them.

7066. I will come to that. After the 18 months you pointed out that the pennies did not amount to what you could get by the privileged system?—Quite right.

7067. And you asked Mr. Rowland to pay 40*l.* 19*s.* a week; and he agreed to pay 40*l.*?—Yes.

7068. Did you not make that assertion because you felt that it was best to get as much as you could by a privileged system?—Naturally, we were in favour of a fair sum; if we could get that sum out of a privileged system we did not see why we should throw it open.

7069. But you still make and made, according to that, the railway company's revenue the chief point, or one of the points?—Of course it is a point. Unquestionably we should not throw away 1,750*l.* a year. But I am bound to say this, that even if we could see our way, even at a small loss to ourselves, to improve the general condition of things, we should not make the money consideration stand entirely in the way.

7070. But still, generally speaking, all through this statement the difficulty was the financial one with the men?—The difficulty was in their being unable to realise the amount that we wanted them to realise.

7071. Exactly. Then you keep to the privilege system mainly because it enables you to get a revenue?—No. I beg to disclaim that altogether. I say we stick to the privilege system because we find in our experience it is the most convenient for the travelling public.

7072. Incidentally it brings in a revenue as well?—Oh, yes; I do not deny that, and they are very pleased to pay it also, I may say.

7073. Again, in the advantages that you estimate, you think only of your customers?—Yes.

7074. You are not thinking of the advantages to the City?—No.

7075. Nor of the bulk of the cab drivers?—No.

7075*a*. You do not care about that at all?—No, the first thing I have to do as the general manager of the South-Eastern Railway is to consult the convenience of the enormous passenger traffic that we have, and I find that is the best means of doing it, that is all.

7076. When you were stating the advantages of it, you said it provides a supply of cabs at all times?—Yes.

7077. Does it?—Yes.

7078. But then a few moments afterwards you said, "when we fall short"?—I mean to say at all times when we want them for special occasions; for instance, we require that they shall have certain cabs in attendance for the morning mail.

7079. But sometimes it does not provide the necessary cabs? — Oh, no. I do not say it does at all times. Supposing we had 40 cabs waiting, or 50 cabs waiting, at Charing Cross to take the passengers, and we wanted 70 to accommodate the particular traffic of the moment, we get 20 cabs from the outside. As I said before, there is a cabstand outside on the Embankment at Charing Cross, and when our supply of cabs is exhausted these cabs come in, and they are only too pleased to come in, and we do not charge them anything for the privilege.

7080. Then, as a matter of fact, it does not provide you with a sufficient number of cabs at all times?—No, not in that sense, it does not.

7081. Your system, with regard to men bringing up passengers; you allow any cab driver to bring up a passenger, of course?—Yes.

7082. And then you turn him out of the yard?—Yes.

7083. Do you let him take a fare?—No, it would be very unfair to let him take a fare.

7084. You turn him out immediately?—If he is a privileged man he would be turned out if the rank was full.

7085. I only want to hear the practice; he is turned out?—Of course; and he must be; and in the interests of the men themselves it is the only reasonable and fair way. They turn out, and then the man who has been longest on the rank comes up. You must have that system whether you have the yard open or privileged.

7086. Do you not think that sometimes, when the horse has come a long distance, it may be rather cruel to the horse, turning him out immediately?—Well, you cannot individualise; you cannot take each case separately.

7087. I am taking the general rule?—You cannot inquire how long a man has had his horse out, whether he is tired, or what circumstances there are. You must take the men on a particular rule; unless you carry out that rule you will have constant complaints from the men themselves. It would be very unjust to the men if you did not carry out the principle of making all the men who discharge go out at the one exit.

7088. Do you not think, when a horse comes a long journey with passengers and luggage, it may be a little cruel to turn it immediately out of the yard in-

stead of letting it rest a little?—I have never heard a complaint arise with regard to that. I do not think our inspectors would be very cruel, if a man said, "My horse is very tired and very exhausted, if you will allow him to remain here," I am sure he would allow him to do it.

7089. Turning him out at all events obliges the empty cab to go back along the streets probably to where he comes from?—I do not know where he comes from. If he is one of our privileged cabs he goes round to Villiers Street, and takes the first turn with the others.

7090. I am not speaking of those; any other empty cab is obliged to go away from your station?—Yes.

7091. You do not consider, in your system, whether a world of empty cabs is a nuisance in the metropolis or not?—That is not a matter for me.

7092. You do not enter into that?—No. I think it would be rather presumptuous for me to do so.

7093. Then, would you think, on the whole, the working of this system leads to congestion of traffic on those streets owing to these empty cabs being turned out?—I think you would have the same congestion under any circumstances, because you would have a certain number of cabs in the yard waiting, whether they are privileged cabs or not privileged cabs. All the other cabs would be in the streets.

7094. I want to ask you a question about the London Bridge Station?—Yes.

7095. Is the yard in front of your station your property?—It is.

7096. Could you tell me where it commences?—It commences under the bridge leading up to the station.

7097. And then from that right up to the station?—Right up to the station.

7098. Have the police of the metropolis control in the yard or not?—No, we have our own police.

7099. There are a number of shops up there?—There are.

7100. And yet it is not a public street?—Where the shops are is the property of the Brighton Company. Mr. Sarle will, no doubt, be able to tell you all about that. Ours is on the left-hand side, and I do not think we have got a single shop there now.

7101. Then all the yard in front is private property—Is private property, yes.

7102. Do you know anything about the practice in other great cities, Sir Myles?—No, I do not.

7103. Well, I will take certain cities one by one, just asking you a question, if I may. There is a very short note here about the Paris system. I will read it to you. It says: "The privilege of entry is not at the "disposal of the company. One or more standings "appointed by the police are attached to each station, "and to stand on the rank in the railway yards is the "right of the first comer, provided that he conforms "to the police regulations and has previously taken "his place on the cab stand from which the station "cabs are drawn. At the same time the companies "can obtain privileged stands for the cabs which they "themselves put at the service of travellers, pro-"vided that these cabs await the arrival of every "train." That is the Paris system?—Yes.

7104. Do you think there is anything unfair in adopting a different system in London altogether?—Of course you have to take the different circumstances into consideration; you have to consider the size of their station yards and all other matters of detail. I can only say that I should prefer our system at our stations.

7105. (*Chairman.*) Might I put this point to you? I rather think I gather from your last answer but two to Mr. Lough, that you do not feel yourself to be in a position to give any definite judgment on the system practised in foreign cities?—No.

7106. Or on our system as compared with other systems?—No, I have not considered it at all. I thought I was only asked to give information as to our own practice.

7107. I only asked that with regard to shortening your evidence?—Except from general observation I have not considered the general question of the cab service in London.

7108. (*Mr. Lough.*) You put down as a strong advantage in the system that you got a better class of cabs?—Yes.

7109. Do you not think that if the authorities inspected the cabs in the metropolis before they issued the plates, which cost two guineas—did their duty—all cabs would be quite good enough for the purpose of railways?—I think it is entirely a question of inspection.

7110. Therefore, if the inspection was properly carried out, railways would be relieved from that worry?—So far as that point is concerned they would have no complaint to make.

7111. (*Mr. Whitmore.*) Were you thinking also of the driver as well as of the cab when you said that?—Well, with regard to the drivers, as I said before, we are in this position, that where we have the privileged cab system, and a driver does not conduct himself properly, we appeal to the master and not to the men, and deal with the master.

7112. (*Mr. Lough.*) Could you not easily get at any driver by putting down his number?—Of course, we can trace any driver by getting his number, but in this case, where we have got 158 privileged cabs, we have 158 drivers. But in the other case we should have the drivers of the whole metropolis.

7113. Have you not got a good many other drivers? You have admitted that the privileged system does not always provide you with cabs; in that case you have to supervise the ordinary cab that comes in?—Yes, but that is only a small addition to the ordinary traffic. We should prefer to have as many privileged cabs as were required by the public, but we find that it is only when there is pressure of traffic that you require additional cabs.

7114. I will put Mr. Whitmore's question then again. Do you not think that if the authorities exercised due supervision in the granting of licences to respectable and industrious men only, you might be relieved of some of the responsibility with regard to the supervision of drivers?—Well, that is a very large question. Of course, if you are extremely careful about the characters of the men, and there is a close inspection, and the proceedings are very carefully scrutinised by the police, I think you might make a considerable improvement. But as it is at present, the evidence which I have got here goes to show that there are a good many men who certainly, I think, are scarcely fit for the position of cab driver.

7115. When you said originally, and in your paper, that the free system, or the system of letting them in by payment of a penny did not pay, what you meant was—I will put it as a question—that it did not pay as well as the other system?—Yes.

7116. You did not mean that it did not pay the cost of the police necessary to admit them?—Well, I could give you the details of the loss. The extra wages of police, and so on, and collector's cost together was 711*l.* in the period. The amount of tolls collected was 1,488*l.* 6*s.* 4*d.*; the amount which would have been paid under the old system was 2,027*l.* 12*s.*, leaving a deficiency at Charing Cross Station of 1,250*l.* 12*s.* 3*d.* That was for 18 months, from the 1st May 1883, to the 31st October 1884. That is the loss at Charing Cross for that period.

7117. Yes; but my point, Sir Myles, was this: You do not say it did not pay you the cost of working the free system; you only said it was a loss because you could get more some way else?—We got more by the privileged system.

7118. (*Mr. Whitmore.*) But that was a positive loss?—It was an absolute positive loss. The total loss at the three stations for the eighteen months was, as I have stated in the paper, including the wages of the additional police and collectors required, 1,897*l.* 16*s.* 8*d.* in the eighteen months—100*l.* a month.

7119. (*Mr. Lough.*) For additional inspectors?—Additional inspectors and collectors. At Charing Cross, of course, we required one at each gate, and double shifts.

7120–1. How did the three men at the gates come to 100*l.* a month, do you remember?—I have not got the details of the wages. I have only got the wage lists here. And the collector who collects the pennies, of course,

7122. Would not the man at the gate collect the pence?—No; we had a special collector.

Sir M. Fenton.
20 July 1894.

7123. I only want to get this point, and then will leave it, because it is rather a detail. When you say a loss you mean merely that you could make more money by another system?—I mean the difference between the amount we are paid under the privileged system, and the amount we are paid under the open system.

7124. Are you aware that the proprietors who give you a certain sum for the privilege charge a larger price to the drivers—or did until the Home Secretary's Award—for the use of the cab?—I did not know it until I saw it in the papers.

7125. But you did not care about that? It was a mere question of revenue with you?—Well, I do not know that I have to interfere in the questions between masters and men. That is beyond my province.

7126. I call your attention to an announcement here—"Charing Cross from St. Pancras, omnibuses carry passengers across the City free"?—Do you mean Charing Cross and St. Pancras?—Those are the omnibuses of the Midland Company, we have nothing to do with them.

7127. I suppose some charge for that is included in the price of the ticket?—And the London and North Western have some omnibuses also.

7128. (*Mr. Hopwood.*) I do not want to weary you with questions, but I will ask you this. Do you differentiate your case at Charing Cross from that at Victoria, or any other railway company, upon general points of policy?—No. I simply speak of our own experience at our own stations. Mr. Sarle is here to speak with regard to Victoria. You see the circumstances of each place differ so very materially; all the different stations differ so materially.

7129. As to the general policy of the privileged system?—No, not as a general principle. I should think the general principle applies to other places as it does to us, and that is that the privileged system is more convenient for the traffic of the railway.

7130. My questions would be upon general policy only, not upon detail, and so, with your concurrence, I will reserve them for Mr. Sarle?—Yes, I should think so; and at the discussions we have had at general manager's meetings, we have been unanimous in that view—the only exception in the least being that of the South-Western—and it appears that Mr. Scotter has privileged cabs, which I did not know until I read his evidence yesterday.

7131. (*Mr. Cunynghame.*) I should like to know whether, as a fact, when the privileged system was suspended, more property was lost than before when it was not suspended?—I could not say.

7132. You have no return to show that?—No; I could not say that.

The witness withdrew.

Mr. Allen Sarle called in and examined.

Mr. A. Sarle

7133. (*Chairman.*—I will ask you if you will give the Committee any information with regard to the working of the privileged system at Victoria Station?—At the Victoria Station?

7134. I will say London Bridge too—all the stations with which you are officially connected?—If you like I will take Victoria Station first.

7135. If you please?—There are 60 owners of privileged cabs there, owning 136 cabs; they vary from 1 to 11, about 8, or 9, or 10 some of the owners own; and in one case there the owner owns 30 cabs. But on the average at Victoria the owners own two and a quarter cabs each. A very large number are men who drive their own cabs. The charge we make for the privilege, I believe, is the same as is adopted by all other companies except the South Western, that is, 3*s.* a cab a week. Each cab bears a company's number, and they are all approved by the station master, as to the condition of the cabs, the respectable appearance of the drivers, and so on.

7136. Have you any other points that occur to you to mention with respect to Victoria?—No, I do not think so.

7137. Have you ever had complaints about the overcrowding immediately outside the station of cabs waiting to come in and supply the lack of privileged cabs?—No, not to my knowledge.

7138. It has been brought before us—I forget by whom, I rather think by a colleague who is absent to-day, Mr. Burns—that complaints have been made of obstruction caused outside the station by non-privileged cabs waiting for passengers who cannot get cabs inside?—No. Occasionally when the traffic is very heavy I have no doubt the incoming cabs have to wait a short time outside before they can get in and discharge their passengers.

7139. You have no official reason to say that the accumulation of these outside cabs approaches anything like a public nuisance by way of a block?—No. But I suppose the complaints there would be made to the police, not to the railway company.

7140. They would be, no doubt. I thought, perhaps, you might have some echo of them?—No. The only thing I can recollect is, the police established a stand immediately outside our gates at Victoria. It became an intolerable nuisance. In a year or 18 months, after several appeals to the metropolitan police, that stand was removed.

7141. (*Mr. Whitmore.*) Where was that?—Immediately outside the entrance gates at Victoria Station, from the lamp post up to Buckingham Palace Road.

7142. (*Chairman.*) It became a nuisance by way of obstruction?—Yes.

7143. We have heard it said that the Victoria cabs are worse than cabs in other stations, does that tally with your own experience of them?—Certainly not.

7144. You think they are quite up to the standard?—As far as my experience goes, and I very often use them myself.

7145. Now, about London Bridge?—At London Bridge there are 108 privileged cabs, owned by 44 masters, and there the proportion is pretty much the same as at Victoria. They average about two and a half cabs per owner or master. There is a very large proportion of men who drive their own cabs. They may, in one or two cases, own two or three cabs besides. There the charge is the same, 3*s.* a cab per week, and they are kept under the close supervision of the station superintendent, and the inspector who is appointed for the purpose.

7146. Does anything else arise with respect to London Bridge?—No. I think the same remarks apply both to Victoria and London Bridge. For that privilege we render certain services. We supply the men with water, and we have inspectors appointed to take down the numbers of the cabs leaving the station—their destination and so on—in the event of loss of luggage or incivility or any charge, that we can get at the man immediately.

7147. And then with respect to your general experience at the two stations, I would ask you, do you think that the privileged system serves the public convenience?—I have not the least doubt about it myself.

7148. You think that to abolish the privileged system would cause public inconvenience?—It would create so much confusion both at Victoria and London Bridge, where our fore-courts are not sufficient now for the purpose, if you allowed the cabs to enter indiscriminately that it would be utterly impossible for us to manage the traffic.

7149. You think that the inconvenience which you anticipate in the contemplated case would arise from the structural conditions of the stations?—Yes, which cannot be improved.

7150. But—merely from an abstract point of view—supposing a station were physically adapted to the open system, as in one case in London, would you entertain any preference for the privileged system over the open system?—Yes, I think it gives better control over the cab drivers.

7151. So that even if you were in charge of a station where the access was easy and the open system physically workable you would still, as at present advised, prefer the privileged system as giving greater control and being more orderly?—Undoubtedly; but I think

all companies in London do make a charge for the privilege; all railway companies do as far as I know.

7152. You know the system at Waterloo is different; they have a certain number of privileged cabs, but the bulk of them are non-privileged; they only pay a toll on entering, and it is open to anybody to come in?—That is so, some of the cabs.

7153. They have a little privileged lot on the other side?—Well, they have convenience at Waterloo which we have not.

7154. That is what I say, but even in the case of it being physically possible, you think from the point of view of control, order, discipline, the privileged system is preferable to the non-privileged?—Yes, I have no doubt about it.

7155. (*Mr. Cunynghame.*) Do you find that the class of men who drive their own cabs are a desirable class, a respectable and a good class, or not?—I think they are rather the better of the two, that is, men driving their own cabs.

7156. Well, now, with regard to the money charge; you charge an amount of about 7*l.* 12*s.* a year, do you not, to each cab?—Three shillings a week; yes, that is 7*l.* 12*s.*

7157. That covers, as I understand, the inspection and care and regulation of these cabs at the station?—Yes.

7158. Outside the station, I suppose, the cabs are under the care of the metropolitan police?—Outside the fore-court of the station.

7159. Outside the fore-court of the station—over the whole metropolis?—No doubt, yes.

7160. But the sum that they manage to do the work of inspecting the cab upon is 2*l.* a cab, is it not, per annum, or thereabouts?—I do not know; I have no information about that.

7161. Are you not aware that the sum charged for the licence of a cab is 2*l.* a year, and for the driver 5*s.*; and out of that 2*l.* 5*s.* the whole of the expenses of inspecting the cabs of the metropolis are paid, leaving a surplus?—No; I am not aware, but I will take it from you that it is so. But we do something beyond that.

7162. I should like to know what you do that represents the difference between 2*l.* 5*s.* and 7*l.* 12*s.*?—As I have already tried to explain, we supply the cabs with water; we employ men to keep the cab ranks clean, and we have inspectors to take the names and addresses, or rather the addresses of passengers that go out with luggage, and so on; and that, I do not think, the metropolitan police do.

7163. No, they do not keep the cab stands clean; that is done by another set of people. And they do not put the water troughs. Still, that sum of 5*l.* 7*s.* extra seems large; does it not to you?—I do not think so. I do not think we get a profit. I will tell you what our receipts are for the privileged cabs at Victoria; and London Bridge they are practically the same.

7164. Perhaps you would give us them kindly?—It is about 1,100*l.* at London Bridge, and 1,050*l.* at Victoria; so they are practically the same.

7165. Would you give us the corresponding figures of what you estimate to be the expenditure?—I have not gone into that; but there would be very little or nothing left if I went into it; there might be a slight profit—very little.

7166. Of course you would have to have, in any case, if there were no privileged system, inspectors there of some sort to keep order generally in the outside of your station and in your yard?—No doubt we should. But we should not have the same control over the men that we have under the privileged system.

7167. No; but you would have the expense of the inspectors even though there were no privileged system?—I do not think we should go to the same expense.

7168. Is the yard outside London Bridge yours?—Immediately in front of our station it is—the fore-court of our station immediately in front of our booking office belongs to the Brighton Company, but the approach from London Bridge does not belong to us.

7169. There are public shops up there, are there not?—Not belonging to us; the pavement does not belong to us.

7170. Perhaps you could tell us how the railway people reconcile the having a private yard, and having a sort of public street and shops along it?—We have no shops—nothing of the kind.

7171. The London and Brighton have?—They have not indeed, neither at Victoria nor London Bridge. It is private property; I do not recollect the name of the owner for the moment.

7172. I remember, for instance, one shop—there is an aerated bread shop, a fruit shop, and a Turkish bath?—We have nothing to do with them. The pavement in front of the shops, and I think 20 feet of the wood pavement beyond, belongs to another person altogether. We have no control over that; we are bound to keep that space clear.

7173. I only wanted to ask, is the yard in front of your station claimed to be the private property of the railway company?—Yes, immediately in front; but the shops and their frontage do not belong to the railway company.

7174. When cabs drive up with passengers to London Bridge Station, do you allow them to stop there to get a fare?—We do not object to him taking a fare; we do not allow him to stop—he would block up the station.

7175. Would you allow him to stop in the yard?—If only to take up a fare we do not object.

7176. But, practically, you do keep the yard clear of all but privileged cabs?—That is so.

7177. I asked this question of Sir Myles Fenton, but I might ask it and get rid of it—you said it would be a public inconvenience if privilege were abolished; you mean to the railway customers, not to the general public?—That is so, to the railway customers.

7178. You do not take into account the public of the City outside the railways?—I do not see how it affects them.

7178A. You are entirely confining yourself to the customers of the railway?—Entirely to the railway customers.

7179. You said the great objection to the abolition of privilege at Victoria is the structure of the station?—Yes.

7180. I cannot understand why that should be so; would you mind explaining the structure?—I was comparing it with Waterloo at the moment, where they have a very much larger space; all their cabs can come in at the back of the station, and there is a certain control over them there which we have not. The incoming and outgoing cabs at Victoria come in and go out at the same place.

7181. That makes it more easy to control them?—Oh, no, indeed; in case of a block there it would take a great number of minutes to clear the place again.

7182. How would a block arise?—If we saw a cab coming in there—a non-privileged cab, with an unsatisfactory man, he having been drinking, or something of that kind, as sometimes happens, and we tried to keep him out, we might have some difficulty.

7183. That might happen in the privileged system, a man being drunk?—He would sacrifice his privilege; that is the control we have over him.

7184. But you would have the same control over any man who comes up drunk—take his number?—We should not be able to remove him so easily. These men are in fear of losing their privilege; they attach so much importance to it.

7185. A man would also be in terror of losing his licence?—Not to the same extent, I think.

7186. Except that, you do not see any difficulty in working the open system?—Except that I say I think it is very apt to lead to confusion at times, and very serious confusion.

7187. I wanted to put it this way: supposing your yard holds 40 cabs or 50 cabs, you could as easily let in 40 non-privileged cabs, and then put up a board, "Yard full," if you had a man at the gate, as you could work the privileged system. You cannot have more than the yard would hold?—I think that would lead to very considerable obstruction in the streets.

7188. (*Mr. Whitmore.*) You mean outside the yard?—Lead to very considerable obstruction in the streets. They would have to drive up to the station before they could see this board, and you would have the street blocked.

Mr. A. Sarle.
20 July 1894.

7189. (*Mr. Lough.*) You heard what I asked Sir Myles about the financial matter. Do you put the profit to the railway company in the foreground of the arrangement or not?—No, I do not. I forget what Sir Myles said; but I do not. We try to cover what our expenses are in the matter.

7190. And on the ground of revenue, if a better system could be suggested, you would not object to adopt it?—No; I think it is too small a sum for a large company to think much about.

7191. (*Mr. Bayley.*) You like the privilege system, I suppose, because it gives you contol over the men; it ensures you getting, perhaps, a better appointed cab than you otherwise would get; and enables you to trace luggage robberies and follow up better than you otherwise would do; is not that it?—That is so. I think those were the reasons I gave.

7192. Then suppoing you should be forced by a strike of cabmen, for instance, to give up the present system, you would consider yourselves at liberty to employ your own cabs?—The company to provide cabs?

7193. To provide your own cabs?—We should be obliged to do something of the kind, of course, for the convenience of the public; but I may say that during the course of the late strike we had no difficulty in supplying cabs for the public in a sufficient number.

7194. And you would not necessarily feel bound to employ cabmen to drive those cabs, I suppose? You would employ your own staff or other servants?—That we should do as a matter of course, if we had our own cabs.

7195. (*Mr. Whitmore.*) Have you thought at all of the system of attaching the privilege to the driver and not to the owner of the cab?—No; I have not thought of it. But I think it is much better as it is; and especially as we try as far as we possibly can to get men who are owning single cabs. We find it more satisfactory; and, as I said before, in answer to Mr. Lough, I think we get a better class of men. The small men are better than the large men; the large man has to employ other men and he has not the same control over them that we might have.

7196. How do you choose out the owners for the privilege?—Well, they apply.

7197. And what are you governed by in the selection of them?—Well, the appearance of the cab and the horse, and the appearance of the man himself. It is left to the station superintendent to do that.

7198. But generally speaking he would try to get a superior class of cab and respectable looking driver?—Yes; there is no question of it.

7199. And you think you are successful in arriving at that result?—Yes, to the best of my knowledge. I have no complaints at all. We do get complaints about all kinds of things in connexion with railway matters; but I really do not recollect a single complaint about the condition of the cabs. The name of the company is on the cab; and the public know exactly to whom to apply.

7200. (*Mr. Hopwood.*) Would the complaints be made to you, Mr. Sarle?—Undoubtedly.

7201. That is, in the eye of the public the railway company is the owner of the cab?—Yes; the company's name is on the cab, with the company's number.

7202. Very well. Then have you been advised, or have you considered, whether in the event of the privileged system being done away with, it would be open to the company to themselves obtain licences for cabs and carry on the cab business?—I think they would be bound to do something of the kind for the convenience of the public.

7203. Upon the whole question of privileged cabs, I take it, you think of the public travelling by rail, and of the public alone?—That is so.

7204. And if the privileged system were done away with, and nothing put in its place which would satisfy the public, you would have to embark in the cab business yourselves?—Yes. I do not know whether we should have the legal power; that would be a matter for after consideration, but we should have to do something of the kind undoubtedly.

7205. I will not press you upon that point, it is a delicate and difficult matter. But, upon the assumption that in the future there is a better inspection of cabs, and a better inspection of drivers, you would be content, as I understand it, to throw open your yards to the non-privileged cabs, provided that proper regulations were duly enforced?—Well, I should think it would be very inadvisable to do so.

7206. Is that merely on the ground of want of space?—No, public convenience. We should be able to do it to some extent, but not so readily in the case of lost luggage. We have frequent complaints now of luggage being lost. In the hurry of the moment, a train coming in with a great number of passengers, luggage may be wrongly loaded on to the cab; we get those complaints, I will not say daily, but two or three in the course of the week at busy times.

7207. What powers have you to recover that luggage expeditiously that do not belong to the police?—We go to the men direct; they are plying at our stations; we know who they are; they are there every day; and any one of them would bring a thing back to the station immediately instead of taking it to a police station three or four miles away.

7208. But is it not the fact that under the system at Waterloo it is open to the inspector to take the number and address of the cab, and that he does so successfully? No, I do not think he does; in my experience he does not. I know I have left Waterloo Station with luggage, but the destination of the cab has not been taken.

7209. There has been a refusal to give it?—No, it is not asked. There is no person, so far as I know, to look after it.

7210. Have you suffered any personal inconvenience from that?—Not personally.

7211. Have you considered this question from the public point of view; I mean the public point of view rather than the railway passenger point of view: for instance, the waste of power which there is to the cab service in a cab travelling from one station to another with a fare and back from that station without a fare, and forbidden to take a fare?—No; it does not arise to any very great extent with us, because the privilege covers both Victoria and London Bridge. A man, instead of coming back to London Bridge if he is nearer to Victoria goes there; there is no extra charge made.

7212. Yes, but he has to go there empty?—Yes; so would other cabs—they would have to go to a certain cab stand empty.

7213. And provided there was sufficient cab-stand accommodation that might be the next street?—It might be; it might be a mile away.

7214. My criticism is aimed at the wear and tear of the cab, the horse, and the man by travelling back from one station to another without being permitted to take a fare?—I do not know. I have not gone into that; but I do not think there can be very much in it, or else we should not be able to get the number of privileged cabs that we do get now if it did not answer their purpose.

7215. Are you aware that the evidence which has been given before this Committee by the men is adverse to the privileged system?—Oh, well, I daresay if they could get into the railway station free they would much rather do that than pay 3*s.* a week. It is very natural that they should do so.

7216. They say that they can make a better living on the streets?—A better living on the streets than at the railway station?

7217. Yes?—Why do these men come and pay the privilege if they do not get anything out of it?

7218. Is it not a question of custom with them?—I do not know I am sure; that goes rather beyond my experience.

7219. I was merely putting it to you to show the difficulties of the position. The same observation applies to the proprietors, who say that they would sooner that their cabs plied upon the streets than use the stations so far as profit is concerned?—No, I do not think that can be so.

7220. (*Chairman.*) I rather gather that these questions, like questions about foreign cities, are beyond your scope—upon which you have formed no opinion?—Circumstances are so different.

7221. (*Mr. Lough.*) Do you know any privileged system in any foreign city?—No, I cannot say.

The witness withdrew.

Mr. WILLIAM CHAPMAN called in and examined.

7223. (*Chairman.*) Are you a driver as well as a proprietor?—Only a proprietor.

7224. Have you ever been a driver?—Yes, sir; I held a driver's licence for about 15 years; I drove regularly for the first 10 years.

7225. What were you before you took to driving?—I was in the coal and coke trade, sir.

7226. But had you ever had any experience of driving?—I commenced driving when I was 20 years of age; I had had experience of driving before that.

7227. Before you became a cab driver you had something to do with horses or driving?—Yes, for six or seven years; I drove a tandem during part of the time, too.

7228. How long have you been a proprietor?—31 years; going on for 32.

7229. How many cabs have you?—34 at the present time, sir.

7230. How many in daily use?—I am speaking of those in daily use; it is supposed to be 34, but I daresay I have one at home; I daresay I have 40 cabs or over, including spare cabs.

7231. What is your system of letting them? Is your system the two-horse system?—Yes.

7232. In your opinion is the present system of inspection an adequate system?—I hardly think it is, sir.

7233. Where do you think it breaks down?—I think there is a great deal more attention paid to trivial matters than there is to more serious points. I think there is a great number of cabs working in the streets that are hardly fit to do so. On the other hand, there is great notice taken of such a thing as the removal of a plate or the obliteration of a passing mark, which is of no injury to anyone, but perhaps more palpable to those under whose supervision the cabs come, that is the ordinary inspector of police on a cab rank.

7234. What you think is, that in inspecting too much attention is paid to the trifles and not enough attention to weightier matters?—That is so; that is in the general supervision, outside the annual inspection when the cab has to be produced at the station.

7235. In the original passing before they are allowed to go on the streets, do you think sufficient attention is paid to the structure and the nature of the cab?—I think not.

7236. Not even then?—No.

7237. Then as to the man's capacity to drive; do you think that is sufficiently tested?—No, I do not think that is either; and I think, in the examination for a licence the system breaks down very much by requiring from the driver that he shall have an absolute knowledge of London.

7238. I am speaking first of the knowledge of driving, the art of driving; do you think that that is sufficiently tested?—I think not, sir.

7239–40. Do you think that the man's knowledge of London is sufficiently tested?—I think they are too exacting in that respect.

7241. That they require on that point too much?—Yes; I think they overlook the more serious matter, the applicant's experience in the management of horses and driving, and pay too much attention to his knowledge of London; that is to say, a man may know London perfectly well, but be perfectly unfit to drive a cab, whereas a man may have a very imperfect knowledge of London but may be a skilled driver, and he will acquire that knowledge of London which he requires in a very very short space of time.

7242–3. Have you any very great difficulty in getting a supply of drivers?—Yes, sir, a great difficulty.

7244. Really?—During some periods of the year I have had such a thing as 10 per cent. of my cabs at home for want of drivers.

7245. Is that because you are very particular in the men you employ, or because there is nobody to be had—Because drivers who are suitable do not present themselves.

Mr. W. Chapman.

20 July 1894.

7246. Is your standard of suitability higher than that of other proprietors?—No; rather the other way. My class of property is not of the exceptionally high class, but a very good class. The horses are well looked after; my men work six days a week; the horses are all fat and fresh, that is well known in the trade; my cabs are all very good cabs, but they are not finished off in the elaborate style that some are.

7247. So there is nothing particular in your business to account for your difficulty in getting an adequate supply of men?—Nothing beyond the necessity of good men presenting themselves.

7248. I mean you do not raise the standard higher than other proprietors?—Rather the other way; being a six-day place men would seek it.

7249. To what would you attribute your difficulty in getting a proper supply of men?—Well, to the drivers; many of them seeking the more superior class of property and a more central position to work from. I may explain to you that my stables are situated at Highbury, Islington, and the drivers seem to gravitate towards Clerkenwell more, where they perhaps get rubber-tyred cabs lavishly fitted, and they seek them notwithstanding the price is considerably higher.

7250. I think that does explain it in a measure; you would yourself think Highbury rather out of the way for a supply of cabs?—There is a great number of proprietors about there and a great number of drivers go from that immediate neighbourhood to Clerkenwell. I cannot explain that quite, sir.

7251. You would have to get as far as Clerkenwell probably before you would get anything like good custom; I do not suppose Highbury does produce much custom, does it?—I think in the winter time Highbury as a starting point would hold its own with any part of London, but not so much in the height of the London season, of course.

7252. So you do not admit that your locality is particularly out of the way?—No.

7253. Not particularly disadvantageous?—Not particularly so.

7254. Now about the butterfly grievance; of course we have heard a good deal about it; do you believe that it amounts to a substantial grievance?—I do not, sir. It is brought about, I think, more by the legitimate driver not working so regularly in the winter time or the bad season of the year as he does in the summer.

7255–6. Do you think that there is any considerable number of men who are mere loafers at other times and occasionally drive?—I do, sir.

7257. And then in addition to these, is there not a class of men who work at other occupations regularly and drive occasionally?—Oh, there are some, yes.

7258. And then there is this third class you mention: men who always drive more or less but drive more at one particular time of the year than another?—That is so, sir.

7259. You reckon all these as coming under the head of butterflies, do you?—I do not term them butterflies but I call them men who do not use their licences sufficiently long to be allowed to retain them. I think that if a man does not use his licence for a certain period during the year, he is not a fit man to drive unless he can show good cause how he has passed his other time.

7260. That is what I mean, but what we, I think, have gathered in the inquiry so far is that the people who are objected to under the name of butterflies are those who have no occupation—are merely loafers when they are not driving; come out to drive now and then and are corner men standing about and doing nothing at other times; these are the butterflies who are more particularly objected to by the regular drivers. You have just now said there is such a class as this, there are such people?—These are the men who are more particularly objected to, I think, by the proprietors, but from what I have heard from the drivers they more seriously object to men who follow legitimately other occupations in certain periods of the year and then only come and join the ranks of the cab driver when

Mr. W. Chapman.

20 July 1894.

the business is most lucrative; there are many of those no doubt, but still the loafers are considerably more than they are.

7261. And then again there is the class you mentioned just now, the men who are legitimately always drivers, but do not drive regularly; drive more at one season than at others?—Yes, that is so.

7262. Taking them altogether, these occasional drivers of three classes, do you think they are numerous enough to make a serious competition with the men who drive persistently all the year round?—I think they are numerous enough to keep another better class of driver from entering the cab trade, who would work more consistently and regularly.

7263. And as regards those who have entered the cab trade, do you think they are numerous enough to make getting a living more difficult for them?—I do not think so, sir. These loafers come in at the time when the trade is most advantaged: all the stations are filled up, and that prevents a man, even if he be a good man, if he gets a licence at that particular time, getting employment very often, whereas if they were removed he would have a better chance.

7264. I said it not only, as I understand, keeps people out of the trade, but to the men who are actually in the trade, and working regularly the presence of these butterflies or occasional drivers is a source of loss by way of competition?—I do not think so, sir.

7265. No? I thought that was what you said just now?—No, inasmuch as our regular drivers all through the season have their situation, they hold it; they cannot interfere with it: whether there are two men driving or one is a matter of indifference to them; they have their cab and secure it, and they are perfectly safe, and they do not give the odd men a chance.

7266. What I mean is, the butterflies must take off some of the custom?—Well, if the plates are issued to the cabs there must be drivers for them: it does not increase the number of cabs whether the butterflies drive them or anyone else. If you ask me to say that the cabs are too numerous and want stopping I quite admit it, but it does not seem to me to follow whether it is a butterfly man or another man that drives them: they have to take their places in the street; there are no more cabs in the street, so it cannot interfere with those who have their regular work. Why the butterfly men appear more numerous in the best season is because of the irregularity with which our regular drivers work in the bad time: they are willing to rest one or two days a week very often, but in the season they do not give an odd man or a butterfly man a chance.

7267. But what I rather mean is this: does not the influx of butterfly men at certain times lead to the bringing out of more cabs than would otherwise be out?—No, sir.

7268. Cabs that would otherwise be at home in dock, we should say?—No sir, I do not think so. None of the proprietors keep more plates than they wish to work or are desirous of working; if they are expecting to work more, they get more cabs, but these do not have plates upon them. If they want an extra cab in lieu of one stopped for repairs, the plate is removed from that one, or it goes into dock when the plate expires and they get the plate on another one.

7269. (*Mr. Whitmore.*) You do not think there is an excessive number of drivers now?—No sir, I do not, only of the butterfly class or the loafing class.

7270. (*Chairman.*) But you do think there is an excessive number of cabs, as I understand you?—Yes, I quite admit if the cabs lessened in number the drivers should be also.

7271. You think the cabs require lessening; that there are too many for the needs of the population?—I do, sir.

7272. What would be your way of lessening. Knocking out any already licensed or refusing licences to any more?—It would come very hard to knock out those who are in the trade: I should not like to be very arbitrary in that respect. I think steps should be taken to see the number did not increase, and to reduce the cabs presented for re-licence that are unfit, by better supervision and stricter inspection; and I think further, that a register should be kept of the cabs for the guidance of the officers that pass them. I would suggest that when a cab is first produced, it should have a registration number and a certificate with it that should last its whole life, and should go with it whoever owns the cab.

7273. Then have you any opinions about the juvenile drivers; do you think it would be to the advantage of the trade to refuse to license a youth to drive?—I do not think it is expedient to license anyone under 18 or 19 years of age, but some of those have proved themselves to be very good drivers—clean.

7274. You would not be willing to put the limit at 21; say, nobody to drive under 21?—No, I commenced driving a cab when I was 20 years of age, and I might say, during the whole of my career I have not met with any accident or any collision; and I have had young men in my employ who have been thoroughly sober and competent drivers. Much depends upon how they have passed their previous life, competency in driving is the chief thing that we want; if you get that, and the age of 19, I think you will be perfectly safe in that direction.

7275. What do you think about the proposal to have two classes of cabs, first and second class, with different prices?—I think there are already too many classes. Do you mean so far as the charge to the public is concerned?

7276–7. To be recognised and to charge differently to the public?—I do not think it would answer at all.

7278. Do you believe that a good lot, as it is generally called, can generally command more than its legal fare?—I do, sir.

7279. A man who drives a really smart turn-out may generally reckon upon getting something over and above?—I think so, sir, and I think that is proved by them paying the higher wage and keeping themselves more respectable and driving more regularly. I think the thing speaks for itself, they seek these good lots at a higher price.

7280. You say, "Keeping themselves respectable;" is it your experience that the cabmen as a rule are a better, more respectable class than they were, say, 20 years ago?—I do not think they vary much; I certainly think that there are now about London a class of drivers whose respectability is not up to the standard of 20 years ago, nor yet their appearance; I speak of these irregular drivers, loafers as you may term them.

7281. Taking the whole trade as a lot, do you think that they have rather gone back than improved in 20 years?—As regards their respectability or appearance?

7282. Respectability, intelligence, sobriety?—I do not think they have improved either in that respect or in their attire, indeed I do not think that they perhaps get quite as good remuneration now as they did a few years back.

7283. That is another thing: but we have had from some witnesses testimony that the men have improved although the living is a harder one to get; I mean that there are more respectable men in the business now; they are better conducted as a class than they were 20 years ago, although things are harder?—I think they have only improved, perhaps, with the times. I think we shall find fewer men who cannot read and write in the cab trade now than we did years ago, but I think that is only going with the times and education.

7284. And do you think a man can make as much as he did with the same number of hours and the same degree of ability 20 years ago?—I do not think perhaps he can, sir, but there are men now who can get a good living who do not work more than 12 hours a day, others will work 16, and my experience is that the man who works the shortest hours has the best living, or appears to.

7285. (*Mr. Whitmore.*) That is only if he has a better class of cab?—No, there is no choice with mine. The man who works 12 hours a day always pays his money regularly, and I have no difficulty with him at all.

7286. (*Chairman.*) Taking them as a class—as a whole—you do not think their living has improved in 20 years?—No, I do not.

7287. Rather gone down?—Rather gone back. I do not think the trade is so good for proprietor or driver as it was 20 years back.

7288. Now we come to quite a different question. Will you turn your eyes to that instrument in the corner of the room. Have you given any attention, as a proprietor, to mechanical contrivances of that kind

for testing distances—the taxameter as it is called?—I have not, no special attention. I do not think any complicated machinery like that in connexion with the cab trade would answer for one moment. We have great difficulty now about keeping those things that are used in the cab trade down, door openers, window blinds; there is a constant jingling, and they are frequently getting out of order, many of them; and any addition of that kind would be a certain disadvantage and a perfect breakdown—it must break down.

7289. Now, with regard to the 6*d.* fares, are you in favour of that change?—No, sir.

7290. You do not think that the increased number of people who would take a cab if they could get it for 6*d.* would more than compensate for the diminution in the sum?—I do not think so, sir, and it would have another bad effect, I think. It would very greatly increase the number of loitering cabs in public places, as it would be putting them in competition with 'busses. And another thing, it would be acting the same as it did many years ago. When I first drove there was a 6*d.* fare in existence, and it was often the cause of complaint with the fares through the insolence of the drivers. They were frequently taken off a rank, possibly they thought they were going to take up a fare; they were taken a short journey and handed 6*d.*, after having stood on the rank for two or three hours. That often caused quarrel and abuse from the drivers and inconvenience to the fares themselves. I think the cab trade sooner wants elevating than demoralising. I think that would have a tendency to demoralise the drivers.

7291. Have you any experience with regard to the extent of "bilking"?—Yes, sir, my experience is that I frequently hear of it.

7292. In your own business?—Yes, sir, from the drivers; we jointly suffer in that respect; the proprietor as well as the driver. We occasionally get the tale of a "bilker" instead of the cash that we should have. Sometimes they find them out and pay it, but if a man does get "bilked," as I have reason to believe he very often does, perhaps not so often as he says, we suffer in that respect, because if the man does not earn the money—as a rule they are men without capital—they do not pay us.

7293. You say "not so often as he says." Do you think that even making a deduction for some little imaginary cases, that there is a considerable number of real cases of "bilking"?—I think it does exist, sir.

7294. And is your experience this, that when it does exist, it is with reference to considerable fares, fares for longish journeys, so that one act of "bilking" means a considerable loss?—I do think that; I do not think drivers are often "bilked" for a small amount.

7295. People who go to Hampton Court, Richmond, or out of town?—I think I may go further and say that the "bilking" that is done is done intentionally.

7296. I think throughout this inquiry we have found that cabmen apply the term "bilking" only to the real intention of cheating, not accidental omissions to pay?—That occurs sometimes, a gentleman will go into an office in the City and become engaged in business, and really forget he has left his cab outside; I think that occurs sometimes.

7297. But then in that case the remedy is easy, because the man can send to him if he has left?—If he knows where to find him, but he may pick up a gentleman who is visiting at a hotel there and goes to his solicitor or stockbroker, and when you inquire at the solicitor or stockbroker's office, they say, "There are thousands of "gentlemen coming in here during the day. We "cannot tell you who he is," and you cannot find him. When called to take up at a particular house you have means of finding him; that occurs sometimes.

7298. I suppose a gentleman who merely forgot he had a cab at the door and remained in the house would get sent to?—That does occur, but it is more often at offices and flats; for instance, anyone getting out here at the door of the Home Office with a cabman waiting may pass out and forget about his cab.

7299. Unobserved?—Unobserved.

7300. You were talking about the loss of "bilking" falling on the proprietor as well as the man. I should like to ask you a question about a proprietor's liability in other respects. You are bound to produce a driver who has offended in any way and to pay a driver's fine, are you not?—The instances in which we are bound to produce the driver are at a police court on a charge

7301. In case of lost luggage also the proprietor has to pay?—In case of lost luggage the application comes to the proprietor direct, and he is responsible for it.

7302. What do you think of those two liabilities; they are rather serious burdens?—They are serious matters In the first place, I do not think a proprietor should be responsible to produce a driver at a police court inasmuch as the police have an equal register of the driver's whereabouts and his licence as the proprietor has, and it is quite as easy for them to serve the summons direct at the driver's residence as at the proprietor's. It often entails very great inconvenience and unpleasantness. The proprietor is bound to appear himself or by some responsible man at the police court. In effect it is punishing the proprietor instead of the driver, and in many instances, especially if it is a fairly good service, the proprietor pays the man's fine, so that he gets punished by his attendance at the police court, neglecting his own business, and then—well, a voluntarily inflicted punishment on himself by paying the driver's fine; then it generally occurs that you appear at Marlborough Street at 12 o'clock in the morning, and it is very inconvenient to a proprietor to leave his yard, and the driver may have left your service, and you have to run about and find him.

7303. You are speaking of the responsibility of producing a driver?—At the police court.

7304. That is one burden, and the other is with respect to lost luggage. Do you think that is a hardship?—I do; I think that the liability should be limited. I had to pay some time back 90*l.* for the loss of a portmanteau with valuables in. I have no means of ascertaining, when these portmanteaux are lost or luggage is stolen, what their contents were; if they are never found it is for the owners to make the declaration, but it has been proved on several occasions that the declarations have been false; that has been found afterwards.

7305. In the case of a portmanteau not found, is anything required to support the testimony of the owner of it that the contents were worth whatever value he chooses to put upon them?—That is all.

7306. May he put a fancy price?—That is our experience.

7307. Might he say there were documents lost in that portmanteau which were worth hundreds of pounds to him?—I do not say about documents, but articles of clothing, jewellery, or any moneys or anything of actual value, the claim for any inconvenience or expense they might be put to by getting duplicate documents, they have only to make their declaration, prove it in a court of law, and the proprietor is responsible to any amount.

7308. How would a gentleman prove the value of the contents of his dressing bag?—I think it is accepted if he swears it on his oath.

7309. As far as you know without limit?—Without limit, yes, and in some instances these portmanteaus have been stolen, and the offenders have been captured and the booty gone. We have found sometimes the portmanteau, minus its contents, at pawnshops. Even when we have found them—well, our liability exists to the same extent when it is proved to be a case of actual robbery. I do not think the proprietor should be held responsible at all. Where it is lost through the carelessness or negligence of a servant letting it fall off the cab, I think it is only fair the proprietor should be responsible to a limited extent. You see the fare never declares the value of the property he is placing in your servant's charge; if that were so, and he paid a sum equivalent, as a railway company would charge for having valuables, it would be a different matter; then of course the man would be cautioned to take particular charge of it, and he would be paid for so doing, but they might throw upon the top of a cab a portmanteau of the most ragged appearance, and yet be of the value of 200*l.*, and the driver might think there is nothing in this except some dirty shirts and stockings, or what not. He would not be at all aware of what the value was.

7310. Do you happen to know, because all this about the liability of a proprietor for things stolen off a cab is new to me, if the law has been altered in that respect a little?—It has not.

Mr. W. Chapman.
20 July 1894.

7311–12. Within my recollection there was a very celebrated jewel robbery of the Countess of Ellesmere's jewels in St. Martin's Lane, while she was coming from Euston. Jewels of an enormous amount were lost. It was a very famous jewel robbery about 1858? It was off a four-wheeled cab, and in that case the liability would have utterly ruined the proprietor?—Yes.

7313. Do you know whether the law is altered in that respect?—I think not. I have never heard anything different; that a cab proprietor is liable to an indefinite amount, but the Carriers Act is different.

7314. With regard to the fees for licensing cabs, do you think they are justly levied, or are they excessive or what?—I have never gone closely into that matter, but some have in connexion with our trade, and they say that the price charged for the control of the Hackney Carriage Department is far in excess of the cost to the Commissioners of Police for the Government; and there are things charged, I believe, to the Hackney Carriage Trade which would be fairly charged to the General Police Account, such as attending to the cab ranks outside the theatres. Well, they attend equally so to gentlemen's carriages, and there is no charge made upon them in respect to that, and to all vehicles in common. Of course, we think that we should only be charged as far as our licensing and inspection, and offices in connexion with that, not for the general control of the vehicular traffic in London, which is largely charged, I believe, so I heard it stated, to the cab account.

7315. (*Mr. Cunynghame.*) Are you in favour of an extension of the radius?—I am in favour of the abolition of the radius altogether, and instead of that to map out a district.

7316. You would be in favour then of marking out a district which might be irregular in shape possibly, according as was thought fair?—That is so.

7317. I suppose, as a witness suggested to us, you would paint on the lamp-posts on the main great thoroughfares the limits of that district?—Yes, sir.

7318. And then join straight lines from post to post, as it were, and so enclose a space?—Yes, or go round the roads, as they happened to suit. There is a particular place, where the radius perhaps bears very hardly, namely, Finsbury Park station, where a great number of cabs get out.

7319. Just outside the radius?—Just outside, and whether there was a radius or not, I think it should be in the power of the Commissioner of Police or whoever had the control of the hackney carriage trade, in such a case as that to declare that rank within the radius.

7320. You are aware, I suppose, that there are differences of opinion about this matter, and that those who hold an opposite opinion to you are generally the people who have their stables and ply solely outside the radius?—Yes, sir.

7321. I suppose that is true?—Oh, yes.

7322. We should get an opinion one way or the other pretty much as we happened to call them?—Yes.

7323. It is not a matter of honesty; it is a matter of which pays them best?—Yes.

7324. Have you any privileged cabs?—Yes.

7325. How many?—I have 12.

7326. Now what do you think of the privilege system?—I think the privilege system should be abolished.

7327. Altogether?—Yes.

7328. You have told us that you thought the sum of 2*l.* 5*s.* a year—for that is what each cab and its driver pay to the police—was sufficient for the cost of maintenance of police supervision or more than sufficient?—Yes.

7329. I should like to ask what you think of the sum of 7*l.* 10*s.* charged by the railway company for each cab per annum; do you think that too much?—I do, sir; still you get an equivalent for that in the special benefit.

7330. You get a special benefit, but I am only regarding it as the price paid for something done for you?—Yes.

7331–2. Not for the benefit obtained, but for work done; looking at it from that point of view you would think it too much?—For work done for the railway company?

7333. (*Mr. Whitmore.*) By the railway company?—By the railway company. Still I think it is only reasonable for them, if they give up space which would be valuable to them perhaps in the shape of yards, to charge something.

7334. (*Mr. Cunynghame.*) You think that fair?—I think it is fair in that respect; I do not know what would come to pass if they were not to place at the disposal of the cabs some of their own private property; it would seriously encumber the streets and crowd them.

7335. And you think therefore that as a return for having bought that property, which they certainly have, that some charge would be fair?—I think so, sir.

7336. But the amount, I suppose, you are not particularly prepared to go into?—No, sir.

7337. Well, you have told us that you think that the number of cabs ought to be lessened?—I think there are too many, sir.

7338. Well, would you limit them?—No, sir, not by a direct limitation.

7339. How would you lessen them?—By raising the standard of quality.

7340. And would you raise the standard of the men in the same way by eliminating the men who are not so desirable?—Yes, I would.

7341. And it is in that way that you would effect a certain limitation both of cabs and men?—Yes, sir.

7342. Now about driving; when you first began to drive you began in the coal trade, I think?—Yes, sir.

7343. What experience of driving had you before?—I was in the coal trade from the time I was 14 up to about when I was 20.

7344. Did you get experience of driving in the coal trade?—I drove a van, a light cart.

7345. Not at a very great pace with coals in it?—I drove a tandem empty, and I think I could drive them at 12 miles an hour.

7346. A tandem with coals at 12 miles an hour?—I do not say that I drove them in the van at 12 miles an hour; I could easily, with the two horses I had, drive at 12 miles an hour when the van was empty. I have driven a tandem also in a hansom cab.

7347. (*Mr. Lough.*) You said you thought a driver who did not use his licence a certain number of days a year should not have it renewed?—Yes, sir.

7348. How many days would you think fair?—I should say some limit between one month and two months; I would not be hard upon a driver for resting certain times.

7349. Do you mean that if he used the licence for 30 days out of a year you would be satisfied?—No; I say if he neglected to use it for 30 days of the year without accounting for it properly.

7350. And, at the outside, if he neglected to use it for 60 days, you would make that a reason for not renewing the licence?—If he neglected to use it, yes; something between one month and two.

7351. Sixty days at the outside?—Yes, I have three licences now in my possession, as to one of which I have not seen the driver since the 15th day of January, one the 7th day of February, and one the 2nd day of the ninth month of 1893. These licences I have left with me, and it frequently happens that we have a driver's licence in our possession for a month without seeing anything of the driver.

7352. You said you were in favour of limiting the number of cabs?—Yes, sir.

7353. Do you know how many there now?—Somewhere about 11,000.

7354. How many do you think could be spared?—I should think we could very well spare 2,000.

7355. Do you think that the charge that is made, of 40*s.* for the cab plate, too high?—Yes, I do think it is too high.

7356. How much would you think reasonable?—Well, it is generally stated about 1*l.* should cover the cost of it.

7357. (*Mr. Whitmore.*) I only want to ask you one question. Are your privileged cabs in any way better than the other cabs that you have?—No, sir.

7358. Or are the drivers of the privileged cabs superior in respectability?—No, sir; most of those driving my privileged cabs drove for me before I had privileges, and were transferred.

7359. Then in assigning a privilege to a particular cab you are not influenced by a desire to get the railway company a superior cab or a superior driver?—No, sir, not at all—ordinary men; there are as good men working the street as there are in the railway, they work more regularly certainly, these men that are on the railway; they get a benefit of the privilege, it is an advantage to them.

7360. It is an advantage to them?—It is an advantage, and it is recognised by their retaining them for the time that they do; they do not change their situations nearly so frequently when a man gets on a railway job, although at some period of the year it is of no value to them.

7361. (*Mr. Bayley.*) Have you any experience, Mr. Chapman, as to the earnings of cabmen?—Only by what I have heard from them repeatedly.

7362. What is your impression as to the average earnings of cabmen?—I believe that a cabmen's average earnings, that is to say after he has paid his expenses out, will be about 30*s.* per week.

7363. That is after paying for his food?—After paying for his food, and I may tell you that is the evidence given by their representative at the Labour Commission: after paying their outdoor expenses they net 30*s.* per week to take home.

7364. The average earnings of what we call the swell cabmen are considerably above that?—Oh, they would be more than that.

7365. (*Mr. Cunynghame.*) If the number of cabs was decreased by the number, say, of 2,000 I suppose it is quite certain that they still would remain nearly as congested in the centre of the City as before, because they would nearly all rush to ply there, would they not?—I do not think so, sir.

7366. I mean the decrease would take place in the suburbs rather, would it not?—No, I think the other would be the fact; I think it would be a material decrease in the centre of the town. I think that is the part it would affect more than the suburbs; I do not think it would affect the suburbs but very little.

7367. Can you give us any reason for that opinion?—Yes, because in the suburban trade I do not think they are overflowed with cabs; I think they are doing better than the men are in London considering the style of vehicle they have; and, further, that it is carried on by men who live in those outside localities and do not touch London. Of course, when we speak of 11,000 cabs, perhaps central London does not have more than 7,000 out of them, so that 2,000, I think, would be calculated to affect that 7,000 by reducing them to 5,000, and very little affect the other 4,000 that are in the suburbs.

The witness withdrew.

Mr. William Williams called in and examined.

(Mr. Cunynghame in the chair.)

7368. (*Chairman.*) You attend here, Mr. Williams, on behalf of the Vestry of Hammersmith, to make a representation to this Committee?—Yes, sir.

7369. You have handed in a paper which I think we might print in full, expressing your views and giving a great many interesting statistics in support of them?—Yes, sir.

The present cab radius of four miles, measured from Charing Cross, was fixed in the year 1867. Since then the general conditions of the metropolis have undergone considerable alterations. First, there is the question of population. In the year 1867 most of the outlying districts of the metropolis were but sparsely inhabited. The following table illustrates the wonderful growth of the parishes comprised within the jurisdiction of the London County Council, showing the census returns for 1871 and 1891.

Table A.—Population, County of London.

Parish or District.	1871.	1891.	Increase.
City of London	74,688	37,705	—
St. Marylebone	159,254	142,404	—
St. Pancras	221,465	234,379	12,914
Lambeth	208,342	275,203	66,861
St. George's, Hanover Square.	89,677	78,364	—
Islington	213,778	319,143	105,365
Shoreditch	127,164	129,009	—
Paddington	96,813	117,846	21,033
Bethnal Green	120,104	129,132	9,028
Newington, Surrey	88,722	115,804	27,082
Camberwell	111,307	235,344	124,037
St. James'	33.619	24,995	—
Clerkenwell	65,380	66,216	836
Chelsea	71,089	96,253	25,164
Kensington	120,299	166,308	46,009
St. Luke's	54,995	42,440	—
St. George's, Southwark.	56,077	59,712	3,735
Bermondsey	80,429	84,682	4,253
St. George-in-the-East.	48,052	45,795	—
St. Martin's	21,238	14,676	—
Mile End	93,152	107,592	14,440
Woolwich	35,557	40,848	5,291
Rotherhithe	27,096	39,255	12,159
Hampstead	32,281	68,416	36,135
Whitechapel	76,520	73,552	—
Westminster, St. Margaret and St. John.	66,050	55,539	—

It will be seen from the above table that the population of the parishes completely within the radius shows signs of diminution rather than of increase, whereas that of the parishes situate only partially within or entirely outside the radius has in some instances almost doubled itself, as will appear from the following table.

Table B.—Population of Parishes, parts of which are situate Outside the Present Radius.

District.	1871.	1891.	Increase.
Hammersmith	42,691	97,239	54,548

Total	1,352,575	2,081,534	729,283

Mr. W. Williams.

20 July 1894.

It will thus be seen that the population of the parishes, parts of some and the whole of others, which are situate partly or entirely outside the present radius amounts in the aggregate to 2,081,534 persons, an increase of 729,283 persons on the census of 1871. The second point is the question of railway stations. At most of the railway stations in the metropolis the Metropolitan Commissioner of Police has fixed cab stands either opposite the entrance or adjacent to the stations. The following table gives the number of London railway stations situate totally outside the metropolitan cab radius. TABLE C.—Railway stations outside radius: Clapton, Finsbury Park, Kensal Green, Kilburn, Stoke Newington, New Cross (two stations), Deptford, Greenwich (two stations), North Greenwich, Bow, Bromley, Bethnal Green, Hackney (three stations), Homerton, Old Ford, Poplar, the East and West India Docks (six stations), Victoria Park (two stations), Hammersmith (three stations), Shepherd's Bush (two stations), Ravenscourt Park, Wormwood Scrubs, Willesden Junction. The third point is the practical unanimity of the various local authorities in the metropolis in favour of the extension. In January 1892 the Vestry addressed a circular letter to each of the vestries and district boards, and replies were received from the following authorities concurring in the proposal, viz.:—TABLE D.—Local authorities in favour of the extension: Chelsea Vestry, Clerkenwell Vestry, St. Margaret and St. John (Westminster) Vestry St. George the Martyr (Southwark), St. Pancras Vestry, Paddington Vestry, St. Luke's Middlesex Vestry, Holborn District Board, Strand District Board, Wandsworth District Board, St. Saviour's District Board, Willesden Local Board, Putney Vestry, St. Saviour's Vestry, St. James's Vestry, Lewisham District Board, Rotherhithe Vestry, Camberweli Vestry, Greenwich District Board, St. Giles District Board, Hornsey Local Board, Stoke Newington Vestry, Battersea Vestry, Wandsworth Vestry, St. Olave's District Board, Marylebone Vestry, Shoreditch Vestry, Whitechapel District Board, Poplar District Board, Lambeth Vestry, Newington Vestry, Hackney District Board, Bow Vestry, Fulham Vestry, St. George's Hanover Square Vestry, Islington Vestry, South Hornsey Local Board, Kensington Vestry; and the London County Council have also passed a resolution in favour of the proposed extension. The fourth point is the inequalities. If a person hires a cab within the radius to come to, say, Hammersmith, he pays at the rate of 6*d.* per mile; but if he wishes to return, or journey from any point outside to any point within the radius, a fare of 1*s.* per mile is demanded. Hammersmith, it is submitted, should have the same privileges of the cab-fare radius in force in London.

7370. You are in favour of an extension of the four-mile radius?—Yes, sir.

7371. And you have pointed out to us that the great majority of vestries, including the County Council, are also in favour of such an extension?—Yes, sir.

7372. Would you tell us the amount of the extension that you think ought to be made?—The county of London, sir.

7373–4. The whole county of London you mean, uniform?—Our first application was for the one mile extension.

7375. And now?—Well, if we are looking to Hammersmith, then we should be satisfied if the radius was extended to the limit of our parish.

7376. Naturally, but you are come to give the opinions of more than the Hammersmith Vestry?—Oh, yes.

7377. What do you think would be the best system for all?—Well, the county of London.

7378. Then, according to you, I may take it simply that the greater the extension the better the parishes would be pleased?—Yes, sir.

7379. But have you also considered what would be fair to the men, the drivers?—Yes, I have, sir.

7380. People must live, and have you considered whether it would be fair to have this extension?—Of course, on the north and south, it would be hard for the cabmen in that respect. It would be unfair to the cabmen to ask them to work for the same price to Hampstead as on the level roads to Hammersmith. I quite admit that the cabmen should properly be studied and well paid for what they do.

7381–2. (*Mr. Whitmore.*) I should just like to ask you one question on what you have said. Would you also take into consideration the density of the population on the outskirts of London as well as the character of the ground; you have said it would be a hardship on the cabmen to have to drive up hill to Hampstead, but would you not also think of what was the quantity and quality of the population beyond the present radius?—Yes; you will see by this return that many of the districts inside are diminishing in population, and driving them out to the suburbs. In the Fulham and Hammersmith line there is an increase in 10 years of 120,000 people driven from the City. The deputation that waited on the Home Secretary some time ago represented two millions of people.

7383. (*Mr. Lough.*) What is your object in extending the limitation?—For the good, I think, sir, of the men and of the district of Hammersmith.

7384. But I want to get it more precisely. Is your object to get the cabs at 6*d.* a mile, or is it that there are not enough cabs now?—No; the disadvantage we feel, sir, is that we outside the radius have to pay more to ride inside to London than you do out.

7385. Then your point is that you want to get the fare reduced to 6*d.* in your locality?—Yes, sir.

7386. You have got plenty of cabs at present?—Well, no, we are not particularly overdone with cabs, because this plan will show you that we have many stands there that are not used. We think if the extension were made we should get more cabs, and there would be more work for them to do in that district during the day than now when they stand idle till the evening time.

7387. But your first reason, at any rate, is that you think you are entitled to the 6*d.* a mile fare in these outer districts?—Yes, sir; and I think it would be good for the inhabitants, for the tradespeople, for the shopkeepers, and those who have to pay their rates.

7388. As well as the cabmen?—As well as the cabmen. Because we find that we are to a certain extent at a disadvantage as compared with Kensington in the question of letting the property which produces the income of the vestry which we are called upon to pay to the County Council. That is one reason why we think that we are entitled to have the privileges that we have to pay a share of the rates to the County Council, and we think we should have that amount of benefit.

7389. Would you be in favour of any change in the fares that now obtain in London, that, is the minimum fare of 1*s.*?—Yes, sir.

7390. Would that satisfy you?—On precisely the same principle as it is now, but extend the distance not reduce the fares.

7391–8. Then you want your cab to travel two miles for 1*s.* instead of one mile; now it travels one mile for 1*s.*, does it not?—1*s.* a mile, sir.

7399. (*Mr. Lough.*) Your point is you want the two first miles for 1*s.*?—That is so.

7400. (*Chairman.*) You think that if the radius were extended there would grow up a demand in the suburbs for cabs, which would largely benefit the cabmen themselves?—I do think so, sir.

7401–2. And secondly, do you not think that there is in Fulham and Hammersmith—I am speaking of those two districts round the spot where you live—a very great dearth of cabs indeed, that it is very difficult to get one?—No, sir.

7403. You think there are plenty?—Well, there is no scarcity, I suppose.

7404. Well I want to know what your experience is; do you think there are too many or not?—There are not too many.

7405. Do you think there are too few?—I think so.

7406. Too few?—Too few, sir; you see the whole of those get near the stations and Olympia, the outside get but very few at all.

7407. (*Mr. Bayley.*) What is your position on the vestry?—Chairman of the Cartage Committee.

The witness withdrew.

Adjourned till Tuesday next at 11 a.m.

THIRTEENTH DAY.

Tuesday, 24th July 1894.

PRESENT:

MR. GEORGE RUSSELL, M.P. (CHAIRMAN, PRESIDING).

Mr. HENRY CUNYNGHAME.
MR. F. J. S. HOPWOOD, C.M.G.
Mr. JOHN BURNS, M.P.
Mr. T. LOUGH, M.P.
Mr. C. A. WHITMORE, M.P.

MR. MALCOLM DELEVINGNE, *Secretary*.

7408. (*Chairman.*) I have first to read a letter. We found at last a witness who was ready to give a definite instance of bribery.* Well, we had a letter from him this morning:—

"9, Albert Street,
"Paddington Green,
"July 23rd

"DEAR SIR,

"IN answer to yours of the 21st inst., I was not aware when giving evidence before the Committee that it would be published in the papers, and when the man I mentioned saw it he refused to come forward, as he thinks he might get into trouble and lose his licence. I am extremely sorry, for my part, he will not come forward after my making the statement I did; but, of course, you can see the position that I am in. Trusting that it has not put the Committee to any inconvenience,

"I remain,
"Yours truly,
"(Signed) D. CHAMBERS."

MR. WALTER H. MACNAMARA, Honorary Secretary to the Cabmen's Shelter Fund, called in and examined.

Mr. W. H. Macnamara.

24 July 1894.

7409. (*Chairman.*) We understand that you are secretary to the Cabmen's Shelter Fund?—Honorary secretary.

7410. For 14 years?—Since July 1880.

7411. And a member of the committee since 1876?—Yes.

7412. Instead of my asking you questions point by point, perhaps you would tell the Committee in your own words the history of the institution, and what you think about its working?—The fund was started in 1875. In that year a few gentlemen, notably Sir George Armstrong, of the "Globe" newspaper, Mr. Dennistoun, the late Mr. Macnamara, made a practical beginning by appealing to the public for funds to place shelters on the most prominent ranks of the metropolis, and the response was very ready and generous.

7413. May I ask you on that point whether it was intended that these shelters should be what the name seems to imply, protection from the weather, or eating houses?—Primarily protection from the weather, the other followed afterwards, as I will describe later on. At that time the police regulations—and, for all I know, now—prohibited cab drivers from leaving the ranks when they are in charge of their cabs, and therefore the object of the shelters was not only to provide shelter and warmth, but to provide them with food and tea and coffee at reasonable prices when on duty on the ranks. Before these shelters were established, as many of us remember, the men had no refuge whatever in bad weather except the inside of their cabs, which they were not at all loth to occupy. There were obvious evils in that. They would get thoroughly wet through, go to sleep in their cabs, and remain there until a fare came along. The Cab Shelter Fund have issued an annual report and balance sheet every year. I should like each of the Committee to take a copy of the last report; it contains an authoritative statement by the committee, and the detailed account of the work. On almost the first page will be found the names of the committee, the trustees, the honorary treasurer, and the honorary secretary, and the only two paid officials of the fund, that is, the general superintendent and the inspector. The general superintendent is paid 128*l.* a year, and the inspector 1*l.* a week; out of that they have to pay their travelling expenses.

7414. (*Mr. Hopwood.*) The objects of the society are confined to the metropolis, I suppose?—Yes. At page 16 of the report you will find a list of the donors of the shelters. A large number of these shelters have been given by friends or relations of the committee and through the personal influence of the members of the committee, and I am sure I am correct when I state that many of these shelters, if not all, would not have been given unless there had been a responsible committee to take charge of them, men whose names were a guarantee that the shelters would be used for the purposes for which they were intended. The cab drivers and the cab owners have not contributed anything whatever towards the erection of the shelters. Cab drivers could not be expected to provide shelters themselves, because these shelters are extremely costly. As is stated in the report, the shelters originally cost about 80*l.* to 100*l.* Great complaints were made that they were extremely unsightly, they were of the bathing machine type, and we therefore offered a prize for a more ornamental shelter. Shelters have been built after the prize design, and are to be seen in most of the prominent streets here. These shelters now, with their fittings complete, cost something like 200*l.* Then we encourage, as much as we can, a floral display at these shelters. I am sorry to say, owing to the strike this year, we have made a very poor show, but there is no doubt there is no objection to them now by residents on the ground of their being unsightly.

7415. (*Mr. John Burns.*) In what way do you connect the strike with the poorness of the floral display? Owing to the fact that the men——?—Owing to the fact that the attendants have taken so very little, and we have not been collecting our fees from them.

7416. But, generally speaking, the floral display is contributed to by the men?—We do not contribute to it in any way. There are one or two shelters where there are gifts of flowers and plants. The men do it themselves at a cost of 20*s.* to 40*s.*

7417. And you find that the men take a great interest in them?—Yes, we do. I should like to state on what terms the shelters are open to the cab drivers. These terms have altered considerably since the shelters were first established in 1875. We had to buy our experience like other philanthropic societies at the first start. In our first annual report, which was issued a year after the institution of the shelters—in 1876, the committee stated that: "In order that the "shelters should be kept clean and the wants of those "cabmen using them be well attended to, the committee conceived it desirable to appoint a paid "attendant to each shelter, who should be allowed the "profits out of such refreshments as he disposed of, "the refreshment tariff being under the committee's "control. To meet the expenditure of his wages they "determined on issuing tickets, the prices of which "would not be less than a penny a day, nor exceed "fourpence a week. About 60,000 of these tickets "were issued to cabmen during the year, but a large "majority of the drivers declined to avail themselves "of the shelters under the conditions imposed; and as "a consequence the receipts from these tickets were "not sufficient to pay the wages of the attendants. "The committee have therefore decided, whilst keeping the shelters still under their complete control, to "throw them open (free of charge) to every bonâ fide "cab driver, and to discontinue the wages of the

* *See* questions 3954–60.

Mr. W. H. Macnamara.

24 July 1894.

"attendants. They believe in consequence a large "number of cabmen will be certain to make use of the "shelters, and that by a slight increase in the price of "refreshments the attendants will be sufficiently paid "for their services." Ever since then the shelters have been open free to bonâ fide cab drivers, but to nobody else, not even to omnibus drivers or conductors, and at the present time the attendants in all but two cases are former cab drivers. I may say that the appointments are eagerly sought after, and we give them to the most capable and deserving men, and men of undoubted good character.

7418. On this point, Mr. Chairman, may I ask Mr. Macnamara if we are to understand that previously an attempt had been made to get the cabmen by a ticket system to pay the wages of the attendant, and that now his wages come out of any profit from the refreshments?—That is so. Yes, the idea was that the cab drivers themselves ——.

7419. Should pay the wages?—Well, I will not say the wages—should pay a small sum, that it should not be a simple charity.

7420. That they should contribute towards it?—That it should be a sort of club subscription, as it were.

7421. Now they do that through their food?—I must say that our object from the first was to make the shelters self-supporting, and with that object we, since 1876, have taken a weekly sum from the attendants in charge of the shelters. This is stated at page 10, I think, of the report before you. "It may be here "remarked that the attendant in charge of a shelter "makes his living by the sale of tea, coffee, bread and "butter (at a tariff fixed by the committee) and all kinds "of provisions to the drivers frequenting the shelter, "and pays a weekly fee, varying in amount according "to the position of the shelter, to the committee, which "forms a fund for painting, repair, and general "maintenance." The amount of the fees paid by the attendants varies; the largest fee that is paid is 7*s.* 6*d.*; in some cases the fee is merely a nominal one of 1*d.* a day or 6*d.* a week. If the committee desire it I can state the fee paid in each of the 40 shelters. I have noticed that one witness stated that the attendants pay as much as 12*s.* 6*d.* a week. Our maximum fee, and that is only in respect of one shelter, is 7*s.* 6*d.*

7422. Then 12*s.* 6*d.* is not paid in any case?—12*s.* 6*d.* is not paid in any case. The error may have arisen in this way: that in addition to the fee which comes into our pockets—when I say into our pockets I mean to the fund—they have to pay for the gas. The gas company will not recognise the attendants, and they have to pay the gas to us, and that is added on every week.

7423. That is how the sum is got out?—That is how the sum is got out, no doubt. I have here copies of the tariff which is allowed to be charged by the attendants. I may say, with regard to this particular fee of 7*s.* 6*d.*, and, in fact, all others, that during the late strike for five weeks we were unable to collect any fees at all, and at other times we have often had to reduce them, always in August and September, and sometimes to remit altogether. I think that, independently of the strike, we have now something like 9*l.* of fees in arrears, which probably we shall never recover.

7424. Is this fee, paid by the keepers of the shelters, an inclusive amount?—He is not the keeper of the shelter; he is our servant.

7425. Well, the tenant?—It is inclusive; he is supposed to pay it once a week.

7426. And he pays that for rent?—He pays it, as stated in the report, as a fee towards the fund for painting, repair, and general maintenance.

7427. It is practically rent?—Yes; but we do not so state it in the agreement. This is the agreement: he is to be the attendant and obey the committee's directions. The attendance shall be subject to be determined at one week's notice; he shall be allowed to sell in the said shelter to cab drivers tea, coffee, and bread and butter, and to charge for the same according to a certain tariff* to be from time to time approved by the said committee, and exhibited in the shelter; and also to cook the dinners of the said cab drivers and to charge 1*d.* for each cooking, and to apply the same, together with any profit on the provisions, to his own use and benefit. And in order to ensure the quality of such provisions the tea and coffee are to be purchased from such shops as may be appointed by the committee at the prices to be fixed by the committee. Then he is under terms to keep the shelter clean and in good order, and pay such sum as may be chargeable for gas and fuel and light; and he also is to pay a sum a week to the fund towards the repair and maintenance of the shelters of the said committee, and will at the lawful determination of the said attendance, by notice or otherwise, give up full and peaceable possession of the shelter. The shelter being closed without the express sanction of the committee shall be considered a breach of the agreement, which shall thereupon terminate.

7428. (*Mr. Hopwood.*) Then it is in no sense a hiring agreement?—It is in no sense a hiring agreement.

7429. The position of landlord and tenant is not set up?—No, we allow him to sell provisions there.

7430. You hire him, but he does not hire the shelter?—He has no rights at all in the shelter, in the building in any way; he has no rights of a tenant in it.

7431. (*Mr. John Burns.*) He really has a repairing occupancy whilst he is in the occupancy of the shelter under the conditions you lay down; the fee that he pays, varying from nothing to 7*s.* 6*d.*, is for the annual maintenance and upkeep and small repairs of the shelter?—Yes. I may state that it very often anything but covers it; the repairs are extremely heavy, the wear and tear of wooden buildings so much exposed to such a climate as we have.

7432. Are we to gather that, even in the case of the highest fee, it is not sufficient to meet the annual maintenance and upkeep and repair?—You may, yes.

7433. (*Mr. Hopwood.*) And it is perfectly clear that the society assumes the whole responsibility for the shelters, and that they are not under-let; the authority over them is not parted with to these keepers?—In no case; they are bound to keep open our hours, and you will see our rules are stated in this general report; there are rules for the shelter attendant and rules under which the shelter is open at pages 18 and 19.*

7434. It has been suggested to us that the shelters are under-let; that is the point that we want you to meet?—We never part with the control of the shelter in any way; the attendant has no option at all as to the hours it shall be open, whom he shall serve, or what he shall charge.

7435. (*Mr. John Burns.*) So sub-letting, in the sense that the shelter people let it to A., and A. sub-lets it to B., does not exist?—Not at all.

7436. And if it comes to your knowledge you would stop it at once?—It could not exist, because we have a general superintendent and inspector who visit these shelters two or three times a week, and at different times of the day and night.

7437. And it is not possible for anyone to farm out one, two, or three shelters?—Absolutely impossible. I should describe the attendant as the weekly servant of the committee. I do not know that it would be disputed that the cab drivers use and appreciate these shelters. They are extremely popular with a large number of them. The numbers who use the shelters are given in the report at pages 11 and 12.† I may state that many of these shelters were placed on the ranks at the earnest request of the cab drivers. In the year 1884 we had no less than 184 of the cab drivers petitioning for a shelter in the Bayswater Road, at the Marble Arch; and then in the year 1880, 1,562 cabmen petitioned St. George's Vestry, Hanover Square, not to remove the shelter from Stockbridge Terrace, near Victoria Station.

7438. (*Mr. Hopwood.*) But the interest of the cabmen in those two particular places could probably be accounted for by the fact that there was no coffee-house accommodation in that neighbourhood?—There was coffee-house accommodation at Stockbridge Terrace. Then I should like to state that in 1883, as stated in the report for that year, the Paddington Vestry requested the committee to remove a shelter placed in the Harrow Road. "The vestry ordered its "removal in consequence of representations that the "shelter did not pay rates, and it was alleged that it

* Present tariff—tea, half-pint, 1*d.*; pint, 2*d.* Coffee—half-pint, 1*d.*; pint, 1½*d.* Bread and butter (one slice), ½*d.*

* *See* Appendix VI. IV.

† The 40 shelters are used by over 3,500 cabmen daily.

" interfered with the trade of those who did; where-
" upon a deputation of cabmen attended a vestry
" meeting specially convened for the purpose, and pre-
" sented a petition signed by 2,331 cabmen, asking for
" the retention of the shelter." The committee, in their report for that year, were glad to state that in the result the vestry rescinded their former resolution by a large majority. Then in addition to the mere shelter and refreshment accommodation given in the shelters a very large number of provident and benefit clubs have sprung up. I think they are referred to in the report before the committee, at page 8. "Although in no
" way under the control of the committee, they are
" glad to observe a satisfactory extension in the
" advantages derived from the establishment of sick,
" provident, and benefit clubs, and clubs for the pur-
" chase of rugs, whips, capes, and other articles of
" necessity to the drivers. In many of these cases the
" clubs have been instituted and successfully main-
" tained by the shelter attendants, and it is gratifying
" to note their properly audited balance sheets."
Then, in addition to that, most of the shelters have libraries; libraries which have been gifts by residents. Canon Farrar gave a library, value 10*l.*, to the shelter in Palace Yard, and many other libraries have been given to the shelters, and newspapers are supplied by residents to the shelters in their neighbourhood. I notice that it has been stated in evidence before the Committee that during and since the recent strike non-unionist men have not been served in a shelter.

7439. (*Chairman.*) That was one of the questions I was going to ask you?—The committee, of course, have nothing do with trade disputes. The general superintendent and myself during the strike, and after the strike, received several complaints from non-unionists against a particular shelter to which they referred. The attendant was sent for, and he was told that he was liable to be dismissed if he drew any distinction between the unionist and non-unionist men, and I then caused this notice to be printed and put up in every shelter:—"The Cabmen's Shelter Fund. Important
" notice.—The committee of the fund find it necessary
" to give notice that the shelters under their control
" are provided for all cab drivers, whether unionist or
" non-unionist men, and that the attendants are bound
" to make no distinction. The committee feel sure
" that all right-thinking cab drivers will be of opinion
" that trade or party disputes cannot be allowed to
" extend to the shelters, which should be neutral
" ground, and are provided for the comfort and con-
" venience of all cabmen complying with the simple
" rules under which the shelters are open." A copy of that notice was posted up in all the shelters. I am sorry to say it had to be put up two or three times owing to its being pulled down by unionist men. I have received a number of letters from unionist cab drivers protesting against this notice; I have one letter here—it is very short if I may read it—signed by a cab driver, and he gives the number of his badge. He says: "Dear Sir,—I have looked with great surprise
" at the notice in the shelters that the attendants are
" to serve all drivers regardless of their opinions of the
" present strike. Allow me to say as one of the 11,000
" now on the books of the union, that if blacklegs
" are to be served you will have to depend entirely on
" that class of despicable drivers for the patronage at
" these shelters, as all the union drivers I have spoken
" to on the subject are determined to do no business
" with anyone having any transactions (business or
" otherwise) with this class of unprincipled and con-
" temptible fellows. Of course, you will be unable to
" see any threat in this, but I must further state that
" we are under no obligations to the shelters, paying
" the same as at ordinary eating-houses, who are glad
" to serve us. And those eating-houses will be treated
" in like manner by us should they attempt to bring
" us into contact at our meals with this class of des-
" picable beings." In the result, our attendants, I believe in every case, have tried loyally to carry out the instructions in that notice. A further result is that to-day two, if not three, of our shelters are boycotted; one of our principal shelters in Piccadilly is boycotted by unionist men, and a letter was received yesterday from the attendant of that shelter, in which he says:—
" Dear Sir,—I hope you will excuse my liberty in
" writing to you, but my position has become such as
" that I cannot excuse myself from doing so. I have
" had expected troubles with my customers concerning
" the notice posted up to the effect that I was to make
" no distinction between non and union men, as regards
" the serving them. I have made no difference up to
" the present, according to Mr. Macnamara's order,
" and by doing so I have lost the best part of my
" custom, and am now boycotted by the cabmen. I
" have stopped a good many men with great difficulty
" from tearing down the notice; but one man last
" Tuesday on seeing it, abused me as hard as his tongue
" would allow him, and made an attempt to tear it
" down; I, of course, tried to stop him, and by so
" doing I was handled most roughly. I therefore hope
" you will do your utmost in assisting me in this
" matter."

7440. (*Mr. Whitmore.*) Does that boycotting mean a great diminution in the number of those attending that shelter?—A very large diminution, and as the result, of course, we have received no fees from the shelter whatever. I may say we have lost something like 50*l.* or 60*l.* in fees since the beginning of the strike, and the effect is that we now, at the present moment, have not sufficient balance to pay for the maintenance and repairs. There is a deficit for the first time for many years; our subscriptions and donations have fallen off, as compared with this time last year, to the amount of 130*l.* We are continually receiving letters from our subscribers in which they say that owing to their disgust at the view some of the cabmen took of what they were entitled to do at the time of the strike, they withdraw their subscriptions from the Cabmen's Shelter Fund; and it is extremely probable that before the end of the year ——, in fact, I do not see any other way that we can meet our liabilities except by selling out part of our invested funds. Those invested funds we have carefully nursed in order that we might have a fund with which to replace the shelters; because these shelters are not very long lived, exposed to the climate as they are; and we find that although in the past it has been easy to obtain donors of shelters, it is not easy to get people to replace a shelter which has been once given.

7441. (*Mr. John Burns.*) Seeing that the strike has terminated for something like a month, what is your justification for continuing the posting of these notices, when the object of the notice has disappeared?—Because the grievance remains.

7442. To what extent?—To a very large extent.

7443–4. Has anything happened within the last fortnight?—Within the last fortnight the grievance remains: I am quite willing to withdraw the notice at once, but the unionist men in the shelters will not allow the non-unionist men to be served; that is where the difficulty arises.

7445. As apart from the objection to the notice, what proof is there that the unionist men will not allow the non-unionist men to be served; can you give us an instance, within the last fortnight or three weeks since the strike has terminated, of these things?—I thought this man stated it.

7446. (*Mr. Hopwood.*) Is that letter dated?—No, the letter is not dated; it was received yesterday. He says: "I have made no difference up to the present,
" according to Mr. Macnamara's order, and by doing
" so I have lost the best part of my custom, and I am
" now boycotted by the cabmen."

7447. (*Mr. Whitmore.*) Your other correspondent, a unionist cab driver says, does he not, that he will not go to any place?—Yes.

7448–50. (*Mr. John Burns.*) We have had evidence that boycotting is not only on one side, because a number of people who have hitherto contributed have declined to contribute in consequence of cabmen having done this, that, or the other during the dispute?—The boycotting of non-unionist drivers is by the unionist drivers, not by the attendants.

7451. (*Chairman.*) Have municipal authorities statutory power to establish and maintain shelters?—Yes; up to 1890 it would seem they had not, but in that year, by the Public Health Act Amendment Act, the benefit of the institution of cabmen's shelters was recognised by the Legislature. That Act enacts that "An urban authority (*i.e.*, borough
" councils, improvement commissioners, and local
" boards), may from time to time provide, maintain,
" and remove in or near any street in their dis-
" trict suitable erections for the use, convenience, and
" shelter of drivers of hackney carriages, and such
" other persons as the urban authority may permit to
" use the same. The urban authority may from time
" to time make regulations for prescribing the terms
" and conditions and the fees (if any) to be charged for

Mr. W. H. Macnamara.

24 July 1894.

" the use of such places of shelter, and may make bye-
" laws for regulating the conduct of persons using the
" same." This enactment, of course, does not apply to London, to which our work is entirely confined. I should like to state, on behalf of the committee, that we quite recognise that the establishment and maintenance of cab shelters in the metropolis might, perhaps, be more properly carried out by public bodies in whom the streets are vested, and who now erect public lavatories and refuges, which they did not do at the time the shelters were established. We established shelters at the time when no public body had the power, and, as far as I know, the inclination to do anything of that kind.

7452. (*Mr. John Burns.*) Am I to gather from that, that in the event of voluntary contributions not being forthcoming, your committee would favour the transfer from the voluntary society to the local authority, to be subsequently named?—It is in no way dependent upon voluntary contributions; what we wish to do, and do now, is what is most for the benefit of the cab drivers.

7453. As apart from voluntary contributions, would your committee view with disfavour the transfer from the voluntary society to the local authority?—Certainly not, if it were thought to be for the benefit of the cab drivers. We, of course, are trustees for the donors and subscribers. I may say that two or three of the shelters have been given on the special terms, that we were to return them to the donors in case of any change of management, or in case of our not using them on the rank for which they have been given.

7454. (*Mr. Hopwood.*) You are not incorporated in any way?—No.

7455. There would be a difficulty in regard to the legacies that you have received if you were to wind up?—Yes.

4456. I see you have legacies?—Yes, we have received legacies. Most of the donors of these shelters are dead.

7457-8. (*Chairman.*) Mr. Macnamara, another question I have to ask you is: Is it a fact, as we have heard it stated more than once, that the shelters have become so crowded, so popular, that they are no longer available as mere shelters for people who wish to go in to be out of the weather, but are fully occupied and engrossed by people taking their meals in them?—They are fully occupied at meal time.

7459. That is a definite time?—Say, between 12 and 2 the shelters are fully occupied by cabmen having their dinner, five or six outside, who have ordered their dinner, waiting their turn, and at tea time the same, but at other times there is plenty of room for purposes of shelter merely.

7460. Is it true to say that the managers of those shelters would rather have the men's room than their company? In other words, that unless a man is prepared to spend money on food he is not welcome there?—We have done all we can to prevent that, but I have no doubt that the cab drivers themselves would resent a man sitting there at meal time when they wanted to have their dinners, teas, or suppers.

7461. No; but I am speaking of between meal times. Do you think between meal times, to vary the form of my question, an ordinary driver is at perfect liberty to go in and use the shelter as a shelter?—Certainly.

7462. It would not be conveyed to him that unless he were ready to spend something on food he was not wanted there?—Certainly not We have done all we can in the matter. We passed a resolution on the 30th October 1885 to this effect: " Resolved, that the general
" superintendent caution the attendants that the shel-
" ters are to be used by cabmen, whether they take
" refreshments or not, and that if further complaints
" are made (there had been complaints) the rules will
" have to be altered and a notice placed in the shelters
" to that effect." That was in 1885. Then in 1889 our general superintendent, Mr. Morris, who for 16 years has well looked after the interests of the cab drivers and the fund generally, writes to each attendant this letter: " I think it right to draw your very serious
" attention to a feeling which within the last year or
" two has been gaining ground amongst our friends the
" cab drivers of London, that the shelters (which are
" erected and placed in the streets of the metropolis
" for the sole comfort and convenience of cab drivers
" by a charitable public) may not be used by them (the
" cab drivers) except for the purposes of refreshment—
" in other words, that a shelter is 'simply a trading
" concern for the benefit of an appointed attendant,
" and that so long as an attendant makes a living by
" the sale of provisions to the drivers frequenting the
" rank on which a shelter is established he (the
" attendant) is satisfied, and that the comfort and con-
" venience of the cab driver is a matter of secondary
" consideration about which he need not trouble him-
" self." He says, " The rule of the committee on the
" question is this: 'The shelters are for the occupa-
" 'tion, comfort, and convenience of the cab drivers,
" 'whether used by them for the purposes of refresh-
" 'ment or not—provided the rules are obeyed,' and I
" feel sure that if it could be proved before the com-
" mittee that the attendants as a body studied their
" own interests only, and were indifferent to the
" honour and practical utility of the fund, very sweep-
" ing changes would at once be made in a very
" summary manner." On behalf of the committee, I should like to say that we claim that the Fund has been extremely economically managed, and we should challenge any statement that any other body could manage it better; but, at the same time, it has been a heavy task, a heavy claim on our time, of course wholly gratuitously, for nearly 20 years, and we do recognise that there are public bodies who have the rates at the back of them, who might very well provide shelters for cab drivers and carry them on; but of course to-day we are the trustees of a property worth about 8,000*l.*, and there is the question of these legacies. I do not know how, practically, such a transfer would be carried out.

7463. (*Mr. Hopwood.*) I am afraid you could not do it without a scheme, could you, under the Charity Commission?

7464. (*Mr. Cunynghame.*) And you could not do it with that, the charity is too recent.

7465. (*Mr. John Burns.*) Have you any reason to suspect, Mr. Macnamara, that in the event of a change being found desirable, and meeting with the approval both of the cabmen and of the society, many of the donors would object to the transfer?—Many of them cannot; they are dead.

7466. But do you think their executors would?—It would be extremely difficult to get at the legal representatives of the donors.

7467. But supposing the executors or trustees of donors who are dead were to have it represented to them that the balance of advantage would rest on the side of transferring them to a public authority, you do not think, do you, that there would be much objection?—I cannot anticipate objections.

7468. No, but you could form an opinion, Mr. Macnamara?—I should not object if I were in their position. There is this one point I feel also with regard to the public authorities. We have been very much handicapped in this, that these shelters are placed with the licence of the vestry or the local board, or whoever the rank is vested in with the consent of the Commissioner of Police, but we have never been able to place a shelter occupying a larger space than that occupied by a horse and cab, and the cause of many of these complaints of cabmen not being able to obtain shelter owing to shelters being so small would be removed, because the public authorities would be able, no doubt, to build larger shelters; they would have larger powers.

7469. Then the size has been circumscribed by the objection of the licensing authority rather than by the desire on the part of the shelter people to keep their shelters so objectionably small as they have been?—We have been compelled to make our shelters in that one size.

7470. And had you not been compelled to comply with that provision your shelters would have been made very much larger?—Very much larger, so as to provide more refreshment accommodation.

7471. And much of the objection of the cabmen as to insufficiency of shelter as apart from meals would have been removed?—No doubt; but, as I say, between meal times I do not think there is any great grievance on the ground of not being able to obtain shelter.

7472. (*Chairman.*) I want to ask you a question about the tariff. I see it is strictly temperance; you do not supply alcholic drinks?—No. We conduct our business on temperance principles, but without preaching a crusade against the licensed victuallers' trade.

7473. (*Mr. Whitmore.*) Might a cabman bring his own liquor there and drink it; would there be anything to prevent that?—Well, we have no rule against it. I remember one case in which a cab driver wrote and complained that he brought some beer in, and the attendant, like many of the attendants, was an enthusiastic teetotaller, and objected, and we upheld the attendant, but we should not be very strict about that; I see no objection to a man bringing in his beer for dinner.

7474. (*Chairman.*) And you do not supply provisions of any sort except tea, coffee, and bread and butter?—Well, the provision question has grown very much. That is again owing to the cab drivers. The cab drivers said, "Oh, we want," as they expressed it, "a square "meal; we want joints; we want puddings, and so "on," and to meet that want the attendants now provide regular dinners and suppers, but our original intention, as shown by our tariff, was simply to provide refreshments of a simple kind, and allow a cab driver to bring his chop or steak or fish and have it cooked at a charge of 1*d.*, and if it had been carried on strictly on those lines there would have been room for shelter purposes and also for those who wanted them for refreshment, but to meet the wants of the cab drivers (it has grown up entirely on their behalf and in their interest) meals are now regularly prepared, and served with tea and coffee.

7475. (*Mr. John Burns.*) Then, practically, do shelters provide that class of food, both in quality and amount, that a cabman would get at a neighbouring coffee house if your shelter were not there?—I know nothing about the quality.

7476. I put that so as to make no invidious comparison between them?—I admit that ours is extremely good. I know, because we go and taste it.

7477. That has never been contested; I want to be fair to both?—We want them to get the best they can.

7478–9. (*Chairman.*) Is there any particular class of cabmen who use your shelters more than another; I should rather put it this way: Do the very smart men use them, or the dowdy men, or both sorts, better men and worse; is there any fashion about it; are they places to which the tip-top cabmen, I might call them, would go?—It depends a good deal on where the shelter was situated. In the Piccadilly shelter and Palace Yard, and one or two other shelters you get a smart set of men, hansom-cab drivers, who are extremely particular, I am told, about their steaks and their new potatoes, and their salads, and everything of that kind. They are quite as ready to complain as members of West End clubs if things are not right.

7480. (*Mr. Cunynghame.*) Are we to understand that practically the shelter in its present phase is not very different from a well-arranged eating-house when conveniently situated in the vicinity of a good many cab stands; would that be a wrong picture?—It is very much more, surely.

7481. Would you please tell us, if you do not mind, very shortly?—In the first place, the difference between a coffee house and a cab shelter is that the cab shelter is for cab drivers only; it is not for the general public, it is only open for a limited class. Then, it is very often available when the coffee house is closed.

7482. Yes?—Then at the coffee house they cannot bring their own food and have it cooked.

7483–4. A fourth?—I thought that was enough, sir.

7485. (*Mr. John Burns.*) It is a fact, Mr. Macnamara, that subscribers recently have shown reluctance to continue their subscriptions as hitherto?—Owing to the intimidation practised in the cabmen's strike.

7486. That is the reason alleged?—Yes; it is the reason alleged.

7487. Has there ever been communicated to you any complaint on the part of cabmen using your shelters as to some of your shelters being used too much for proselytising purposes—first from the point of view of religion, temperance, mutual thrift, and the formation of clubs and societies in which the attendant is, perhaps, more pecuniarily interested than some of the would-be members?—I have had no complaints of that kind.

7488. Are you aware that your shelters are frequently used for proselytising purposes of that kind?—I am not. I am aware that in many of the benefit clubs the attendants cannot possibly have any pecuniary benefit in them.

7489. Are you aware that cabmen frequently say that a customer for a cup of coffee is not welcome, whilst the customer for a chop is?—I am not aware of that. I am quite sure of this, that the cab driver who could not get his cup of coffee would complain to the secretary of the fund.

7490. But in the event of a shelter accommodating nine men, and of there being 15 applicants for admission, is it not a fact that the attendant, paid as he is out of the profit on refreshments, would give preference to the nine men for the square meal, whilst the five or six men for the cup of coffee would be left outside?—Do you mean preference in point of time?

7491. In point of time, yes; and is not that preference in point of time due to the proportion of profit on the cabman's meal?—If the shelter was full and the man came and asked for a cup of coffee, a cup of coffee would be handed to him outside at once.

7492. If it was raining that would not happen?—He must take his chance.

7493. But is not the priority of admission frequently due not to the time of application, but to the cost of the man's meals or the price that the man pays for his meals?—The attendant has no authority to regulate the priority of admission. All cab drivers have an equal right to use it. We have very stringent rules to that effect, and I can assure you that cabmen are very ready to make complaints if anything happens.

7494. Do you consider 40 shelters sufficient for the cab requirements of London?—I should think not; I should think there might be probably some 10 or 15 more with advantage.

7495. Is there any probability of the Cab Shelter Society being able to provide the difference between 40 and 55 or 60, whatever may be sufficient?—The cab ranks vary so; sometimes a rank is made much smaller, a new rank is put on, and so on, that it is impossible to say. For instance, in consequence of building operations in a new street a new rank might be started, and then somebody who lived there might say, "I will give a shelter for this rank."

7496. But you can hold out no hope, can you, of private benevolence, in the face of that previous statement you have made, supplying the want?—I am not prepared to say that private benevolence is dried up altogether; I only tell you we have lost 130*l.* in subscriptions this year, part of this sum in consequence of intimidation practised in connexion with the strike.

7497. Do you consider that a good system by which the attendant is not paid a fixed weekly wage, but the quality of the food he supplies depends not on its actual cost, as it would if a weekly wage were paid, but the profit that the keeper may or may not be desirous of making?—The question of the profit does not rest with the attendant. The prices are fixed by us.

7498. Yes, but it is possible within the tariff, which may be perfectly fair and legitimate according to the committee, for him to comply with its letter, but not in the quality of food supplied?—We have officers who go and taste the food, and we do all we can.

7499. Do you consider that a local authority should be the proper authority for these shelters?—I do not consider anything about it; I simply say that for 20 years we have done it at great cost of time, and that if it is thought better we should be quite willing as far as we can to transfer our trust.

7500. But considering the limitations that are imposed upon voluntary societies by local authorities that frequently conflict with them as to size and location of the shelters would it not be best for these reasons alone that a local authority should have these shelters?—Of course, I cannot say how a local authority would carry them on.

7501. Are you aware that in Liverpool and Edinburgh, and other cities besides London, local authorities do build and maintain the shelters?—I am aware of that.

7502. Have you any reason to doubt that they are efficiently administered?—I happened to be in Glasgow last week, and I went into a shelter. There was no cooking at all going on; there was a stove there, but there was no control of any kind. The cab drivers themselves subscribed for a man to come in, who was their servant, not the servant of the municipal authority, to do what they wanted.

Mr. W. H. Macnamara.

24 July 1894.

7503. But is not that rather due to the difference in habits of the cab drivers in Glasgow and London?—I am not sufficiently acquainted with the habits of the cab drivers in Glasgow to say.

7504. (*Mr. Lough.*) I notice, Mr. Macnamara, that dividends on stock appear in your report; have you stated what the amount of this stock is?—Yes, you will find it in the left-hand corner of the page, "Memorandum—invested funds."

7505. I see, 1,100*l.*?—Yes.

7506. I heard you state, in reply to Mr. Burns, that there were 130*l.* annual subscriptions lost owing to the strike?—Yes.

7507. How do you know that?—I do not think it is quite accurate that I stated there were 130*l.* lost owing to the strike. What I meant to say was that our subscriptions and donations were 130*l.* less now than they were this time last year, and that we have had letters from our subscribers withdrawing their subscriptions on the ground of their disgust at what took place in connexion with the strike. I do not say that the whole of the sum or anything like it is owing to that; a good deal of it is owing to bad trade, I have no doubt.

7508-9. But it may pull up before the end of the year is completed?—If people get over their disgust.

7510. And if the cabmen do their business well in the remainder of the year, do you not think the balance may be restored?—I have not the slightest hope that we shall pull up the last six months; the last six months are always worse for us than the first, because there are so many people away from London.

7511. (*Mr. John Burns.*) Are you aware that the Metropolitan Drinking Fountain Association, who have been uninfluenced by the strike, also complain of a deficiency of funds and a great difficulty in meeting a similar object?—I am not; but I have stated that a good deal of it is owing to bad trade.

7512. Is there not an increased tendency on the part of people who have subscribed to hospitals, drinking fountains, and cabmen's shelters to throw the liability on the local authority instead of personal charity?—Of course, when times are bad, people first cut off their subscriptions and then their luxuries.

7513. (*Mr. Whitmore.*) But in some cases a specific statement has been made that that has been done in consequence of intimidation practised during the strike?—Yes. I wish I had brought the letters with me: they had withdrawn their subscriptions on that ground.

7514. (*Mr. Lough.*) Can you tell us how much the subscriptions withdrawn definitely on that ground amount to?—I cannot tell you.

7515. Why do you require that 1,100*l.* of invested funds; I see when you erect a new shelter you make a collection?—We try to get it locally. We require this 1,100*l.* because these shelters do not last very long, and we find there is great difficulty in getting people to give a new shelter in place of an old one, and so we have to rebuild the shelters. This is towards rebuilding the shelters; each shelter costs 200*l.*; we have now got one or two shelters which we shall have to rebuild.

7516. Well, I see you are able to provide out of annual income 307*l.* for repairs and repainting; is that not enough for maintenance?—That is for maintenance, not for rebuilding.

7517. Have you ever tried, in connexion with any shelter, the system of allowing the cabmen themselves to form a committee to control it?—We have not.

7518. Have you any cabmen on your managing committee?—We have not.

7519. Do you think it would be well to add, say, an equal number of drivers to the other gentlemen who compose this committee?—I venture to submit that the fund has been very well managed under the present constitution of the committee.

7520-3. I think the fund has been well enough managed, but you were admitting that the shelters were not very popular?—Oh, no; I have not admitted that at all.

7524. (*Mr. Lough.*) Did you not admit, in some instances at least, if not generally, that since the strike there was a sentiment rather prevalent amongst the men against the shelters?—Certainly not; what I said was that two of our shelters have been boycotted by the unionist men because our attendants have served non-unionists.

7525. Have there been only two affected that way?—There are two shelters absolutely boycotted at the present moment.

7526. What two are they?—Piccadilly and Park Road, St. John's Wood. I have already read a letter from the attendant at the Piccadilly shelter.

7527. Are these the only examples that you have had in the last year or two years of any sentiment against the shelters amongst the men?

7528. (*Mr. Whitmore.*) But if I may intervene, that is not exactly an accurate way of putting it; it is not a sentiment against the shelter.

7529. (*Mr. Lough.*) Boycotting is a sentiment against an institution, surely. I only want to get at the facts, because I have heard of some of the shelters being unpopular, and I just want to ask the question; I will be very glad indeed to hear that it is not so?—I beg your pardon; will you kindly put the question?

7530-1. Is the boycotting of these two shelters the only examples you have had in the last year of two of the shelters being unpopular amongst the men?—You can hardly call it unpopular. When the last strike arose some few years ago we had the same trouble, but not to such an extent as at present.

7532. Has any sentiment of this kind ever exhibited itself except during or after strikes?—No, necessarily it would not. The friction between unionists and non-unionists only exists at and after strikes for a time, I suppose.

7533. (*Chairman.*) May I put in a question? I think I see what Mr. Lough is driving at. Putting aside the question of trade disputes and strikes altogether, do you think that the institution is popular with cabmen?—Oh, no doubt; I thought I had already stated that.

7534. No doubt you had, but Mr. Lough was not here at the beginning. Do you think that to introduce cab drivers on to your committee of management would tend to increase the popularity of it in ordinary circumstances, without reference to strike times?—I should not have thought so.

7535. You do not think that with cab drivers on the committee of management the men would feel their needs were more exactly understood and more aptly provided for?—We are always ready to listen to any complaint from drivers or associations of drivers of any kind. We feel that we carry it on for their benefit, and if they do not appreciate it, then we would rather not have anything more to do with it.

7536. (*Mr. Lough.*) Do you not think it might help to increase its popularity and usefulness if you associated the men with the management?—I do not think its popularity could be very much increased.

7537. Well, take the attendant; he cannot feel that he is the servant of the men who go into the shelter?—I do not think he wants to be.

7538. You would not like the servants in a club not to feel that they were under the members of the club; do you not think it would be better if they were run on somewhat of the same principle as that on which a club is run?—I am afraid it would give rise to a good deal of dissension. How would you elect the committee; who would elect the committee? The whole body of cab drivers in London?

7539. The cab drivers who use each shelter perhaps?—They vary so; a cabman may be at one shelter to-day and to-morrow at one miles off. In connexion with the advantages of the shelters over ordinary coffee houses, I gave three reasons, and Mr. Cunynghame asked me if I could give a fourth reason why cab shelters were better than coffee houses.

7540-1. (*Mr. Cunynghame.*) It is in no adverse spirit to them at all?—I am not suggesting that; a fourth reason has just occurred to me that the customers of a cab shelter have a means of complaining of the food and attendance that they have not in a coffee house.

7542. There would be a supervision over the food?—Yes, a supervision over the food.

7543. By a central authority?—By the central authority of the shelters; they could complain and their complaints would be fully inquired into.

7544. Very much the same, for instance, as at the Aerated Bread Company's restaurants, the power of

complaint?—I do not know how far they would inquire into it; I take it if you complained of your bun or tea there you would get no answer.

7545. (*Mr. Lough.*) Surely they have the power of complaint in an ordinary restaurant too; you would get an answer too?—You have not a committee and a general superintendent, and an inspector to inquire into it.

7546. Do you think your prices that you charge are as low as Lockhart's prices?—I cannot quite say what Lockhart's prices are, but if ours are more then it cannot be said that we undersell Lockhart's and the coffee houses.

7547. Do you happen to know whether your prices are as low as at a coffee house like Beasley's, frequented chiefly by cabmen?—I cannot tell you; all I can say is that these prices are paid every day without complaint to us.

7548-9. (*Mr. Whitmore.*) Have they remained the same during your history?—The prices have remained entirely the same, except, I think, tea was 1½*d.* a pint at one time, and we raised it to 2*d.*

7550. (*Mr. Lough.*) I should like to put just this one question, do you regard the thing as a philanthropic institution or a paying institution?—I regard it as a philanthropic institution certainly. I do not know what philanthropy means if this is no philanthropy. We have been working at it for the last 20 years gratuitously, and we have tried from the first to make it self-supporting, we did not wish it to be a charity, but we found we could not do it. We would be very glad if the work could be carried on without outside help, but it is not possible.

7551. Then it is mid-way between the two; it is half a charity and half a self-supporting institution?—Yes; the fees received pay for the annual repairs. If you look at the balance sheet you will see that is just about it. Everything beyond that, all expenses of management, come out of funds subscribed by the public.

7552. What is the meaning of "Fees for gas at shelters" in your report, 120*l.*?—A large number of the shelters are supplied with gas stoves; we had great complaints from residents near some of the shelters of the smoke from the stoves, so we were obliged to put gas stoves in, and the charge for the gas for lighting and cooking we require the attendant to pay for in each case.

7553. (*Mr. John Burns.*) He paid for the coal originally, did he not?—He paid for the coal originally; he pays for the gas in the same way; he pays for light and fuel.

The witness withdrew.

Professor JOHN PENBERTHY called in and examined.

7554. (*Chairman.*) You have come on behalf of the College of Veterinary Surgeons?—Yes, sir.

7555. It will not be necessary for me to take you point by point through the printed statement of what you propose to say, but I will invite you to give your views on the subject of horses and the diseases of horses as used in the cab trade as they come under your professional notice?—In your request to the College to give information, the diseases of glanders and farcy, I think, were specified. Undoubtedly, as we have said in our report, these diseases prove very serious to the owners of cab stock, both great and small. The burden, of course, naturally falls more heavily on the smaller men, and it is the opinion of the committee of the College that the circumstances under which the horses of the poor men are kept rather favour his losses; but notwithstanding that, even in very well-managed stables, where there is no reason to complain from a general point of view, the losses are still large, and these prove a source of danger to all cab owners by dispersion of their stock should any undetected cases of glanders exist, which, I regret to say, is frequently the case. Up to quite a recent period the great difficulty in dealing with glanders and farcy—that is from a legislative point of view as well as a medical man's—has been the difficulty of saying when a horse is or is not affected with glanders; but the discovery of a material called "mallein" appears to have removed that difficulty, and now it appears to me and my colleagues on the committee that we may discover whether any horse in any stud is affected with glanders even in the most latent form.

7556. May I ask you to explain to us about the discovery of this; is it a substance?—The discovery is probably an outcome of the discovery of "tuberculion."

7557. Was it a substance or a condition: I was not sure which it was?—It is a material which is produced by the glanders virus.

7558. How does the discovery of this material help you in your diagnosis?—By injecting some under the skin we have a reaction which, as far as we know, only follows when the horse is glandered; when the horse is not the subject of glanders there is no reaction. It has been carried out by, I think, the whole of the members of the committee on a very large scale.

7559. (*Mr. Cunynghame.*) Does it take long to detect the disease from the date that you inject it?—About 24 hours.

7560. (*Chairman.*) Do I understand you to say that glanders is entirely a matter of transmission, that the disease does not arise spontaneously?—Entirely, sir.

7561. Is the same the case with farcy?—They are one in reality and are now so recognised by the Glanders or Farcy Order of 1892.

7562. They are absolutely one, not kindred, but similar?—Depend on the same virus. If a horse be infected one cannot determine when glanders or farcy is going to appear.

7563. In both cases they are transmitted and not spontaneous?—Never spontaneous.

7564. Do you think that the public water troughs are a source of this contagion, or means of this contagion?—I am sorry I am bound to say so; though that is a minor one. I should like to have it understood that that is only one of the lesser means of distribution of the disease.

7565. What do you consider the most fruitful source?—The introduction of a horse affected with glanders. Because a horse with glanders may show to an ordinary or an expert observer no sign of the disease.

7566. That is a source of mischief which it is difficult to get at?—Except with the mallein, sir.

7567. And even that needs professional knowledge to use?—That requires professional knowledge, too, of course.

7568. I mean how is the ordinary proprietor to judge whether he has got a glandered horse into his lot?—He can only judge whether it is worth his while to seek veterinary aid, and have it tested with mallein if necessary.

7569. And in the meantime he must separate it from his other stock if he wishes them not partially contaminated?—It is always wise in buying new stock of any kind to keep them separate.

7570. Would it in your opinion be easy by framing any legislative measure to stamp out the diseases?—I think it would, sir.

7571. Would you kindly indicate to us what changes in the law you think ought to be made?—That all measures should be made compulsory, not permissive. The last Glanders Order is a permissive one, which permits any local authority to adopt certain measures. One local authority objects to adopt the powers for the reason that a horse may be brought from a neighbouring authority which does not adopt the same powers, and contaminate the area of that authority.

7572. Have you any other suggestions as to legal methods?—Except that power should be given to inspect and use new means of diagnosis.

7573. You mean that there should be power in the local authority to insist upon that test being applied?—Yes.

7574. To a suspected animal?—Yes. I am also of the opinion that a certain compensation should be given, the amount of which I think it is hardly for me to suggest, but we have in the report suggested one-fourth

Prof. J. Penberthy.

24 July 1894.

of the value of the diseased horses. I think that would have the effect, in the first place, of giving an incentive to the owners to report. In the second place, I think it a just compensation; because horses glandered may do their work for a considerable period, and at the same time be disseminating the disease. It would certainly be a great incentive to owners of horses who were doubtful about them to report to the inspectors; and then, of course, if the power to apply the mallein were given, I think the matter could be settled. Glanders is a disease of London, out of about something over 2,000 horses that die annually I should say about four-fifths die in London, and the other centres, Glasgow and Liverpool, supply a large proportion of the other one-fifth.

7575. In fact, it is a disease of large towns and not of the country?—Yes, sir. But by a process which we indicate in our report, namely, by turning out horses, especially if they are not doing well, into fields in the country, more especially in the home counties, the disease is often spread; perhaps one affected horse is taken to grass, glanders is latent in his system, he does not show it himself, but he gives it to perhaps half a dozen horses that are grazing with him. Those horses do not show it, perhaps some of them do not show it until they are mixed in six or seven studs which become contaminated. I have had two instances of that lately and of very serious loss accruing through it.

7576. Has your professional experience enabled you to form any opinion about the testing of cab horses before the cabs are licensed?—A public testing?

7577. By the police authorities—whether they are adequately tested. I think we have had it in evidence that the horse is regarded as part of the cab for the purpose of the preliminary investigation before the lot is licensed to go on the street. The horse as well as the cab is supposed to be investigated. Do you know at all whether this process is a real and bonâ fide investigation?—It is investigated only by the intending purchaser or his agent. If his agent be a professional coach-builder in the first place, and a veterinary surgeon in the second place, he is protected so far as having a sound horse, and a carriage that is a bonâ fide article is concerned.

7578. No, I do not mean that. I mean the police authorities in Scotland Yard inspect the cab before it is licensed, and the horse is supposed to be inspected at the same time?—As to fitness?

7579–80. As to fitness. I wanted to know whether you had had any experience which would enable you to say whether that supposed inspection of the horse is an efficient and thorough inspection?—I do not see how it can be.

7581. An inspection of its physical soundness, I mean only, not of its temper in harness, and that kind of thing, because that cannot be investigated, but of its physical fitness, its freedom from disease?—It could not be investigated by the police, that is certain, except the police employed a veterinary staff.

7582. You mean they have not sufficient expert knowledge to enable them to form an opinion?—They have not, certainly; and they have no veterinary administration at all that I know of.

7583. And you do not think that the signs of disease in a horse are sufficiently evident even to the outsiders to enable them to form a rough and ready, but accurate notion, of whether the beast is fit or unfit?—Of course, you might get occasionally an expert policeman, but being a policeman he is not likely to be so well informed as the cab owner himself, who is going to risk his money, and whose life's work is with horses.

7584. I think we have had it stated that sometimes a cab owner would put a creditable horse into his cab when he takes it to be licensed and substitutes another one when he goes on the street with it?—There is no reason why he should not do that; there is nothing to prevent him.

7585. That part of our inquiry, the inspection of a horse by police before licensing, has not fallen under your personal knowledge?—I cannot, of my personal knowledge speak of it, but I could conceive of no power now in action which could do it; because a man may have 50 horses in his stable to-day and may sell them to-morrow morning, and have 50 new ones, which are never seen by the police. The police have a general supervision in the streets, and in the streets only, to see that the horse is not being cruelly used or tortured.

7586. But short of that, should you say that as the present system works out the horses in the streets that you see ordinarily in going about are a healthy, vigorous lot, or should you say that a good many are being worked that are unfit for work?—I should say the cab horses of London compare very favourably with the cab horses of any part of the world in which I have been.

7587. (*Mr. Cunynghame.*) Does it not appear to you, perhaps, a dangerous system, one that might be accompanied with disadvantages, to introduce a plan of compensating, even in part, persons who have diseased animals that are obliged to be killed. You said you would give them one-fourth?—Well, there is a certain amount of danger that imposition might be attempted, but I regard this as small and unimportant.

7588. And possibly a certain amount, too, of unfairness that the public in general should pay one-fourth of the value of this man's horse instead of his being obliged to take the risk of its illness himself?—Well, purely from the point of view of political economy, I suppose it is fair that the owner should bear the burden of his purchase.

7589. You put it on a question of expediency with regard to horses?—Quite so; expediency as regards the horse, and on these facts, that the small owner whose living depends on it, may work his horse for six or 12 months without any damage to himself, and that successful precedent has been established in other contagious diseases.

7590. I quite understand that, I think?—And at the same time he may be damaging other horses.

7591. If you will allow me, I will test your view by an instance. You know when people have had typhoid fever in the house, they are obliged to strip all the walls of the house and put up clean wall paper; would you be in favour of the Municipality bearing one-fourth of the cost of putting up that clean wall paper or one-fourth of the expense falling on the community?—If I could see that the circumstances were equal.

7592. You think there is a difference?—I think there is a difference in the circumstances.

7593. I see your view, I think. You need not answer this question unless you like. Do you know anything of the qualifications of the veterinary surgeons who are generally employed by the Royal Society for the Prevention of Cruelty to Animals—do you know any of those surgeons?—I know some of them who are employed, and I should say you could not include them under one opinion.

7594. (*Mr. John Burns.*) It has been alleged during this inquiry that some of the veterinary surgeons employed by the Royal Society for the Prevention of Cruelty to Animals, although technically qualified men, are not men who regularly follow a lucrative business, and are too frequently in the habit of associating with some of the officers at public-houses and elsewhere; in a word, are not reputable qualified men. Do you share that opinion?—That is an opinion I have frequently heard expressed, and an opinion with which to a limited extent, I am disposed to agree.

7595. Then there are men—may I put it it in this way—technically qualified to inspect and pronounce an opinion upon horses, who, in other ways, are not in a position to exercise rigidly and impartially the qualifications of an inspector's office?—Whose opinion would not have much weight with me; if you will allow me to say that.

7596. (*Mr. Cunynghame.*) And may we take it also, whose moral character—that is the point—would not render them trustworthy witnesses in a court of justice?—I could not possibly give an opinion of that kind.

7597. (*Mr. Lough.*) I would like to ask you another question about this case of compensation raised by Mr. Cunynghame; have you had experience of glanders being transferred from horses to human beings, or have you heard of it?—Yes.

7598. There is, then, a danger to human beings when glanders are prevalent?—There is a danger, yes.

7599. Do you not think then, that on that ground it might be fair to provide a little compensation to the owners of the horses for the more speedy extinction of

the disease?—As a matter of expediency; it hardly touches the matter of fairness.

7600. And then on the question that Mr. Cunynghame put, whether in a case of illness it might be fair to ask the municipality to compensate for removing infection, I want to ask you whether you are aware that in Leicester that is regularly done?—I have heard it is.

7601–2. The house cleared out, and the bedding turned, and all restored at the cost of the municipality?—I am not sure whether it would not be the best, if I could be a judge of that.

7603. You have heard that they consider it very economical?—Yes.

7604. Now, I want to ask a question about the water troughs. Do you think the danger of the water troughs would be removed if the water were allowed to run more quickly through them?—The danger would be lessened according to its rate.

7605–6. If the water ran sufficiently quickly through them the danger would disappear?—Oh, no; be lessened.

7607. Do you think it would be possible to make troughs perfectly safe by any system of that kind?—Not perfectly safe.

7608. You are against troughs altogether?—From a humanitarian point of view I am altogether in favour of supplying animals with drink, but I recognise it as a source of danger in this disease, and my reason is that I have had experience of glanders in private stables where the horses have had to drink out of a common trough, and where it could never be successfully coped with until the troughs were removed and the animals watered from pails.

7609–10. In the present troughs does the water lie, or does it move through quickly?—It moves through quickly, in the better troughs.

7611. Do you think that the prevalence of the disease in London that you have spoken of is due to the ill-construction or unhealthy character of the stables in London, speaking generally?—I think that conduces to it.

7612. Are the stables in which cab horses are kept good stables, as a rule?—Some very good and some very bad.

7613. Have you a large acquaintance with them?—Very considerable

7614. Do you find the bad ones amongst large owners or small owners?—Naturally amongst the small ones.

7615. Do you find, then, that cab drivers who own one or two horses generally keep them under what you consider unhealthy conditions?—Often under unfavourable conditions, yes.

7616. Unfavourable conditions?—Yes. They are often compelled to keep them in the dark end of the mews; darkness always encourages dirt; and, of course, dirt may include the virus of the disease.

7617. And are they well-drained as a rule?—Well, I have never been able to discover any great defect in them. I believe this would come under inspection of nuisances.

7618. (*Chairman.*) May I put in a question on that. Is it your professional opinion that bad draining is prejudicial to horses' health in the same way that bad draining is prejudicial to human beings' health?—Yes.

7619. And that many of the diseases to which horses are subject are facilitated by bad drains?—Their progress is accelerated; it renders the subjects weak.

7620. (*Mr. John Burns.*) And that many of the diseases to which horses are subject are facilitated by an absence of light?—The virus of glanders is supposed to be very deleteriously affected by sunlight, and the absence of sunlight is one of the great dangers on that ground.

7621. (*Mr. Lough.*) I suppose the horse you find the most sensitive of all animals?—The most easily affected by diseases, I think.

7622. A more keen, nervous system?—The dog has probably a keener nervous system, but his tissues are probably more resistant. The horse is very easily affected by any abdominal disease.

7623. I want now to go to the stables of the larger owners. We have returns which show that there is a large number of owners of 20, 30, or 40 horses—I will put it between 20 and 40, because that is the small-size large owners, we will say; do you find those stables usually well constructed?—Very fairly, indeed some are well constructed. Some owners who keep 40 horses have three or four different stables. They are sometimes not all in one stable, and these are occasionally far from satisfactory.

7624. Do you know any stables in London in which all the horses cannot lie down at once?—I do not know according to the present arrangements.

7625. Some horses stand, whilst others are lying?—Yes.

7626. Do you find stalls of sufficient width for the horses to be comfortable?—Usually, yes.

7627. Is there any power to deal with a stable in which all the horses could not lie down at once?—Not that I know of, except under the Cruelty to Animals Act.

7628. (*Mr. John Burns.*) Professor Penberthy, have you formed any opinion upon the question of the inspection of horses and cab yards and stables in London. Could you suggest to the Committee a more perfect form of inspection than now prevails?—As regards the comfort?

7629. As regards the sanitary condition of cab yards—the general conditions under which disease may or may not be communicated to horses, and the general sanitary comfort, so to speak, of the yard, horses, and stables?—I think that it should be done systematically.

7630. Do you consider that the present form of inspection is satisfactory?—I do not think there is a system of inspection.

7631. There are five forms of inspection now in London?—I have heard there are.

7632. One by the policemen, in the street, of the horses?—Yes.

7633. One by the Royal Society for the Prevention of Cruelty to Animals' inspectors?—Yes, which is purely permissive.

7634. Purely permissive. Then the Metropolitan Drinking Fountains Association have, of course, a very limited degree of inspection?—Yes, of drinking troughs.

7635. Then the London County Council have their veterinary inspectors, whilst the local authority, namely, the fifth, exercise sanitary supervision; that is so, is it not?—That is so; they have power to exercise. I believe every one of those is permissive. I do not think there is any statutory enactment which compels the authority to take cognizance of it.

7636–7. Do you not consider, as a veterinary expert, that those numerous forms of inspection are diffuse and irregular, and lack decision?—Yes, and are comparatively valueless.

7638.—For the purpose sought. Then you consider that each of these five systems of inspection of horse, yard, and stable, are inefficient, and that the whole of them combined are useless for the object to be attained?—Comparatively useless, yes.

7639. Do you believe that cab yards are a prolific source of farcy, glanders, and other diseases?—Yes.

7640. And the small yards, as asked by Mr. Lough, are particularly bad?—Yes, I think so, and if I may give my reasons, because a small owner is generally poor, and consequently has often to buy a cast horse.

7641. Would you favour a greater inspection in the street, the yard, and stable, by directly appointed and thoroughly qualified veterinary inspectors, under one local authority instead of the present diffuse system?—I would, sir.

7642. What form of inspection would you favour?—That all stables should be systematically inspected by veterinary surgeons, and that if public drinking troughs be allowed, their cleansing, &c. should be under veterinary control.

7643. But is it not a fact that in all provincial towns where voluntary societies do not exist, a complete and adequate system of inspection in the street, yard, and stable is carried out by the local authority under the Contagious Diseases Animals Act?—All local authorities do not appoint veterinary inspectors.

Prof. J. Penberthy.

24 July 1894.

7644. No, but they have the power?—They have the power, yes.

7645. And in cases where that power is exercised, as in Liverpool and Glasgow, the power is fairly well exercised?—Is fairly well exercised, yes.

7646. Do you know anything of this fact, that in 1892 there were 108 cab horses slaughtered in six cab-masters' stables, whilst at Messrs. Tilling's, who had 2,500 horses, and the London Street Tramway Company, which had 1,200 horses, there was not a single case all the year?—I am aware of the return, yes.

7647. Does not that indicate that if better horses were in London cabs, and some regard were paid to their comfort and convenience, farcy and glanders necessitating slaughter would almost altogether disappear?—No.

7648. (*Mr. Hopwood.*) Do you doubt the correctness of the return?—Not at all, sir; I remember the return well.

7649. (*Mr. John Burns.*) To what can be attributed the difference between the number of horses slaughtered by six cab masters and the fact that no horses were slaughtered where nearly 4,000 were stabled?—The difference in the banking account, the difference in the ideas of economy; those are the two main features. The horses of the companies you mentioned—Tilling's and the London Street Tramway Company—are bought direct from the country at a fair price for young horses. In the other cases the men may have to take the weedings, very likely, of some of these and other companies' horses. Amongst these is sometimes an animal that is not doing well but which really has glanders in his system and conveys it to his other horses. I think much depends on the source from which fresh stock is procured, and the promptness with which appreciably affected and suspicious cases are dealt with.

7650. But do you consider it fair and just to, say, the other half million of horses in London, or whatever the number may be, that a few bad small cab masters who are unable to keep their horses in good condition, should be allowed by public opinion or by the local or imperial authority to be a continual source of contagion?—I do not think they should, certainly.

7651. And you think only a rigorous inspection and rejection of unfit horses would remove it?—I do, certainly.

7652. You are aware, of course, that the London County Council, as the local authority under the Contagious Diseases Animals Act, has the power only to inspect where *primâ facie* disease exists?—I am.

7653–4. Do you consider that from the point of view of restricting disease an unfair limitation?—I consider that is too limited.

7655. And you would give them the power of interfering by inspection to prevent disease, rather than locking the stable door when the horse had gone?—Certainly.

7656. If it were proved that there was collusion between veterinary inspectors and unqualified veterinary surgeons, you would regard that as an unsatisfactory condition of things?—If there were illegitimate collusion—any collusion to evade the law I should think unsatisfactory.

7657. Let us put it this way. If it came to your knowledge that veterinary surgeons employed by the Royal Society for the Prevention of Cruelty to Animals were in the habit of colloguing with the society's inspectors in public-houses, you would not consider that an instance of good administration. I only put it conditionally?—Personally it does not appeal to me as being a thing that I should wish to see; but it is a peculiar question to answer. The poor man's beer is just the same as the rich man's beer, and there can of itself be no harm in the inspector going with another man to have a glass of beer. From your point of view, I should not countenance the thing myself.

7658. No; but from an administrative and a disciplinarian point of view?—I should object to it.

7659. Do you consider that a voluntary society's inspector is more liable to caprice and prejudice than a public inspector, properly qualified and dependent upon the local authority for the continuance of his salary and probably his pension?—Certainly.

7660. Then would you be in favour of abolishing the present system of inspection by a voluntary society, with more or less qualified inspectors, and handing it entirely over to the police or local authority?—I do not think it could be abolished. In the first place there is no power to abolish it; it could not be acquired. I certainly believe that humanitarianism has advanced sufficiently far to make it incumbent on the Nation to see that animals are not ill-treated.

7661. But supposing the duty now more or less efficiently discharged by a voluntary society was more efficiently discharged by the police or local authority, would you be in favour of the transfer of these duties?—If it could be done I should be certainly in favour of the transfer of the duties. But I do not see how it could be done.

7662. You think it could not be done?—The action of the Royal Society is a purely voluntary matter.

7663. But supposing the people of London were willing to pay out of the rates for the remuneration of these inspectors that now work for a voluntary society, and others in addition to carry out more efficiently the system of inspection, would you agree with that?—I do not exactly catch the question, sir.

7664. Well, supposing the Royal Society for the Prevention of Cruelty to Animals has 12 inspectors to carry out the duties of that society in the streets of London, do you not think that 12 or 14 inspectors appointed either by the police or the London County Council, would be a better system of inspection than that undertaken by a voluntary society?—Yes, certainly, I only wish to imply that, as far as I know, the Society has no powers of its own—no powers special to itself; and I fail to see that they could by any Act of Parliament be quashed.

7665. But is there not more probability of a public body, susceptible to Parliamentary pressure and to ratepayer's criticism, more efficiently and more impartially carrying out the duties of inspection than a voluntary society that may be subject to caprice?—I thoroughly believe it.

7666. (*Mr. Hopwood.*) You have been asked a good many questions about the cab horse at home, I should like to ask you a question or two about the cab horse when he is attached to the cab. Do you think that the animal that we know about the streets of London is the most suitable for the work which it has to do?—I think so, yes.

7667. And you think on the whole that he is fairly well treated?—I think so, yes.

7668. That as a rule he has not to work unduly long hours?—I think not, sir; I think his general condition shows that.

7669. The general condition of the horse in the London cabs is good, in your opinion?—I think so; of course, there are exceptions.

7670. As a rule they are fairly well driven, fairly well kept, and you have no suggestions to make to us as to their condition, or the betterment of their condition?—No, I do not think as a whole they require any betterment. I think they are well cared for, well driven, and better turned out than in any carriages in the world.

7671. You are speaking of the horses?—Yes.

7672. And you have no suggestions to make to us with regard to the horses?—Other than that their comfort at home might have the advantages of inspection—better light and better stables than some of them have. Some of them are very good.

7673. I treat it that you have been asked everything that can be asked with regard to the horses at home?—Yes, as far as occurs to me at present.

7674. My questions only go to the conditions of the horse when in the cab?—I do not think they are, as a rule, over-worked; I believe the horse owner is a very good judge of that from an economical point of view.

7675. And you have no suggestion as to their standings?—No, sir; not that I know of.

7676. (*Mr. Lough.*) Do you not think that that voluntary society, the Royal Society for the Prevention of Cruelty to Animals, to which Mr. Burns alluded, has educated public opinion with regard to cruelty to animals?—I think it has done a great deal of good in that direction. I disagree with some of its processes, but I agree with its object entirely; and I think it has done an immense amount of good. I should be extremely sorry to use an unduly harsh word against it, though I feel very strongly against its movements. I

have recently written at pretty full length upon the subject.

7677. (*Chairman.*) You say "against its movements." I do not think that would read very clearly." You mean that you dislike very much what it does?—The way in which the details of its work are carried out.

7678. (*Mr. Cunynghame.*) Perhaps you would have no objection to let us have a copy of what you have written?—I think I can let you have a copy.

7679. (*Mr Lough.*) Do you not think that any voluntary society necessarily must be more defective in the details of its proceedings than an organised State institution?—Yes, sir.

7680. But allowing for that, you are of opinion that this society has done a great deal of good in the education of opinion?—Certainly, sir; and I think kindness to animals should be part of our system of education, fostered by example, and provided for by the State. I should be very sorry to see the Society crushed out of existence by any legislative enactment which did not provide for the carrying out of its ostensible objects in an amplified and improved manner.

7681. And one other word. Do you not think that supposing it were crushed out of existence and the duties were thrown upon the police, or even a municipal system, that such an organisation could only proceed according to law; it could not move with public opinion as well as a voluntary society? What do you think of that?—Public opinion can move the law, it is said.

7682. Exactly. But there would be long intervals when the law would not be moved, and a great deal of harm might be done?—I think the general education—the same element would be working as is working now at the instigation of the society.

7683. Without the society?—Without the society. I think they have educated, and we cannot undo education, fortunately or unfortunately.

7684. Do you not think that ought to go on, and that it would go on better with a voluntary society?—I should encourage it.

7685. You cannot quite see a voluntary society educating even a municipality?—No, excepting a very slow process; I am afraid that is beyond my experience.

7686. (*Mr. John Burns.*) Would you favour an automatic flush through the troughs, if troughs should continue?—Yes.

7687. Would you be in favour theoretically of doing away with the troughs altogether, and substituting the bucket?—Yes.

7688. Would you be in favour, for the purpose of cleanliness and greater supervision, of having the local authorities in charge of the troughs and buckets?—Yes, the local authority.

7689. Namely, that the scavenger who swept the street every hour in front of the horse trough should occasionally glance at the horse trough, and see that it was clean and tidy?—Yes.

7690. Do you consider that the inspection of troughs and water posts in London could be improved. Have you ever noticed unclean water troughs?—Very rarely; I do not think I have noticed an unclean water trough from a general point of view; but the virus of glanders, for instance, is so microscopic, so extremely small, that it is quite possible for myriads of these to exist, and the trough appear perfectly clean.

The witness withdrew.

Adjourned till Thursday, at 11 a.m.

FOURTEENTH DAY.

Thursday, 26th July 1894.

PRESENT:

MR. GEORGE RUSSELL, M.P. (CHAIRMAN, PRESIDING).

MR. HENRY CUNYNGHAME.
MR. F. J. S. HOPWOOD, C.M.G.
MR. E. H. BAYLEY, M.P.
MR. JOHN BURNS, M.P.
MR. T. LOUGH, M.P.
MR. C. A. WHITMORE, M.P.

MR. MALCOLM DELEVINGNE, *Secretary.*

7691. (*Chairman.*) There is a letter I should like to read to the Committee with reference to evidence given some days ago by Mr. Jenkins, question 4488: "I could "give you an instance that occurred the day before "yesterday. I have been trying to get the full facts, "but I can get them; it was the case of a cab being "taken to Rochester Row, and being refused to be "passed there, and then taken to the Stone's End, "in the Borough, and passed. I can bring you the "number of that cab. Q. 4489. Will you send it "to the Secretary, the number of that cab?—A. Yes, "I will find it out."

"DEAR SIR, "July 25th, 1894.

"In answer to your letter of the 23rd, respecting the evidence I gave about the four-wheeled cab that was refused at Rochester Row, but was afterwards passed at Stone's End. The number of the plate is 14,878, and the railway number 88 in Victoria Station.

"I beg to remain

"Yours respectfully,

(Signed) "R. JENKINS."

[*Referred by desire of the Committee to the Commissioner of Police.*]

MR. HENRY LAMBERT called in and examined.

7692–8. (*Chairman.*) You are the general manager of the Great Western Railway?—I am.

7699. How long have you been so?—I have been connected with the company for some nine and twenty years; but I have been general manager now nearly seven years.

7700. And during that time you have had the privileged cabs under your control?—Yes; the system of privileged cabs has existed since the year 1845.

7701. Yes, but I mean during the time that you have been manager you have had control?—During the time I have been general manager, I have had this question more particularly under my notice.

7702. We have heard in this inquiry that one of the objections to the privilege system is that the cabs and their horses have to undergo a great deal more wear and tear than is the case otherwise, because the men have to scurry back to the station from the point to which they have taken their fare; does that tally with your experience?—No I am bound to say that while it is alleged that the privileged cabs have greater wear and tear than the ordinary cabs, it is not from the hurrying back to the station, but rather because of the

Mr. H. Lambert.

26 July 1894.

luggage which they have to deal with in much larger proportions than the outside cabs.

7703. What are the regulations about the return of the privileged cabs to the station?—There is no specific regulation on the subject, but there is an understanding that the cabs shall return and it is to their interest to do so. That we believe to be the strongest inducement; they know that as soon as they come back to the station, whether with more or less delay, generally less, they are able to secure a fare.

7704. But they are at liberty if they so choose to take up another fare between the coming and going?—Yes, there is no doubt that if a cab on its way back to the station is hailed by a passer-by the cab takes the fare and I have myself hailed our own cabs in preference to strangers when I have wanted to go home, for instance, from the West End.

7705. (*Mr. Hopwood.*) But they have no opportunity of going on a cabstand in order to give the horse a rest?—They have the opportunity if they avail themselves of it, but the rule is that they shall return to the station, undoubtedly, and we look for them to do that.

7706. (*Chairman.*) Would it be considered an offence in one of these men if he were found resting on a cabstand?—No, I do not think we should regard it as an offence, especially if it took place at a time when there was no great pressure for cabs; there are times when the pressure at the stations is very light and it is more especially at these times that the cabdrivers take outside fares; but if we found a man standing on the rank at a time when he would know that there was pressure at the station we should very likely find fault with him.

7707. You think that the system is conducive to the public convenience?—We have a very strong feeling that it is to the interests of our passengers that we should have this system of privileged cabs; we believe that we have a better control over the men and their vehicles and horses; we secure a supply of them because it is by no means an uncommon thing for us, in times of pressure to get complaints from the public that there is not a sufficient supply of cabs on the station. If we were dependent upon outside cabs it follows that we should have no where to look to at all; we should be at the mercy of the outside cabmen who would go where their interest prompted them.

7708. I believe that the number of the privileged cabs has increased in the last 50 years?—50 years, save one.

7709. From 18 to 210?—213 in 1893 we had.

7710. And do you regard that as in itself a proof that the system meets a public want?—We do distinctly.

7711–2. Would you give the Committee your views as to the advantages of the system?—I have already suggested that we think we have a better control over the supply and over the character of the supply. We have men who have been coming to the station as long as 40 years; a great number for over six years, and it is obvious that in such a case we know our men and have a better control over them than we should have if they were strangers. We find it also very useful in the tracing of missing luggage for which our facilities would be less if we were dependent upon the outside man, and for this reason, that in the case of our own men, every man has to declare, as he leaves the station, where he is going to, and on the following day to make a return of where he has gone; just as an illustration I have brought last Monday's returns, so that you may see the sort of thing it is; the information that is given, and the value of it to us. (*Documents put in.*)* In other words the cabmen identify themselves with the company, and assist them in their inquiries, because of their association with them; and we find that the outside man is not so ready to assist us

7713. I understand that you keep up an habitual inspection of the cabs?—Yes, certainly.

7714. And do you sometime have to turn them out on account of faults?—Yes. I may say that I pay a good many cab fares in the course of the year, starting from Paddington. I always have one of our own cabs from choice, and I have myself had occasion to find fault, and have given orders, in fact, for particular horses to be excluded. A little while ago I went to the St. Pancras Hotel, to a meeting. The horse travelled very badly. When I went to the hotel I challenged the cabman, and he said, "Well, I have spoken of this horse myself," and it ended by my giving notice that the horse should not be allowed to come on the station again.

7715. And do you sometimes have to exclude men on account of misconduct?—Yes; but I am glad to say that the number of complaints that we have had to deal with during the last three years is very small. I have particulars of them here,* and I find that from the 1st of July 1891 to 30th June 1894—three years—there were only 16 complaints in all of our own men; here is the nature of the complaint, and how each case was dealt with.

7716. Do you think that the number of complaints now is larger than it was a few years ago, or smaller? No, I should not like to say that. We have had a little more difficulty since the strike, but nothing of any special importance; and I should not say that the complaints have increased of late years.

7717. Nor sensibly decreased?—No. There is the evidence for the three years, which gives you an idea to what extent the complaints are made.

7718. But how much time does that cover?—Three years. 16 complaints with 200 cabs.

7719. I mean further back than that. How would that compare with the time when you first became manager?—I have not taken out that information. I could not give it you; but I think you may take that as a fair sample of the state of things that goes on.

7720. I wanted to know whether you had any view as to whether cabmen, as a class, were improving. However, you have not got the information at your finger ends?—No. I could not give you specific information about that. I rather point to the general control we have over them, and the keeping them in order.

7721. Sometimes, I suppose, your supply of privileged cabs is inadequate to the demands of the public?—There are times of pressure when that arises, and then we let in the outside cab, and charge a halfpenny for the entrance.

7722. (*Mr. John Burns.*) Do you take his number as he goes out with luggage?—We do; but the outside men refuse to tell us where they go. As a rule, we do not get the assistance from them that we do from our own men.

7723. Is not that refusal to lend you assistance based on the fact that they resent privilege as privilege?—I do not think so.

7724–5. What is the reason?—Well, they feel themselves more independent, free of control, and they object to let us know what their movements are.

7726. But is not their refusal to tell you where they are going a symptom of their general dislike of being only called upon when the privileged cabs break down?—But they are voluntary assistants; they come to the station: we do not send to them. These cabmen know the time of pressure at the various stations as well as we do, and they come seeking for work and are admitted. It is quite a voluntary act on their part; we exercise no compulsion over them.

7727. So when your privileged cab breaks down and railway passengers are inconvenienced thereby it is the outside cab, by its voluntary assistance, that comes to their and your relief?—No doubt, in his own interest.

7728. And in yours?—And in ours; it is a mutual affair.

7729. (*Mr. Whitmore.*) How often do those periods of pressure, when the privileged cab is insufficient, occur, do you think?—Well, the best answer I think I can give to that is to tell you what the revenue is from the non-privileged cabs. In the course of the year 1893 the revenue from the non-privileged cabs was 41*l.* 15*s.* 7*d.*

7730. Made up entirely of the halfpence?—Made up entirely of the halfpence.

7731. (*Chairman.*) As against—give us the other figures?—The amount received from the privileged cabs was 1,601*l.* 5*s.*

7732. What do you deduct from that for the working expenses of your privilege system?—We have an inspector and two policemen, whose wages amount to 274*l.* 14*s.* 9*d.*

* *See* Appendix IV. 2 (ii)

* *See* Appendix IV. 2 (i.).

7733. So your balance is about 1,300*l.* a year?—Yes, and I may say that I have made a calculation as to what the revenue would be, assuming we adopted the plan of letting any cab in on payment of a penny, as the South-Western do, and I find the result is practically the same, so that in point of revenue there is nothing to choose between the two systems, but we believe that the privileged cab system is far better in the interests of our passengers.

7734. Then, in addition to your privileged cabs, you supply omnibuses?—We do. We have a small supply of omnibuses, 12 single-horse and 4 pair-horse.

7735. What is your system with them?—We provide the omnibus, and the contractor supplies the driver and horse, and also supplies additional omnibuses; and I may just state in connection with the cab business in relation to the omnibuses that we have had no complaints from our own privileged men, and we have arrived at the conclusion that the minimum charge of 4*s.* made for an omnibus prevents practically any undue competition with the cabs.

7736. I suppose they have to be bespoke beforehand?—They have; we have an advice from intending passengers, who ask us to send these omnibuses, or to have them in readiness on their arrival by train.

7737. Do you require any prolonged notice of them, or can a passenger telegraph on the way up?—Yes, that is done: telegrams are sent and they are met; our contractor is close at hand, so there is no difficulty, and the omnibuses are on the station.

7738. And the omnibuses do not ply for hire?—No, they must be ordered.

7739. Now, an omnibus that has taken a cart-load of people to a destination and put them down, could it take up any passengers on its return?—No, it would come back straight away; it is a single job.

7740. Could it take a party back to the station?—By arrangement.

7741. It would not be an offence?—Oh no; I do not know a case of the kind, but if a case were to arise, we will say, an omnibus set down a party of passengers at a house, and in the same thoroughfare another family saw the omnibus there, and said, "Will you take us back to Paddington?" the man no doubt would do it.

7742. (*Mr. John Burns.*) It is done?—I have no doubt it is done: I have no knowledge of it being done, but we should not regard it as an offence if it was done.

7743. (*Chairman.*) Short of a family; at a time like the recent cab strike, it might have occurred that an individual passenger wanting to get to the station would avail himself of the returning omnibus?—Yes; but I think I may say that the omnibuses are not availed of on the way back to the station.

7744. (*Mr. Cunynghame.*) You make a profit, I think you have explained to us, Mr. Lambert, out of this letting the cabs into the station of something like 1,200*l.* a year?—1,200*l.* or 1,300*l.* a year.

7745. What I want to ask is, do you think it is defensible on general principles for your railway company to make a profit out of this?—I think so.

7746. On what grounds?—Well, we give them an opportunity of securing a fare.

7747. True?—They have the advantage of remaining in the station under cover during the time they are waiting for a fare, and that is worth some consideration.

7748. True, but the value of the cover that they are under is hardly up to 1,200*l.* a year, I presume, the interest on the expenditure necessary to provide that cover?—You know the covering of Paddington station is rather an expensive business. I am not looking at it in that light; but in my opinion it is a convenience that they are under cover when they are waiting.

7749. May I take it, it is not the money that weighs with you as much as the convenience that you think the system is to the public?—I may say that distinctly; we do not look upon it as a question of revenue, but rather as an assistance to our passengers.

7750. They pay 3*s.* a week?—Yes, that is our charge; as I have pointed out, if we adopted the charge of a penny a vehicle the result would be about the same in point of money.

7751. Then, from your point of view, you have no objection to reduce it to 6*d.* a week if you could get the same control and carry the system on that you have at present?—Well we find no difficulty in collecting the 3*s.*

7752. (*Mr. John Burns.*) But would you have an objection to reduce it to 6*d.*? You could equally collect 5*s.* if you were hard enough?—Well, I do not know, the 3*s.* has been in force for the 50 years, save one, that this arrangement has existed, and it has stood the test of time; we have never advanced it from this, and we have no difficulty in collecting it.

7753. (*Mr. Cunynghame.*) No, there is no difficulty in collecting it, but what I mean is, you would not much mind if it were reduced to 6*d.*, as money is not your object?—If adequate reasons were advanced.

7754. You put it that it is to the convenience of the public?—I have put it distinctly that it is to the advantage of our passengers that this system prevails.

7755. If it were reduced to a sufficient amount to pay your inspectors, you would not object, as money is not your object?—For adequate reasons.

7756. If adequate reasons could be given. You are aware that every station in London, even the small stations of the District Railway in London, also claim this privilege, and exercise it?—I believe all the railway companies claim the privilege.

7757. For instance, the small District stations, such as Hammersmith and places of that sort, grant a monopoly to certain cab proprietors?—They grant the privilege, I believe, but I am not quite sure whether the charge is 3*s.* a week at those outside places. I know at some of our country stations the charge is not 3*s.* a week.

7758. Do you ever grant such a monopoly as part of the consideration for taking your premises, for instance to a cab proprietor hiring your premises?—No, we have no cases of that kind.

7759. Are you aware that that has been done?—I am not aware; as I have pointed out already, this 3*s.* charge has existed 49 years.

7760. How, in your judgment, is it true that the Waterloo people work a system of non-privilege, and yet do not lose more luggage or have more inconvenience than other people?—Well, we can, of course, only speak from our own experience, and we do believe that we have a very substantial hold upon our men, and we have been able to trace luggage that has disappeared dishonestly from the station, and we cannot understand the South-Western putting it so high as that; but Mr. Scotter told me—I may just mention incidentally—the other day, that he had two systems at work at his station.

7761. Yes, he has a small privileged system, a very small one?—He has the privileged cab system for the express purpose of meeting the convenience of the passengers using a particular station.

7762. (*Mr. John Burns.*) No, sir, that was not said in evidence?—I am only telling you what Mr. Scotter told me.

7763. Mr. Scotter said the very opposite, that it was the physical condition of the station that induced him to adopt the privilege?—I venture to say that that bears out what I have said, it is the physical construction of the station that interferes with the access of the non-privileged cabs, therefore he is obliged to have a system of privileged cabs to serve that particular station.

7764. But not because of privilege; for reasons purely physical.

7765. (*Mr. Cunynghame.*) Did Mr. Scotter tell you that there was more luggage—for that is what I was upon—more luggage lost under the open system where the penny is charged, than is lost under his privileged system?—The subject was not mentioned.

7766. And you, I suppose, are really unable exactly to account for the success that, we have had evidence at least, is attending upon the Waterloo system; it rather surprises you in a way?—Oh no, I have known of it because the subject has been raised from time to time.

7767. You have known of the success, or known of the system?—I do not know about the success.

7768. That is what I am putting to you?—I venture to say that the cabs at Paddington station will bear a favourable comparison with those at Waterloo; we think we have a better class of vehicle and a better

Mr. H. Lambert.

26 July 1894.

class of men, and I should be very sorry in the interests of our passengers to adopt the Waterloo system.

7769. You do not think the Waterloo system is a success?—No, not from the point of comparison.

7770. As to luggage, you think he loses more than you do?—I cannot say.

7771. If a piece of luggage were lost—given to the wrong person—the railway company would be liable, would they not, for giving it up to the wrong person?—I do not know quite the case that you have in your mind.

7772. Supposing a person has committed his luggage to the railway company and called for it, and it is found that that luggage has been given to somebody else—taken off in a cab and never found again—the railway company, I presume, would be liable?—If we failed to deliver the luggage, probably we should be liable, but I would rather not express an opinion on the case without I have the facts, because that is a legal question.

7773. This system, then, is an advantage to you, as it prevents luggage being lost, and allows of it being traced to the house?—We think so, and therefore an advantage to our passengers.

7774. As well as to the passengers, it is an advantage to you?—But surely to the passengers in the first instance.

7775. Possibly, but it is an advantage to you too?—Undoubtedly an advantage that we should have the opportunity of tracing missing luggage; but after all is said and done, the passengers' interest is the first interest in the question.

7776. I quite understood that; more than the money and more than this question of luggage, you have answered me quite fairly so far?—Yes.

7777. Now, with regard to this question of lost property; as carriers, you are liable for lost property; of course I am now on a little different topic?—Subject to the Carriers' Act, which excludes certain articles, such as jewellery.

7778. And you are also liable of course for passengers' luggage; but you are not liable for machinery and things of that sort, concealed in a portmanteau?—Not unless it is properly declared.

7779. And you are also further protected, I think, by special rules made with the consent of Parliament in your byelaws, are you not?—There are certain byelaws which are approved by Parliament.

7780. Which further restrict that law?—Yes.

7781. Now, what is your view of what the cabdriver might fairly claim in that respect; you say he enjoys the privilege of the Carriers' Act; for instance, he is a carrier not liable for furs, jewellery, feathers, and a vast number of things like that; that would be so, would it not?—I do not know to what extent a cab proprietor could be called a carrier.

7682. If he is not a carrier he would not be liable for luggage at all?—That does not arise in connection with the privileged cabs any more than with the other cabs.

7783. No, I am not asking you that; I am asking you a question on the general point, which has nothing to do with the privileged cabs; the cab proprietors claim that they ought to have some privilege in respect of lost luggage, as railway companies have?—The railway companies are protected by what is known as the Carriers' Act in respect of such things as jewellery, silks, and so on.

7784. And also by byelaws?—I was going on to say, that I am not prepared to say to what extent that applies to the cab proprietor as a carrier, and I have not before heard of the desire of the cab owner to be protected in that matter.

7785. We have had that a good deal?—If he has found a difficulty in that respect, I know of no reason why he should not have similar protection to the railway carrier, if you ask my own opinion on that.

7786. That is what I am intending to convey?—I see no reason why he should not have the same protection as the railway company.

7787. You need not answer this question unless you like; do you not think that a limit of 10*l.* in all cases would be rather small for a portmanteau, looking to the large amounts that passengers carry nowadays—that applies to companies as well as cabs?—After all, you must look at what the cabman would get as his revenue for the carriage of these articles, and whether the 10*l.* would be fair; you might increase it, but you ought to consider whether it would not be a larger burden upon him than he would be justified in accepting, having regard to the money that he received for the fare.

7788. You think that would apply to railway companies and cabs too; that that limitation is fair?—Yes.

7789. I will not ask you what the right limitation is, perhaps a larger sum would be fairer?—That, you know, has stood the test of a good many years.

7790. (*Mr. John Burns.*) You say that in your opinion there is not more wear and tear to a privileged cab than a street cab, except in so far as the privileged cab carries a greater proportion of luggage during the year?—Yes, that is the information that is given to us.

7791. And apart from that you would not think that a privileged cab required more horses than an ordinary street cab has?—I do not think so; I am not sure that the privileged cab does not travel fewer miles than the non-privileged cab.

7792. And to that extent fewer horses, proportionately, would be used?—I do not know what horses are served to a non-privileged cab as compared with a privileged cab, but on the general question I should be disposed to say that the privileged cab travelled fewer miles than the outside cab.

7793. That means that in the course of the day it travels less often empty than an ordinary street cab?—An ordinary cab goes about plying for hire, and he might go for miles perhaps before he takes up a fare; but the privileged cab coming back to the station is sure of a fare in a longer or shorter time as the case may be.

7794. You have no positive regulation as to the return of the cabmen?—No, no specific regulation on that point. We have regulations dealing with the cab proprietors which he is to observe in connection with his contract.

7795. And you do not specially prohibit a privilege cab and driver from taking a fare either back to your station or to any other part of the city?—We do not.

7796. Do you consider it fair to the public and to the general outside cabman that a cab with a special privilege to ply at a railway station should enter into competition with the general street cabs whilst the general street cabs are deprived of the power of competing equally with the privileged cabs?—Well, may I tell you a little incident that happened to myself on that very point?

7797. In your own way.—I was going home from Coventry Street one night and I saw one of our own cabs plying for hire; his horse's head was to the city and not to Paddington, but being one of our cabs I took him home and when I got out I said, "How is it you were plying "for hire in Coventry street instead of going back to "the station?" and he with his whip pointed to his register plate and said he was a public carrier bound to answer any call.

7798. Bound to answer any call?—On the part of the public.

7799. But supposing a non-privileged cabman drove into Paddington station, and said the same thing to your police constable who wanted to turn him out, would you admit a similar argument on the part of the cabman?—No, because the circumstances are not alike.

7,800. In what way?—He forces his way into private property.

7,801. Yes, but you allow your private railway stations to be freely entered by public vehicles, the cost of inspection of which and the regulation of which falls upon the general cab trade and the public exchequer, do you consider that fair?—Yes, I do, indeed.

7802. You do?—Certainly, it is our private property.

7803. Then you are to have all the privileges of private property, *plus* the amenities that are gained for the cab service at the public expense?—But after all is said and done they are public vehicles.

7804. Agreed.—They are public vehicles, but they have the use of private property for a consideration.

7805. Yes, for private purposes?—No, for public purposes.

7806. No, for private purposes?—For the use of passengers—who are the public—who travel by our line.

7807. You cannot have your cake and eat it too; you cannot tell us that a railway station is a private place and then in the same breath say that a cab is used at that private place to the profit of a private company for public purposes.

7808. (*Chairman.*) I must suggest for the defence and protection of the witness that you must ask questions and not make statements. If you will put your questions to the witness I am sure he will be able to answer them.

7809. (*Mr. John Burns.*) Very well, sir. Then it is not an offence for your privileged cabs to rest on the ranks?—Subject to what I said previously that if we found one of our privileged cabs on a rank at a time that he and we knew was a time of pressure at Paddington we certainly should find fault with him and call him to account for it.

7810. Do you consider that railway passengers should be more conveniently catered for than the outside public by a public cab service?—Well, we find that is the demand of the railway passenger.

7811. You find that is the demand?—Yes. As I have already stated if a passenger arrives at Paddington station and does not find a cab at his service he complains to the railway company, not to the cab owner; he has no hold on him.

7812. As he growls on the sidewalk if a cab does not come up?—I am speaking of what we know in our own experience. He complains to us, and holds us responsible for not having a supply of cabs at his disposal.

7813. When the privileged cabs at Paddington are insufficient the outside cabs are called in?—They are.

7814. Do you find many complaints from your officials as to the dishonesty or greater incivility of the non-privileged cabmen?—I have already said that they decline to give us the information that we get from our own men.

7815. But is not that due to the fact that they resent generally the adoption of the privileged cab system?—Oh no.

7816. Could you assign a reason for that?—What we think is this: they prefer to pick and choose their fares, our own men are under an obligation to take the the first fare that is offered to them.

7817. Is that so?—That is so.

7818. Just as the cabs at Waterloo station are obliged to?—I do not know what the practice is there; I am speaking of our own experience, and we say that we find the non-privileged men pick and choose their fares, and there are cases that have been reported to me where men have actually taken their fares outside the station and then for some reason or other got rid of them, because they did not happen to please them, by transferring them to some other cab, or leaving them in the street to do the best they could.

7819. But do you know that that is an offence that they cannot legally commit?—That may be so, but still it is committed.

7820. Are you aware that in Waterloo station, where no privilege exists, there is no complaint as to the honesty of the men, the civility of the men, or their desire to pick and choose their fares, and if there was a desire it cannot be done, because each cabman as he is called must take the fare wherever it is going?—Well, I can only speak from my own experience, and I say distinctly that these non-privileged men do pick and choose their fares.

7821. When the privilege system of supplying cabs at Paddington does break down, you have to depend on the outside cab service?—We do, but as I have pointed out that is a very small matter during the course of the year.

7822. Not so small because I see by the return of revenue you have handed in, that in the year 1893, 21,000 non-privileged cabs came to the aid of the privileged cab system at Paddington?—Well, I take the figure from you; I have given you the amount.

7823. That shows that the privilege system is not a perfect system?—That shows that we may very fairly increase the number of our privileged cabs, and that I presume would not be in the interest of the non-privileged men.

7824. Have you sufficient yard space?—We could make arrangements for that undoubtedly.

7825. How many privileged cabs can you accommodate at Paddington?—I cannot say; we have not enough space in the station, but we have a cab rank outside where they stand and filter through the station.

7826. Your accommodation is practically as large as Waterloo, or could be made as large?—I think so, certainly it is as convenient.

7827. Is there any objection on your part to do justice to all sections of cabmen by trying the experiment of the Waterloo system at Paddington?—Well, we have had the practice of Waterloo under consideration from time to time, but we have never seen that it gave so much advantage as we already possess.

7828. If it could be proved to you that the breakdown in the supply of cabs at Paddington would be less frequent than it now is, would you be inclined to adopt it?—May I ask you how you would prove such a proposition as that?

7829. Well, Mr. Scotter proves that, with the exception of one or two cases of American liners bringing in a thousand passengers at Southampton, the open system never, or very rarely, breaks down; certainly less frequently than your system breaks down at Paddington?—You call it "break down"; that is a term I would rather object to myself.

7830-31. You can apply any other term?—As I pointed out, this system of privilege——

7832. (*Mr. Whitmore.*) Requires to be supplemented by the external cab?—Yes, to get the assistance from outside. May I again give you the figures. This has been a gradual growing from 1845. In that year we commenced with 18, and we run 204 during the present year 1894; in 1893 we had, as I have already said, 213; they have gone on increasing year by year as the necessities of the traffic demanded.

7833. (*Mr. John Burns.*) Have your officials ever complained about a congestion of non-privileged cab outside your station, due to the privileged system?—I have not had such a complaint myself.

7834. You have frequently seen cabs crawling around the Great Western station at Paddington, waiting for fares?—I have seen cabs plying for hire outside the station.

7835. Does not that frequently happen to the inconvenience of the general public?—We have had no complaint of that kind; do you mean to say that there has been a congestion of empty cabs plying for hire, and they have interfered with the access and egress to and from the station?

7836. That is so?—I have never heard of such a case.

7837. When a train comes in from Maidenhead or some other place where there are sports or a fête or some event, is it not frequently the case that non-privileged cabs, in the expectation of the privileged cabs ceasing, block up the thoroughfare and inconveniently crowd the approaches?—I can say I have had no complaint of that kind; the police would regulate such things, and prevent the thoroughfares being congested.

7838. Equally it is your duty to open your yard and assist the police in diminishing the congestion of traffic?—As I have already said, if the privileged cabs are not equal to the traffic, then we let in non-privileged cabs.

7839. But you do consider that the privilege system on busy days does act as an incentive to cabs to congregate outside?—I should not like to accept that proposition.

7840. No; we will say then, if the yard were open to all as at Waterloo?—No, because the yard is never kept barred to cabs, so to speak If there is a large number of passengers expected, the outside cabs are let in; if the privileged cabs are found to be insufficient they are let in at once, and the passengers absorb them, and they go out at the other end. There is one way for coming in and another way for going out. I have never had a complaint made to me of any congestion of traffic interfering with the cab scoming or going in the station.

7841. But, Mr. Lambert, from the point of view of fairness, if the outside cab is good enough to assist you

Mr. H. Lambert.

26 July 1894.

in times of difficulty, why should not he have the advantage of the railway fares at normal times?—Well, as I have said, we believe that upon the whole the arrangement we make is in the interests of our passengers. That is the consideration that rules us.

7842. And to the detriment of the outside public and the general inconvenience of the streets?—I do not say that.

7843. But does it not occasionally happen so?—No.

7843. That your privileged system causes the congestion of traffic outside the station?—I say I have never had a complaint of that kind.

7845. What complaint have you had as to missing luggage when non-privileged cabdrivers have carried your passengers. Have you had a disproportionate number of complaints?—That is such a general question that I could not give you any satisfactory reply to it.

7846. I will prove to you that it is not so general. You say one of the advantages of the privileged system is that it gives you an opportunity of tracing lost luggage?—It does.

7847. It, in your opinion, gives you a more trustworthy set of men?—I think so.

7848. That comparison can only be instituted by taking cases in which the drivers of non-privileged cabs are less trustworthy and less honest. Have you any instances of this?—No, I have no particular cases, but I venture to point out to you that a man who has been running to Paddington Station, say for 10, 15, or 25 years, has become identified with the Company, and is more willing to assist them in inquiries of that kind than the outside man, who perhaps only comes occasionally into the station.

7849. But that happens, of course, because the present system prevents the non-privileged cabdriver having that close contact and touch with the Railway Company: and he looks upon you now as an enemy, and exploits you accordingly?—I do not know that he does.

7850. But that condition of things removed, do you not think the ordinary street driver would be just as glad to propitiate the authorities by good behaviour as a privileged cabman?—No, it would have either one of two results; either the man would be indifferent as he is now, or he would attach himself to a station, and the system of privileged cabs would grow up again.

7851-53. But it would be a system of privileged cabs which would give all cabmen a fare, and would not incidentally congest the outside streets?—You must please not put that upon me, because I have never had any complaint of congestion on the outside thoroughfares.

7854. Then you can give us no evidence as to the superiority of behaviour and character and honesty of the privileged cab driver?—Beyond what I have stated.

7855. Do you consider, Mr. Lambert, that cabs should be inspected, regulated, and watered at a public loss, because there is a loss on the administration of the cab traffic, to enable you to give an exclusive accommodation to your passengers at public expense?—Well, I take it the public inspection of cabs is intended in the interests of the general community.

7856. Yes?—The passengers at railway stations are part of that community.

7857. Certainly?—It is an incident in their convenience that we provide a system of cabs for their use, and, we believe to their advantage, which, as I have said more than once, is the first consideration we have in view in this matter, and we think that we have tested it by a long experience, and are justified in assuming that the present system is the best.

7858. Yes, but incidentally railway passengers should not be exclusively treated, and a private company obliged, at the expense of the general public who contribute to the cost of this administration?—Well, I suppose the railway company, as part of the general public, contribute their share.

7859. Well, in the matter of cabs when it suits them?—No, but in the general administration; in the rates they pay.

7860. But then by charging to these cabmen a price for their privilege you tax them, and not the railway company, for the extra privilege that they enjoy. The railway company makes no contribution; either the privilege cab owner or the cabman has to pay that; is not that so?—But the railway company makes their contribution to the general rates which go to support the administration.

7861. Which they equally get out of the public, but over and above that you make a profit of 1,300*l.*, do you not?—I say with one system of privilege or the other, the money would be about the same.

7862. But do you consider it fair to make a profit of 1,300*l.* out of the travelling public?—Certainly; we should not do it if we did not think it fair.

7863. With regard to your private omnibuses, they go on the station for fares, do they not?—No.

7864. But do not your porters, when a train comes in, arrange with the drivers of your private omnibuses that the plums of the passengers shall go into the private omnibuses, whilst even your privilege cabs shall have the next desirable?—Well, such a proposition has never been made to me.

7865. Have you not observed this on the station?—No, I have not. Of course that state of things could only arise if there were a string of omnibuses waiting for hire; but the rule is, and the regulation is, that the omnibuses shall be ordered beforehand, and they get ordered, as I have already stated, by telegram from the passenger during his journey up. In the case of omnibuses going to private houses in London, they must of necessity be ordered beforehand by letter or telegram.

7866. But does not this frequently happen, that a party orders the day before, or perhaps two days before, a private omnibus to meet them at Paddington. Through an alteration in domestic arrangements they do not turn up, and do not take the trouble to send a telegram, and that omnibus waits, and is then pounced upon by the porter to the exclusion of your privilege four-wheeler?—I have never heard of such a case.

7867. I have seen it many a time?—Well, your experience is different from mine then, and I am quite sure we should have heard of it from the privilege cabmen themselves. We never have. As I have said, we have no complaint from the privilege cabmen of the omnibuses. I can only speak from my own experience.

7868. You say that you have a superior class of cab at Paddington?—We think we have.

7869. Do you consider that due to the privilege system?—Yes.

7870. Is it not rather due to the fact that you are supplied by one company, and a good company, with an excellent business-like manager?—Oh, no. I have got the particulars of the men who supply us.

7871. You did not have that class of cab before the London Improved Cab Company supplied you, did you?—Oh, yes. We consider we have always maintained a very good class of cab at Paddington Station.

7872. But the superiority of your cab above the average street cab was never so high until the last few years?—But I say again that it is not due, as you suggest, to the introduction of the Improved Cab Company.

7873. (*Chairman.*) But may I interrupt you. Do you admit what Mr. Burns says, that your superiority over the other cabs is greater now than it was a few years ago; that you are more conspicuously superior?—Every year some improvement or other arises in the cabs. We consider that by keeping the close supervision on them that we do, by watching the improvements that are introduced from time to time, and by calling upon our owners to meet these, that we do get an improved supply of cabs; but the proposition I understand the honourable member to make is, that since the London Improved Cab Company came on the scene the improvement has taken place, and I say that whilst we are undoubtedly indebted to the Improved Cab Company for better cabs, which have no doubt raised the general standard, I cannot put it down to that alone. As I say, we have supervised the supply of cabs from time to time, and as improvements have arisen so we have got them introduced. Now we have, as I have already said, over 200 cabs. Mr. Hibberd, who has been with us a great number of years, supplies 40 hansoms himself.

7874. (*Mr. John Burns.*) At Paddington?—At Paddington. The London Improved Cab Company supply 43 hansoms and 12 four-wheelers. If you like I will give you roughly the names and the numbers of the

cabs. Mr. J. Perry supplies 1 four-wheeler; Mr. J. Brown 11 four-wheelers; Mr. G. Caffyn 1 hansom; Mr. C. Collins 7 four-wheelers and 3 hansoms; Mr. J. Crawford 2 four-wheelers; Mr. W. Goodman 1 four-wheeler and 2 hansoms; Mr. E. Hibberd 40 hansoms, that is the one I mentioned before; Mr. J. Howe 4 four-wheelers and 2 hansoms, and so on. They go 7; 8 and 3; 1; 8 and 5; 14 and 1; 7 and 5; 1; 3; 8 and 3. So we are not in the hands, as you have suggested, of the London Improved Cab Company.

7875. No; they have levelled up though?—No; but then I may say that we find that the larger owners are more ready to adopt improvements than the proprietors of two or three cabs.

7876. Has not the number of owners that supply you with privilege cabs during the past few years diminished, whilst the number of cabs that each one supplies is increased?—Not that I know of.

7877. In the event, Mr. Lambert, of it being demonstrated to you that the railway company and the railway passenger would not be inconvenienced by the alteration of the existing privilege system, and the cab trade as a whole would be improved, would your company sympathetically consider the advisability of adapting themselves to the changed conditions?—Well, of course, any proposition that is made we should be bound to give our careful consideration to. At the risk of being tiresome, I will say again that the interests of our passengers have been our first consideration, and the system that exists is the result of experience, and we feel upon the whole that it is best, but if reasons can be urged why an alteration should be made we are quite prepared to consider the question. But it must be, I think, from that standpoint.

7878. (*Mr. Whitmore.*) On that, I think, it would be convenient if I ask, supposing that happened, you do not think there is anything in the structural conditions of Paddington Station which would make the non-privileged system impossible of adoption?—Oh no, they would enter in the same way as now and pass out in the same way as now.

7879–80. (*Mr. John Burns.*) As matter of fact, from the standpoint of cab yard and the peculiar situation of your cab rank accommodation, you are really better off than Waterloo, which is under dark arches and rather inaccessible?—Well, we think we are.

7881. Subject to your passengers not being inconvenienced, and its being proved that the general public convenience would be improved, by the adoption of the non-privileged system, there are no particular objections to it?—Well, I cannot carry it further than I have suggested. The present system is the result of long years of experience, and we should require, no doubt, adequate reasons urged before we made a change.

7882. (*Mr. Hopwood.*) I will not trouble you with many questions, Mr. Lambert. I will refer, in the first place, to these daily reports which you put in, and ask you for some information upon them. They show, as I understand it, the number of fares taken by each cab during the day?—Yes, they do.

7883. Is there any limit to the number of fares which a privileged cab may take?—No.

7884. I turn to cab No. 36, and I find that it took nine fares. Now, from the point of view of waste of power to the driver, horse, and cab, I want to draw your attention to this: No. 36 cab started at ten minutes past ten, and his destination was Victoria Station; he would come back empty?—Yes.

7885. He was back at 11.25 at Paddington and took another fare; the destination was Victoria Station again?—Yes.

7886. He would come back empty, I suppose, a second time?—I assume that; the time would indicate that.

7887. Yes, the time shows it. At 1.37 he was off to Berkeley Square, and so on?—That is a short fare, you see.

7888. But is it not the fact that he was travelling back to your station empty all day long?—I assume that would be so.

7889. Then I have another case before me where a man took a fare from the 10.50 train, and his destination was Victoria Station; he would come back to Paddington empty. At 12.15 his destination was Charing Cross; he would come back empty. At 1.37 he started again, and his destination was Charing Cross a second time; and then later in the day he was at Waterloo Station—back empty. Now, I put it to you whether there is not an obvious waste of power in having a cab and horse travelling between station and station in that way, with a restriction against the cabman bringing a fare back to Paddington?—Of course it would be very much better if he could load both ways; that goes without saying; but he finds it to his interest to come back to Paddington, where he is sure of a fare, rather than to stand about on the chance of getting a fare on the public streets.

7890. Well, does he—are you satisfied of that?—And we ensure his services, you see.

7891. Is he? Are you satisfied that even the privileged cabmen are at one with you upon this question?—I have never had any complaint to the contrary.

7892. Has it not been suggested to you that they would prefer to have liberty to bring back a fare from Charing Cross to you, when their destination has been Charing Cross?—Oh, but there is nothing to hinder them.

7893. Nothing to hinder them?—Nothing to hinder them bringing a fare back to Paddington.

7894. Nothing, I take it, so far as you are concerned; but they would be turned out of Charing Cross?—Yes; but then you see we should not have the man to rely upon for the supply of our own passengers.

7895. I quite understand that that is your answer to the position. Now, turning to another point you have put before us. Has it not come within your knowledge, and is it not true, that where the privileged system does not exist, the men who come to the station in the course of time do so habitually?—That is what I ventured to suggest a little while ago, that supposing we were to remove the privileged cab system altogether and were to rely upon the outside cabs, sooner or later a proportion of the outside cabs, at any rate, would make Paddington their home, so to speak, and the privileged cab system would grow up again.

7896. (*Mr. John Burns.*) But you would not get your 1,300*l.* profit?—Yes, we should; because, as I have pointed out, the pennies would have the same result. Just let me amplify that a little, if I may; 3*s.* a week is 6*d.* a day. These returns, if you would kindly look through them, show that this is a very small average; and, therefore, I repeat that if we had our penny on the average number we should still get the revenue that we do now.

7897. (*Mr. Cunynghame.*) Always assuming that you had your penny?—Quite so; if we got nothing, of course the total would be nothing.

7898. (*Mr. Hopwood.*) While a system of privilege, so called, would be growing up, it would not be the present system of privilege, which is extended to a few cabmen only?—No, it would not be the same exactly.

7899. There would be a distinction?—But I have no doubt it would sooner or later eventuate in the same state of things.

7900. Turning from that to the question of penalties, have you got a copy of the agreement which you make with the proprietors of the privileged cabs?—I put the regulations in.

7901. Have you considered the possibility of entering into an agreement of that kind with the cabmen individually rather than with the proprietor?—No, I have not; I understand that, as one result of the late strike, whereas previously the cab proprietor made a profit between his charge to the men and his payment to us, that is now done away with.

7902. I was going to suggest to you that possibly in the future the cab proprietor would have no interest in keeping up the privileged system?—Well, I suppose he maintains his price for his cab, at any rate.

7903. I suggest to you that it is not so?—The cab driver being sure of his livelihood is able to maintain his payments to his owner better than the casual men would do.

7904. The proprietor may be sure of getting his money, but in the future, I believe, he is not to receive any more by way of payment than that which is paid by the cab upon the streets?—Well, that I do not

Mr. H. Lambert.

26 July 1894.

know. As I understand—perhaps I may be allowed to say that again—the arrangement was, that whereas the cab owner charged the driver one shilling a day extra for his cab, now, inasmuch as his payment to the Company is only 3*s.* a week or 6*d.* a day, that shilling is reduced to sixpence. That information has been given to me; I have not been able to verify it.

7905. (*Mr. Bayley.*) That arrangement is at an end now. The Secretary of State's award only held good to the 15th of July.

7906. (*Mr. Hopwood.*) I suggest that the position is this, Mr. Lambert: you have to consider very carefully the *locus* of the railway company towards the cabmen, in the interest of discipline on your private property?—Yes.

7907. You have put in a summary of complaints received in regard to the privileged cab-drivers; and I find upon looking at it that the offences divide themselves into two parts: those which are offences against the law and those which are offences against your special regulations. Now, I put it to you, would it not be sufficient protection for you to have a code of regulations dealing only with those offences which are not offences against the law?—Well would you kindly illustrate that by giving two cases, one under each head.

7908. Drunk in charge of a cab?—Yes.

7909. You suspended him for a week?—Yes.

7910. But you might have handed him over to the police?—We might have handed him over to the police.

7911. So there is no merit in that, is there?—Still that is a double protection, is it not. It is the police *plus* the company.

7912. There may be a double punishment?—There may be a double punishment,

7913. Another case; refusing to take a gentleman to London Bridge; is not that an offence against the cab laws?—No doubt.

7914. Overcharging a passenger?—Still against the law.

7915. Using bad language?—Against the law, I suppose.

7916. Now we will try to get one which is apparently against your regulations: attempt to overcharge a passenger?—But is not the attempt as bad as the offence?

7917. I do not know; is it as bad?—What I mean to say is that the law would cover the one as well as the other. You see, these are complaints made to us by our passengers, and we take them up in their interest, and see the men, and deal with them in this fashion; and I put it in that return as evidence rather of control we have over the men; we get so few complaints having regard to the number of cabs that are used.

7918. But then I suggest to you that you are doing something which may be very praiseworthy, but is not necessary in the interests of the passenger?—But I am afraid if we did not take the matter the passenger would not. The passenger appeals to us, and we take the matter up for him; but we would be very unwilling to take this man before the magistrate, because that is what it would mean.

7919. (*Mr. John Burns.*) Then you become auxiliary magistrate between the cabman and the passenger?—If you like to put it that way.

7920. (*Mr. Hopwood.*) The point I want to make with you is this, that you might dismiss from your minds altogether these particular classes of offences in regard to cabmen after they have left your premises, and deal only with regulations for the proper control of your private station?—Then may I say that that course of proceeding would be this: a passenger would write to us and say, "I hired a cab at your station; the man was drunk," and he complains accordingly. Our answer, from your point of view, would be, "Very sorry, but it is a matter that you must "deal with through the police; you must apply for a "summons against the man at the police court; you "must attend at the police court and prosecute your "charge."

7921. No?—Is not that so?

7922. No; just let me put it to you. Surely with your good administration, if the man was drunk when in charge of a cab at your station, he would have been dealt with by you before he took the fare?—Well, it is impossible to say; you cannot always prove these things until the whole of the circumstances are gone into.

7923. But I suggest to you that these are offences which are not committed within your jurisdiction at all; they are offences committed on the streets?—Very good. Then I say the course of procedure is what I have indicated, that instead of dealing with the question ourselves, which is the more convenient plan both to the passenger and to the cabman, we should have to say to the passenger, "You must apply "for a summons to the police court, and deal with "the case yourself." Well I venture to say that even Mr. Hopwood himself, as a passenger, would think that rather severe measure for the company to deal out to him, to refer him to the police magistrate.

7924. I am afraid I do not agree. If I take a cab upon the streets, surely that is the course I have to pursue if I want to punish a man?—No doubt; but then, I say again, the public do not take that course, because of the trouble and inconvenience arising from it.

7925. Is it not a mischief of the privileged system, from your own point of view, that you have to take such an obligation upon yourselves?—The few cases—in the three years amounting to five cases in each year and one over, sixteen in all—show, I think, that we have these men under very fair control, and the knowledge that they are dealt with in this way is a safeguard against future offences.

7926. Very well. There is only one other question. On the back of these sheets I see, "Any driver neg-"lecting to fill his sheet up regularly and properly "will make himself liable to be punished." What is the punishment for that—fine?—Fine in the first case; and if he persisted a caution; a great deal will depend upon the character of the man generally; if he failed once or twice he would be cautioned; if he went to more he would be fined; if that was found to be not sufficient he would be dismissed.

7927. Do I understand that under your system the agreement for the hire of the cabman is made with the proprietor, but that the cabman himself is liable to punishment without entering into any agreement at all with you?—Well, no doubt the agreement is with the proprietor, and we deal direct with the cabman.

7928. And does it not commend itself to your judgment to alter the system, so as to make the agreement direct with the cabman?—No, I think not.

7929. (*Mr. Whitmore.*) Do you exercise any power of selection of the individual cab or the individual driver?—No; we leave that to the cab-owner to select. If we object to the man, we do so to the owner.

7930. You sometimes do object?—We occasionally do object; but the cab-owners, knowing what regulations have to be met, are generally careful in the men they send.

7931. And that applies also to the cabs?—I am speaking of the cabs also.

7932. I mean there is the case of the driver and the case of the cab, which are distinct. Supposing one of the cab-owners with whom you have a contract supplies you with a good cab which is driven by an unsatisfactory driver, would you object to the particular driver?—Oh, yes, we have had to object to drivers; and we have also had to object to vehicles; and also we have had to object to horses.

7933. What I want to know is: is your objection effective? Can you exclude from your station either a cab or a driver or a horse?—Oh, certainly. We find no difficulty in actual practice in carrying that out.

7934. And as a matter of fact you do carry it out?—We do carry it out when the occasion arises.

7935. And as the result of that, no inadequate cab and no unsatisfactory driver or horse could be admitted into Paddington station?—We try to accomplish that.

7936. And you think you are successful?—We believe, on the whole, we are successful.

7937. (*Mr. John Burns.*) Of course you are aware that the police are paid for, and are supposed to exercise the powers of inspection of cab, horse, and driver, which you supplement?—Yes, I know that is so.

7938. (*Mr. Lough.*) I wanted to put this question *apropos* of that subject: Do you not think, if there were a satisfactory system of inspection of vehicles in London, that you, as a railway company, might be relieved

of all the trouble on that head?—Well, I think it is only right to say that the cabs having been inspected by the police, come, so to speak, with a good character to us. Our objections have been rather, perhaps, to want of conveniences. It is very rare that we have to object to a cab in itself—a cab which has once passed the police inspection. I do not put that very high at all. The general cause of complaint is either of the driver or of his horse.

7939. I see the trouble. You think that if there were a severe system of inspection of the carriage, it might relieve you at the station of trouble on that head?—Of course it would make our task easier, no doubt.

7940. Well, I will ask you the same question about the men. If there were a careful discriminating examination of the men to whom licences were issued, it would also tend to relieve you of anxiety about them, no doubt?—No doubt it would be an assistance to us.

7941. I wanted to ask you about the privileged system on the London and South-Western which you referred to. Are you aware that the agreement under that system is made directly between the Company and the driver?—No, I was not aware of it. You are speaking now of the 25 cabs?

7942. I am speaking now of the 25 cabs?—No, I was not aware that it was made with the driver as against the owner.

7943. And are you aware that the fee is paid by the driver weekly?—No, I was not aware. The only information I have comes from Mr. Scotter himself, who said that they adopt both systems at Waterloo. "I am obliged," he said, "to have a small number of privileged cabs"—(I think he put it at 25)—"to serve a particular part of the station for the assistance of our passengers."

7944. We have got it in evidence, so we need not trouble you?—I only repeat the conversation I had with Mr. Scotter; you have had it in evidence.

7945. You said you kept your system because you considered it was for the benefit of the public?—For the passengers.

7946-48. That is what I wanted to ask you. You do not mean the general public, you mean your customers?—Certainly.

7949-50. Is it not your custom at Paddington to turn out horses that come to your departure platform, regardless of how far they may have come, if they do not happen to be your own privileged horses and cabs?—They all pass out of the station.

7951. Do you not think it may be cruel to horses, after they have come a long journey, to turn them out without the chance of a fare back?—Well, we have not the space to hold all cabs of that kind. In the interests of cabs coming with passengers and luggage we are obliged to keep the roadway clear.

7952. Do you not think that on the whole the cabs coming to the station with passengers, if you had an open system, would balance the cabs that would be wanted to go away with other passengers?—I do not think so. What we find now is this, that on the occasion of race meetings or special events the supply of outside cabs is insufficient altogether; and if we had not the privileged system in existence we should have no cabs to supply our regular customers with.

7953. Quite so. So that your privileged system breaks down now on the days of race meetings?—No; I say it is the outside cab that fails us on race meetings and special events, and if it were not for our privileged cab we should be left wholly in the lurch.

7954. Are you able to judge that, so long as your privileged system exists; the cabmen in London know that you have a privileged system, and therefore they do not come?—I do not think, with all deference, that the feeling of the outside cabmen leads them to take that course of action.

7955. With regard to that question of mine about allowing horses that come to the station to go round to the departure platform, of course there would be no difficulty in allowing as many as the yard would hold and stopping them when the yard was full, and saying, "We are full now, and you must go away"?—There would be no physical difficulty.

7956. You said that there was an advantage in the privileged system in connection with passengers' luggage, did you not?—Yes, in the tracing of the missing luggage.

7957. Are you responsible for luggage that is lost on a privileged cab?—No; I take it the owner of the cab would be liable.

7958. In fact, if you can prove that you put the passenger's luggage on a cab the railway company is clear?—We think so.

7959. I believe that is the law?—Yes.

7960. And that applies equally to a privileged as to a non-privileged cab?—Certainly.

7961. (*Mr. Cunynghame.*) But if a railway porter puts any luggage on a wrong cab is the railway company free?—That is a legal question I would rather not discuss.

7962. (*Mr. Lough.*) The point is this if the railway company can prove that the porter put a portmanteau on a cab, and it tumbles off that cab in Berkeley Square on its way to Charing Cross, you are not responsible?—We think so, certainly.

7963. Therefore, on that matter of safety of luggage there is no special advantage.

7964. (*Mr. Hopwood.*) But if any of your passengers lose luggage you are anxious to help them to get it back, I suppose, independent of all legal liability?—Yes, we do all we can.

7965. And the advantage of the privileged system is that you have a picked lot of cabmen, and you have them more under control?—That is our view and experience.

7966. Do you attach so much importance to these advantages that if you were called upon to inaugurate the open system and admit all cabs at random, rather than that you would prefer to provide your own cabs and your own drivers?—Well, that undoubtedly would be a question which we would have to consider. I have no hesitation in saying that that course has presented itself to us. After all said and done, it comes back to the convenience of the passengers. If that were done, it would be in the interests of the passengers—if we were to go to that expense.

7967. You feel that you would be justified in taking that course in the interests of the passengers?—I should not like to commit the company to saying we ought of course to take that view.

7968. Possibly you might?—But that course has been discussed by ourselves as being a way in the interests of our passengers to secure good vehicles and have proper control.

7969. And possibly you might adopt that course?—It is quite a possibility.

7970. Do you keep any record, Mr. Lambert, of the luggage lost or stolen in connexion with the cabs?—When complaints are made to us, of course, we have a record, and, as I have already said, we do all we can to trace missing luggage when it is complained of.

7971. Do you keep any record?—Only the record that is kept by our own police, to whom these matters are referred.

7972. If we could get some record from you, and a similar record from Waterloo station, that perhaps might help us to see whether the privileged system does protect the passengers. Do you think such a record could be obtained?—I would not like to give you a definite answer until I have had an opportunity of looking into it.

7973. Would you ask Mr. Lambert to kindly give us such a statement, if he can do so conveniently?

7974. (*Chairman.*) Mr. Lambert, anything you can hand in on that subject when you have had time to look it up, will be welcomed by the committee?—I will see whether I can give you any satisfactory statement—any statement that would help you in your judgment.

7975. (*Mr. Hopwood.*) Would you, Mr. Lambert, consider with the railway association whether it is possible to have reciprocity as between the railway stations in the matter of privileged cabs, so that if a cab travels from Paddington to King's Cross it may have by arrangement the right to go in there and come back again to Paddington or elsewhere with a fare?—Well, I could, of course, raise the question if you desire it, but it all comes to this, that it would interfere with the supply of cabs to a particular company. For instance, if the Great Northern cabs come to Paddington——

Mr. H. Lambert.

26 July 1894.

7976. (*Mr. John Burns.*) It would kill the privileged system, in fact?—No, no, I would appeal to the honourable member to allow me to finish my answer.

7977. I beg your pardon?—I say if the Great Northern cabs were to be admitted on their arrival at Paddington station to the arrival side to wait for a fare, the Great Northern Company would be deprived of the services of that cab, and difficulty would be created there; but it seems to me that so far from killing the privileged system it would put it much higher than it is now, because you would confer the privilege not merely on the cabs employed by the one company, but on the cabs of all the companies.

7978. (*Mr. Hopwood.*) I am not suggesting to you that it is a cure, but I am suggesting to you that it is a step in the right direction to prevent cabs travelling backwards and forwards between the stations empty?—But that waste of power, as I have already said, is very much less in the case of the privileged cab, according to our opinion, than in the case of the outside cab. He has to go for miles, perhaps, before he can get a fare, or stand for hours; but a man coming back empty to the station is sure of a fare after a longer or shorter interval, as the case may be. He really wastes less time than going about the streets waiting for a fare.

7979. Although he may make 20 journeys, 10 with fares and 10 empty?—That may be so.

7980. (*Mr. Bayley.*) You say that you can punish a cabman for refusing to take a fare from the station?—We can.

7981. So that is an advantage which you have over the ordinary law, because it is not a legal offence for a cabman to refuse a fare from the station?—I suppose the ordinary law compels a man who stands at a recognised rank to take any fare that is offered to him.

7982. Not at a railway station; a railway station is private property, so that the law cannot punish the man?—Therefore, in that sense, it is not a public stand.

7983. Therefore that is an advantage which the privileged system gives you?—Undoubtedly.

7984. (*Mr. John Burns.*) Are you aware, Mr. Lambert, that on the average earnings disclosed by these tickets the privileged cabman cannot possibly earn the money that he pays to the proprietor in many cases, and certainly not that money plus his wages?—I think the answer to that is that we have all these privileged cabs at work; if they did not earn their money they would not work.

7985. Yes, but what proof have you that they earn the proprietor's money and their own wages exclusively from railway cab fares?—I have no proof.

7986. But are you aware that these tickets disclose in many cases that the cabman, if he pays in his day's money to the cab proprietor, can only have done it by earning money by plying on the streets?—I cannot say. I only give you these tickets as showing that it is part of the control that we have over the men. In giving on those tickets an account of their doings, of course they do not give us—at least I assume they do not give us—any outside earnings they may get. That is as far as our own business is concerned; and that, of course, is only one day.

7987. They average roughly about seven fares per day, and here is a typical one. The man started at ten o'clock in the morning and finished at 10.30 at night. He had seven fares. With the exception of one to Liverpool Street and one to Waterloo, they were short fares, namely, Victoria station. Now averaging those at seven half-crowns, which is a fairly good amount, it would only just take him beyond, perhaps the amount that he would be charged by the proprietor. Are you aware, then, that these facts are disclosed: that three-fourths of the money that the privileged driver earns he earns in the railway station, whilst the remaining one-fourth he gets out of the general public?—No, I have not made any examination of those tickets. I have asked for them for my own satisfaction. These returns which I have put in, the man is compelled to make, and I was anxious to see, for my own information, whether he did make them; I called for last Monday's returns and here they are. I have not had any opportunity of examining them; and I take it that neither you nor I could say what the man actually got for each of those fares.

7988. No, that is perfectly true. But assuming that your privileged cab drivers charged the legal fare for the fares disclosed on these tickets, are you not willing to admit, on what these tickets disclose, that they could not earn their day's wages?—I could not, because my experience of cabmen is that it is the exception for them that they accept their legal fare.

7989. That is not the point. Assuming that they charge their legal fare, and, if you like, a liberal addition, on these tickets, they could not earn their wages?—As I have said, I have had no opportunity of examining them. I could not say.

7990. Are you aware that it is the general impression of privileged drivers that if they were confined strictly to railway fares they could not earn their wages?—No, I am not aware of that. All I can say is, that I do know that the privileged cabmen take fares outside and not for railway business, and so supplement their earnings for railway business.

7991. This question I wish to ask you: Do you consider it fair both to the privileged cab-driver and to the public that 1,300*l.* profit should be made from a privileged cab service, that by itself is not able to yield the men a proper day's wage and the masters a fair day's price for their cab?—Well, the answer to that is that we consider it is a reasonable charge for the facilities we give; and I have not heard any reason yet why we should relinquish it.

7992. Do you not think that these tickets disclose that the privileged cab system that prevails at Paddington is really kept up for the Company and the railway passengers' convenience, at the cost of the outside public?—No, I do not.

7993. Not if it is proved that the cabman plying as a privileged cabman at Paddington cannot earn his money?—Well, that has not been proved yet, excuse me for saying.

7994. Well, I assume it has. I am coming to another point. I will put it in this way—you may object to it: as apart from making this accommodation for your railway passengers, you are practically assuming functions that I think would be better left to magistrates. Is not that so?—Well, I cannot say more than I have said, that the passengers appeal to us to assist them in cases where they consider the cabmen are at fault.

7995. You punish drivers occasionally by fine, do you not?—We do.

7996. Do you consider that fair?—We do.

7997. You have not yet given them imprisonment?—How do you mean?

7998. You do not carry the punishment beyond fining? You have not yet given them hard labour?—We deal with them simply as we do with the other members of our staff; if they do not behave properly we punish them either by fine or dismissal.

7999. Do you communicate with the proprietor when this happens?—Yes.

8000. Then am I to gather that on the mere *ex parte* statement of a railway passenger the man is frequently reprimanded?—Not the mere *ex parte* statement.

8001. How do they complain, in person; or is it mostly by letter?—Mostly by letter. But we take pains to satisfy ourselves as to how far the statements are correct; because we find many statements made to us are not borne out by the facts. We do not fine the man unless we are quite satisfied that he is guilty of the offence charged against him.

8002. But what is the character of the steps you take? Do you ask the cabman if such and such a statement is true?—Certainly. The proprietor and the cabman are seen by the responsible officer at Paddington Station, and the circumstances are gone into. If the cabman offers an explanation, the explanation is given to the complainant. If the matter is so clear that there can be no doubt, the man is dealt with. The cabman is often confronted with the complainant.

8003. Do you not think the better plan would be not to trouble at all, but leave it to the railway passenger?—That would not satisfy our passengers.

8004. You are not supposed to assume magisterial functions towards the public as apart from carrying them?—We are supposed to listen to a complaint that is made by a passenger, and to do our best to remedy it. The complaints, I venture to say, are very few, but in those few cases we have done our best to ascertain the facts and to award what we considered reasonable punishment.

8005. (*Chairman.*) Do I understand you to follow the same course *mutatis mutandis* with a porter who was complained of for incivility?—Yes, the same course. We have complaints every day of porters, guards, and others, and we take exactly the same steps. We have the men before the responsible officer, and the case is gone into. In many cases we consider the explanation given by the staff is an answer to the charge, and it is given by us. It is only when the facts are clearly proved that we award punishment.

Mr. H. Lambert.
26 July 1894.

8006. As far as this matter goes you treat the cabman on a footing with the servants of the company?—Precisely so.

8007. (*Mr. Cunynghame.*) And when you have made a fine you have no legal power of enforcing it; the man can pay it or else go, I presume?—Yes.

The witness withdrew.

Adjourned till to-morrow at 11 a.m.

FIFTEENTH DAY.

Friday, 27th July 1894.

PRESENT:

MR. GEORGE RUSSELL, M.P. (CHAIRMAN, PRESIDING).

MR. HENRY CUNYNGHAME.
MR. F. J. S. HOPWOOD, C.M.G.
MR. JOHN BURNS, M.P.
MR. T. LOUGH, M.P.
MR. C. A. WHITMORE, M.P.

MR. MALCOLM DELEVINGNE, *Secretary.*

Sir EDWARD BRADFORD called in and examined.

8008. (*Chairman.*) Sir Edward Bradford, we have been obliged to trouble you to come here this morning, because there was a strong desire on the part of the Committee that some large questions touching the character and organisation of the Police Department should be answered by you personally, but I understand that one department which we had intended to question you about is one of which you do not feel prepared to speak, and that is the Receiver's?—I am quite prepared to speak about anything; all I say is that the Receiver is not a subordinate of mine.

Sir E. Bradford.
27 July 1894.

8009. Let me put it in this way; in anything that you may be good enough to say in reply to questions about the Receiver's Department, you wish it to be understood that he is not a subordinate of yours, and you merely speak from knowledge which you have derived, not in the position of a chief over a subordinate, but as working with him?—Exactly, because he really is the financial adviser to the Secretary of State. Whatever information I can give, I will only be too glad to give on any point.

8010. But with regard to that part of the work of Scotland Yard you do not speak as the chief responsible for what is done?—No.

8011. But merely from information that you have obtained during your administration?—Yes.

8012. (*Mr. Whitmore.*) Are his annual accounts presented directly to the Secretary of State?—Yes.

8013. And not through you?—No. I understood that the points were chiefly in connexion with Mr. Pennefather's evidence, and therefore I looked through the evidence, and took each question in which he could not give information without a reference to me, and I think I could not do better than go through them again, if those are the points upon which the Committee wish information.

8014–5. (*Chairman.*) Very well, then, Sir Edward, as to the police employed in hackney carriage work; what is the number at present so employed?—378, that is police who are engaged in hackney carriage duty, of whom a certain number—47—are engaged entirely on hackney carriage duty.

8016. And what portion of time do the men who are partially engaged give to the duty?—The whole of their time.

8017. I thought you said that some were entirely engaged, and some partially?—The way in which I would explain that is that the man is on a point where he can do police duty as well as hackney carriage duty.

8018. But he is there all the time?—He is there all the time.

8019. What are their duties on the standings?—I think, perhaps, the best answer to that would be exactly what the hackney carriage standings require. I would briefly put it in this way, they are appointed on special duty at hackney carriage standings, they examine hackney carriages and horses, they draw water for the same—those standing at the carriages—they examine and report upon any carriages that come up that are supposed not to be fit or in every respect good, and also harness and defects of that sort, they have to prevent cabs beyond the authorised number stopping at the standing, and to prevent disorder and secure civility as far as they can, their duty is to notice any furious and wanton driving, and also to report all cabs plying without approval marks, and they also would prevent damage to the cabs, or any articles being taken from them if the driver happens to be away. I think those are about the duties which I may say devolve upon them. I do not know whether it would occupy the Committee too long if I just read the orders with regard to hackney and stage carriages, which would show what duties devolve upon them?

8020. If you please?—These are the orders: "Police "appointed to special duty on standings are to ex- "amine every hackney carriage and horse drawing the "same placed on the standings of which they have "charge, and to report all cases where either hackney "carriages or horses are not in every respect fit and "proper for public use, and also when the harness is "defective or unsound. Inspectors and sergeants "when patrolling are also to make examinations in "accordance with this order, and report any infringe- "ment of the law. Special attention is to be paid to "hackney carriages employed at night. Police are "not to allow more than the authorised number of "carriages on any standing. Police are to report all "cases of misconduct, drunkenness, or incivility by "drivers, and to pay special attention to cases of "furious or wanton driving. They are to report all "cases in which luggage is carried on the roof not "properly secured. They are to report all cabs plying "without approval mark, or where any of the plates "may be damaged or disfigured, or improperly fixed. "No police constable is permitted to solicit or accept "money from any driver or from the public. At "hackney carriage standings where there is consider- "able traffic, no driver is to leave his carriage. "(Drivers requiring refreshments must take their "carriages to other standings where there is not so "much traffic and danger of accident.) Drivers of "hackney carriages are not to be allowed to stand "together upon the footway or to cause any obstruc- "tion or annoyance. Police are to give all in- "formation in their power about the proper fare

Sir E. Bradford.

27 July 1894.

" to persons hiring hackney carriages, and to render " assistance in all cases of dispute between the " hirer and the driver. To pay special attention to " unlicensed drivers (known as " Bucks ") who " loiter about the neighbourhood of cab stands. " The constables on duty at the hackney carriage " standings will observe and report when the tables of " distances, tablets, &c., are defaced or otherwise " illegible, in order that fresh ones may be supplied, " and should any person be detected wilfully defacing " any table or tablet their names and addresses are " to be ascertained, with a view to summon under " 24 & 25 Vict., cap. 97, s. 52. They will not allow any " notices, bills, &c., to be posted at the back of the " tables of distances, except as authorised by the " superintendent. A book with ruled columns will be " supplied them for the purpose of entering the par- " ticulars of reports made. Dogs are to be permitted " to drink at hackney carriage standings. In all cases " where it is practicable, constables on fixed points are " to be charged with the duty of keeping order at cab " ranks in their immediate vicinity. Cab ranks within " a reasonable distance of each other to be inspected " by the same constable. Constables appointed to cab " ranks, when not actually engaged in inspecting the " cabs or in any needful work in connexion therewith, " are to patrol within sight of the stands, not exceed- " ing a distance of 150 yards. The hours of duty— " 9 a.m. to 1 a.m. the following day. The duty will be " performed—

" In Town Districts.—First relief, 9 a.m. to 1 p.m., and from 5 p.m. to 9 p.m.; second relief, 1 p.m. to 5 p.m., and from 9 p.m. to 1 a.m.

" In Country Districts.—The reliefs are to be in tours of eight hours, commencing at 9 a.m., and terminating at 5 p.m., and from 5 p.m. to 1 a.m.

" The reliefs to be changed weekly. They are to " inform hackney carriage drivers as to the position " the carriages are to take at the hackney carriage " standings, and prevent nuisance or annoyance to the " inhabitants?"—I think that shows really what is required from the men on the stand.

8021. Quite so. Now do you, Sir Edward, think that the system of employing police for these duties is preferable to the old system of watermen?—Of course I have never seen, nor have I any recollection of the system, under which the watermen worked. My impression is that it is an advantage to the public to have a constable doing this work—at all events, you see he is there on the spot. It is for the public generally both a convenience and an advantage, and the hackney carriage driver does derive advantage from it.

8022. I suppose, for instance, several of those duties that you enumerated when you were reading out just now are duties which could not well be discharged by a mere waterman?—No.

8023. I mean they were *quasi* judicial?—Yes.

8024. And mediatorial. I mean the police have to arbitrate in disputes; apparently that is one of the duties that was read out?—Yes.

8025. And you think those duties could not be adequately discharged by a mere waterman?—No.

8026. But what cost to the public is involved in applying all these policemen to this cab duty?—It is a difficult thing to say what would be the exact amount, but we have taken it roughly as the Receiver has explained at half of the pay of the men; you see that half the constable's duties are in connexion with the hackney carriage stands, and half with the public.

8027. Could you state roughly at what you would put the cost of applying these men to cab duty?—You mean the relative cost as compared with that of watermen?

8028. No; I mean what would be saved if they were not applied to the duty; does it not cost more to have these men applied in this way?—I think Mr. Pennefather has shown in his account that he charges 125*l.* some odd shillings a year for each man, and he has given the total sums which I think I can show. It is really taking half the pay of the men so employed; that is how it is calculated.

8029. And that amounts to how much?—26,000*l.*

8030. At any rate, more than 20,000*l.*?—Yes; then, of course, the other items which are added to that account were in connexion with the office.

8031. But do you think that this large sum, over 20,000*l.*, can be fairly put down in its entirety to the hackney carriage account?—I think it is as good a rough calculation as one could make, considering that it is only a matter of account, if you came to divide it. The way I have rather looked at it is this, if you were to do away with those standings what number of men could we dispense with entirely in London?

8032. That is what I mean?—I think that is the way that he roughly calculated that half, it is as near as possible half. My impression is that it is 200 and 193, whatever the difference is, and I think that is in a rough way a fair charge; but still if you come to say that this must be cut down for any particular reason, I have no doubt that something perhaps more economical could be arranged.

8033. But taking it at what it is, do you think that the public gets its money's worth; do you think it is a good expenditure of money?—I think so; yes.

8034–5. (*Mr. Whitmore.*) I was going to ask this: supposing the police were relieved of this duty would that amount of money be saved?—Supposing the superintendence of the hackney carriage stands devolved upon watermen or upon servants of the county council or vestry, other bodies than the police, would the police expenditure be reduced by that amount at all?—No, that is what I was rather trying to convey; I think that we should have to maintain half the number that are now employed.

8036. On ordinary police duty?—Yes.

8037. (*Mr. John Burns.*) Is it not a fact that a point duty man has to attend to those water posts as his main duty during the day?—Yes.

8038. Does it not frequently happen that it takes his attention away from police duties that perhaps from another point of view are more important?—It may be; it is exactly what I mean by saying that it is rather a difficult thing to divide the duty.

8039. (*Chairman.*) You mean at one minute he may be attending to one thing and at another another?—It is so difficult exactly to say where the police duty ends and the other duty begins.

8040. (*Mr. John Burns.*) And watering duty begins?—Exactly.

8041. (*Chairman.*) But you are disposed to think that the public has its money's worth in this outlay?—Certainly, I am rather inclined to think that the public really benefit more than the hackney carriages, but it is a difficult thing to give any distinct reason for the opinion.

8042. (*Mr. John Burns.*) Do you not think it possible, Sir Edward, that if an arrangement were made at these water posts and at those cab ranks where water is supplied for the four-wheeled and the hansom cab driver himself to help his horse to water whilst the police had a nominal supervision over them without standing at the post, that policeman himself could give more attention to his purely police duty at that point than he is able to do now?—I think the way in which that has arisen was that had the hackney carriage standing not been there the policeman probably would not have been appointed originally, but by degrees they have been made a fixed point at that spot, and the public begin to expect it, and therefore he really performs as much duty if not more, for the public than he does for the stand. But I do not think that the whole of the duties even appertaining to the stand could quite be done by a man who was not a policeman. The part of drawing water could I think, but not the preventing an excess number of cabs coming on to the stand; you, I dare say, know there are occasions when there would be a great crowd.

8043. But is it not the fact, Sir Edward, that cab stands or ranks are generally situated in that part of a road or street where the police duty, necessarily by the fact that there is a rank there, is at a minimum?—Yes.

8044. And has not the rank made the point duty, instead of being what in my opinion it should be, the point duty making the rank?—I think it has. You mean that the rank has brought them?

8045. That is so.—That is rather what I said.

8046. Is it not a fact that the ranks are generally situated where without a rank there would be the smallest minimum of police duty?—Yes, that is really what I was saying.

8047. So what happens now at the water-post stands is that a policeman has a minimum of purely police

duty with a maximum of watering duties in the majority of cases?—Yes, I should think so.

8048. For instance, a rank or water post is never put on at a crowded part where there is a liability to obstruction, or to criminal assaults, or petty thefts; as a rule they are placed, are they not, in rather isolated and not particularly crowded parts?—Victoria Street, Pall Mall, and places of that sort are rather crowded.

8049. I do not know of one at Victoria Street?—Oh, yes.

8050. At the Army and Navy?—We have one there, along the corner of the church, and one opposite the post office right along the centre of the road, a stand and a post. It is where they are now building.

8051. Yes, but they are exceptional?—But as I said before, I think it is a very difficult thing to divide; it must be necessarily rather a give-and-take arrangement, that of settling what amount of his duties may be charged to the police and what amount can fairly be charged to the hackney carriage work.

8052. But in the event of some local or other authority being willing to do the purely water duties connected with water posts, would you, as Commissioner, have any objection to adapting the police duties on the spot to that change?—I should be very glad myself to try any arrangement that might be suggested.

8053. That to a great extent would relieve a number of policemen from pure water duties?—That is exactly what I was saying, it would relieve about half of them.

8054. Do you not think it rather anomalous that you should see a smart big policeman practically confined all day to swinging his water key, attending to the perhaps 20 or 30 horses that at a less frequented water post might come up?—But he has other duties, you see; he patrols along the streets, and does the work of that street, and can be summoned away.

8055. But by virtue of his primary duty as water-post policeman he cannot go further than 20 or 30 yards from each point?—As far as giving the water is concerned, it could be done by any private person.

8056. (*Chairman.*) Then we come to the Public Carriage Office; what is the number of the staff employed there?—In the Public Carriage Office there is one inspector, nine sergeants, three constables.

8057. What are their duties?—They are entirely connected with the hackney carriage work. They work more directly under the Assistant Commissioner who has charge of this department, but their duties include the registration of names and addresses of the holders of all licences, the registration of convictions, unfitness of carriages and horses, the work in connexion with the appointment of standings for hackney carriages and stopping places for stage carriages, and all inquiries. Then in the Lost Property Office there are two inspectors——

8058. That is a separate office, is it not?—Mr. Pennefather charged half the cost of the lost property office, in virtue of the lost property, it only appertains to lost property that comes from the public carriages, and it is under the Public Carriages Act that it is established; he charges half of that to omnibuses and half to the hackney carriages.

8059. Yes, but do any of those men whom you have first enumerated do anything with the lost property?—Not the first. I have put one inspector, nine sergeants, three constables; they have only to do with hackney carriages, and all inquiries connected with them. The lost property have two inspectors——

8060. If you do not mind, we will keep these two distinct; they are distinct in the office?—Yes, quite.

8061-2. Let us talk of the Public Carriage Office first. The staff is entirely occupied by work relating to licensing?—Yes, entirely.

8063. (*Mr. John Burns.*) Is there not a superintendent, Sir Edward?—The superintendent now assisted by a chief inspector is over both offices.

8064. (*Chairman.*) The superintendent is over the Public Carriage Office and the Lost Property Office?—And the Lost Property Office.

8065. So to that staff which you have enumerated should be added half of a superintendent?—Yes. There used to be two superintendents; they were separate offices, and there was a chief inspector in the Lost Property Office, who is now the superintendent over both. The chairman wished to keep the two separate.

8066. Yes, that is what I did wish. Now, with regard to the Public Carriage Office, as I understand, the gross expenses of this office are divided between cabs or omnibuses in the proportion of the number of licensed cabs to the number of licensed omnibuses?—Yes, that is the Receiver's division. He has consulted me upon what would be a fair way to divide the expenses at different times, but I should not have any real voice in that.

8067. And therefore you will not express an opinion as to whether it is a fair principle of division?—He has talked it over with me, and we thought it very fair at the time the proposal was made.

8068. You have concurred in that division?—Yes.

8069. And would you apply the same principle to the estimated cost of the clerical work done in the department?—I think so, quite.

8070. Well, now we come to the Lost Property Office. I understand you have one head man over both?—Yes.

8071. So we must reckon him again, or take half of him this time. Well, under him what is the number of the staff?—There are two inspectors, one of whom is a sub-divisional inspector, a sub-inspector, three sergeants, and one constable.

8072. And the whole of that staff is employed exclusively on lost property?—On lost property exclusively.

8073. About the number of articles of lost property brought in from cabs, how does it compare with the number brought in from 'busses?—I have not a division of the two.

8074. We will leave that over. Perhaps you will send it to the secretary?—I am sure they could be furnished.

8075. Is it in your opinion a fair arrangement that any portion of the expense of this recovery of lost luggage should be charged against the hackney carriage revenue, or is it in your opinion a charge that ought to be borne by the owners of the lost property?—I think it is fairly chargeable against the Public Carriage Department. It is only for the public carriage lost property that the office is established; I did make a note because that also was a point that was asked Mr. Pennefather.

8076. I am not quite sure what your figures would apply to if you found them, because the last question I asked you was whether you thought it fair that the administrative charge of this Lost Luggage Office should be charged upon your fund, or whether it would not be fairer that it should be borne by the people who lose the luggage?—You mean the actual person who has lost the property?

8077. Yes, the loser?—That would be to charge a fee upon that?

8078. Yes, upon the recovery of things?—I see no objection whatever to their paying a fee, and so relieving the charge on the Hackney Carriage Department.

8079. Would you not put it a little higher than that. Why should your department have to bear any of the charge at all?—Well, I think that is to ensure the recovery of the rewards. After all, the public carriage benefits to a great extent, because charge is taken of each of these articles in this office, and the office has to levy the reward for the driver. It is entirely under the Public Carriage Act that the office is established.

8080. But even the reward for the driver could be borne by the owner of the lost property?—You mean by charging such a sum; he has to pay a reward.

8081. He has to do what?—He pays a large reward to the driver.

8082. He does that?—Yes, very large.

8083. That is not borne by you?—No, that is entirely separate.

8084. (*Mr. Whitmore.*) That is a prescribed sum, is it not?—Yes, it is; 3*s.* in the £ on the value of the property.

8085. So that, in fact, the owner of the lost property does contribute?—Yes, he pays very largely, the driver gets that amount and, in fact, very large sums I know;

Sir E. Bradford.

27 July 1894.

n this very report there were some of them, I believe, as much as 50*l.*

8086. (*Chairman.*) Do you say there is a fixed scale of payment?—Yes.

8087. Calculated on the value of the recovered article?—Yes.

8088. There was a case of jewellery for instance, which might have run to thousands of pounds; would the owner have to pay a certain proportion of the value of those things?—For property of the value of 10*l.* and upwards, such a sum as the Commissioner shall deem reasonable. That is included in the order.

8089. 10*l.* and upwards?—Yes, 10*l.* and upwards, and on the amount recovered much depends. I see in this particular report (I quite remember the cases) two rewards of 10*l.*, one of 25*l.*

8090. (*Mr. Cunynghame.*) I suppose that in the case, say, of a bond for 10,000*l.*, you would not give the man a proportionate amount of it?—No.

8091. You would consider reasonable what was a fair reward for his honesty?—Yes.

8092. But not necessarily in such a case that proportion?—No.

8093. (*Chairman.*) And the same remark would apply, as I say, to a case of jewels?—Yes.

8094. Do you think that the work done by the staff in these two departments, the Lost Property and the Public Carriage Department, could be adequately done by a very much humbler and smaller staff?—I do not think it could.

8095. You think it requires an ample staff, and a highly trained staff?—Yes.

8096. You do not see any opening for reduction in that direction?—I think not, certainly, and I have thought that point over.

8097. And now, Sir Edward, I want to ask you a few questions of a more general character about inspection. I must tell you that we have had an almost, I think an almost universal concurrence of testimony, that the inspection is of rather an indifferent character, and I want to know what you think about it. Do you believe that the system of inspecting is a thorough and testing system?—I have not been quite satisfied that it has been good enough; I think that our staff has not been quite strong enough; that is what has seemed to me to be the want.

8098. Do you think that there is enough technical knowledge, for instance, as respects the structure?—Yes, I think so. A man has been brought up to it, right throughout his service; he is a man picked for it, he has had a long experience in the police, and has had his attention called to cabs from his earliest youth you may say; I think that he is a very good judge if he is a picked man.

8099. Then with regard to driving: we understand the practice is that a man who wants to drive a cab must bring a testimonial from two householders that they believe him to be, amongst other things, a competent driver?—Yes.

8100. But do you believe that the testimonial is worth anything, or has it become a dead letter?—I believe it is worth a great deal, because I believe it is tested by the hackney carriage staff as far as they can, that is they know that it is a genuine ——

8101. Document?—Document.

8102. Yes, it is?—And the man certifies that he is capable of driving. I saw the question had been put whether an examination in driving——

8103. Yes, but before we come to that, no doubt what you say is perfectly correct, that your people test the authenticity of the document, but they have no means of testing, have they, the capacity of the people who signed the document to give an opinion about driving?—No, but the reason I feel satisfied to a great extent that there is not any great deficiency in respect to the driving is that the number of accidents which arise from bad driving are very few, the complaints we receive of bad driving are small in number, and there is one's own experience in going about; I seldom come across a man who is a bad driver, if ever. Of course, as I say, if it were considered desirable to make that a stricter examination, I am sure we could devise some plan by which it could be done.

8104. But, Sir Edward, though the accidents are not so many as we might expect, I think we have had it placed beyond dispute in this inquiry that a very large number—the proportions were variously stated by witnesses—but a very considerable number of men come to cab-driving that had never driven at all, and that they drive by good luck rather than by skill?—I have not had that come before me at all in going about; I cannot believe in it occurring, for I think that an inspector would be altogether neglecting his duty if when he went to test a certificate he did not bring to the notice of the department that the men giving it were not likely to have been able to judge, or something of that sort.

8105. But I think we have elicited this—that these certificates are given out of friendliness, and as a sort of common form, more than as a serious testimony to faith in the man's driving capacity, that a respectable man can get all that is necessary from two of his neighbours without any inquiry into his fitness. Certainly within my own knowledge a footman has gone and got a licence without any difficulty—a man who had never driven anything; and founding myself upon that I have asked the question of a great many witnesses, I think one witness put it as high as 50 per cent., that 50 per cent. had never driven at all, and they all seem to agree that the driving trade is recruited from various classes and professions, a certain number of gentlemen's grooms and coachmen, a great number of drivers of tradesmen's carts and vans, and such like professions, and a very considerable residuum, as I say, variously stated as to number, from various indoor and sedentary occupations, and it has certainly occurred to some of us in this Committee that it would be better if the capacity to drive were not taken for granted on the testimony of two agreeable neighbours, but were made the subject of some searching inquiry by you?—I think it certainly would be desirable.

8106. And if desirable you think it is practicable?—I am quite sure that if it were thought desirable we would devise some plan by which that should be; it would require a good deal of thought as to how to carry it out.

8107. (*Mr. Whitmore.*) Have you in your mind an actual practical test of the individual's capacity to drive?—Would that be——

8108. I mean are you thinking of that as practicable at all?—Yes, as practicable; I think one could make it practicable.

8109. You think it might be?—I think it may; I would not at once say how, for I really have not thought exactly how.

8110. (*Chairman.*) But you see no *a priori* inability?—No, I do not.

8111. Now, we have got another point, and that is, the knowledge of London; do you think that the inquiry into that is adequate?—I think it is.

8112. You have no improvements to suggest with respect to that?—No.

8113. You think that test is sufficiently searching?—I think that is sufficient?

8114. Now I am going to take you to quite another branch of your department, and that is the practice in the police courts. I suppose that you have some knowledge at any rate, of the system under which the police courts act?—I cannot say that I have had any personal acquaintance with that; it would only come before me quite in an indirect way.

8115. You have never, in the discharge of your duties, had occasion to go to police courts?—I have done that, but only as a matter of information.

8116. Well, but taking it at that, which is no doubt very valuable, is the impression that you formed of the practice of the police courts that the drivers get fair play?—I really have no reason to suppose they do not; I never saw anything that led me to think that they did not.

8117. Do you think that there the police hold what may be called a standing brief against the drivers?—I think men's temperaments vary equally amongst drivers and amongst constables. I can only say that every endeavour is made to make the constables as sympathetic and as courteous as they can be. Our orders are strong on that point, I quite admit that if a cabman may not like being checked a constable does not like being spoken to sometimes, and there are so

many differences in temperament that I would not say that all are equally considerate, but I think, speaking generally, that the feeling is good between them, and fair.

8118. I think we have rather elicited this, at any rate, from many of the drivers, that they do not feel that police evidence against them in the police courts is always *bonâ fide* evidence; do you think, as far as you have any means of forming a judgment, that the evidence of the police in any questions arising against the cabman is evidence to be relied upon?—I do.

8119. And you think that the magistrates are well advised in taking that evidence and guiding themselves by it?—Yes, I do.

8120. As far as you know, speaking generally, it is competent and trustworthy evidence?—Yes.

8121. Would you kindly describe the process by which a summons is taken out against a driver?—Do you mean for any offence?—the constable reports it to his inspector, who again reports it to his superintendent, a recommendation then comes to the Assistant Commissioner who has charge of this particular department, and he sanctions the summons being applied for.

8122. Then no summons can be applied for without the sanction of the Assistant Commissioner?—Without the sanction of the Assistant Commissioner, no; he sanctions every one.

8123. Does that report which is made by the police to the Commissioner go before the magistrate; does he see it?—No, it would not.

8124. It is for the confidential use and information of the Commissioner?—Yes.

8125. (*Mr. Hopwood.*) What material, Sir Edward, is put before the Assistant Commissioner to enable him to judge?—The report.

8126. Yes; but does that amount to a statement of facts?—Yes, it does; and the superintendent also puts his remarks on it in sending it forward.

8127. My point is rather this, does the constable in making his original application to his superintendent for a summons really put on record the facts of the case?—Yes.

8128. So that by-and-by, when the case gets into court, the facts would be so stated as to enable the magistrate, if he had them before him, to cross-examine the constable, and test his *bona fides*?—Yes.

8129. (*Mr. Cunynghame.*) And the magistrate, I presume, would have the power to call for such a report if he chose to?—He would have the constable himself as a witness, which would be the same thing.

8130. It would probably be within the competence of the gentleman on either side who were conducting the case, or the cabmen?—It would not be usual to call for that report.

8131. I presume it would be within the competence of the magistrate or of either of the parties if there was a note made at the time by the man who was giving evidence, to call for that to test the truth of the story that was now being told, and compare it?—He would call for his notes, not the report which he made to the Commissioner.

8132–3. The notes of the constable of the facts upon which that report was founded?—Yes.

8134. (*Mr. Lough.*) I understood the original report of the constable to the inspector, or the inspector to the superintendent, were not, as a rule, supplied to the magistrate?—No, they are not.

8135. (*Chairman.*) I understand, Sir Edward, from your few answers, that the notes made by the constable on the spot at the time of the occurrence only can be called for, but that the report founded upon those notes sent before the Commissioner is not produced?—No, that is so.

8136. (*Mr. John Burns.*) What steps does the inspector in charge of the station or the superintendent to whom the policeman makes the application for a summons, take to verify the *bona fides* of the constable's statement?—That is going into an exact detail that I do not know I should quite feel sure about answering.

8137. I will not press that, Sir Edward?—These cases, Mr. Burns, do not come to me, you see, in the first instance.

8138. I will not press that, Sir Edward, but may I put it in this way: do you not, as Commissioner, consider it advantageous for the cabmen, the police, and the public, that the inspector or superintendent should exercise some power of supervision as to the *bona fides* of the application for a summons?—He does so, I believe; I have always believed him to do so with discretion.

8139. But in the event of it not being done?—He would not apply for the summons.

8140. (*Mr. Lough.*) All that you say, Sir Edward, is that the magistrate may ask for this report?—For the notes on which the report is made.

8141. But it is not a rule that it shall be supplied to the magistrate?—The notes?

8142. The notes.—No, I think not, because he would take the constable's evidence, and then he would ask him for the notes which he took at the time; it is a very constant thing for this to be done.

8143. We have had one magistrate before us and a clerk, and we did not hear of any rule of either notes of constables or reports being examined?—No, I do not think there is any rule.

8144. You do not think there is a rule that it should be?—No.

8145. (*Mr. John Burns.*) In the event of an inspector or a superintendent being dissatisfied with the *bona fides* of the application on the part of the constable for a summons against a cabman, what steps would he take?—He would not apply for it; he would not recommend the Assistant Commissioner that one should be applied for.

8146. Then in that case what would happen to the policeman?—If he were considered to have behaved badly he would be brought up as a matter of discipline, and dealt with.

8147. (*Chairman.*) Sir Edward, I was asking you a question a moment ago about the trustworthiness of police evidence in cab disputes, and as that is a question touching the character of the police, it leads naturally, or at any rate not very unnaturally, I think, to another question touching their character, which I am bound to put to you sooner or later, and may as well put now; it has been again and again stated in the course of this inquiry by drivers that it was a matter of common rumour that a man wanting to get an indifferent cab passed when it is sent up to be licensed had, in fact, to have recourse to bribery, and that if he put a coin under the cushion it was passed, and if he did not it was not. I am bound to say that when we have tried to bring this accusation home the attempt has always broken down at the last moment, and nobody has come forward to testify to it.

8148. (*Mr. John Burns.*) Except one.

8149. (*Chairman.*) I recollect one did; a man did come and give evidence as to what he had done himself on behalf, I think, of a firm or a company he managed; he was not an individual only.

8150. (*Mr. Hopwood.*) Years ago.

8151. (*Chairman.*) I will correct the form of that, and I say that in one case only have we been able to get evidence from somebody who had taken part in the act, but we have heard in this round-about way that it is a matter of common report, some put it as high as common knowledge, that this bribery was habitually practised. I want to ask you, as the head of the force, if you have any reason from your official experience to believe that that accusation is true?—No, I have not. I can only say that during the time that I have been in charge I have only once had such an accusation come before me, and we made every inquiry, and could not bring it home, and I can only add that if any case were ever brought before me I am quite sure that we should do our very best to inquire into it, and I should make an example of the person against whom the charge was made if I thought it was proved. I have heard exactly that general sort of statement myself. On every occasion that anybody has said it to me, I have always asked them to give me the opportunity and means of testing it, and have always felt that if a man knew of a case like that he neglects absolutely a public duty if he does not bring it to my notice, for I am quite sure that a very minute inquiry would be made into it, and, as I say, that if it were proved the man would be made an example of, and I cannot say more. Really I have heard that very thing said, but it is so easy to say these things in a general way. The men are put into a very delicate position, that is, the inspectors, and it is so easy for anybody

Sir E. Bradford.

27 July 1894.

to make a general statement if a cab is rejected, or anything done that displeases them, but I have really no reason to suppose that it is true. I will add to that that if any suggestion could be made to me of putting additional checks to prevent the possibility of corruption, I should be only too glad to accept and act upon them.

8152. Now, Sir Edward, on quite a different subject, have you had any experience of the inspectors of the Royal Society for the Prevention of Cruelty to Animals?—Cases have come before me. As I have said, the work of this particular Department does not come directly to me, but there have been cases in which the Assistant Commissioner has considered that matters of principle were involved, and he has brought them before me, and in that way I have had cases, and the Royal Society for the Prevention of Cruelty to Animals inspectors have come before me, and I have, I may say, issued orders that have made a little more stringent the rules in connexion with allowing their interference, not that I wished not to be sympathetic with the animals, but I have always rather wished to guard against anything like hardship to cabmen, who, I believe, are the people who have mentioned the subject to me at the time.

8153. Have you ever in your experience of those men had an opportunity of forming any general opinion how they have done their work?—No, I should not like to form any opinion upon what I have myself seen. So far as I know, a great many of them do their duty extremely well, but I think I should be going beyond my direct knowledge if I said that they all do it excellently.

8154. Would you wish to take the interests of the animals directly under the charge of the police, and make it the duty of your constables to look after them?—They do, it is part of their duty.

8155. Yes, but I mean exclusively?—Withdraw the Society altogether?

8156. Yes?—I think the Society serve a good purpose if the officers are kept in check. That has been my aim.

8157. (*Mr. John Burns.*) And experience has proved that they wanted keeping in check?—I think it has.

8158–9. (*Chairman.*) And now, Sir Edward, about the congestion of the traffic, it has been admitted that there is congestion in some parts of London; in fact, it is not disputable. Have you any views as to the remedy for it?—Without increased powers being granted to the Commissioner of Police, that is, to interfere with traffic generally, which he cannot do, I do not see my way to anything. I think he ought, perhaps, to have the power of saying that vans and other heavy traffic shall go by certain streets. In that sort of way I have no doubt something could be done, but, as it would require legislation, I have never really gone narrowly into the question, for I know we have got no power to do it.

8160. Would the powers that you have at the present moment affecting hackney carriages not enable you to deal effectively with this question of congestion unless you could get fresh statutory powers to deal with all forms of congestion?—No, I think not.

8161. (*Mr. John Burns.*) I wish to ask you a question about the alleged conduct of policemen at police courts, Sir Edward?—Yes.

8162. It is alleged by some cabmen that frequently the sergeant gaoler, or the constable assisting the sergeant gaoler of court, acts in relation to the cabman in a way that he would not act, say, with the cab fare with whom the cabman is having a dispute? Now, have you ever been to Marlborough Street, Sir Edward, when cab cases have been on?—No, I have not.

8163. Have you had your attention particularly directed to the special treatment, or as the cabman would call it, the extra-special treatment that he receives at the hands of the constables as compared with the ordinary public?—No; I can only say if I did I should at once——

8164. Now that your attention has been directed, Sir Edward, I have no doubt you will take an early opportunity of seeing what truth there is in the allegations made as to the treatment of cab witnesses by policemen?—I shall. I am only too glad to have anything of the sort brought to my notice.

8165. Well, if it came to your knowledge, Sir Edward—and you will have a knowledge of the amount of time necessary to deal with cases of breach of discipline and insubordination?—Yes.

8166. If it came to your knowledge, and was indisputable that 40 cases of cabmen crawling, and obstructing, and plying for hire were rushed through in 30 minutes, either at Marlborough Street or Bow Street, would you consider that a space of time in which that number of cases could be thoroughly inquired and gone into?—I should not like to do it myself.

8167. You take a longer time if a policeman were reported, say, for drunkenness on duty, to you?—Of course it may be that the anxiety is not to keep the men waiting for a long inquiry. I daresay that is very often the way in which it occurs. I do not think that the constables as a rule summon a man without good grounds; they always give them a caution.

8168. There are *primâ facie* grounds certainly?—Probably they do rather run the cases through with the object of not detaining the men. I can only imagine this is the case, but I should not consider that a satisfactory inquiry.

8169. (*Mr. Hopwood.*) And not detaining the magistrates?—Them also.

8170. (*Mr. John Burns.*) Are you aware, Sir Edward that cabmen, although innocent, or only partially guilty of the offence with which they have been charged, frequently plead guilty to get away sooner, and to escape, although innocent, with a smaller fine, or perhaps a smaller fine than they would if they were to plead not guilty?—I have heard that said.

8171. Are you aware that cabmen, though innocent, plead guilty to get away with a smaller fine than they would if the case took longer?—I have no evidence of such a thing.

8172. Do you consider that if that condition of things exits that is likely to breed respect either for the policemen's regulations in the street —— ?—If it exists, certainly not.

8173. Or compliance with a police order for the regulation of traffic?—I think not.

8174. The other point I wish to ask you about is, have you considered the advisability of having a separate police court for all vehicular cases?—I have never considered it. I have never heard it referred to until quite recently.

8175. But do you not think, Sir Edward, with your large experience as a public official, that criminal associations are not conducive to improvement in character of the men who are tried with criminals?—No; I am sure it must have an injurious effect.

8176. And as a matter of fact, with ordinary men, as well as with policemen, does not continual contact with criminality tend to make the average man callous?—I think it does, yes.

8177. From that point, what steps do you take, Sir Edward, within your power as Commissioner, to check and mitigate the impetuous zeal of young policemen towards cabmen?—Beyond cautioning men repeatedly, and punishing them when cases come before me, I do not know that there is anything else to be done. The officers are told, it is repeated to them constantly (the orders contain an injunction, I forget the exact words that are used), that police are always to treat those with whom they come in contact considerately. I think all that I can do at the head of the Force is done to try and ensure that. But, as I have said before, men are not all constituted alike.

8178. But, considering the extraordinarily large number of cabmen there are in the streets of London, and the magisterial, the almost judicial, relation of the policeman to the cabmen, would you consider the advisability of making a special regulation in regard to the treatment of cab drivers by policemen?—There is not only a general direction, but there is a special order which enjoins on the police to be strictly considerate. Persons connected with public carriages are to be treated with courtesy, and are not to be delayed longer than is absolutely necessary—is an order that is given to them. It is enjoined on the police—"Com-"plaints having been made to the Commissioner of "incivility, loss of temper, improper apprehensions, "on the part of members of the force in carrying out "their duties"—and then, "the following orders on this subject are to be strictly acted upon." They are to be

treated with the utmost civility, forbearance, and good temper by the police. That is a special order, and if anybody brings to my notice that they have been differently treated I always do whatever I can to inquire into it, with the object of letting it be distinctly understood what is desired. Of course, the position of a policeman in one of these crowded streets, I know, is a very difficult one; and, as I have said, many of the cabmen are men who do not like being checked, and this applies not only to a cabman, but also to other people.

8179. It is not peculiar to cabmen?—Many beyond cabmen; and, therefore, the policeman is in a very difficult position. But I think that all that can be done is done to prevent bad treatment.

8180. Well, Sir Edward, considering that in many parts of London there is insufficient rank accommodation and that cabmen technically are not allowed to ply for hire on the streets, and the fact that, as a rule, the men are long hours in the street, now that it has been alleged that there is one sort of police justice for the cabmen and another for the public, will you specially consider those allegations, and act upon what truth there is in them?—I should be very glad to act upon anything that would secure perfect treatment on all occasions; but what I was saying was that I do not think the police are in the habit of acting hastily. They are always told to caution men before they report them, and from my own observation I know how ——

8181. We all know Sir Edward Bradford, the police particularly?—I really am about at times when the men do not know that I am there. I watch a great many cases; and, of course, anything that can be done is done to ensure their being well treated.

8182. Now, Sir Edward, I want to take you to another point, if you do not mind. The police under you perform jointly with the Royal Society for the Prevention of Cruelty to Animals the duty of inspecting horses in the streets of London?—Yes.

8183. Primarily, that duty belongs to the police?—Yes.

8184. Do you not consider, Sir Edward, that that duty should be exclusively performed by the police?—I have said that I think the Society fill a very useful place.

8185. Yes; I would rather deal with that later on. But do you not consider, as the Chief Commissioner of Police in London, that that duty should be exclusively performed by the police?—I should say yes.

8186. Does it not frequently happen that when a horse is stopped by a Royal Society officer in the streets of London that a crowd assembles?—It always does assemble; I do not know any particular case in which this has come before me in connexion with this point.

8187. And does it not frequently happen that when the Royal Society officer stops the cab, the cabman and he, by virtue of the fact that he is not a police officer, engage in a wordy warfare, and a continuance of the obstruction, which would not happen if the policeman alone stopped the horse?—I have never had a case before me, but I think that seems likely.

8188. And frequently after the dispute has lasted some time to public inconvenience, the policeman is called in, and both are either taken away or advised to walk away?—Yes.

8189. But is that a condition of things that, as Commissioner of Police, you could look on with favour?—Certainly not with favour.

8190. You do not believe in dual responsibility and control in any of your departments?—No, I do not.

8191. Now, has not this body showed a disposition to assume functions towards cabmen and cab horses that in your opinion only the police should exercise?—I think they have at times.

8192. And they have recently been checked?—Yes.

8193. In your opinion, is not a voluntary society officer, who does not give hostages to good conduct and impartiality in the discharge of his duty, more liable to a capricious and prejudicial performance of his duty?—Certainly.

8194. He is more likely to take sides as against a man?—I think he is.

8195. Than a man who is dependent upon the police?—Discipline and good conduct.

8196. Discipline, pension, promotion, and the other incidents of public service?—Yes.

8197. In the event of it being proved that the exclusive inspection of horses should be handed over to the police, you would not refuse to perform that duty?—Not in the least.

8198. I go from that point to another, Sir Edward. You have, of course, been in the Strand at night-time?—Yes.

8199. You have noticed the congestion of cab traffic in the neighbourhood of Catherine Street, the Adelphi, and the Lyceum?—Yes.

8200. Do you consider that a condition of things which should be allowed to continue?—I know of no way in which it can be prevented.

8201–2. Have you specially directed your attention to the removal of this congestion of cab traffic?—Yes.

8203–4. And have you arrived at any conclusion by which it could be mitigated?—I think everything we can do is done. I think it is improved.

8205. Would you be prepared to discuss with the local authority in that district the means by which additional rank accommodation could still further improve upon it?—With pleasure, yes.

8206. You admit that, from the cabman's point of view, as well as from the policeman's point of view, it is a condition of things that continually leads to conflict, to hostility, to bad language, and to a very bad condition of things?—I think it does.

8207. And you are prepared to co-operate?—Yes, but it is for a short time only.

8208. It is from a quarter to eleven till about half-past eleven?—Yes, from eight to eleven—three hours.

8209. Do you not consider, Sir Edward, that your horse inspectors should preferentially be promoted for their knowledge of horses and for veterinary reasons?—Apropos of what?

8210. I mean in respect of the inspection of cab horses and cab yards? You have got inspectors?—I do not think that I have men specially for the purpose.

8211. The police inspectors are supposed to visit the cab yards?—Yes. Really, Mr. Burns, I do my best to select the men who are most suited for the duty required of them, whether horsemen or not. I think it, perhaps, would almost go into the administration of the police if I am to be examined as to whom I should select for a special duty.

8212. I have no desire to overstep the jurisdiction of this Committee. But do you not consider with regard to the administration of the hackney carriage law that a wheelwright or a coachmaker in the police force would make a better inspector of vehicles than a man who was not?—I should not admit that; and if I thought he was I should select one.

8213. Well, the reason why I put that question to you is that it has been alleged against your administration of the hackney carriage law that frequently when cabs are taken to a station the inspector never gets inside the cab, in fact hardly looks at the cab, but simply walks round about two yards away from it, and comes in and tells the man to put the plate upon it. I will not take that as true, but assuming that to be true?—He neglects his work.

8214. And do you not admit that it is not the kind of thing that a technically qualified coachmaker would do?—Not if he neglected it too; if he did not do his duty it would be all the same.

8215. But is that the kind of inspection that a practical coachmaker would make?—If that is the case, and it was brought to the notice of his superior officer, he would be punished for neglecting his duty.

8216. But other things being equal, you would give preference, I assume, to a man who knows something of horses to inspect horses, and a man who knows something of vehicles to inspect cabs?—Yes, certainly.

8217. Now, the other question I wished to ask you, Sir Edward, is with respect to the bribery of inspectors; and at the outset I must admit that the allegations as to bribery apply to a period in which you had no control; they apply to a period when you were not Chief Commissioner.

8218–9. The specific allegations with regard to bribing for a cab refer to the time before you were appointed Commissioner. But this allegation has been

Sir E. Bradford.

27 July 1894.

made that the other day a cab, No. 14,878, Railway No. 88, was taken first to Rochester Row to be passed, and rejected there; it was then taken to Stone's End in the Borough and there passed. Now, does not that indicate either a lack of communication between the two police inspecting stations or an irregularity that, if true, you would attend to and put down?—Just so.

8220. Now that your attention has been directed even to past allegations of bribery, do you not consider that the allegation, even though in the past, is sufficient for you to direct immediate attention to?—My attention is always directed to it.

8221. To see if it is continued?—I should do anything I could to prevent such a possibility.

8222. And in the event of it being detected the punishment would be severe?—Yes, it would.

8223. Now, Sir Edward, I want to put this to you: Do you not consider that the fact that a policeman's time in court when attending on cab cases is taken either from his sleep or his leisure time contributes to a positive tendering of evidence in which impartiality is not possible?—He gets time off.

8224. But does he now?—He does.

8225. How long has that been, Sir Edward?—Certainly for several years. When he has to attend the court he gets time off.

8226. Time off his duty?—Yes, he goes on for a shorter time.

8227. Of course I accept it from you; but is that positively so?—Yes, it is.

8228. (*Mr. Whitmore.*) So that the length of time during which he is in court ——?—"Police attending "police courts are to be granted time off as follows." There is an order which puts exactly the terms. I do not know that I need trouble you by reading it all; but it gives the exact time that is allowed off.

8229. (*Mr. John Burns.*) I will take it from you, sir. We will come to another point, and my last, Sir Edward. Has your attention been directed by any of your subordinate officers to congestion of cab traffic round several London railway stations?—Not specially.

8230. Has it been reported to you that round Victoria Station, for instance, there is occasional congestion of cab traffic?—No.

8231. Have you considered the effect of the privileged cab system on London cab traffic?—I cannot say so with reference to the cab traffic. I pass Victoria often, but I never do see the traffic congested much there except on special occasions.

8232. Then it has never been reported to you?—No, never.

8233. Are you aware, Sir Edward, that there is privileged cab stand accommodation in railway stations for nearly 2,000 cabs?—Yes, I know that.

8234. Have you ever considered what advantage, if any, the opening up of that enormous cab stand accommodation would be to the congested state of our streets? I cannot say that I have ever formed any conclusion upon that point.

8235. You admit, Sir Edward, do you, this great congestion of cab traffic in the Strand, round Trafalgar Square, and Oxford Street?—Yes, at certain times.

8236. But the Strand is always blocked, is it not?—Not by cabs.

8237. But have you not considered the necessity of taking special steps to remove crawling in the Strand?—I have. But that was only to relieve it to some extent. I have not considered that in connexion with privileged cabs.

8238. But has it ever dawned upon you that the opening up of privileged cab stands in the neighbourhood of the Strand would diminish that crawling?—No, it has not.

8239. And in the interest of the public, against whom crawling is a great offence, are you prepared to specially consider the privilege question, as Commissioner?—I should be very happy to do so.

8240. You have no power over railway stations, have you?—No, we have not.

8241. Are you particularly desirous of having it, in so far as cab traffic is concerned?—No.

8242. (*Mr. Cunynghame.*) There seemed to me two quite different complaints or remarks that might be made upon inspection—one, that the standard of goodness required in cabs was not high enough; and another, a totally different one, that the inspectors were not sufficiently careful to see that the cabs come up to the standard of the day, such as it is?—Yes.

8243. One would point to an improvement in the rules respecting it; the other would point to an improvement in the mode of carrying those rules out?—Yes.

8244. Now, I understand, Sir Edward, that in saying that you thought the police force did their duty in inspection you meant to say so far as the present standard of cabs goes?—Yes.

8245. But it might be considered expedient to require a higher standard altogether, which would be a totally different thing?—Yes.

8246. (*Mr. Lough.*) I think, Sir Edward, you said just a moment ago, in reply to Mr. Burns, that it is part of the police duties to inspect the stables?—Yes, it is.

8247. When Mr. George Isard, the inspector of carriages, was here, we asked him these questions and got these answers; and I want to know whether it is right. Mr. Isard said: "Not that we go into the "stables, but we pay that attention to it when we are "compelled to go"?—When I said visit the stables, it was more the yards.

8248. I mean the yards; but you will see this covers the yards: "(Q. 1599) Have you search powers conferred "upon you? (A.) No, we do not go in unless we have "a special order from the Commissioner. (Q. 1600), "Cannot you inspect a cabyard or mews without the "special order from the Commissioner? (A.) If the "cab owner will admit us." I ask you, Sir Edward, is that correct evidence?—I should not be able to say; I must refer. No doubt the inspector has stated his orders correctly. My impression is that part of his duty is to visit the yards in his division.

8249. Now, one word again. We have Mr. James Scott, the manager of the London Improved Cab Company, and he was asked (Q. 2643) "I gathered "from you, Mr. Scott, when last you were here, that "for general inspection of cabs, horses, harness, "premises and sanitary condition during the period "you have been with the London Improved Company "—namely, nearly eight years—you have not had a "single general inspection?—Not one," he answered?—Yes.

8250. "(Q.) In no case an inspection of cabs, horses, "premises and plant? (A.) No"?—It does not do for me to say the statement is wrong. My impression is that there must have been an inspection. But again I ought to repeat that at the head of the Force I should not know whether the inspector has visited the stables or not. I can make inquiries.

8251. "(Q. 2646.) Not a general inspection?—Not a "general inspection. (Q.) But for the purpose of "inspecting this or that particular horse, or this or "that particular cab? (A.) Yes?—This is the order: "When not engaged as above they are patrolling their "district, visiting yards, stables, &c., to see notices "are abided by, or performing duty at some suburban "station." I take it that—although I would not say that it is exactly carried out—that is the order.

8252. Then you give us officially that you have these powers to fully inspect stables?—I think you must let me inquire about that.

8253. Oh, with pleasure, Sir Edward?—It is a point that my attention has not been called to in the least. I only know that these are the orders. I could not say what our powers are without inquiring. I will with pleasure inquire into that. These orders which I have have received the sanction of the Home Secretary. They would not have included it without we had powers to go into yards, &c. That is the only thing I can say.

8254. I want to ask you another question on this answer of Mr. Isard's: "(Q. 1599.) Have you search "powers conferred on you? (A.) No, we do not go "in unless we have a special order from the Commissioner"?—Yes.

8255. Now, I wish to ask you, do you remember yourself issuing any such order?—The Assistant Commissioner has charge of that department, and he would issue it as from me. I have never had a case come before me.

8256. With the chairman's consent, I will ask you, Sir Edward, if you would be kind enough to put together for us what you conceive to be the legal position of Scotland Yard, and how far it is actually acted on, in the face of the evidence to which I have pointed your attention?—I have never seen the evidence to which reference is made.

8257. Scott's evidence and Isard's evidence?—I have never seen it, but I shall be happy to put together the legal position of Scotland Yard on this point.

8258. You said, Sir Edward, that the staff of inspectors, even for such carriage inspection as they do, was not, in your opinion, strong enough?—Yes.

8259. Has your attention been directed to the fact that in Liverpool there are 10 inspectors to about 800 cabs, whereas you have only six in London for 11,000 cabs?—Yes.

8260. Of course if that evidence has been laid before the Committee, you would think the six very much too small?—I think so.

8261. Then you also said that you did not think the inspectors were wanting in technical knowledge?—No.

3262–3. Is there any technical knowledge of carriage construction demanded from the inspector before he is appointed an inspector?—No.

8264. I want now to go back in the order of your evidence, Sir Edward, for a moment. In describing the staff of constables in the street, you mentioned, I think, 40 men; I think it was for the watering?—Forty-seven; there are more than that watering; there are 378 altogether.

8265. But you said 47?—Who do nothing else.

8266. But watering?—No; the others do the watering too. I divide them thus: 47 whose whole time is devoted to the cabs, 331 who are partially employed doing the same work.

8267. What is the precise duty of the constable who attends to what you call watering?—I read it at some length.

8268–9. Have those constables power with regard to the troughs?—No, nothing to do with the troughs.

8270. Therefore if these constables saw a trough where the water was stagnant and the top was covered with very dangerous-looking froth, they would not have power to order it to be cleansed out or put into a more sanitary condition?—If it were in an insanitary condition, I think he would bring it to the notice of his superior officer. But he has nothing to do with them; the troughs belong to a private company.

8271. But those troughs are in the public streets?—Yes.

8272. And there is no public street authority but the police?—You mean if it were smelling, that he should bring it to notice. I think he would.

8273. If the trough was stagnant and covered with froth from the horses' mouth—I saw one yesterday myself—have the police any duties with regard to letting the water flow and getting it out?—No.

8274. About the lost property. As I understood, in your answers to the Chairman you put on the Public Carriage Department the whole expenses of the Lost Property Office?—Yes.

8275. Have you any lost property office whatever except this one?—No.

8276. Do you not receive property from the Metropolitan and District Railway?—No, they have their own office. They do not send lost articles to us.

8277. Are none finally brought to Scotland Yard?—No.

8278. Or any police station?—No.

8279. Is there any lost property that is found in the street brought to you at Scotland Yard?—It is brought and taken to the local police station. It is not dealt with in the office.

8280. Do you happen to know anything about the practice of other municipalities with regard to lost property, Sir Edward?—No, I do not.

8281. You would not casually know that there is a lost property office, for instance, in Liverpool?—No, I do not know anything of the way it is worked there.

8282. Because in Liverpool we have had evidence that the charge for a carriage licence is only 1*s.* 6*d.* per annum?—Yes?

8283. That of course would not keep up a lost property office?—No.

8284. Well, do you suppose that there would not be such an institution in Liverpool?—I should think there would, but this Act would not apply to the establishment of the Liverpool institution. I do not know the least what their system would be.

8285–6. Then I will leave it. I want now to ask a question about the issue of the licence, Sir Edward. In reference to the inspection of the carriage, do you understand yourself how it is done; for instance, the owner of a hackney carriage must come to Scotland Yard in the first instance to get the licence for his carriage?—He comes in the first instance to Scotland Yard to pay the 2*l.* licence fee, and gets a receipt for the money.

8287. He gets a provisional licence provided he passes the inspector?—He gets the actual licence when the carriage has been passed by the Public Carriage Inspector.

8288. And the inspection of the carriage takes place at another place altogether?—Yes, in the division.

8289. Do you not think it would be more convenient if those two offices could be brought together, and you could at once inspect and license—supposing it could be arranged?—Everything is possible. It is a very large number to come to one spot, besides the distance they would have to come.

8290. But suppose there were three or four places for issuing them? My point is that there are two offices for the same thing?—One is the inspection of the cab, and the other is the granting of the licence, which is done after inquiries are made from the office.

8291. I have one other question. Do you think, Sir Edward, if these licences were all issued at a given season, say once a quarter for 14 days, that the work might be simplified and done more cheaply?—I am afraid not. I have thought of that, because I saw a question had been put to the Receiver, and I think that it would not be a practicable suggestion. What has struck me is this, that it would rather increase the staff, for it would necessitate the dealing with a large issue, 8,000 drivers' and conductors' licences, and 3,500 proprietors' in a fortnight, or all at once. The present staff could not possibly do it, and the accommodation is ot sufficient for the purpose; consequently, whereas now the average time an applicant is kept waiting is between five and ten minutes, under the suggested arrangement a delay of several hours might take place.

8292. Have you considered whether there are too many cabs in the streets of the metropolis?—I really should be afraid to venture an opinion whether there are or not. I noticed during this late strike, when it was partially over, and there was not a very large number still out, that sufficient cabs were not procurable at certain hours. I think it looks crowded and as if we had too many in certain localities. But generally, I should be afraid to say that there are too many.

8293. I will just put it in one general question. Have the metropolitan police force formed any opinion as to whether there are too many or not?—No.

8294–5. Do you think it would be desirable that an opinion should be formed as to how many cabs would be wanted for the requirements of the metropolis?—I have thought a great deal about it, and I should be very sorry to be one of the authorities to say what number should be the limit.

8296. Did you notice in Colonel Smith's evidence ——?—I have not seen any of the evidence at all. I only last night read over the evidence of Mr. Pennefather.

8297. Well, Colonel Smith, in reply to repeated questions, said that there was a nuisance of crawling cabs in the City?—Crawling cabs, yes.

8298. I will ask you, is there a nuisance of crawling cabs in the metropolis?—I would say at certain times, yes.

8299. At what times?—The time rather varies. In Piccadilly and the Strand towards five and six in the afternoon; between that time and late at night.

Sir E. Bradford.

27 July 1894.

8300. Would you say as much as this, that there is, in your opinion, in the crowded parts of the metropolis, a nuisance of crawling cabs?—Yes.

8301. But you hesitate to say ——?—That that is because there are too many.

8302. I was going to ask you, notwithstanding that, you hesitate to recommend a limitation of the number of licences issued?—Yes.

8303-4. Either to cabs or to drivers?—Yes.

8305. Do you think that there is any necessity to raise the age at which licences are issued to drivers?—I have not seen any great necessity. I believe the number that was issued at the minimum age was quite a small one; but if there was any abuse in this respect I should be very glad to see the age raised. I think we do not as a rule take any youths under 18.

8306. (*Mr. John Burns.*) Eighteen, but a few at 17?—A few; very few it is indeed.

8307. (*Mr. Whitmore.*) But should you see any objection to the limit of age being raised to 21?—Not the least.

8308. (*Mr. Lough.*) Now, Sir Edward, I am going to a different subject. You read out a sentence of instructions commencing, "Complaints having been made"?—Yes.

8309-10. That sounded to me very interesting, and I should like to have it referred to again, if you do not mind?—It was with reference to civility.

8311. May I ask you to read the whole passage?—I really read the words to show that there was an injunction to be civil and not to lose temper; that was the reason of my reading it. The sentence began in that way.

8312. Is there any objection to its being read?—Not the slightest. "Complaints having been made "to the Commissioner of incivility, loss of temper, "and improper apprehensions on the part of some "members of the force in carrying out their duties, "the following orders on these subjects are to be "strictly acted upon. All persons are to be treated "with the utmost civility, forbearance, and good "temper by the police. Whenever a question is put "to them by any person they are not to answer in a "short or abrupt manner, but with the greatest "possible attention; at the same time they are to "avoid as much as possible entering into unnecessary "conversation with anyone. A perfect command of "temper is absolutely indispensable in the proper discharge of police duty. A constable must not allow "himself to be moved or excited by any language or "threats, however insolent; the cooler he keeps himself the more power he will have over his assailant. "Idle or silly remarks are unworthy of notice, and if "the persons making them see that they have no "effect upon the constable they will soon leave off. "Forbearance and moderation will always be understood and appreciated by the public, the magistrates, "and the Commissioner. The police are not to apprehend or unnecessarily interfere with any person, "unless some specific act has been committed by "which the law has been broken. To deprive a "person of liberty is a very serious matter, and great "discretion is necessary in trifling cases, where one "person charges another with having committed an "offence. The attention of the force is to be frequently called to the necessity for the strictest "observance of these orders, and the serious consequences likely to result from any disobedience "thereof. Constables on joining the force are to be "very carefully instructed on these points, and the "danger to which they would render themselves liable "by any disregard of these orders is to be explained."

8313. Might I ask you, were those complaints made in your time, Sir Edward?—No.

8314. What date is that?—This is an order of old date. This is a re-issue of the order that was in force before I joined.

8315. And you cannot give us any information about the number?—I could tell you when that order was drafted, but not from this.

8316. Can you throw any light upon that strong statement about complaints having been received, the number of them, or anything of that kind?—No, I could not.

8317. (*Mr. John Burns.*) On this point is it customary, Sir Edward, when public attention has been directed, as through a strike, or something like that, to the police management of a particular trade, is it customary for you to re-issue your orders so as to specially draw the attention of the inspectors to them?—If I thought there was anything wanting I certainly should.

8318. (*Mr. Lough.*) Now I want to come to the police courts for a moment, Sir Edward. You said you had not much experience of them?—No.

8319. But have you noticed the evidence that has been presented to us about the number of cases?—I have not seen the evidence, I must again repeat.

8320. Well, I will give it to you, Sir Edward. We have had particular evidence of two courts—Marlborough Street in the metropolitan area, and the Guildhall in the City.—Yes.

8321. The evidence that has been presented to us as to Marlborough Street shows that the total number of cases last year was 2,252.—Yes.

8322. And in the Guildhall 261.—Yes.

8323. One-tenth of the number.—Yes.

8324. Do you think that that is an extraordinary difference?—No, I think not.

8325. Can you account for the difference?—In the City there is only traffic for a short time in the course of the day. Ours is going on for 24 hours. In the City everything is closed after a certain hour in the evening. I think that would account for it.

8326. And you do not think there is any extraordinary difference there?—No, I think not, considering the area and the number of hours.

8327. Well, the traffic in the City commences much earlier than outside, does it not?—No; in parts of our area I think it begins quite as early—all the parts surrounding the City, in Clerkenwell, and in all that part, there is very heavy traffic; much the same in Commercial Street and all that part; they are very early.

8328. Then, do you think that the total number of prosecutions, 4,925 in the year 1893, out of some 12,000 men, a large number?—No, I think not.

8329. You think it is moderate enough?—I think so.

8330. We have had evidence that in the City there has been a great falling off in the number of prosecutions; during the last three years they have fallen to one-third or one-fourth?—Yes.

8331. Has your attention been drawn to any such movement in the metropolitan area?—No.

8332. You do not think there is any improvement, any decrease in the numbers recently?—I should like to refer to the Returns.

8333. The table shows there is not any?—No, there is not, certainly.

8334. Well, do you not think, Sir Edward, that, seeing they are exactly the same men and cabs, and that the City is a very crowded place for such a long time, that this remarkable movement in the City contrasts somewhat?—It may be owing to some special system; I do not know. My attention has never been directed to it, so that really I cannot offer any opinion on it.

8335. (*Mr. John Burns.*) You have no objection to inquire into the cause?—No.

8336. (*Mr. Lough.*) Are you aware that they have got a separate court for street offences in the City?—No; I did not know that they had.

8337. The Chairman asked you on that question of a separate court for the cab cases?—Yes.

8338. You said you had only considered, or your attention had only been drawn recently, to the demand for a separate court?—No; it was only drawn quite recently, to the fact of its being mooted.

8339. You have never even considered it?—No, never.

8340. Seeing that there is this separate court in the City, and the great decrease in crime, and the much smaller number of cases, would you approve of an experiment of that kind in the outer area?—It is scarcely a thing for me to offer any opinion upon.

8341. I just wanted to ask a question about the course that is pursued when a constable is going to summon a cabman?—Yes.

8342. You said that the Superintendent Commissioner, I think it was——?—The Assistant Commissioner it is who eventually approves of the application.

8343. The Assistant Commissioner sanctions the issue of all summonses, does he?—Yes.

8344. In every part of the metropolis?—In every part of the metropolis.

8345. Then, seeing there are 5,000 a year, he sanctions the issue of about 100 a week; and I wanted to ask you, are his duties more or less formal in the matter?—I think whenever a case of any importance comes before him it would not be in the least formal.

8346. As a general rule, he would do what the inspector recommended?—The superintendent. It has gone through two hands before the superintendent of the division.

8347. And what he recommended?—Yes.

8348. Whom does it reach before the superintendent?—The inspector.

8349. Then I suppose he would be guided largely by the inspector?—It would depend on the man, I think, how far he would be guided by him.

8350. Upon the constable?—No, upon the superintendent, I think.

8351. Are the wishes of a constable with regard to the issue of a summons often disappointed?—I do not know; not having to deal with this directly, I should be sorry to say in how many it is declined.

8352. (*Mr. Whitmore.*) I only want to ask one question about the system of granting licences for cabs; with a view to preventing the possibility of allegations of bribery at that time, would it not be well that there should always be some other officer present besides the inspector who actually passes the cab?—You mean a second inspector?

8353. Yes?—Of course everything that adds to expenses makes one——

8354. I am putting that as a suggestion.—That there should be two inspectors on each occasion that a man comes? He has a second man with him; he has a constable who is, as a rule, present with him.

8355. There always is a constable present?—Yes, there is a constable present, he screws on the plates, you see.

8356. However, you do not think there would be anything amiss in having a second officer?—Not the least; it is only a matter of expense.

8357. But if that was thought to make the possibility of the charge more unlikely, it would be considered?—I should be very glad to adopt anything.

8358. (*Mr. Hopwood.*) Are you responsible for the accounts of the Metropolitan Police Fund, which are presented to Parliament?—The Receiver really is responsible.

8359. Should any question as to the form of the accounts be addressed to you or to the Permanent Secretary to the Home Department?—Yes, certainly he would be the person to whom they are submitted.

8360. (*Mr. John Burns.*) In matters of common interest affecting the administration of the cab traffic in the City of London and in the metropolis, is there co-operation between you and the City police authorities?—Yes.

The witness withdrew.

Mr. Henry Ferrett and Mr. George Edward Smith called in and examined.

(Mr. Cunynghame in the chair.)

8361. (*Chairman.*) Superintendent Smith, C. Division. Will you please assume that we know nothing about this particular point, and describe to us as reasonably fully as you can the green yard and the purpose for which it is used?—The green yard in the C. division?

8362. If you please.—The green yard, as it actually is in the district, is a place that is appointed by the Commissioner, under agreement with the keeper of the yard, where horses or cattle are taken for safe custody.

8363. Is there any statutory power in the Commissioner to do that, so far as you are aware?—I believe there is.

8364. By virtue of a special statute relating to green yards?—I do not quite follow you, sir.

8365. Is there any Act of Parliament specially giving the Commissioner power to appoint these green yards?—Yes, there is, sir.

8366. Can you indicate it to us? Well, you can do it presently. We should like the name of the Act, if anything special exists?—Yes.

8367-8. How many of them are there in the metropolitan district, as far as you know?—I cannot say, I can only tell you of my own district. There is one in my district.

8369. (*Mr. Lough.*) What is your precise locality?—The area of it? It is the whole of the south side of Oxford Street, bounded on the west by Hyde Park.

8370. (*Mr. John Burns.*) By Park Lane?—By Park Lane, yes; and extending to Pall Mall in the south, and divided by St. Martin's Lane and High Street, Bloomsbury, to Oxford Street again. It is an area of nearly a square mile; not quite.

8371. (*Chairman.*) Will you describe to us what is done there?—The only thing that is done, as far as I am aware, is the safe custody of cattle that are taken to the green yard.

8372. Is any charge made against any person for the custody of the horse or animal?—Oh, yes; the owner of the horse has to pay the green yard fees.

8373. Who fixes those fees?—They are fixed by an agreement between the Commissioner and the keeper.

8374. Have you got a table of those fees in your division?—I have got a short memorandum of the cost in the division:—Green yards, P.O., 6/6/93. Mr. Henry Rosomon, 38, South Molton Street and Haunch of Venison Yard, Brook Street. Horses, per head, 6*s.* per day and night; horses, per head, 3*s.* 6*d.* per night; horses, per head, in and out same day, 4*s.* 6*d.* per day; cows and oxen, per head, 3*s.* per day; sheep or goats, 1*s.* 6*d.* per day; dogs or poultry, 1*s.* per day; pigs, per head, 1*s.* per day; trucks, &c., each, 1*s.* per day.

8375. I see here, horses per day and night; does that include feeding?—Feeding.

8376. They would give them a good feed for that?—Yes, it includes everything.

8377. Does not that sum of 6*s.* seem to you rather large for the care of a horse for a day?—It is rather large, and of course it is larger in my district than it is in many of the other districts. I do not know any of the other districts where it exceeds that.

8378. I suppose it might be urged—but you will tell me whether you think it is a just thing to urge—that only two horses a week might come into a green yard so that you might only get 12*s.* for the whole thing a week, and have a man to keep there and pay?—They do not extend to two a week, sir.

8379. Do they not do anything else in these green yards besides?—The owner himself has cattle in there.

8380. In there?—He has to keep sufficient accommodation for horses or any cattle we might send there.

8381. There is space for how many horses in the green yard in your division?—Oh, we have space there to accommodate six or seven horses.

8382. Six or seven; and then during the time that he thinks they may not be wanted he puts his own four or five horses in it?—This man particularly has a large stable there, and he has a quantity of horses in the yard, and he lets out horses and stabling.

8383. So that the green yard, after all, is only a livery stable, putting up a horse at bait?—About the same thing, sir.

8384. Looking at it from that point of view, do you not think 6*s.* a dear charge?—Considering the enormous rent they have to pay in my district, and that they have to keep accommodation, and a man to wait at all times of the day, I do not think it is an excessive charge.

Mr. G. E. Smith.

27 July 1894.

8385. I see what you mean. You think there are some exceptional circumstances?—That is so, and my district is different from others.

8386. (*Mr. Whitmore.*) Would that be the ordinary charge at a livery stable?—Livery stable?

8387-8. Suppose you had a horse, and wanted to put it up for a day, what would be the charge?—I should think a livery stable keeper would not do it for less.

8389. (*Mr. John Burns.*) Does that 6*s.* night and day include a possible veterinary attendance in the event of a horse meeting with some slight accident?—No, sir, I think not.

8390. If veterinary attendance were required that would add to the cost?—Veterinary attendance would be called in by the police, and would be charged to the police fund.

8391. Have you ever had a case of veterinary attendance in the green yard?—I am not aware of any. We have had many cases of veterinaries called to accidents in the street, ordered by the police, and charged to the police fund.

8392. (*Mr. Hopwood.*) The charge includes the risk, which there must necessarily be, of taking a diseased animal into a livery stable?—That is so, exactly.

8393. (*Chairman.*) And I suppose the owner of the yard is liable for the animal if any harm comes to it; how is that in law, do you know?—Oh, he would be liable; no doubt of it. But no doubt the liability would fall upon the police, and the Commissioner would only be covered by the agreement with this man. Of course that is really a point of law.

8394. Do you think that it might be a better arrangement to take horses that are taken up in this way to a stable regularly under the control of the police, instead of taking them to a green yard?—No, sir, I do not.

8395. You think that in that event, and if such a stable existed, great precautions would have to be taken against contagious disease, one horse being brought there that had glanders, or farcy, or was badly diseased?—The same applies to this green yard-keeper; he would have to get separate places to isolate them, and put up with all the expense of disinfecting them, and risk as well.

8396. Supposing the owner of the horse refuses to pay the green yard charges, who would sue for them, the police or the owner?—The green yard man.

8397. The green yard man would sue the owner of the horse directly?—Yes.

8398. And then, I suppose, the reasonableness of the charge would be a matter to be determined by the judges before deciding?—That would be so.

8399. That is not a statutory sum?—No, it is not, sir.

8400. Then, where charges of cruelty to animals are brought, the horses are taken, are they not, to this green yard?—Yes, those are the principal horses that are taken in my district.

8401. Supposing the charge of cruelty is unfounded, is dismissed, has the owner still to pay the green yard charges?—Yes, he does pay it.

8402. Is not that a flagrant hardship upon him? Supposing he is unjustly accused, and his horse unjustly taken, is it not very unjust that he still has to pay that?—It would be so.

8403. And the Royal Society for the Prevention of Cruelty to Animals do not refund it, do they?—No, I do not know any case where they have to refund. Of course the owner, if he was unjustly taken into custody and acquitted by the magistrate because there were no grounds or foundation for the charge of cruelty, would still have his remedy against the Commissioner.

8404. But would he have a right to recover at law the green yard charge, do you think?—He would have a right, I think.

8405. I doubt it, unless the prosecution were malicious as well as unfounded?—I do not think that, sir; I am not a lawyer.

8406. We will not discuss that point. I think you would find it would be rather difficult to have an action against the Commissioner except in a very bad case. At all events, as a fact, when a man gets off and the charge is unfounded, he has to pay this green yard charge out of his own private pocket?—He would have to do so.

8407. He does not get it refunded out of the prosecutor's purse at all?—I do not know any case in which it has occurred. But if the owner, after having paid under such circumstances, appealed to the Commissioner, I think no doubt the Commissioner would pay some compensation to meet that.

8408. If so, that would come out of the general police fund?—It would come out of the police fund, sir.

8409. Have you had any experience of these prosecutions for cruelty to animals?—Yes, sir.

8410. We have had evidence put before us that by the Society for the Prevention of Cruelty to Animals they are often vindictively pursued; what is your opinion upon that?—That has not been my experience, sir. Of course there are many cases in my district where the Society officers call the attention of the police to cases of cruelty, and the constable then uses his own judgment and discretion as regards the case, and if it is a gross case of cruelty, the person is arrested; if it is not, the constable does not act in the matter; and in the case, of course, of a public vehicle, where the horse may possibly be not fit for the work through some cause or other, the driver is simply told what the consequences would be, and the report made to the Commissioner goes then to the inspector of the district.

8411. I am bound to tell you that the witnesses, so far as I remember, do not complain of the police in this matter, but what they complain of is that officers of the Royal Society for the Prevention of Cruelty to Animals are often biassed, and press cases hardly upon them. I want to ask your view upon that?—Are you alluding now to charges, or process by summons?

8412. To both. That whenever the officer is brought up in the capacity of a witness, or anything of that sort before a magistrate, they do not treat the people fairly; they press it too much against them?—Then in the case of a charge, you must admit that the police must be conniving at that case before a charge is taken.

8413. I think you have misunderstood the question rather. They do not say that the superintendents are not fair to them, but what they say is that the officers of the Royal Society for the Prevention of Cruelty to Animals display a bias against them, and press charges,—go unjustly or too much to the superintendent and bring before him cases in rather a vindictive spirit, asking him to prosecute; and when they are up before the magistrates themselves, instead of using a fair tone take a tone too much against the owner of the animal. That is what I want you to tell me about?—That has not been my experience sir.

8414. (*Mr. John Burns.*) On this point, you said just now, and it is very important, that before a charge can be taken from the Royal Society officer the police must be satisfied as to its bona fides?—Certainly, sir.

8415-6. Then, am I to understand from you that the only function that the Royal Society inspectors exercise is practically to call the attention of the police to the cases of cruelty?—That is so as regards charges, sir.

8417. So that when a Royal Society officer sees a horse with a sore shoulder, he on his own initiative cannot take that horse to the police station?—He has no power, sir.

8418. He must call a police officer who, when called, must be satisfied that the case of cruelty alleged by the officer is sufficient to warrant it being taken to the station?—That is so, sir.

8419. (*Mr. Whitmore.*) And no prosecution can be initiated without the actual ——?—No, sir, I do not say that; I am distinctly saying the charge—that is where a person is arrested and taken to the police station and charged; I am not alluding to the summonses.

8420. But an inspector may also, instead of taking that course of causing a man to be arrested, go himself and take out a summons against a man?—Quite so; I am confining myself purely and simply to a

charge where a person is arrested and deprived of his liberty, sir.

8421. (*Mr. John Burns.*) Then I am to understand that a police officer in the street enjoys all the advantages that a Royal Society officer enjoys, but that a Royal Society officer must confine himself to pointing out the case of cruelty to the policeman; beyond that he has no more power than a private individual doing the same thing.

8422. (*Chairman.*) Beyond that he must proceed by summons?—By summons.

8423. But do they proceed by summons?—Oh, yes, in many cases.

8424. (*Mr. Whitmore.*) And in those cases the assent of the police is not required?—Nothing to do with it; I was confining myself purely and simply to where a person was deprived of his liberty on a charge of cruelty.

8425. Now turn to cases where the inspector for the Royal Society for the Prevention of Cruelty to Animals is acting on his own initiative?—Yes, sir.

8426. Have you observed any of those cases at all?—They do not come under our notice at all.

8427. Have you not, by accident or otherwise, had an opportunity of observing those cases?—I have heard of the cases in the police court.

8428. You have been in the police court when they have come on?—Oh, yes.

8429–30. Who employs the surgeon, pays him, and selects him?—The Society, sir.

8431. Do you know the men who are employed as surgeons to give evidence?—I know the one who is generally employed at Marlborough Street.

8432. Now it has been alleged here that a great many of those are not in regular practice as practitioners, but lead rather a wandering life, and are not very good men and safe men to trust as witnesses; what do you think about that?—I have no experience about that; I do not know this gentleman's surroundings or where he resides.

8433. You are not able to tell us whether he has a regular practice or not?—I am unable to tell you that.

8434. In regard to these summonses, do you still think, in your division at all events, the inspectors of the Royal Society for the Prevention of Cruelty to Animals do their best to bring out every fact in favour of the cabmen as a good prosecutor ought to do, as well as every fact against them, or do they rather make themselves into plaintiffs, we will say, and partisans?—They are undoubtedly plaintiffs.

8435. In the sense of being rather partisan?—I could not say.

8436. Well, we will put it in this way: have you ever had experience of the capricious and prejudicial exercise of the duties of inspection by these officers?—No, sir, I have not; in my time I have been in the court once when there was a dispute of judgment as between two veterinary surgeons where a case has been taken, and the defendant called his own veterinary surgeon and they differed as to the view of the case.

8437. (*Chairman.*) Do you look with favour on a society, what I might almost term an amateur police society, carrying on its business in London, or do you think it would be better that all summonses of this character should be taken out by the police; have you any views on that?—I have no views.

8438. I will not press you to give any views?—We take cases that come under our knowledge independent of the society, and if a case of cruelty comes under our notice which would not justify arrest, we take process by summons.

8439. I will not press you to give an opinion on the wide question, if you feel you would rather not. I will now read you an answer that has been given to us, and ask you if you know anything about the matter it refers to. It says: "These people" (meaning the Royal Society for the Prevention of Cruelty people) "practise "great cruelty, for instance, we have a piece of cloth, "sir, tight over the joint of the horse's leg, so that he "should not hurt his leg if he struck it; that is termed "a Yorkshire pad. Supposing that horse is put in "the green yard, they leave the Yorkshire pad on all "night, and the next morning when we go into the "yard the horse's leg is very swollen and inflamed. "They point that out to the magistrate as an act of "cruelty." Have you any observations to make upon that?—I have none, sir.

8440. You have not seen that?—No, sir, I have not seen it, or heard it.

8441. (*Mr. John Burns.*) How long have you had special acquaintance with the inspection of animals?—I have had no special acquaintance with it, sir.

8442. Your connexion then with the green yard has been incidental to your discharge of other duties?—Certainly, sir.

8443. Have you ever observed a stoppage of horses in the streets of London by the Royal Society officers?—No more than an isolated case that I have seen.

8444. How many cases in your experience?—It would not amount to more than two or three that I am aware of; I have seen many cases, of course, when the animal has been brought to the station.

8445. Do you consider it would be to the advantage of the horse, the public, the police, and the cab driver if the inspectors now employed by the Royal Society were directly employed by the police?—No, sir, I do not know of any advantage.

8446. Does it not frequently happen that when a policeman has had his attention directed to an alleged case of cruelty by a Royal Society officer, the prejudice that an official must necessarily have to an amateur official prevents justice being done to the horse?—I do not think so. As I explained before, the constable must be satisfied in his own mind; and it does not rest purely with the constable as regards a charge—I am confining myself to charges—because the inspector on duty also who takes the charge has to satisfy himself before he takes it.

8447. That proves rather, does it not, that the Royal Society officer has no legal or official power other than that which an ordinary civilian in the street enjoys?—That is so, that is my opinion, he has no more power

8448. Would it not be better for all parties if the inspection of horses were placed in the hands of qualified inspectors, who had veterinary knowledge plus the police executive and administrative power?—It may be so; I could not pass any opinion upon that.

8449. Would not that prevent what one sometimes sees in the streets, a Royal Society officer stopping either a cab or a waggon horse; the cabman, waggoner or carman excitedly disputing with him on the ground that he has no legal power; and the policeman then having to appear on the scene, and frequently to take sides one way or the other, not so much to settle the case of cruelty but to remove an obstruction to traffic? does not that occasionally happen?—It does occasionally happen.

8450. Would that happen to the same extent if the policeman had the veterinary knowledge plus the administrative power he exercises as a policeman?—I do not know that the opposition would be so strong against the police in the matter.

8451. But in your opinion and experience is there any reason why there should be dual control and responsibility in the inspection of horses?—I do not know of any reason, sir, of course the Society's people have formed their own constitution, I suppose. We have nothing to do with their formation; they have the same power as any private individual; and any private individual seeing any case of cruelty has the same power as a society; we often get the attention of the police called by private individuals to cases of that kind independently of the Royal Society officers.

8452. Do you think that the Royal Society officer who lacks that incentive to good conduct that probable promotion and receipt of a pension always gives to a man is likely to be as impartial as a police officer?—Well, sir, I do not think I ought to be really asked that question. You see I do not know what prospects they have in front of them as regards the Society.

8453. Well, there is not that prospect of promotion with ten or a dozen men that there is in a force of fifteen thousand, is there?—There may be the same per-centage; nevertheless, I am not aware of it.

8454. Do you consider that the veterinary surgeons that the Royal Society brings in are the best type of veterinary surgeons?—I cannot say, sir. The only experience that I have had for some years is now and

Mr. H. Ferrett and Mr. G. E. Smith.

27 July 1894.

again seeing a man at the station; and being superintendent of the division I do not come so closely in contact possibly as one of my subordinates.

8455. Have you any reason to suspect collusion between Royal Society officers and veterinary surgeons?—No, sir, I have none.

8456. And your experience of the greenyard business does not give you any impression in that direction, does it?—I do not follow.

8457. Let me put it this way. Has it ever come to your knowledge that there has been collusion between the greenyard keeper and the veterinary surgeon for the detention, the profitable detention, of a horse in the greenyard?—No, sir; the veterinary surgeon examines the horse generally in the street and not at the green yard.

8458. (*Mr. Hopwood.*) Just one question. What is the locality of the greenyard in the C Division?—It is situate at the "Haunch of Venison" yard in Brook Street.

8459. In fact, a first-class West End livery stable, I suppose?—Well, sir, the owner is a carman, and has many horses and vans.

8460. I think I know the place, in the Haunch of Venison yard, Brook Street?—Rosomon is the name of the man.

8461. Well, I suppose you would say that the detention of a horse brought from the street into such a place could never be profitable?—I do not follow, sir.

8462. If you have a livery stable keeper, with good cattle on his premises, and a horse is brought off the streets which he knows nothing about, he is not likely to want to keep him there indefinitely with the risk of glanders or some other complaint appearing?—It is a difficult job to get any one in my neighbourhood to undertake it almost at any price. We had considerable trouble to get him to take it at the price.

8463. In some districts in London these cases must undoubtedly be a nuisance?—Undoubtedly, sir.

8464. (*Chairman.*) Superintendent Ferrett, F Division, you come from the country, do you?—I was in the country previous to going to the F Division. That can hardly be called the country. It is Paddington, Notting Hill, Kensington; they are the three districts.

8465. I will ask you just to call to mind the evidence that Superintendent Smith has given, and to tell us whether from your experience you can enlighten the Committee on any of the points which have been asked?—I do not think I can add anything to what Mr. Smith has said, sir. I quite agree with him in all that he has said, and that has been my experience.

8466. You agree, for instance, in his estimate of the general conduct of the Cruelty to Animals Society people?—I do, sir.

8467. (*Mr. John Burns.*) Have you ever had any conflict of opinion with the Royal Society officers as to cases of cruelty?—Never, sir.

8468. Do you think generally, or not, that they are qualified men who carry out these inspectors' duties?—I am afraid I am not competent to give an opinion upon that point.

8469. Why not?—I have not sufficient experience of them.

8470. But if you have sufficient experience of horses under your police power to stop a case of cruelty in the street, surely you ought to be able to express an opinion as to whether the Royal Society are equally qualified?—I do not see any reason why they should not be equally qualified. But I know my own men; I do not know these men; I do not know what their history has been or anything about them.

8471. Have you heard any instance of their incompetency—a lack of qualification?—I have not, sir.

8472. Do you consider generally that they are qualified?—Well, I should not like to express an opinion; as I said just now, I cannot express a definite opinion upon that point.

8473. Would you favour the appointment by the police direct of fully qualified veterinary inspectors?—It is a question of administration; I do not think I should recommend that, sir.

8474. But, why?—I do not think that there are sufficient cases to warrant that, so far as the police are actually concerned.

8475. But if there are sufficient to warrant the appointment of six, eight, or ten Royal Society officers in London, surely there are sufficient, in the event of their not being employed by the Royal Society to warrant the same number being employed by the police?—Yes, sir; but I do not know anything about the constitution of the Royal Society, and what induces them to appoint the number they do appoint—what work they have to do, and what they are required to do.

8476. But assuming there is a necessity in London for 6, 8, or 10, or 12 inspectors for vehicular horse inspection, would you not prefer that they should be police inspectors rather than Royal Society inspectors?—I would, so far as we had any connexion with them, sir. But in regard to the Royal Society's officers, as Mr. Smith has said, they are like private citizens; the Act of Parliament gives them the power to act themselves, and I think that so far as I can give an opinion it would not be worth much.

8477. But have you not ever regarded it as an encroachment upon police duties for an amateur society with its officers to come in and do that which primarily falls upon the police?—I do not think it does primarily, if you will excuse me.

8478. But just as much as the detection of crime under the law?—Yes, but the Act of Parliament in this case is very special, that a private individual shall have the same power as the police officer; that is to say, if a person sees a case of cruelty he has a right to take a prosecution the same as a police officer.

8479. But then that applies to theft and other offences It stops short of the power of arrest which the Society do not enjoy in this case. You do not think, then, there is any harm from the continuance of that dual system?—I do not think so, sir, as far as my opinion is worth anything; if you start that you would have to do away with the Society for the Protection of Women and Children and other societies. And there are so many of these societies, and you could not draw an invidious distinction between them and this one.

8480. There is the converse of that; the multiplication of these societies may lead to the police force being entirely an amateur organisation?—I do not think it is likely to become that at all.

8481. (*Mr. Hopwood.*) Have you more than one greenyard in the F Division?—Yes, sir, two.

8482. Will you tell us where they are, please?—They are both at livery stable keepers, sir. One is at Mr. Howe's, a cab proprietor and livery stable keeper, Stanley Mews, Paddington Green; the other is Mr. John Robinson, job master, King Street, Kensington.

8483. And will you give us the price, which they respectively charge per week and per day?—Per day, sir. Cattle and horses, per head, 1*s.* 6*d.* That is the first day, sir; after the first day, 2*s.*; sheep and pigs, per score, 5*s.*; that is per day. After the first day, 7*s.* 6*d.*

8484. Then there is a great difference in the charge which is made, and the charge apparently varies with the locality in which the green yard is situated?—Yes, it does, sir.

8485. When you are in Brook Street, the charge is 6*s.* day and night; when you are in Paddington Green, it is 1*s.* 6*d.*?—Yes, sir. These charges, that I have read out now, are, I may say, the general; and Mr. Smith's are the exceptional. But there are others. I have got another case here. When I was in the M Division at Southwark, we could not get any one there to take the first day under 2*s.*, that is only 6*d.* difference; and the second day, 2*s.* 6*d.*, that is only 6*d.* difference to the general charge.

8486. And you take the view that the necessities of administration impose upon you the obligation to find a place to put these horses, and you have to pay practically what is asked?—Yes, sir. But we, I think, almost invariably get an agreement, and the charges, I take it, are very reasonable—those that I have read out.

8487. Are you satisfied, from your experience, that the livery stable keepers, carmen, or cab proprietors, who put up these horses, treat them fairly and reasonably in return for the money which is paid?—I

have every reason to believe they do, sir; and we frequently visit—at least, the inspectors, sergeants, and constables do—and the inspectors report monthly to the Commissioner that he has inspected the green yard and found it satisfactory and suitable for the reception of animals.

Mr. H. Ferrett
27 July 1894.

The witness withdrew.

Adjourned till Tuesday at 11 a.m.

SIXTEENTH DAY.

Tuesday, 31st July 1894.

PRESENT:

Mr. F. J. S. HOPWOOD, C.M.G. (IN THE CHAIR).

Mr. E. H. BAYLEY, M.P.
Mr. JOHN BURNS, M.P.
Mr. T. LOUGH, M.P.
Mr. C. A. WHITMORE, M.P.

Mr. MALCOLM DELEVINGNE, *Secretary.*

Mr. JOHN COLAM, Secretary to the Royal Society for the Prevention of Cruelty to Animals, called in and examined.

Mr. J. Colam.
31 July 1894.

8488. (*Chairman.*) Mr. Colam, you are the Secretary to the Royal Society for the Prevention of Cruelty to Animals?—Yes.

8489. How long have you held your position?—34 years.

8490. Will you tell us something about the constitution of the society?—Yes, the society consists of annual members and life members, and it has branches throughout the country, about 100 branches.

8491. Is it incorporated in any way?—No, not incorporated.

8492. But you have received at some time or other the right to apply the term "Royal"?—Yes, from the Queen, in the year 1846.

8493. What are the objects of your society?—The prevention of cruelty to animals by the enforcement of the statutes, and by the spread of knowledge, and by the teaching and training of children in schools and families to be kind to animals.

8494. No special legislation has been passed to enable you to carry out those objects?—None.

8495. You simply prosecute under the ordinary law?—Certainly.

8496. And in all parts of the country you take up prosecutions?—In all parts of England and Wales.

8497-8. How many prosecutions do you undertake in the course of the year?—I have taken four years in this paper, which shows that in the year 1890 we had 5,890 convictions.

8499. Convictions?—Yes. In 1891 we had 6,404 convictions; in 1892, 7,632 convictions and in 1893 7,548 convictions. I have totalled that, because I thought you might compare it with the convictions in London into which you are inquiring; there are 27,474 convictions.

8500. Now can you give us the number of prosecutions?—Yes, I think I can give you that; we have estimated the number of dismissals at 2½ to 3 per cent.

8501. Can you make an apportionment of those convictions and tell us how many there were against cab drivers and cab proprietors in London?—In London; I have got it all here for you, but not generally throughout the country.

8502. No, we are concerned with London only?—Will you allow me just to follow the lines that were laid down to me in the letter which I received?

8503. By all means?—During the 34 years that I have been secretary I have noticed a great improvement in the condition of cab horses. I think I can show it to you in these words, that when we had only four officers in London—we had only four when I first came to the society—and two only were engaged in cab and omnibus work in London, it was the easiest thing in the world for them to find a case of cruelty within an hour of commencing duty. Now that we have upwards of 20 officers in London, we do not average much more than one a day.

8504. One case of cruelty a day in the metropolitan area?—In the metropolitan area.

8505. (*Mr. Bayley.*) Is that against cabmen?—I am speaking of cabmen only, not of omnibuses. There is a reservation which will be needed in that general remark of mine as to the better condition, and that is with regard to night cabs, which, in my opinion, are no better than they were years ago.

8506. (*Chairman.*) Then may I put it to you in this way, that the prosecution a day is as a rule a prosecution of a night cab?—Yes, they are the residuum, you may call them, of the cab horses, the animals which must not be seen generally in the day time, which are too bad to look at, and which are kept therefore for night work. I may say I am speaking generally—of course there are good horses at night—and the majority of the convictions against cab owners and cab drivers are of those horses that are used in cabs at night.

8507. Then it follows from that that your 20 inspectors are on duty at night, or a part of them?—Yes, that is to say, amongst the 20 there would be a good many of them that would be engaged on inquiry work; but we always have five or six officers every night out on cab work.

8508. Can you give me—I do not want to destroy the train of your thought at all—but if it will not do so, can you give me a sketch of the way in which they go about their duties?—I have got it here further on. The next question that I was asked was from whom the society receives complaints of the cruelty, and the action it takes thereon. Well, the cab cases that yield convictions are generally found by the officers, but the public, nevertheless, report thousands of cases which on investigation are not found to be offences at all.

8509. (*Mr. John Burns.*) Can you hand in the number of communications from the public?—I cannot.

8510. Have you not a list of them?—I have not a list, no.

8511. The reason why I asked that is this: you tell us that cab cases average about one per day?—Yes.

8512. You also tell us now that you have thousands of communications from the public, making complaints or sending on allegations of cruelty in certain cases; have you not a list of these?—No.

8513. Not a summarised list?—No.

8514. Have you not kept a list?—No, many of them are not worthy of being put down on a list.

8515. But surely you might have compiled one in the office as some evidence of the interest the public take in your work?—Every letter that comes is answered, but many letters and verbal complaints are

Mr. J. Colam.

31 July 1894.

really not worth tabulating or putting into our accounts, except when there is some little *primâ facie* case of cruelty in the letter.

8516. But is it not customary for an office of any society to compile a list of *primâ facie* cases?—We do.

8517. Well, what is the number?—Well, I cannot give you the number because we have not referred to it; it is too long a piece of business. I can give it to you if you wish it, certainly.

8518. The reason why I asked that is that your statement of one case per day for cabs, which furnish the widest field of your operations, seems to me to be irreconcilable with the statement that in the course of the year or over a certain period you receive thousands of complaints?—I did not say in the course of the year thousands.

8519. There was a period?—I was speaking generally. The public report thousands of cases. I did not refer to a year. I wanted to show how the public do take an interest in the work of the society; they do write to us. I cannot tell you how many cases we have had in the course of the four years, but I can tell you how many letters we have had which have led to an investigation. That I can do, and I will have much pleasure in doing it.

8520. (*Chairman.*) Will you go on with your statement, Mr. Colam?—The reason why these cases are sometimes not found after investigation to be cases which can be prosecuted—I am now speaking of the cases which really are investigated—is that the spectator has seen a horse, say, going lame, and he concludes at once that the horse is in pain, whereas lameness is not an indication of pain always; there may be lameness without pain, but there is always a pain where the lameness is what is called "acute lameness," where there is inflammation or heat in the part which is affected, and that is the reason why the public make mistakes very often, and when we go to examine the horse we find that though the animal has got a stiff joint, limps slightly, and things of that kind, just as we have very often, the work may be done without any pain. Then again with regard to thinness, people think sometimes that a horse is being starved, or that it is being overworked, when really the thinness arises from the breed rather than from anything else. I thought perhaps you would like to know that military men are frequently correspondents of the society, and they are pretty good judges of horses. Then amongst others we have dismissed drivers who come sometimes and complain about the horses while they have been at work, and you can clearly see that there may be a wrong motive there at all events. We inquire into those cases as well as the others. Then, the next question that was put was: "The number of drivers and owners convicted during the last four years within the metropolitan area by the action of the society under 12 & 13 Vict. c. 92., stated separately."

8521. What is that Act?—That is the Act for the more effectual prevention of cruelty to animals, the general Act; there are several supplementary Acts and other things, but that is the general Act, and the principal section is the second section. I will leave with you a "Return showing the number of convictions obtained by the officers of the R.S.P.C.A. against cab drivers and cab owners within the metropolitan area." I mean by the metropolitan area the police area.

8522. (*Mr. John Burns.*) Twenty-two miles?—Yes—— "during 1890, and 1891, 1892, and 1893."

A RETURN showing the NUMBER of CONVICTIONS obtained by the OFFICERS of the R.S.P.C.A. against CAB DRIVERS and CAB OWNERS within the METROPOLITAN AREA during 1890, 1891, 1892, and 1893.

Year.	Convictions.	Drivers.	Owners.	Police Courts.	Petty Sessions.
1890 -	144	73	71	135	9
1891 -	194	83	111	173	21
1892 -	327	148	179	293	34
1893 -	318	152	166	255	63
	983	456	527	856	127

8523. What of?—Of cabs; this is of cabs, 73 drivers and 71 owners, 135 of which were heard at the police courts.

8524. You say there were 73 cab drivers and 71 owners; am I to understand that that is a duplicate charge?—Yes, certainly.

8525. But it is practically one case, is it not?—No, it is this. When a man is found driving a horse in an unfit state he is proceeded against because he has committed an offence, and then the owner is proceeded against for causing, so that you see there are two convictions in such cases as that.

8526. But 142 of these 144 cases I gather were really 71 double-barrelled complaints against the driver and the owner also?—Certainly.

8527–9. We want to get at the actual figure?—Yes, certainly, and 135 of those were heard at police courts and 9 at petty sessions.

8530. Then does the same remark apply to 1891?—Yes, precisely.

8531. (*Chairman.*) With regard to the 1891 figures, where the offence is not what Mr. Burns calls a double-barrelled offence; are they cases of cruelty by owners discovered during inspection of the premises, by seeing the horse in the yard, or how do you get at them if the horses are not in the cabs?—Oh, we invariably find them at work; 111 being a higher number than the number of drivers might strike you, perhaps.

8532. That is the point of my question?—Those are the cases in which the magistrate has let off the driver, although as a rule we never press a case so much against the driver; we try to get it against the owner as much as possible. Shall I take the next year now?

8533. Yes, please?—In 1892 there were 327 convictions. I will explain to you the reason of that increase.

8534. (*Mr. John Burns.*) Was not that the farcy and glanders year?—Oh, but neither farcy nor glanders would come in; we hand those over now.

8535. No, but was not 1892 the year in which horse-flesh generally was prevalent to disease and poorness of condition?—Yes, I think you are quite right, then there were 148 drivers in that year and 179 owners.

8536. (*Chairman.*) Then you propose to give your explanation?—I will on giving the next item, please, because it applies to both.

8537. Yes?—In 1893 there were 318 convictions, and 152 drivers and 166 owners. The explanation is this: that public opinion demanded that the society should be more at work and more active, I think the magistrates felt the necessity of encouraging the society's officers—they encouraged me at all events to put more men on to that particular kind of work.

8538. (*Mr. John Burns.*) In what way did public opinion manifest itself in that direction?—By letters in the newspapers.

8539. Were they signed letters?—Well, sometimes they were, and sometimes by a *nom de plume*.

8540. Were not a good many of those *nom de plume* and anonymous?—Oh, yes.

8541. Particularly in the "Telegraph" and "Times"?—Yes, and the "Echo" sometimes.

8542–3. Can you give us the proportion of signed and anonymous letters?—That is impossible.

8544. Is it not one of the duties of an officer connected with a public society like yours to tabulate the number of letters and the number of complaints, and those signed and unsigned?—Letters in the newspapers are about the last thing I should take notice of; many are the greatest rubbish, and there is nothing in my opinion more silly than some of the correspondence in newspapers on the subject of cruelty to animals.

8545. That is a very strong and a very significant admission on your part?—And yet we have 7,000 convictions, sir; there is no lack of work.

8546. If you say that in deference to public opinion you have been compelled to take action, and that public opinion has expressed itself through letters anonymous and signed, surely you would not apply the same remark to those?—That was quite a different question.

8547. Not at all?—You put the question to me whether I tabulated these things; that is a different thing altogether.

8548. (*Chairman.*) Will you now go on with your statement, Mr. Colam?—That comprises the number.

8549–51. That deals with the convictions?—Yes; may I just mention that I can give you the number of general convictions in the metropolitan area, in the same way—the general convictions beside the cab ones, and you can compare the two if you like.

8552. Very well, you had better put it in?—Yes, I will. For 1890 there were 976 general convictions as against 144 for cabs.

8553. (*Mr. Bayley.*) Do the 976 include the 144 or are they independent?—They include the 144. In 1891 there were 1,308 general convictions as against 194 cab convictions. In 1892 there were 1,288 general convictions, including 327 cab cases. In 1893 there were 1,229 general convictions, including 318 cab convictions. That makes a total in the metropolis of 4,801 general convictions, as against 27,474 right throughout the country. I will leave all these papers with you, if you please.

Aggregate of Convictions.

Year.	No.
1890 - -	5,890
1891 - -	6,404
1892 - -	7,632
1893 - -	7,548
	27,474

London Convictions.

Year.	No.	Cab Cases.
1890 -	976	144
1891 -	1,308	194
1892 -	1,288	327
1893 -	1,229	318
	4,801	

8554. (*Chairman.*) Can you give us under this head the number of summonses which fail and are dismissed?—No, I have not taken that, because we take an average of the year, and I thought the average would be enough for you.

8555. Can you give us any estimate?—Yes, sir, from 2½ to 3 per cent. are failures. I have here—if you would like to have it—a proof of the new report, which might be useful to you. I will send you a full report in the course of this week; but I can just mention it to you now. It is the analysis of convictions obtained during 1893 in respect of horses and all the various animals, and what was the particular kind of cruelty.

8556. We should like to see a copy or two or even more, but of course we cannot put them on the notes?—I will send you a dozen, sir, if you please.

8557. Thank you. Now can you go on to give us an account of the causes to which you ascribe the failure of your prosecutions?—The next question I have, if you will allow me to say so, is, whether in cab cases the large masters commit the cruelty or the small masters. Well, our experience is that in three out of four of the cab cases the cruelty is committed by men of small means, men who are called little men, who have from two to ten horses. In the first place, they are too poor to buy good horses; frequently they buy horses for 2*l.* up to 5*l.*, and you may be sure that sooner or later, with a little work, those horses become unfit.

8558. Do you say that your society is able to reach all cases of cruelty which occur in the London streets?—No, sir; that I will come to. I am glad that you have asked the question, because I want to show you that we can do very little. Wealthy men have better stables; they buy better horses; they have horsekeepers to look after them; they have better food and they have better drivers as a rule, except in some cases where the men are poor and look after their own horses: and then of course the drivers are very good. There are several men in a large way of business against whom we have never had a complaint since I have been secretary, and that is 34 years. That does not apply to one or two cases in which there have been public companies, where we have been obliged to prosecute.

8559. (*Mr. John Burns.*) On that point, Mr. Colam, do you publish in your report without mentioning names the trades of those against whom you have taken action? For instance, you give for a certain year, say 1891, a certain number of cab cases; would you publish in your report that so many cab drivers were proceeded against, so many mail-cart drivers, so many general carriers, so many omnibus drivers?—No; if you think it would be desirable, I should be very glad indeed to mention that to the committee and carry it out. We have never done it; our analysis consists of the animals which have been ill-treated, and the manner in which they have been ill-treated.

8560. But do you not in any way grade them?—No, not in regard to the trades.

8561. (*Mr. Bayley.*) But you have done so in the case of the cab drivers, because you have given us the figures?—I have looked through the books for the purpose of getting out cab cases for you, that is all; but Mr. Burns asked me whether we published it in our report.

8562. (*Mr. John Burns.*) It is very difficult to judge the importance of the statement unless it can be made comparative?—There are many conditions to be considered, and the result would be useless for a comparative view; you could not carry that out in connexion with cab drivers without naming the number of drivers.

8563. If we knew the number of omnibus horses that were employed in London and the number of cab horses, we would be able to gather as to the decrease of cruelty of the drivers of each, or kindness?—I think there would be a good many questions come into it, sir.

8564. Still——?—Yes, if you think it should be done, I will mention it to the committee.

8565. (*Chairman.*) What is your next point?—The next is this: that with regard to the cab cases we do not lose more than one per cent. as against the drivers—I think we may say that—but as against the owners, perhaps, we lose two per cent.; and that arises from the difficulty that there is in proving cases of causing. What I call the certainty of punishment when these cabmen are overtaken is really a strong deterrent, no doubt.

8566. Are you prepared to tell us the causes which lead to failure?—Yes, I will; that is my next point. I may tell you that during the four years we have never lost any cases on appeal against the decisions by magistrates. The convictions have always been affirmed.

8567. Under what circumstances is there an appeal—when there is a sentence of imprisonment without the option of a fine?—When the conviction and costs are more than 40*s.*, the Act provides; but I think, as you stated, that it is generally when there is imprisonment without the option of paying a fine.

8568. Then you never lost a case on appeal?—During the four years.

8569. But you have lost cases in the police court?—Yes.

8570. And to what do you ascribe the failure there?—Well, sometimes witnesses have refused to come up; sometimes witnesses are stupid in the box, make statements different from what they made to us; and sometimes—I am sorry to say it—we think they have been tampered with. Then, there is the difficulty of proving "causing;" it is easy enough to prove a case of cruelty against the man driving the horse and cart, driving a horse in a bad state, but it is much more difficult to prove that the master knows that it is in that state and sends it out.

8571. Then I rather gather from your answer that failures upon your summonses arise as a rule in those cases in which your inspectors do not inaugurate the prosecutions?—Oh, no, there is no one allowed to lay an information without a direction from me.

8572. I do not think that I make myself quite clear to you. You say that cases fail in the police courts because the witnesses do not come up to the position that you anticipated when the information was laid?—Yes, sir.

8573. But that I assume is not and cannot be the case where the information is laid by one of your own official inspectors?—Certainly not, sir; our officers do not fail in that respect, it is where the evidence is mainly that of some private person, and we always

Mr. J. Colam.

31 July 1894.

examine the animal and on finding it is in a bad state primary information, using the private individual as a lay the witness.

8574. Then I take it, that very few cases fail in the police courts where the information has been laid by one of your duly appointed inspectors?—Well, I think I may say that it is very seldom that anything of that kind occurs.

8575. Do you recollect a case of failure?—No, I do not know one.

8576. And you would of course ascribe that to the care and good judgment which is exercised by your inspectors before they apply to you for leave to lay an information?—Certainly; and the training also of the men, which I will come to by-and-by in the last part of the case. Then there is also this, the fact that veterinary surgeons are frequently called to oppose, and the magistrate has to take into consideration the evidence of veterinary surgeons on both sides. Then it is a matter merely of doubt, and then he says, "I will give the benefit of the doubt." Then sometimes horses are moved away to prevent examination by experts which the society might send in. Then there are some cases which I might mention in which a magistrate says, "Now, you have not asked me for a summons against "the owner in this case; I wish you to take out a "summons against the owner." If we say we have not any evidence against the owner, he says, "Now, mind you bring him here." I suppose it is the object of the magistrate more than anything else to give him a lecture, if he cannot convict him. I think that causes failures. I have given you all the causes that I can think of. Then the next question is with regard to our work not reaching all offenders whose avocation extends to the streets of the metropolis and whose work is continued day and night.

8577. You say you can do comparatively little to grapple with the vast amount of cruelty that exists quite apart from the cab trade?—Certainly, but particularly with the cab trade.

8578. Well, tell us why?—In the first place, what can a few men do in a place like London, where there are thousands of miles of streets, and where the animals are at work night and day in the streets? Take the 20 officers that I mentioned to you and plant them here and there, and see how insufficient that is. It is true that the police are everywhere, as it were, so that they are frequently in communication with our officers and help us. They let us know of cases sometimes, or they proceed themselves.

8579. Just let me put a question there. Why should they let you know of cases; have they not quite as good a position as yourself to institute proceedings?—To institute proceedings, but not to understand and discriminate. What does a policeman know about a horse? Your experience, I am quite sure, will tell you that he knows nothing, as a rule, except he sees a great wound under the collar. "There," we always tell the police, "you can do just as well without us as with us."

8580. What do your inspectors know about horses unless they call in a veterinary surgeon?—I will tell you presently.

8581. (*Mr. John Burns.*) It would be interesting for Mr. Colam to furnish us with a list of the total number of cases out of his report, and the proportion of those cases that have been communicated to his officers by the police, and how many of those, if any, lead to convictions?—I should have to go through the whole of the reports of our officers for four years to do that; the communication is made verbally in nearly every case.

8582. Does not your officer tabulate them?—The officer reports that police so-and-so told him so-and-so.

8583. (*Chairman.*) Perhaps Mr. Burns would be content with a year?—With one year.

8584. (*Mr. John Burns.*) I should be content with a month, last month. Can you tell us the proportion of complaints that have been made by your officers to you, and out of that number what were police cases?—Certainly I will do so.

8585. Can you tell us offhand, now, what is the proportion?—No, I cannot, indeed. I should be very sorry to venture.

8586. Is it 25, 30, 40, 50, or 60 per cent?—I would not venture on the figures.

8587. (*Chairman.*) The nature of the cruelty proved against offenders?—Yes, sir. Well, as regards the owners, the cases that come under our notice are wounds under harness, acute lameness, worn-out animals that are decrepit, weakness or emaciation caused by under-feeding, by disease, by neglect, by withholding proper or sufficient food, by bad stables, by overwork and want of rest. Then as regards the drivers, I am glad to tell you that we have very few beating cases indeed. I think it is because the public eye is upon them, and they would not think—I am speaking generally now—of doing any violent beating except where they were pretty safe. I think very likely, too, some of them are just as good as we are, and would consider their horses as much as we should ourselves.

8588. (*Mr. John Burns.*) Am I to gather from that observation, Mr. Colam, that generally speaking the drivers, not only of cab horses, but of other horses in the streets of London, do not publicly beat their horses to the extent that they did?—Oh, no, nothing like what they used to.

8589. That they are much more kind?—Nothing like what they used to be.

8590. And you think public opinion in itself is a factor towards that result?—Certainly I do; I am sure of it. The cruelty of which drivers are convicted is in working horses that have got wounds under harness, or that are lame, or that are worn out and emaciated. As I have stated, there the magistrates always say that it is just as important to teach drivers that they must not break the law as to teach masters that they must not, and if drivers would only cease to work horses under those circumstances there would be no cruelty.

8591. (*Chairman.*) I should like to put a general question to you. I gather from the tone of your evidence that you feel that there is a great deal of cruelty practised, but that so far as the scourging of the horses—as the cab drivers call it—is concerned, that has diminished?—Very much diminished, sir.

8592. The cruelty is in other forms?—Certainly, sir.

8593. What is your individual opinion from the long experience of the office you hold of the condition of the London cab horses at the present time?—I have said that at the first, sir, I think that it has very much improved.

8594. He is a well-treated animal?—It would be difficult to generalise to that extent.

8595. (*Mr. John Burns.*) Except at night?—At night, that is the reservation. These are my words, "Speaking generally, cab horses at the present time "are in better condition than any time during the "last 30 years." I am sure of that, and I think I might say, although it has nothing to do with your inquiry, that they are very much superior to the cab horses in Paris.

8596. (*Chairman.*) We are glad to hear it. Now you wish to tell us something as to the effect of this privileged system on the condition of horses?—Yes, sir. Well, as far as we are able to judge we think that privilege does not lead to cruelty generally.

8597. (*Mr. Whitmore.*) You mean the system of privileged cabs at railway stations?—Yes, sir, that privilege does not lead to cruelty, but that it fosters abuses in some cases.

8598. (*Chairman.*) Tell us why?—In the first place it provides a refuge where bad horses may be hidden.

8599. Do you mean in the stations of the railway companies?—I mean that exactly; but I do not think it applies to any railway thoroughly, except to Victoria.

8600. (*Mr. John Burns.*) But is there not the converse of that? You say that privileged cab yards afford a refuge for bad horses that otherwise would not be used?—In one case it fosters these abuses, in one case I can give you.

8601-3. But would it not also, given omnipresent powers of inspection, rather be a means of detecting horses?—No, not in this case, because our officers are driven out. I am going to tell you that our officers are not allowed to go there, but in the Great Western, in the Midland, in King's Cross, no officer of the society has ever been asked to leave the yard, but at Victoria, the Brighton Railway, which is a nest of cruelty in regard to the horses, our officers are uniformly driven out.

8604. (*Mr. Bayley.*) Then really your reason for saying that this system possibly gives facilities for cruelty is that in the case of one station your officers are not admitted?—That is just what I said, sir; I said in some cases; that is all I said, and I particularised Victoria.

8605. (*Chairman.*) Well, your statement regarding Victoria is a strong one; you say it is a nest of cruelty. I must ask you for some further particulars in regard to that.

8606. (*Mr. Bayley.*) Does that apply to the Chatham and Dover as well as the Brighton side?—No, sir; it is only on the Brighton side. Our officers are allowed to go into the London, Chathan and Dover stations and examine the horses, and we think it very desirable that they should do it, because then the animals can be examined before they take on their loads and their fares, and passengers do not become disappointed after they have got inside and find they have got bad horses, especially when our officers outside are obliged to stop a cab when they are on their progress home. Of course it causes a great deal of vexation and annoyance.

8607. (*Chairman.*) You are not admitted into Victoria?—We are not admitted into Victoria.

8608. (*Mr. John Burns.*) What is the reason alleged?—The constables there have received instructions from the superintendent—it came out in evidence—to exclude our men; we know no more than that. It also came out in the evidence that the superintendent was on visiting terms with the largest of the cab owners whose cabs go to the station.

8609. (*Chairman.*) Does the same observation apply to London Bridge?—No, nor to any other station.

8610. It is peculiar to Victoria?—It is peculiar to Victoria. That is the reason I say that it fosters abuse.

8611. Then your suggestion must amount to this, that the state of things at Victoria is not the fault of the directors and general manager of the company, as the same thing does not arise at London Bridge; it is the fault of some subordinate official?—I am quite aware, sir, that saying this does not go against the question of privilege really, only against the manner of enforcing it.

8612. Yes, but that is hardly an answer to my question. You put it to us that the difficulty that you have at Victoria must be, not the fault of the company, but the fault of some subordinate official at that particular station?—Yes, sir; I do not know any more than that.

8613. (*Mr. Whitmore.*) Have your inspectors watched the horses as they come out from that station?—We are obliged to do that, sir; we are obliged to put them all round; we are obliged to stop the cabs, and when someone who has come from the Continent and perhaps is very anxious to get home, finds he must not go any further, but must get out and obtain another cab, you can clearly see the annoyance that would be caused.

8614. (*Chairman.*) Can you give us any particulars of the cases, the number, the class, and so on, which your inspector has had to deal with outside Victoria Station?—A great many, sir.

8615. And it is because they have had to deal with a great many that you say Victoria is a nest of cruelty?—That is the cause, sir.

8616. (*Mr. Bayley.*) What kind of cruelty?—Unfitness, lameness, a general unfitness of the horse, that is all.

8617. (*Mr. Whitmore.*) The fact that your inspectors have observed those cases as the cabs come out of Victoria Station really shows that the privilege system there cannot preclude inspection by your officers?—They cannot go inside to do it.

8618. Not inside, but you detect the cases as the cabs come out?—Suppose an officer stops a cab, and while he is engaged examining that horse another cab comes rushing by, another cab, and another cab, three or four perhaps in that bad state, they just escape him because he is engaged on that cab; it is not like the inspection on the rank inside a station.

8619. (*Mr. John Burns.*) Have you a list of cases detected by your officers outside the Brighton Company's Railway Station at Victoria during the past 12 months?—I think I can give you one; I have not got it here.

8620. Roughly, how many cases have they disclosed?—I cannot tell you; I have not taken these cases, have merely taken the cab cases generally.

8621. (*Chairman.*) Have you one or two inspectors posted on the ground there?—Generally two, sir.

8622. Is the work detailed to two men, or is it interchangeable among all the members of your staff?—Oh, it is interchangeable, because, assuming a man has a case in court, we must send another man.

8623. (*Mr. Bayley.*) Have you access to all other stations?—Yes, never kept out of any one.

8624. It is a means of fostering abuse?—It is a means of fostering abuse; it is a means of facilitating abuse. If it is a monopoly, and it requires supervision, and you do not allow that supervision in the stations, it appears to me that it must be so.

8625. (*Mr. John Burns.*) Have you directed the attention of the Commissioner of Police to the fact that your officers have been refused admission to Victoria Station?—The police are refused also.

8626. Have you directed the attention of the Commissioner of Police to the fact?—We have not. I do not think he has anything to do with it; but we have of the company.

8627. Are the police officers refused admission?—Yes; the contention is that the station is a private property and not a public place within the meaning of the law.

8628. But do you know whether, in spite of your officers being excluded from Victoria Station, the police have made some attempt to inspect the horses?—I do not think they have; I have never seen a policeman inside there. I go there every morning and night and I have never seen a policeman there at all.

8629. Have you ever known a police officer take horses outside Victoria Station for cruelty?—Our men have frequently called police officer to help.

8630. And you will hand a list of such cases in?—I will.

8631. The number of cases taken by your officers?—Outside cases.

8632. And the number handed on to your officers or taken jointly with the police?—Yes, jointly with the police. May I just say this, that in one case—to give you a case now—an officer of the society was about to proceed along the platform at Victoria Station to speak with a cabman who was on the rank respecting a case of cruelty which had occurred, the name of the driver was not known to him——

8633. (*Chairman.*) Which had occurred in the open streets?—Yes, which was a subject of inquiry, at all events, to put it that way, and when he got on the platform the man who was called the inspector there of the railway constables—who are not sworn officers, as you are aware, and who cannot arrest themselves—rushed up to him, and said, "Where are you going?" and he told him. He at once laid hands upon him. In consequence of that assault we took this man to the police court; Mr. De Rutzen heard the case and fined him a guinea, and gave him a sound lecture. That is just one case only; I just put the case down here so that I might explain that to you.

8634. (*Mr. Lough.*) What date was that?—I should think that would be about a year and a half ago. My son, who is a barrister, conducted the case before Mr. De Rutzen, and the contention then was argued out that this was not a public place. I think Mr. De Rutzen was of a different opinion.

8635. (*Chairman.*) Have you any more to say on that head, Mr. Colam?—I have got here a note that we have more cases of cruelty coming from the cabs at, Victoria, the Brighton railway station than from any other station—many more.

8636. Although you have no means of getting into the station to ascertain the facts?—Quite so, yes.

8637. (*Mr John Burns.*) Do you think that, as the Brighton Railway Victoria station furnishes to you a disproportionate number of cruelty cases, your officers' faculty of inspection is whetted by the fact that they cannot get near there or inside?—Do I think they do not tell the truth?

8638. No, I did not put it that way. Do you consider that the fact of your officers being excluded from Victoria station induces them to be more vigilant in regard to horses coming out of Victoria Brighton station than

Mr. J. Colam.

31 July 1894.

they are at other stations?—Well, of course, our officers are human beings, and so far there may be something in it, but at the same time they are sent there to perform their duty in consequence of what I see myself, and, a good deal, of what cabmen have told me, for instance, a remark of this kind: "Your men should be "there at 7 o'clock in the morning," or "They should "be there at 12 o'clock at night," or "They should be "there before 8 o'clock in the morning," or something of that kind, "and just watch the cases as they come out of the yard." Well, that has led me to plant the officers and say to them, "Now then, be very careful, "and watch there for certain horses."

8639. But, generally speaking, the fact of your being excluded from Victoria has not diminished the vigilance of your officers at that station?—It has not diminished it.

8640. It has increased their vigilance?—I daresay it would.

8641. (*Chairman.*) Have you made any arrangements for your officers to be accompanied to that place by a veterinary surgeon?—Well, occasionally we have. I should like to show you a comparison on this point, please, between Victoria Station and Waterloo. The men at Victoria pay 3*s.* a week for their privilege; there we have, as I have told you, a great deal of cruelty. At Waterloo, the men pay a penny each time they go in. Anybody may go, but he has to pay a penny, which is for the standing ground there, to cover expenses, I suppose, and I mean to say this, that, talking about privilege and no privilege, Waterloo compares wonderfully well with Victoria, not only with regard to the cases that we find, but also with regard to the assistance rendered to us by the railway officials, and especially the railway constables at Waterloo, where we have been frequently helped by them. I thought I might just tell you that.

8642. (*Mr. Bayley.*) How does Waterloo compare with King's Cross?—I do not know; I cannot tell you that. I only brought this as a case of privilege or no privilege.

8643. But why have you made a comparison between Waterloo and this nest of cruelty?—Because that is called an open station, sir.

8644. Why have you confined your comparison to Waterloo and Brighton Victoria, which you say is an exceptionally bad station, a nest of cruelty?—Because that is a case of privilege.

8645. They are all privileged except Waterloo?—Except Waterloo; that is the reason I give it you.

8646. (*Chairman.*) Mr. Bayley is anxious that you should compare like with like; a privileged station, Victoria say, with another privileged station?—Oh, would you like to say another station?

8647. (*Mr. Bayley.*) I will suggest between Waterloo and King's Cross?—That is privileged.

8648. I want a comparison as between a privileged and an unprivileged?—I have given you that.

8649. You have only spotted one single station, which you say is an exceptionally bad one?

8650. (*Mr. John Burns.*) Well, take Paddington?

8651. (*Mr. Bayley.*) I suggest King's Cross in addition?—Very well, the two.

8652. (*Chairman.*) Upon this question of privilege has your attention ever been drawn to cases of overwork of horses from having to travel longer distances than they should during the course of the day, say from station to station with a fare and back again empty?—I am afraid I could not say anything with very great distinctness on that point, because we only speak of the condition in which we find the horse from whatever cause it arises, we only say, "Here is a horse which is overworked." "Here is a horse which is distressed." In all such cases, of course, we have veterinary surgeons to give evidence.

8653. Then we pass on to the next head in your evidence, the measures which you suggest to the Committee should be taken to abate cruelty to cab horses?—The measures that I have thought of, sir, are that more cab inspectors should be provided, that is, if they are able to discriminate between good horses and bad horses. I am not quite sure that they are able to at present.

8654. Do you know what the powers of the police with regard to the inspection of horses are at present?—They have the same powers, I presume, as we have, only they have additional powers, being constables.

8655. (*Mr. John Burns.*) But you and your officers have no power other than that enjoyed by an ordinary civilian, have you?—Not any more.

8656. Absolutely none?—Absolutely none.

8657. The police have more power?—Certainly, being constables.

8658. They have power of detention and arrest?—And arrest, and they have protection in the event of failure after arrest, which we have not got.

8659. Have you ever striven to get increased powers?—Oh, yes.

8660. Have you succeeded?—No, sir, we have not.

8661. Why have you failed?—Because I suppose there is an objection to private individuals being empowered to act as constables. In the United States every officer of every society throughout the whole of the States is a sworn officer.

8662. (*Mr. Whitmore.*) How have you attempted to get these additional powers?—When Colonel Henderson was the Chief Commissioner and also when Sir Charles Warren was, I applied that our officers might be sworn; in some towns we got them sworn by the watch committees.*

8663. (*Mr. John Burns.*) Can you give us the towns?—Yes, I can give you the towns where they are sworn.

8664. (*Chairman.*) Is that the only measure you have to suggest to us, Mr. Colam?—Not at all. We think cab inspectors should be increased, because there are only about five cab inspectors in the whole of the metropolis, and they ought to have a special training. That is indispensable, as you will see, when I tell you what our officers' training is. The reason is that the value of an opinion depends upon knowledge; I need not say that. Then I think the next thing I would suggest is that the police and our officers should be admitted into places where horses are on hire, and also into stables. We have a very great difficulty with regard to that. An officer says, "Now, if I would "advise you, take that horse home; he is really not "fit; take him home and rest him." Next day he wants to see the horse, to take a veterinary surgeon to examine the horse; the stable door is locked, and he is forbidden to see anything. No power on earth exists to compel the owner to show that horse to us, so that we cannot take the best evidence before the magistrate, in consequence.

8665. Am I to gather from that, that you are refused access to an animal which you suspect to be in a bad condition?—Which the officers report to be in a bad condition.

8666. Failing the power to get access to that animal, do you not report such a case to the police?—The police have no power.

8667. The local authority have under the Contagious Diseases (Animals) Act?—Yes, if there is a suspicion.

8668. Do you report it to the local authority?—If we suspected contagious disease we should do so. We sometimes have got the sanitary inspector, who has power to enter, on, I am afraid, not altogether a very honest supposition, that there is something wrong in the stable, and that is an undesirable method. We would much rather have power to go in straight, "Open that door, and let us see that horse." The magistrates are very severe on men who refuse to admit our officers or a veterinary surgeon taken by us; naturally they are, because they see the object of it. Then it has been suggested to our committee that we should recommend that there shall be a special department to manage the public carriage work apart from the police. The committee is of that opinion, but it is an opinion not based very much on knowledge. I think it is a political question rather than anything else, which we do not want to go into.

8669. The idea, no doubt, is that the hackney carriage service should be managed by a practical board?—Certainly.

8670. Well, we are glad to receive the suggestion from you, of course?—That is a suggestion of the committee. Then, I may just tell you that in Sir Richard Mayne's time, that was during my earlier time in the society, and I knew him very well, and used to go down to him, and always contended that it was necessary that we should have experts there; and he had experts there himself. He generally had two

* The Royal Society has 24 men in 24 different places holding warrant cards as sworn officers of police.—J. C.

officers. There was a man named Cherry, a very well-known veterinary surgeon, who was always asked for by the magistrates for any cab cases, because he was attached to Scotland Yard.

8671. Is that all?—That is all with regard to that.

8672–3. (*Mr. John Burns.*) Those experts were the veterinary experts employed by the Department itself?—The veterinary experts employed by the Department itself.

8674. (*Mr. Lough.*) What date was that?—Twenty-five years ago.

8675. (*Mr. John Burns.*) 1865 to 1870?—In Sir Richard Mayne's time, I know.

8676. (*Mr. Lough.*) Can you tell us anything about the discontinuance of that system?—No, I do not know at all.

8677. (*Chairman.*) Now, Mr. Colam, I have a very important question to ask you, one of very great interest to the Committee. I want you to give us the qualifications which are required in your society's inspectors, as to their character, intelligence, education, and training; also their relations with veterinary surgeons, and a sketch of their general method of working in your interest?—Yes, sir. The first thing that we require in a candidate for appointment is that he shall prove that he has a good character, that he is sober, honest, and reliable for integrity, &c. Then he is examined as to his intelligence, because our work is higher than ordinary police work, and we require a man who is intelligent enough to receive an instruction in writing, has also got tact and persuasive manners, and is capable of giving advice. Then the next qualification is that he shall fit himself by a knowledge of the anatomy of animals and the ailments of those animals that he has got to do with. For that purpose we have a veterinary surgeon, who regularly teaches our officers.

8678. Is he a staff officer of yours?—A staff officer, yes; and every morning a certain amount of instruction is given on these points.

8679. (*Mr. Whitmore.*) On tact?—Not on tact; on ailments.

8680. (*Chairman.*) What do you pay these gentlemen for their services?—The veterinary surgeons?

8681. No, the inspectors?—They come in at 28*s.* a week, and they rise, when they become first-class officers, up to about 2*l.* 5*s.* a week.

8682. (*Mr. Whitmore.*) Might I ask what, as a rule, if you can say so, has been the previous training of your inspectors?—Well, we have a good many cavalry men, and we have some policemen, men who have been inspectors, and who are still able to do our work.

8683. (*Mr. Bayley.*) How much does the veterinary surgeon get, the professional?—The veterinary surgeon who teaches our men, about 3*l.* a week.

8684. (*Mr. John Burns.*) Is he a licentiate of the Royal College of Veterinary Surgeons?—Oh, yes, sir.

8685–6. Does he receive this as a fee for attendance on a certain day?—Does regular work; giving the whole of his time.

8687. Do you think that a competent licentiate of the Royal College of Veterinary Surgeons will give the whole of his time for 3*l.* a week?—I am sorry to say there are many of them who cannot get that, sir. In the event of one of the probation men seeing a horse and reporting it in a bad state, lest any injustice should be done, that man is sent down, first of all, to make me a report upon that case, in order that I may be satisfied that it is really in the state reported. You see we take a sort of double check there. If he cannot go, then one of the senior officers goes. Then the next point of instruction that we give to our officers is—something that we hope will not surprise the Committee—is instruction on the law of evidence. We are obliged to do that. We cannot have a solicitor and advocate in every case, and our men conduct their own cases, generally speaking.

8688. (*Mr. Bayley.*) Who instructs them on that point?—Well, we instruct them by a system of crossing off their evidence, striking out that which is not evidence, and making them write it over again.

8689. Are you the professor?—Well, I am the professor in that, because I am the final person; I am obliged to do that a good deal. The next thing is, we have to teach them about the method of entering on investigations, because it is really an important matter—not to make offences, not to spread abroad anything which may damage character, and which ultimately may turn out no case at all. And then in regard to detective work. These are the things which we require in point of education. Then the young officers go out with the senior officers occasionally into the streets, and learn, get experience there. No officer is permitted to employ a veterinary surgeon on his own account without my consent. That is done partly with a view to prevent unnecessary expense; they would employ them in every case, where they are not needed, and costs would be run up unnecessarily.

8690. (*Chairman.*) Have you any veterinary surgeon who is a staff officer?—No, sir.

8691. When a surgeon is employed, he is employed on payment of a fee?—Certainly; and we call on the nearest man, as a rule.

8692. Then the man employed outside Victoria Station with your inspectors is paid by fees?—Oh, certainly, he would be paid a fee. The fact is, magistrates, very rightly, I think, would regard it as important that the veterinary surgeon should be entirely free from bias, as far as we can get them to be so. Medical witnesses are not always free from bias; I dare say you know better than I do. The nearest veterinary surgeon is employed, as a rule; but sometimes the magistrates suggest a particular veterinary surgeon whom they prefer, who is known, of course, and we are obliged to send that one man. That is the reason why one veterinary surgeon is often seen in our cases, the same veterinary surgeon.

8693. At different courts, or at one court?—At one court, he is generally known at one court. Then, in the next place, I want to explain to you that our officers are kept under strict discipline. They come every morning at 8.30, and parade. They have to deliver reports of their work of the previous day; every officer is compelled to report the whole of his work that he has done the previous day.

8694. In writing?—In writing. They also take plaints, the meaning of which is this: If a private individual has made a complaint to the office about a case of cruelty which we think is one that should be investigated, then a note is formed like a sheet of foolscap with a description of it, and that plaint note is given to the officer, and he has to go and make his inquiry.

8695. Do I understand that your inspectors draw out a statement of facts?—No; there is a registrar who does that in the office.

8696. From dictation?—From the dictation of persons who come and make complaints.

8697. Including your inspector?—No, from private individuals.

8698. But does your inspector enter upon his reports a statement of the facts in each case of cruelty as it comes before him?—Yes, those that he sees himself on the street, and those he inquires into on receiving plaint notes; and that comes before me.

8699. That statement of facts?—Yes, it is brought out—if you will pardon me, I will just show it. We make our officers draw out their reports in cases of cruelty with the evidence of the witnesses precisely as they have to give it in the witness box, in the first person, because of the ease by which we can see the case in a moment, you see. And then it is good education for the men. I am very proud to say that we have been frequently told, in consequence of this, by the magistrate, that our men show great ability in conducting their cases in court. I wish you also to know, with the exception of charges, no information can be laid except by my order. In charges, sometimes, there are cases in which the man would escape if he is not arrested; but we have a rule that charges are never to be made except under the strongest necessity, notwithstanding the magistrates press us very much indeed to make charges. I hold that, in the first place, it is a great danger to us and our funds, because we might have an action in the event of arrest and the charge not sustained, and I also hold that no citizen ought to be deprived of his liberty if he can be reached by summons. I think that is a cardinal principle in our work.

8700. Is that all you have got to say to us?—No, sir. The officers are all bound to report, not only the actual cases, which, to use their words, are reported for prosecution, but cautions that they have given as a check.

Mr. J. Colam.
31 July 1894.

8701. We understand that they give you a detailed statement of their proceedings during the day previous to that on which their reports are put in?—Including the cautions given on the road, sir.

8702. (*Mr. Whitmore.*) Are they interested in the number of the prosecutions?—I am very glad you have asked me that. They have no interest whatever; and neither do they receive the moieties of penalties which the Act allows. Our officers go into the box with perfectly clean hands, and say they have no interest whatever in the evidence which they are giving. Then they are not allowed to receive a single sixpence without reporting the case. They come to me and get my consent. They are dismissed for drinking, or debt, or insubordination.

8703. (*Chairman.*) Receive money from whom?—Anybody, sir, no matter whom.

8704. How could they properly receive money from any source?—Well, sometimes a person who has reported a case of cruelty, when the thing has gone on very well and to his satisfaction, will say, "Here, officer; here's a shilling for yourself," or something of the kind. He must not keep that without reporting to me. The reason of that is, that if tips or anything of that sort were permitted it might be given from the other side.

8705. (*Mr. John Burns.*) Was it ever attempted?—Oh, yes, frequently.

8706. To what extent?—Well, we frequently have to give evidence that the owner of the horse, the subject of the inquiry, has offered consideration to our officers.

8707. Have you ever dismissed officers for receiving considerations?—Once dismissed; I have suspended them—punished them.

8708. In how many instances?—In my time, 34 years, I have done so perhaps in a dozen cases, not more.

8709. A dozen cases. Reprimanded, suspended?—Reprimanded for receiving small amounts from friends or foes.

8710. What was the amount?—Always small amounts; never more than half-a-crown.

8711. (*Chairman.*) Do you often receive applications from your inspectors asking leave to retain money which has been given?—That is what I mean.

8712. Do you often receive applications?—I receive them very often. If there is no reason against it, I say "Yes." In the case I mentioned I should see no reason against. But if there was the least suspicion about it, I would refuse it. Then when an officer is serving on a branch in the country—we have 100 branches, 120 officers—frequently this branch offers them a little gratuity, and it has to be reported to me before it can be accepted.

8713. You keep no account, I suppose, of these sums?—No, not the least.

8714. I have only one further question to ask you, Mr. Colam, and that is this: how does your system of prosecution in cases of cruelty to animals within the City limits compare with the methods upon which you proceed outside those limits?—The City of London, sir, you mean?

8715. Yes?—I think we do very little in comparison in the City of London, sir. I think our work is chiefly elsewhere; and I think I must just put it down to this reason, that the City police have been encouraged by the City magistrates to bring cases there, and we find that they can get on very well without us. Occasionally they send for us; in starving cases they send for us. The ordinary policeman would not know how to go about a starving case. The amount of evidence that is needed would be beyond his means. And in difficult cases, acute lameness, or anything of that sort, we are sent for.

8716. I want to understand that a little better. What do you mean?—Well, a policeman comes down, and says, "We have got a very difficult case; can you give us a little help?"

8717. Comes down where?—Down to our office in Jermyn Street.

8718. A policeman?—Yes; sometimes a magistrate has requested him to come down.

8719. But does the policeman come under the authority of the Commissioner of Police?—I assume he does.

8720. Or does he come on his own account?—Simply comes and says, verbally, "Will you come and "give us a hand in this case?" An officer is sent down with him.

8721. Where is your office?—105, Jermyn Street.

8722. And a policeman, a member of the City police force, comes out of the City to your office, and asks one of your officers to come in and help him with a case?—If it is a difficult case.

8723. How many cases of that sort have you?—I should think that we have, perhaps, 20 a year.

8724. Twenty cases in which your services are specially called in to go into the City to prosecute, or to help the police to prosecute, in cases which have happened within the City limits?—Yes, sir, not to prosecute for them, but to discover evidence. And may I also say that the metropolitan magistrates generally, if police cases are brought into their courts, and they see any difficulty, advise the officer to come down to the society, and we do the same for them.

8725. That is in the metropolitan courts?—In the metropolitan courts, yes.

8726. My question was confined to your procedure within the City limits?—I think it is very small in comparison. They do a lot of work themselves, and there have been very few convictions there.

8727. You put it at 20 a year in which your services * have been called in by the City police?—I think so.

8728. Have you any inspector within the City limits?—Oh, yes; our officers regularly go through there, and they take cases there before the Guildhall and the Mansion House.

8729. Can you give us the number of cases in which you prosecute in the City in cases other than those in which you are sent for?—I can get them, directly.

8730. (*Mr. John Burns.*) Before you leave the City, you say that proportionately you have few cases in the City?—Yes.

8731. Do you consider that the City police give more attention, and more detailed attention, to horse cases in the City than is given in the metropolis?—I do.

8732. Do you consider generally that the men stationed, say, at Blackfriars and London Bridge, are selected by virtue of their special qualification and knowledge of horses?—They are, indeed.

8733. And, generally speaking, when they do take up a case, they are right?—I cannot form an opinion about that, because I do not see the cases.

8734–5. Generally speaking, is the inspection, based on veterinary knowledge, of the City officers better than the metropolitan police?—I do not know anything of their cases, because they do not come before me. I only know this, that they do a lot of work there, and we have it in the newspapers that heavy fines are imposed there.

8736. You say these cases do not come before you?—No.

8737. Have you ever made any attempt, in the interest of the Society for the Prevention of Cruelty to Animals, to get at the official police cases of cruelty as distinct from your own?—No; if the police are doing their work well, and we are not wanted, we devote our attention to the places where we are wanted, and where we have work which requires our care.

8738. And, generally speaking, the City police administer their inspection duties in relation to horses as well as any district you know?—Yes, I think I may say that; and I think, as you just now remarked, it is because there are certain men told off for that special duty. They do nothing else.

8739. Quite so; notably at Blackfriars and London Bridge?—Yes. Another note, it takes 12 months' probation to turn one of our probation men into an efficient officer by the training that I have explained to you; and these men, all the men in London, are under the charge of a superintendent. I thought you would like to know that.

8740. (*Chairman.*) A further question occurs to me. You have told us that inspectors are posted outside Victoria Station and they stop the cabs leaving the station where they see cause for complaint as to the condition of the horse?—Yes.

8741. Will you tell us under what authority you stop the horses when they are travelling along the streets?—That is a very difficult question to answer. I am

* During April, May, and June, 1894, the Royal Society's officers received assistance 11 times from the City police, and rendered them aid nine times by invitation.—J. C.

afraid we have not any authority at all. At the same time, what we do is this: there is a policeman handy, and we call him there. Now, the Act of Parliament says that any constable upon his own view may arrest, so we call the attention of the police, and we say, "You see this?" He says, "Will you sign the charge sheet?" We say, "Yes."

8742. (*Mr. John Burns.*) Does your man run to the horse's head and hold it till the policeman comes up?—Generally there is a little crowd, and the policeman comes up.

8743. As matter of fact your officer stops the horse first, a crowd collects, the policeman inquires into the cause of the obstruction, then examines the horse, and if satisfied that there is a case for the magistrate, takes the horse and cab to the station green yard or wherever it is going?—Yes.

8744. (*Chairman.*) Then it might be put by an unfriendly critic that at the commencement of your operations in such cases you are guilty of an illegal act?—It may be so, sir. We have a very strong moral power at our back.

8745. I do not say that I am putting it in an unfriendly way?—Quite so. We feel that very much, indeed.

8746. (*Mr. John Burns.*) As matter of fact, to detect cruelty, you have to cause obstruction really?—Yes, a small and temporary obstruction, if you like to call a crowd of a dozen men by that name. The same crowd is seen when a policeman stops a horse.

8747. (*Mr. Whitmore.*) Unless you can get a constable to actually arrest a cab driver?—Yes, sir, quite so. I think we are very much behind nearly every country with regard to this question. There are several countries, the United States, and Australia I may mention, and New Zealand and Canada, in which the officers of the societies have the power of arrest. So they have in India. But in the old country I suppose there are traditions and prejudices which cannot be got over.

8748. (*Mr. John Burns.*) Mr. Colam, would you kindly tell us, roughly, on this question of the efficiency of your inspection, the income of your society for the last year?—About 20,000*l.*

8749. Made up of voluntary subscriptions entirely?—And legacies. That is voluntary.

8750. You receive no subsidy, do you?—Not the least, sir.

8751. From local or Imperial quarters?—Not the least.

8752. Roughly the lump sum of your expenditure? It is about the same, sir. We always work up to our income. You see we can always extend our operations into places where there have been no officers before.

8753. And in the event of your income being suddenly diminished, that means a diminution of your inspection power?—Yes.

8754. And reducing the number of your officers?—Quite so.

8755. Generally speaking, is your society supported as well as it might be?—We think it ought to be supported very much more.

8756. What is the total number of officers you have in the street?—Throughout the kingdom.

8757. Yes, in the street, in the kingdom?—Well, about 115.

8758–60. What is the total number of your staff?—About 120.

8761. How many officers have you in the streets in London?—We generally have from 20 to 30. But I ought to qualify that answer by saying that London is our nursery, as I have already explained, where we have training officers.

8762. Then I am to gather from that that you have 20 men permanently at work who are qualified, and five or six, perhaps 10, probationers?—No; I think I might say this: we have not got so many; we may have about 10 full-fledged officers.

8763. I want to know the efficient qualified men of your society who are at work daily in the streets of London for the purposes of inspection; is it 10?—10, sir.

8764. You said the total number employed in London is 20. How are the others of the 20 employed?—They are employed as probationers with the other officers.

8765. Assisting?—Yes.

8766. Now, you say that their wages are from 28*s.* to 45*s.* per week?—Yes.

8767. What veterinary qualifications do these men boast?—I have already explained.

8768. You have, but not sufficient for my purpose, I will frankly say?—You mean, do they get a diploma.

8769. No. What veterinary qualification? They have no qualification from teaching.

8770–1. Do they hold any certificate from any veterinary college?—None at all.

8772. Have they ever been assistants to veterinary surgeons?—No. We have got one or two men who have been veterinary officers, but as a rule they are not. They receive the best teaching we can give them.

8773. You say they have not any veterinary qualification, as such. You say that none of them have been assistants to veterinary surgeons?—We do not make that an essential; but, of course, if we can get it we are very glad to have it.

8774. What is the examination to which you subject them to qualify them for the post of inspector?—The first examination I have already given; the veterinary surgeon who teaches them reports.

8775. They are taught after they come to you?—Yes, certainly.

8776. They have not any antecedent knowledge or qualification?—No.

8777. None at all?—None at all. One of the best officers we ever had was an engineer.

8778. It is very complimentary to my profession, but that does not go very far. Am I to gather that before entering your service they have no technical qualification for the post?—But we do not allow them to do any actual duty, until they are qualified; they go with other men.

8779. But that does not happen until they enter your service as inspectors?—No, certainly not; every man must have a beginning.

8780. Certainly. Then they are not asked to pass any veterinary examination after they have entered your service?—No, sir; no.

8781–2. What is the chief reason for selecting a man for this post?—The chief reason is that we want a man.

8783. But what is your test of manhood for this post? Is it personal appearance?—Well, there is something in that—stature.

8784. Physical qualification?—Yes.

8785. Stature?—One of the conditions is that he must be 5ft. 9in. high; another is that he must be under 40 years of age and not under 25.

8786. But what has stature to do with veterinary qualification and the power of inspecting horses?—It has nothing to do with that, sir. But if you will allow me to explain, our men have to do something else besides manage horses—they have to manage crowds in the street, where stature is a very important factor.

8787. They have to manage crowds. But you told us just now that they have no power beyond an ordinary civilian?—They have to manage crowds, sir. Everybody knows what the officer has to do.

8788. I will not press you unfairly or unduly. You tell us stature is one of the conditions, on the ground that they have to manage the crowd?—That is one ground—commanding appearance.

8789. Presence—stature—because they want a man to manage a crowd?—Yes.

8790–2. But they have no official power?—Their not having it is an additional reason; otherwise we should not need it so much.

8793–4. I want to know what is the connexion between the stature of the officer and veterinary knowledge of the animal he inspects?—I have said none, sir.

8795. Stature, physique, capacity to manage a crowd, is one of the qualifications for this office?—To carry the moral force which is necessary in the office.

8796. We come now to the relations with the police. Generally speaking, do your officers get assistance from the police?—Oh, yes.

Mr. J. Colam.

31 July 1894.

8797–8. Have you ever had complaints from the police as to the officers assuming the functions of the police?—No official one.

8799. Have you ever had non-official remonstrances?—From private officers; police constables sometimes have complained that our officers are a little too bumptious.

8800. How frequently have those complaints been made?—Perhaps a dozen times I have had them in my 34 years.

8801. Have you ever had a remonstrance from the Chief Commissioner?—Never.

8802. You said your number of cab cases was roughly one per day; is not that so?—Yes; I said did not exceed.

8803. Did not exceed one per day; and those mostly with night cabs?—Yes.

8804. (*Chairman.*) Let us clear this up, Mr. Colam. Is it one case per day, or one conviction per day?—One conviction, sir. You are quite right. I thank you very much.

8805. (*Mr. John Burns.*) One conviction per day; mostly for night cab horses?—Yes.

8806. Do you consider that if the inspection by the police of cab horses, both at stables and on the streets, were more efficient than it now is, there would be so many bad night cab horses on the streets?—I think the better the supervision of the streets the better it is.

8807. You said that there had practically been no change in the night cab horses for some years?—I think so.

8808. Do you consider that this condition of things, no improvement is due to inefficient inspection somewhere?—Certainly it could be stopped with better supervision.

8809. And you believe if better supervision prevailed, principally at night time, it would be stopped?—I think so; yes. When you said better, I hope, sir, you meant better in point of knowledge.

8810. Yes, and numbers?—Knowledge, power of discrimination, between what is a case of cruelty and what is not a case of cruelty.

8811. Do you know the number of police officers who are devoted to this work?—No, sir.

8812. Have you ever heard the number fixed at six?—No, sir; it was with reference to the City that I said six.

8813. Have you ever heard that the number of officers detailed off for this street inspection is six in London?—The cab inspectors, you mean?

8814. No; I mean horse inspectors connected with the hackney carriage department?—There are five of those inspectors.

8815. Their duty is to go about the streets, is it not?—No, I do not think so; I think their duty is to go about cab ranks.

8816. Do you know the number of the policemen inspectors under the hackney carriage department that give part of their time to the inspection of cab horses?—I am told it is five, sir.

8817. Do you consider that number sufficient for London?—Oh, no; certainly not.

8818. Would you suggest a number?—It would be impossible for me to suggest a number without knowing the work of the police; but I think it ought to be very much increased. I have said so.

8819. What do you think would be adequate, allowing for the existence of your own officers?—I think there ought to be one in every division.

8820. That would be, roughly, 24, would it not?—Yes.

8821. What is the relation of your officers to the veterinary surgeons that are called in?—In what respect?

8822–3. Well, I must put it in this way. Supposing one of your officers detect a case of cruelty, what does he do on the veterinary side of the case?—He first has to report to me, and to ask permission for a veterinary surgeon to examine the animal, and then I give my consent or I do not; or if it be a case of urgency from a certain part, "horse affected so-and-so," in a telegram, "may I call in a veterinary surgeon," and then I should send him back an answer, "yes" or "no."

8824. Then am I to understand that the officer who takes a case of cruelty on his own initiative invokes the aid of the veterinary surgeon?—He may do so, but he is liable to get his knuckles rapped for it.

8825. Is it frequently done?—No, it is only occasionally done.

8826. What is the class of man that he calls in under such circumstances?—The rule provides that the veterinary surgeon nearest to the place where the complaint takes place——

8827. Does he comply with the rule generally?—Oh, yes, he does.

8828. Have you ever heard complaints on the part of cab owners, and cab drivers about the partial selection by your officers, and even by your society, of veterinary surgeons who, in their opinion, do not occupy that standing in the profession where impartiality can be most fully shown?—I have never had a complaint from a cab owner on the subject.

8829–30. Then you would be suprised to hear that it has been given in evidence that frequently your officers have been suspected of collusion with the surgeons whom your society employs, and that frequently the surgeons that you employ have not the highest qualification?—I shall be surprised to hear that, because I shall be surprised to hear that that is evidence at all. That which is a suspicion is not evidence; and, in the second place, I should be very much surprised to hear it said that any cab owner is a judge of whether a man is of a high class or not.

8831. You have not heard?—No, I have not heard.

8832. Have you ever heard, Mr. Colam, that occasionally veterinary surgeons that you employ for cases of cruelty are to be seen drinking with your officers in public-houses?—No.

8833. Has that complaint ever reached you?—No, it has not reached me. I do not say it would be very unusual if it were so, because if they have to wait at a police station they have to go for refreshment.

8834. Then you do not think that your system permits of collusion between a veterinary surgeon and your detective officers for getting cases from which the surgeon would get his fee whilst the officer would be simply, of course, discharging his duty?—I have not detected any cases of that kind, therefore, of course, I must say I do not know of such cases.

8835. But if it were brought to you that your veterinary surgeons were in the habit of drinking with your officers, what would you think of that condition of things?—I should want to know how often, and under what circumstances, and I should dismiss or punish the officer if he had committed a fault.

8836. Well, we will come to the next point. Several cab owners have complained of capricious interference and prejudiced inspection on the part of your officers, have they ever complained to you of this kind of thing?—They always complain before the magistrate of that, of course; you must expect it.

8837. But have they ever made any complaint of that character to you?—Not the least. I think that if they did the conduct of the magistrate is one answer, the way in which he treats the case after he sees the person who accuses and the result of the investigation before him, and also if I tell you that we do not loose one per cent. against the drivers, and two per cent. against the owners. I think that is a pretty good answer to the question about collusion or anything else.

8838–9. Do you act in co-operation with the officers of the local authority under the Contagious Diseases (Animals) Act?—Yes; we report all cases of glanders and farcy, and things of that kind, to him.

8840. In London it is the officer of the London County Council?—Everywhere where we find it. Formerly we used to prosecute ourselves, in the Metropolitan Board of Works' time; but now we send all cases up there, and our officer gives evidence for them as a witness.

8841. Do you know anything of the inspection of cab horses at the police station before a cab is licensed?—No, sir.

8842. Have you any suggestion to offer by means of which that system could be improved?—No. I really do not see the good of that inspection, because the horse may be in the cab work to-day, and out of it to-morrow, and a new horse brought in.

8843. But, generally speaking, the system is not so perfect but that it might lead to evasion—a bad horse to-day and a good horse to-morrow?—A horse might be borrowed and taken down there for the purpose of getting the licence.

8844. Have you ever had complaints made to you of inefficient examination of horses and cabs at Scotland Yard and elsewhere?—Oh, yes; I have frequently heard people say that cabs are a disgrace to the metropolis, and the horses are in a very bad state.

8845. Do you consider that if the inspection at Scotland Yard and the other stations was more complete from the veterinary and coachbuilder's point of view that complaint would be lessened?—I think it would.

8846. You said that your work was higher than ordinary police work?—Yes.

8847. But the average salary of your officers and the chance of promotion are not equal to those of a man similarly situated in the police?—The salary is better; I am very sorry we cannot give the officers any more, sir.

8848. That is due to insufficiency of money?—We get plenty of men; yes.

8849. What objection have you, Mr. Colam, if any, to the police taking over entirely the duties now jointly performed by you and the police?—I have no objection at all, only there should be a stipulation that the police should be trained as our officers are trained, or you will soon have an awful mess of it.

8850. But given that inspectors under the police possess the necessary veterinary qualification and pass the necessary examination, would it not be better for all purposes if the police, paid out of the rates, exercised the duties that you now discharge?—Yes; and still we would go on, because there is much work they cannot or would not do, as in Brussels, where the plan exists.

8851. Still you would go on?—Yes, certainly.

8852. From the point of view of inspection?—We think it would be a very good thing for the prevention of cruelty if more police could be made to work properly.

8853. Well, the police inspector, given veterinary knowledge, has an advantage over your inspectors in so far as he has the police power of arrest at his back?—Certainly.

8854. And consequently crowds in the street would not be caused to the extent that they are now?—Yes, they would just the same.

8855. And generally police inspection *plus* veterinary knowledge is better than the double system?—Yes; *plus* veterinary knowledge, that is quite right.

8856. You said veterinary surgeons can be got to devote the whole of their time for 3*l.* per week and less. Upon what do you base that statement, Mr. Colam?—Upon our actual payment.

8857. Do you consider that the class of veterinary surgeon who is willing to devote the whole of his time to your cruelty cases for 3*l.* a week is the type of man on whom the conviction or imprisonment of a cab driver or a cab owner should depend?—That man to whom we give 3*l.* a week is the teacher of our men. The persons who are witnesses in court are veterinary surgeons in full practice.

8858. I beg your pardon. Let us put it in this way. Do you consider that a veterinary surgeon who devotes the whole of his time for 3*l.* a week is a man sufficiently qualified to teach your 10 or 12 inspectors their duties?—I do.

8859. Is that the general opinion of the veterinary profession?—I do not know the general opinion of the veterinary profession.

8860. Are all the charges brought by your officers against a cab driver or cab owner supervised by you before action is taken?—Yes. All the difficult cases are brought before me.

8861. Difficult in what sense, legal or veterinary?—Legal.

8862. Have you any veterinary knowledge?—I have not, strictly speaking. I always go upon the reports which are placed before me, including the veterinary certificate. We have a certificate in every case where the veterinary surgeon is called in, and it is upon that that I go. I have sufficient knowledge, which you call veterinary knowledge, to guide me as to conditions which constitute offences under the Act.

8863. But you said that, generally speaking, you had one veterinary surgeon?—To teach the men, yes.

8864. But, generally speaking, one veterinary surgeon did your court work?—No. I said the nearest man to where the offence takes place. We have, as a matter of fact, upwards of 50 different veterinary surgeons within the metropolitan area who work for us.

8865. And they are men of standing?—It would be rather a strong remark to make, that all those 50 men were of low standing in their profession.

8866. No, I do not suggest that with regard to them. These 50 men, are they men of standing in a particular locality in their profession?—Yes, they are the ordinary veterinary surgeons, as good as any other men.

8867. Then it is not true if it were said that the veterinary surgeons are men who are nominally qualified, but who really do not regularly practice their profession?—Absolutely untrue They range from Professor Pritchard and Professor Axe, of the college, down to the man who is in local practice.

8868. (*Mr. Bayley.*) Do you make it a condition that they shall always be in full practice?—Oh, no. Sometimes we are not able to call the nearest to the actual spot where the offence takes place, because he puts it it in this way to us, "Please do not call me; this man "is my client," and then we fetch another veterinary surgeon, of course, because it would be very unpleasant for him to appear as a witness against his own client.

8869. (*Mr. John Burns.*) You said, Mr. Colam, that the system of privilege in some stations led to horses being hidden from you, that without privilege you might get access to?—Certainly, sir.

8870. Where is that notably shown?—Victoria.

8871. At Victoria have you ever asked the railway company, by letter, to give you access to their premises?—We have applied to the superintendent, and the superintendent has said he has received his instructions, and he must carry them out.

8872. But have you never gone over the superintendent of the station to the general manager or the secretary of the company?—I believe our chairman has.

8873. But you, as secretary, have never written to them direct?—No, I have never written to them direct.

8874. May I suggest that it would not be inadvisable if that were done?—I quite agree with you. I suggested it myself, but I think the chairman undertook it.

8875. You say that you think a reason for your exclusion from Victoria Station is that one of the superintendents has been or is on friendly terms with the largest cab owner?—I said it came out in evidence at the police court.

8876–7. You believe that these friendly terms, relationships between officials and private persons, preclude impartiality in the discharge of their duty?—I have no belief in the matter. I do not form any conclusion. I merely tell you it came out in evidence.

8878. You do not say generally that privilege leads to cruelty?—No.

8879. Would you suggest that all stations be open to cabs and cab horses under the conditions that Waterloo now is?—Certainly.

8880. Do you think that if that were done there would be less cruelty to horses than now prevails?—Certainly, I think so. Horses would go in there which are not privileged, and there would be less travelling about to find a station.

8881. Have you ever asked the managers or secretaries of big railway companies to give you access to all railway stations for society purposes?—We have never been excluded.

8882. Except one?—Except one. All others our officers go in, and they are generally helped.

8883. You say that for the more efficient performance of your inspection duties within the objects of your society, your officers might be sworn?—Yes.

8884. Have you ever made any application to Scotland Yard for that purpose?—Yes; to Sir Edmund Henderson.

8885. Was it granted?—It was not granted. The Home Secretary thought it would not be advisable.

8886. Were reasons given for the refusal?—That is all.

8887–8. You suggested that if you had the right of access to diseased or over-worked animals much good

Mr. J. Colam.

31 July 1894.

could be done for horses in that way?—If we were allowed to go into the stables after an offence, or even before an offence.

8889. Do you not think that greater good would be done if the police inspectors and the inspectors of the local authority had that power which you seek?—Yes. I think a very great deal of good would be done if there were more men employed by the police to look after the animals.

8890. Would you look with favour on these powers being conferred on the local authority's inspectors and the police inspectors instead of yourselves?—Not instead of ourselves; but with the proviso I have already given you, namely, that they shall be properly trained.

8891. Then I gather from you that in all questions of inspection and the right of access to premises where horses are kept you claim co-equal rights and powers with the inspectors of the local authority and the police inspectors?—We do not claim them, sir.

8892. But you would like them?—We would like to have them; as the excise officers have, for instance.

8893. You said you would like to see a special department for the hackney carriage service under the Hackney Carriage Act. What did you mean by that?—That the granting of licences should be under a board of experts, or that it should be a special department away from the police.

8894. But by whom should that be exercised?—Well, we do not know. We leave that entirely to the Committee.

8895. Would you suggest the local authorities in England?—Certainly. I think that would be a very good idea. I think we might suggest that, certainly.

8896. Would you suggest in London what applies in provincial towns, that this duty should belong to the watch committee?—Yes, certainly.

8897. Do you find that the inspection of horses and cabs by the provincial watch committees is done fairly well?—As far as my knowledge extends.

8898. (*Mr. Whitmore.*) To begin with, do you know there is no watch committee in London?—I know there is none.

8899. And do you know that a watch committee involves an authority over the police on the part of the town council?—Well, it would be very improper for me to make any recommendation on that point at all, I think.

8900. (*Mr. John Burns.*) But you consider that some body other than the police ought to have the special inspection of cabs and horses in London?—Yes, sir; the reason why I think so is that they should have men who are experts.

8901. But what is your standard of "expert"?—Veterinary surgeons.

8902. Veterinary surgeons?—If the horses are to be examined, I mean; not the cabs, of course.

8903. (*Mr. Whitmore.*) But if your recommendation for the improvement of the system were carried out by Scotland Yard, would you then think that Scotland Yard was a bad authority?—Certainly not; I have no reason for saying that.

8904. Therefore your objection is not to the constitution of the authority, but to the particular method they have followed in carrying out their duties?—We have great confidence in Scotland Yard, as much as we have in the county council. We do not know the difference.

8905. (*Mr. John Burns.*) Then I gather from you that the best administration of the hackney carriage law, as it affects cruelty and the treatment of horses, would be carried out by a board of experts?—I think so.

8906. Veterinary surgeons?—For the horses.

8907. Then you have not any qualified veterinary surgeons acting for your society, have you, in the streets?—We have one on the staff.

8908. But as apart from him you have none on the streets?—Certainly not.

8909. (*Mr. Whitmore.*) Do you think that there is more cruelty practised in such privileged stations as Paddington and King's Cross than at Waterloo?—No, I do not think so. But I think there is this much in favour of the Waterloo system, that a man having a good horse can go into that place at any time when he is passing there without having to go all the way up to Paddington to get a fare.

8910. Quite so. But I mean as regards the actual practice; cruelty inside stations you do not allege?—Not at all.

8911. Therefore, supposing the privileged system were abolished it would not lead to any mitigation of cruelty inside the stations?—Certainly not.

8912. (*Mr. Bayley.*) You said any cab with a good horse could go into Waterloo Station; do you mean that a cab with a bad horse could not go in?—I think that was rather a wrong remark of mine, because it misled you; I mean a man happening to have a good horse and to be going past there will go in and take a place, but if it were a privileged station he could not enter, although he had a good horse.
